Mr. CUMMINS. In the case we have had occasion to examine recently in connection with the appointment of a member of the Interstate Commerce Commission there was found to be a difference of 47⅞ per cent between the cost of reproduction and the physical value of the property. That is to say, there is what is known as a going value, which inheres in the physical property and which adds to the value of the physical property, which is not a franchise value or an intangible value in that sense. If it should be found in the future that the going value is to be considered in determining the cost of the property condemned by the Government, there might be a very vast accession to the value of the Copper River & Northwestern Railroad, with an extension reaching to Fairbanks, on the Yukon, as compared with its present value.

Mr. POINDEXTER. I think that under the circumstances surrounding the Copper River & Northwestern Railroad the physical value would probably be less than the cost of reproduction instead of more. In the first place, the road was built under a peculiar sort of contract, by which the contractor got 10 per cent of the money he spent. Of course, there was not any especial desire to limit the expenditures under that sort of a contract. I do not mean to say that there was any effort to make the expenditure unduly large, but it is undoubtedly true that there were a great many difficulties of construction of the road and, as a railroad, it has very little value at the present time, except to the Guggenheims in getting out their ores from the Bonanza copper mines. They are fortunately situated in regard to it in the circumstance that they did not have to put up the money to build the railroad. They induced Mr. Morgan to do that.

Mr. McCUMBER. Mr. President, I think I am in sympathy with the proposition of the Senator from Iowa [Mr. CUMMINS]. I voted against this bill. I voted against it because I do not believe in Government ownership or Government operation of railways. I believe that the Government should exercise only the function of governing and make the laws that shall govern the operation of railroads and other business rather than attempt to do the business itself. I am still firm in my conviction that the Government ought not to enter the private industrial domain in opposition and in competition with its own people.

But the Senate and the House have seen fit to vote that we shall construct the railway, and inasmuch as it is to be constructed out in Alaska I am perfectly willing—in fact, a little desirous now—that the Government shall try its 'prentice hand in the operation of railroads just as far from the United States as it is possible.

Therefore, if I am compelled to differ from the Senator from Iowa upon this proposition by my vote, it is a difference in the matter of a conviction as to what certain words mean. I put to the Senator from Nebraska [Mr. NORRIS] the question whether he can give a different construction to the words "in the event he fails to lease" from the words "in the event of failure to lease"? The Senator admitted that there might be a distinction in the use of the two terms. The Senator from Iowa immediately stated that the only power for operation was in the subsequent paragraph, which related to the leasing, and therefore, as it was in a different paragraph and there was no provision in a preceding section relative to the right of the Government to operate, my contention could not be correct.

Then I thought I was right in my assertion that there was a provision preceding this which allowed the President to either operate or lease, and while I was looking it up the attention of the Senate was called to the same provision by the Senator from Oregon [Mr. CHAMBERLAIN]. I think the Senator will find that preceding the proposition of which he speaks is the proposition clearly granted that the President may either operate or lease.

Mr. CUMMINS. Mr. President——

Mr. McCUMBER. I yield to the Senator from Iowa.

Mr. CUMMINS. I may have been inaccurate in the way I stated the matter. I can not recall just what language I used. My purpose was to say that there is not in the bill, as I recall it, any authority to the President to operate in direct terms the railroads to be built, except in the clause which was under discussion.

The Senator from Oregon [Mr. CHAMBERLAIN] called attention to the fact that there was authority given to make rates and exercise the other functions of a common carrier. That I know, but I do not believe that the Senator from North Dakota will find in the bill the authority to operate in those terms except in the clause that was so long under discussion. If I am wrong about that, I will be very glad to have the Senator call my attention to it.

Mr. McCUMBER. I think the Senator is in error, and I will call his attention to it in a moment. The whole question devolves upon the construction of the word "failure." I generally doubt my own convictions, when they do not agree with those of the Senator from Idaho [Mr. BORAH] and the constitutional lawyer from Iowa [Mr. CUMMINS] and also the Senator from New Hampshire [Mr. GALLINGER]——

Mr. CUMMINS. It has nothing to do with the Constitution. I thank fortune for that.

Mr. McCUMBER. But I have been in the habit of forming my own judgment upon the construction of words and I am compelled to follow that ancient rule of mine. I know of no word in the English language that has not some degree of mobility about it. That is not only a feature of the beauty but of the force of expression that may be obtained by the use of words in our language.

Mr. GALLINGER. Mr. President——

Mr. McCUMBER. I will yield in one moment. So the question arises here whether the word "failure" means an ineffective attempt or whether the proper construction would be a lack of attempt. That depends entirely upon the language both preceding and succeeding. It depends simply upon its connection with other words and the intent and purpose of the balance of the provisions of the bill.

I will call the attention of the Senator to the provision which authorizes the President to operate. He will find it in these words:

> To receive compensation for the transportation of passengers and property and to perfrom generally all the usual duties of a common carrier by railroad.

He is not only authorized to take the money but to perform all the usual duties of a carrier by railroad. While that might have been expressed in simpler language in a statement that he might operate it, I can not imagine how you can give the power to exercise all the rights and duties of a common carrier and also to receive the compensation for the transportation of passengers and freight unless you concede that the power was given in the words "to operate" that railroad.

Mr. BORAH. Mr. President, the Senator, with his usual clearness and conclusiveness and remorseless logic, has demonstrated to a certainty that the words "in the event of failure to lease" have no business in there at all, and if they have any meaning at all it is to suggest strongly to the President that he proceed with the leasing first.

Mr. McCUMBER. The Senator has stated that before. If he means to suggest to me that this might be expressed in some other way more clearly, I will agree entirely with him; but I will not agree with him that the word "failure" here means after an ineffectual attempt. To that extent I disagree with him, although I may agree with him that it was unnecessary to put those words there. However, I am speaking now upon the question whether preceding the use of this word the power to either operate or lease appears in the instrument. I think the Senator will agree with me that this language clearly gives the power to operate and to receive compensation for that operation.

Mr. CUMMINS. Mr. President, I have never doubted that. I would not doubt that if there was nothing more given than the power to construct. I think the mere fact of ownership would carry with it the power to use the property created or constructed.

Mr. BORAH. That is not true, though.

Mr. McCUMBER. I do not agree with that.

Mr. BORAH. That would refute and answer the Senator's argument with reference to the Panama Canal.

Mr. CUMMINS. Well, the Senator has answered his own argument. As I was about to say, when he made the delightful allusion to the Senator from North Dakota, undoubtedly what the Senator from Idaho meant by his reply was that the Sen-

ator from North Dakota was making the most persuasive argument possible in behalf of our position, and I think he was. I think he agrees in the object sought to be attained; but what I said, or intended to say, was that the word "operate" had not been used; that distinct, definite power had not been given in the previous part of the bill. If it is true—and I do not question it—that the inferential power to operate exists in the previous part of the bill, why in the world did the conference committee follow that statement with one to the effect that, if there was a failure to lease, then the President might operate? Why duplicate the authority? If he had been given that full authority, as I am ready to admit, why repeat that, in the event of a failure to lease, he shall operate, when that duty had already been charged upon him? It can be susceptible of no other explanation than that Congress wanted to arrange an order in which these respective powers should be exercised—first, the power to lease, and, second, the power of operation.

Mr. McCUMBER. Mr. President, I shall have to disagree with the Senator again upon his first premise, that the right of ownership or the right to construct carries with it the right to operate. It is not necessarily so. The property as constructed may belong to the Government, but all of the power in reference to its operation must be granted by the Congress; and unless Congress, in its supreme power over the matter, has granted authority to the President to operate, he would have no authority to operate the road simply because we empower him to construct it.

With that statement, I will come to the next proposition of the Senator, that this power is a mere inference. I deny that it is an inference. I do not know any clearer way you could indicate the operation of a railway than by saying that you shall do everything that is usual and ordinary for a common carrier by railroad to do, and that in addition you shall receive the fees and compensation for that service. That is no inference; that is a direct authority to operate and to receive the compensation for that operation.

We have, then, in this proposition, first, authority on the part of the Government of the United States to operate or, in the discretion of the President, to lease. We can not avoid those two propositions. The President has the right to operate, under the language which I have read, and, in his direction, he has the right to lease. Now, in the event of his failure to lease, the bill then provides how the operation may be carried on. It has, first, provided for the operation; then it says "in the event of his failure to lease." What does that mean when taken in connection with the previous declaration that he can either operate or that he can lease? The Senator from Idaho [Mr. BORAH], I know, says that the word "failure" there means that he must first make an attempt to lease and, if he fails, that he may then proceed to operate; but if we once admit that the power to operate or to lease is given in the alternative in the first instance, then an entirely different construction, it seems to me, will follow. The meaning that then should be given to the word "failure" would be "neglect"—if he fails to do or if he neglects to do the one, that he shall then proceed to do the only other alternative that is given him.

With that view of the proper construction to be given the language, I shall vote, in order to get rid of this bill, that the conference report does not compel the President to first attempt to lease the road before he proceeds in the matter of its operation.

Mr. BORAH. Mr. President, I have taken some part in this discussion with reference to the interpretation of this clause, and I am quite certain that the interpretation for which we have contended is the correct one. I feel that this bill will unfortunately be construed as an instruction to the President that it is the desire of Congress that he shall lease the road rather than operate it; but I do not think I shall vote to return the bill to conference. My reason for that is that I am advised by those who are in touch with the situation and by those who are in a position to know, that it would endanger the passage of the bill; that there are conditions surrounding the passage of the measure at this time which have been accentuated by reason of conditions on the outside—public discussion, and so forth—which might lead to a long delay and possibly to the defeat of the measure. I prefer infinitely more, Mr. President, to have the measure as it is than to have no measure at all, although I should have liked very much to have seen the language so clear and conclusive as to the question of operation and leasing that there could be no doubt as to the desire of Congress to operate rather than to lease. But I do not feel that I would be justified in jeopardizing the measure on this account, for after all the President will likely do what seems best in the light of public opinion as to leasing or operating.

Mr. LANE. Mr. President, I should like to ask the senior Senator from Oregon, for information, if there is not an opportunity to send this bill back to conference and to have this language corrected? It is indefinite and not specific enough.

Mr. CHAMBERLAIN. Mr. President, there is not any question about the power of the Senate; they can send the report back to conference if they will; but I have not any doubt, in my own mind, as to what will be the fate of the bill if it goes back to conference and an amendment is made there which would not be acceptable to the other House. This matter was very thoroughly discussed there, and was very thoroughly discussed in the Senate. It is simply a question of passing the bill with that language in it, subject to criticism, or defeating the bill with language in it which meets the concurrence of the whole Senate.

Mr. CLARK of Wyoming. Mr. President, I do not exactly understand the Senator. Do I understand that, if this bill goes back to conference, there is no possibility of an easy adjustment of a matter which is not really a matter of dispute? I do not understand that there is any dispute as to the real desire of both Houses of Congress in this matter.

Mr. CHAMBERLAIN. I think, Mr. President, that we discussed this matter at very great length—this very clause—and I do not believe it would be possible to change the language of the bill with the possibility of again getting it through both bodies.

Mr. CLARK of Wyoming. Certainly the conference committee have no other desire, as I have understood from the discussion, than to give the discretion to the President as to which he should do—leasing the roads or operating them under Governmental control. I understand that that is the purpose of the conference. Now, it has developed in the discussion on the floor that that purpose is not carried out in the view of some of the Members of the Senate by the language of the conference report. I can hardly understand, if we send the report back with the simple suggestion of a change in the language so as to meet the view of both the House and the Senate conferees and the House and Senate, how it would endanger the bill.

Mr. LANE. That was my object. I understood from one of the members of the committee, at least I gained the impression, that perhaps it would not be a difficult matter to arrange when their atttention is called to the effect of what in my opinion is rather an important matter.

I am in favor of the railway in Alaska and the opening up of that country, but I want to see the money expended in a way which will be of the greatest benefit to the people of Alaska and in which the Government will take the fewest chances of making a failure in the expenditure of the money. If this binds the Government to the construction of a railroad at the end of an existing road, so that the Government will not be in possession of an outlet to the sea in addition, and then it is to come up in contact with a glacier or buy an interest in a glacier, I am opposed to it. I would as soon own a railroad across a live and active volcano as I would one crossing in front of a glacier. I would be put out of my misery quicker perhaps with the volcano, but not more surely than I would in bucking a glacier.

Another thing I think should be made clear, and that is that it is the wish of this body, as I think it is, that the Government, through the President, should operate this road, as the first choice, instead of to lease it. The President is instructed, almost ordered, to lease the road, and in the event that he fails to do so, then he may operate it. I think that clause is open to difference of construction and will do harm in the future. I fear that it is going to lead to trouble, and that it ought to be changed. I should like to ask the committee themselves if they could not agree to take the bill back to conference for a few days and see if that language can not be improved so as to make it more clear and make sure that the bill will accomplish the results which we all want to attain.

I do not like to vote against the adoption of this conference report, yet I feel almost as if I were bound to do so. I think the language is loosely drawn and that we are not going to get the benefit that we should receive or have the assurance of results that we should achieve in the expenditure of so large a sum of money.

Mr. CUMMINS. Mr. President, I am unwilling to believe that a reconsideration of the questions that have been presented to-day in the light of the argument that has been made upon the conference report will imperil the passage of the bill. I am not impressed with these vague suggestions that somebody who formerly was for the bill will at another time be against the bill. I have too much confidence in the stability of human nature; I have too much confidence in the prepared and reflective judgment of Members of Congress; I have too much con-

fidence in the justice of the end sought in this bill to be at all alarmed with regard to its ultimate fate. It will pass Congress, and it ought to pass Congress, but it ought not to pass until we have made every fair and reasonable effort to secure those things that we believe ought to be secured.

The argument or address made by the senior Senator from Washington [Mr. JONES] has greatly strengthened the attempt that I made in an earlier part of the day to show that the bill should be changed. I especially ask the attention of the Senator from Nevada [Mr. PITTMAN], the Senator from Oregon [Mr. CHAMBERLAIN], and the Senator from Washington [Mr. JONES]. The Senator from Washington says that the proper interpretation of the bill as reported by the conference committee requires the President to acquire a railroad or two railroads from the sea to the interior of Alaska. I should like to know from the Senator from Oregon and the Senator from Nevada whether they concur in that interpretation?

Mr. CHAMBERLAIN. So far as I am concerned, Mr. President, my interpretation of the bill is that the President is required to construct a road from tidewater into the interior of Alaska, to the navigable waterways in Alaska. In locating and constructing that road he is at liberty to parallel any line that is built there or to build a line over any route he wants to or, if he finds it is cheaper and better for the Government of the United States, he can acquire a road already constructed.

Mr. CUMMINS. Precisely. I should like to know if the Senator from Nevada holds that view.

Mr. PITTMAN. Mr. President, I hold that view, and I also hold the view that the President can be trusted to build that road properly; that he can be trusted to build it from the seacoast to the interior, instead of from the interior to the seacoast, and therefore I see no necessity for amending the bill.

Mr. CUMMINS. I may say, in passing, that I do not concur in that interpretation of the bill as reported by the conference committee, but for the purposes of this argument I accept it. So we are finally reduced to this issue: The conference committee has a bill which requires the acquisition of a railroad or two railroads from the southern shore of Alaska into the interior, and the authority and direction given to the President would not be fulfilled until the Government had acquired such a railroad or railroads.

The proposal that I make is that, before we expend money in the extension of railroads already there, some provision be made for the acquisition of the railroads that are there, if they are to form a part of the governmental line. The proposal of the conference committee is that the President shall be authorized to extend these lines and then acquire the roads already there. The issue is nicely defined; it is clear-cut.

I do not want to give the President of the United States or any other person the authority to build a line of railroad from the northern terminus of either of the railroads there until we know whether we are to acquire the existing lines and what will be the cost of acquiring the existing lines. I am so fully persuaded that this position is unassailable that I intend to vote for a motion to recommit the report to the conference committee.

Mr. CHAMBERLAIN. Mr. President, may I call the Senator's attention to the fact—I know the Senator wants to be fair—that this bill provides, as the Senator will see if he will refer to the conference report, in express terms that the President shall have the power to construct a railroad? It provides that he shall have the power—

> To designate and cause to be located a route or routes for a line or lines of railroad in the Territory of Alaska not to exceed in the aggregate 1,000 miles, to be so located as to connect one or more of the open Pacific Ocean harbors on the southern coast of Alaska with the navigable waters in the interior of Alaska.

That is the power given to him to designate and to locate a route from tidewater, from one of the open ports to the interior of Alaska. The Senator suggests that the President has not power to acquire, if he wants to acquire, one of the roads that has already been constructed; but that power is expressly given him if he sees fit to acquire the road, and the methods are pointed out by the bill itself, because it says, in express terms, if the Senator will pardon me for just a moment, that the President shall have power—

> to purchase—

This is further down in the bill, defining further his powers—

> to purchase, condemn, or otherwise acquire upon such terms as he may deem proper any other line or lines of railroad in Alaska which may be necessary to complete the construction of the line or lines of railroad designated or located by him.

And the use is declared a public use, and the power of eminent domain is conferred upon him. What more power could you give the President?

Mr. CUMMINS. Mr. President, I have not questioned that.

Mr. CHAMBERLAIN. The Senator said a little while ago that the President did not have the power——

Mr. CUMMINS. Not at all.

Mr. CHAMBERLAIN. And insisted that the power should be given him; and not only that, but that Congress should be advised practically what it would cost him to acquire that road if he saw fit to acquire it.

Mr. CUMMINS. I have no doubt whatever that the President has the power of acquiring those railroads under this act. I have no doubt that he may designate the route, the location of the line, from any of the harbors on the south coast to the north, but if it is the purpose of the United States to acquire either of the railroads which are there now, I want the cost of that railroad to be ascertained before we have made it valuable by the extension of the line.

Mr. CHAMBERLAIN. Mr. President, just a moment. I suggest to the Senator that the radical difference between the Senator and myself is that I have absolute confidence in the integrity of purpose and the ability of the President to do the right thing, which the Senator does not seem to have; and there is not a bit more power conferred upon the President of the United States in this case than was conferred upon the President with reference to the Panama Canal.

Mr. CUMMINS. Oh, vastly more, Mr. President.

Mr. CHAMBERLAIN. I do not think so.

Mr. CUMMINS. There is no comparison between the two, but I will not enter upon that inquiry.

I have confidence in the Senator from Oregon; but if I were a millionaire, which I am not, and I were about to invest my money in the building of a railroad in Alaska, I would not be willing to say to the Senator from Oregon, "Go on and build this railroad wherever you like; acquire whatever roads you want to acquire; and not only acquire whatever roads you want to acquire, but when you want to acquire them." I think the custodians of the public purse ought to have a little more regard for the rights of the people than to repose such vast, unlimited, and unrestricted authority in the hands of any one man. The same reasoning would lead us to the opinion that this country ought to be governed by a single man, without limitation as to law, without limitation put about him by any representative body of men. I know the Senator from Oregon does not mean that, and yet such it seems to me is the tendency of the times.

Mr. President, if the suggestion that I have made prevents but one thing—and that is a thing which every Senator here has declared ought not to be done—I do not know why we should bestow the power upon the President to do it.

Moreover, the Senator from Oregon has great confidence, as have I, in the Chief Executive. Years may elapse before the full authority granted by this bill is exercised, and we can not assume—I am sure the Senator from Oregon will not assume—that every man who may occupy the presidential office can hold his confidence in the same high and complete degree that is true of the present occupant of that office.

Moreover, the Senator from Nevada and the Senator from Oregon have both said that the only objection raised upon the part of the House conferees, the only objection on the part of the House itself, is that in some fashion the Senate bill might be used to the advantage of the owners of the Copper River & Northwestern Railroad. I can not believe that any such suggestion was ever made sincerely; but grant that it was, it is the easiest thing in the world for the conferees to remove that objection and to phrase this idea in such language as to make it incapable of being construed, even by one who is opposed to the bill itself, to any such effect. Therefore it seems to me that the report should be recommitted, and that we should make one more earnest and sincere effort to do the thing that every Senator here agrees should be done.

I made a motion, Mr. President, when I was on my feet before, but I have been advised by those who are more skillful than I in parliamentary law that there are some things included in it that can not be properly embraced in the motion to recommit. I therefore withdraw that motion, and simply move to recommit the conference report to the conferees.

Mr. PITTMAN. Mr. President, I rise to a point of order.

The VICE PRESIDENT. The Senator from Nevada will state his point of order.

Mr. PITTMAN. I make the point of order that that motion is not in order; that it is involved in the original motion to agree to the conference report.

Mr. JONES. Mr. President, I was just going to suggest to the Senator from Iowa that the proper course would be to vote down the motion to agree to the conference report, and then, if that is done, he can make the motion to recommit.

Mr. GALLINGER. Mr. President, if Senators will turn to the precedents they will find that it has been frequently ruled—never otherwise except in one instance, and that ruling was subsequently overruled—that a motion to recommit is in order. I read from Gilfry's Precedents:

Mr. Sherman, the President pro tempore, on January 14, 1887, decided that a motion to recommit the conference report on the bill "to regulate commerce," with instructions, was not in order, according to a previous decision of the Senate. * * * He held a simple motion to recommit in order.

The same ruling was made by Mr. Edmunds and others. So I think, Mr. President, the precedents of the Senate justify the Senator from Iowa in making his motion.

I would refer to page 189, the fourth paragraph, headed "Conference reports may be recommitted." I shall not stop to read it. The first sentence is:

It is in order in the Senate to recommit a conference report to the committee of conference, but not with instructions.

And it is elaborated.

The VICE PRESIDENT. The Chair is of opinion, of course, that it is in order to recommit a conference report; but the Chair, as now constituted, is of the opinion that the original motion to agree to the conference report is first in order. That does not prevent its being sent back to conference if the original motion is not adopted.

Mr. GALLINGER. I shall not take issue with the Chair; but it seems to me that under the precedents of the Senate the motion made by the Senator is manifestly in order at the present time.

The VICE PRESIDENT. The Chair has been looking up the matter all day, and there are precedents on all sides of the question.

Mr. GALLINGER. I have not found the others, but perhaps they exist.

The VICE PRESIDENT. It seems to the Chair that it is not at all material which motion is put first, because the result will be exactly the same.

Mr. CUMMINS. I shall not attempt to discuss the question of order, because I do not feel competent to speak upon the parliamentary law relating to the subject; but it seems to me that a motion to recommit ought to take precedence of a motion to agree. The Senators can not fairly express their views upon the subject upon the motion to agree until they have tested or voted upon the question of recommitment. However, I am not sufficiently familiar with the matter to advise the Chair, and therefore must submit to whatever ruling the Chair may make.

The VICE PRESIDENT. The Chair is not at all desirous of being arbitrary about the matter; but it is the impression of the Chair that if the Senate wants the bill to go back to conference it will not agree to the conference report.

Mr. LODGE. Mr. President, if I may be permitted to say so, the principle which underlies all motions in regard to conference reports is that the motion must have precedence which tends most quickly to bring the two Houses into accord. I think that general principle is maintained by all the best writers on the subject—that the motion that will bring the Houses together most quickly has precedence. Therefore a motion to concur must take precedence of any other motion, according to that general principle, which I believe to be a sound one.

If the conference report is disagreed to, then it is unquestionably open to asking for a new conference, to appointing conferees with instructions, to recommittal, or to anything that the body chooses to do. I confess, however, that I do not see how you can set aside the motion which will bring the two Houses most quickly into accord.

Mr. GALLINGER. Without desiring to enter into any controversy about the matter, I will ask the Senator a question. If the conference report is rejected, will it not automatically go back to the conferees?

Mr. LODGE. Not necessarily. It will not go back to the conferees unless steps are taken to send it back to the conferees.

Mr. GALLINGER. I think the Senator is mistaken in that.

Mr. LODGE. I think not. I think this body is not bound to have a further conference unless it asks for it. It may want new conferees, and it is open to it to appoint them then. My point goes simply to the general principle governing what I think is the precedence of the motion.

The VICE PRESIDENT. Unless there is an appeal from the ruling of the Chair, the question is, Shall the Senate agree to the conference report?

Mr. CUMMINS. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Gore | Martine, N. J. | Sheppard |
| Bankhead | Gronna | Norris | Shields |
| Brady | Hughes | Oliver | Smith, Ga. |
| Brandegee | James | Overman | Smith, Md. |
| Bristow | Jones | Owen | Smith, Mich. |
| Bryan | Kenyon | Page | Smoot |
| Burton | Kern | Perkins | Sutherland |
| Catron | La Follette | Pittman | Thomas |
| Chamberlain | Lane | Poindexter | Thompson |
| Chilton | Lea, Tenn. | Pomerene | Thornton |
| Clapp | Lee, Md. | Ransdell | Townsend |
| Clark, Wyo. | Lewis | Reed | Weeks |
| Cummins | Lodge | Robinson | West |
| Dillingham | McCumber | Saulsbury | Williams |
| Gallinger | Martin, Va. | Shafroth | |

Mr. SHEPPARD. I wish to announce the unavoidable absence of the junior Senator from Mississippi [Mr. VARDAMAN] on account of illness. I also wish to announce the unavoidable absence of my colleague, the senior Senator from Texas [Mr. CULBERSON], and to say that he is paired with the senior Senator from Delaware [Mr. DU PONT].

Mr. REED. I announce the unavoidable absence of my colleague [Mr. STONE] on account of illness. He is paired with the senior Senator from Wyoming [Mr. CLARK].

Mr. OVERMAN. I desire to announce that my colleague [Mr. SIMMONS] is unavoidably absent on account of sickness.

The VICE PRESIDENT. Sixty Senators have answered to the roll call. There is a quorum present.

Mr. GRONNA. Mr. President, I am not opposed to this bill. I voted for it when it passed the Senate. I do believe, however, that it should be recommitted to the committee of conference so that the provisions that seem to be ambiguous may be made plain. Knowing, as I do, the patriotism of the membership of the other House, I can not believe that it would in any way endanger this bill to send it back to the committee of conference in order to have its provisions made plain.

It seems to me that there is but one interpretation to be placed on this language. The language of the bill makes it the duty of the President of the United States to lease these railroads, but in the event of failure to lease them he may operate them. I shall vote against the adoption of the conference report, but not because I am opposed to the legislation. I heartily favor the appropriation of this amount of money by the United States for the purpose of constructing and operating, but I believe the Government should operate as well as construct a railroad in Alaska. I can not, however, make myself believe that we should pass this bill in such form that it can be misunderstood by anybody. I believe it is our duty to make the language so plain that it can not be misconstrued. Certainly it seems to me the membership of this body and the membership of the other body should be able to write a statute so plain that it could not be misunderstood.

No one can have any higher opinion than I have of the honesty, the integrity, or the good judgment of the President of the United States; but it is our duty to make the law plain. It is our duty to write it in such language that it can not be misunderstood.

I believe there is at least one provision in this bill that is ambiguous. I believe the bill should go back to the conference and be corrected, and if is not sent back and corrected I can not vote for the conference report.

The VICE PRESIDENT. The question is upon agreeing to the conference report.

Mr. CUMMINS. Upon the pending question I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CLARK of Wyoming (when his name was called). I have a general pair with the senior Senator from Missouri [Mr. STONE], who is detained from the Senate by illness. I transfer that pair to the senior Senator from Illinois [Mr. SHERMAN] and will vote. I vote "nay."

Mr. CATRON (when Mr. FALL's name was called). My colleague is necessarily absent.

Mr. KERN (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. BRADLEY], which I transfer to the senior Senator from Maine [Mr. JOHNSON] and will vote. I vote "yea."

Mr. SAULSBURY (when his name was called). I transfer my general pair with the junior Senator from Rhode Island [Mr. COLT] to the junior Senator from Virginia [Mr. SWANSON] and will vote. I vote "yea."

Mr. OVERMAN (when Mr. SIMMONS's name was called). I again announce the unavoidable absence of my colleague [Mr. SIMMONS] on account of sickness.

Mr. SUTHERLAND (when his name was called). I have a pair with the senior Senator from Arkansas [Mr. CLARKE], who is absent. Not knowing how he would vote upon this question, I withhold my vote.

Mr. WALSH (when his name was called). I am paired with the senior Senator from Rhode Island [Mr. LIPPITT]. During his absence I withhold my vote.

Mr. WILLIAMS (when his name was called). I have a pair with the senior Senator from Pennsylvania [Mr. PENROSE] and therefore withhold my vote. If he were present and I were at liberty to vote, I should vote "nay."

The roll call was concluded.

Mr. LEA of Tennessee. I am paired with the senior Senator from South Dakota [Mr. CRAWFORD], and on account of his absence withhold my vote. If at liberty to vote, I should vote "yea."

Mr. CHILTON (after having voted in the affirmative). I inadvertently voted a moment ago. I have a pair with the senior Senator from New Mexico [Mr. FALL], and therefore withdraw my vote.

Mr. BANKHEAD (after having voted in the affirmative). I have a general pair with the junior Senator from West Virginia [Mr. GOFF]. I transfer that pair to the junior Senator from Mississippi [Mr. VARDAMAN], and will allow my vote to stand.

Mr. WILLIAMS. Since making the announcement which I made a few moments ago, the junior Senator from Pennsylvania [Mr. OLIVER] informs me that if his colleague were present he would vote "nay" upon this question, the same way I would vote. I therefore take the liberty of voting. I vote "nay."

Mr. SMOOT. I desire to announce that the senior Senator from New Mexico [Mr. FALL] is unavoidably detained from the Senate. He has a pair with the senior Senator from West Virginia [Mr. CHILTON].

Mr. DU PONT. I have a general pair with the senior Senator from Texas [Mr. CULBERSON]. I transfer that pair to the junior Senator from Wisconsin [Mr. STEPHENSON] and will vote. I vote "nay."

Mr. CLAPP (after having voted in the negative). I have a general pair with the senior Senator from North Carolina [Mr. SIMMONS]. I notice that he is absent. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH], and will allow my vote to stand.

The result was announced—yeas 42, nays 29, as follows:

So the conference report was agreed to.

RELIEF OF SUFFERERS FROM FLOODS IN TEXAS (S. DOC. NO. 444).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, transmitting a letter from the Secretary of War submitting an estimate of appropriation in the sum of $9,709.71 to reimburse certain appropriations of the Quartermaster Corps for the value of supplies furnished for the relief of sufferers from the floods prevailing in Texas during the month of December, 1913, which, with the accompanying papers, was referred to the Committee on Military Affairs and ordered to be printed.

ESTIMATES OF APPROPRIATIONS (S. DOC. NO. 445).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, submitting items of appropriation for consideration in connection with the urgent deficiency appropriation bill, one involving an appropriation for the marine hospital, San Francisco, Cal., $8,000, and the other embracing a credit in the accounts of S. R. Jacobs, disbursing clerk, Treasury Department, $3.61, which was referred to the Committee on Appropriations and ordered to be printed.

PETITIONS AND MEMORIALS.

Mr. KERN. I present a number of memorials, signed by 550 members of the Alliance of German Societies in the State of Indiana, and also a number of memorials, signed by 305 citizens of Indianapolis, Ind., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages. I ask that the memorials may be received and referred to the Committee on the Judiciary.

The VICE PRESIDENT. The memorials will be referred to the Committee on the Judiciary.

Mr. KERN presented petitions, signed by 200 citizens of Bicknell, 600 citizens of Warren, 300 citizens of Richmond, 450 citizens of Knightstown, and 200 citizens of Liberty, all in the State of Indiana, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, or importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of Stone River Post, No. 65, Grand Army of the Republic, Department of Indiana, and a memorial of Rich Mountain Post, No. 42, Grand Army of the Republic, Department of Indiana, and of Rich Mountain Corps, No. 125, Woman's Relief Corps, of Lebanon, Ind., remonstrating against any change being made in the United States flag, which were referred to the Committee on the Judiciary.

Mr. OLIVER presented a memorial of General Francis Marion Branch, American Continental League, of Philadelphia, Pa., and a memorial of Rochambeau Branch, American Continental League, of Philadelphia, Pa., remonstrating against an appropriation for the celebration of the so-called "One hundred years of peace among English-speaking peoples," which were referred to the Committee on Foreign Relations.

He also presented petitions of Hazel Glen Lodge, No. 1043, Independent Order of Odd Fellows, of Pittsburgh; of Conshohocken Council, No. 241, Order of Independent Americans, of Conshohocken; of Washington Camp, No. 576, Patriotic Order Sons of America, of Halifax; of Washington Camp, No. 329, Patriotic Order Sons of America, of Reading; of Washington Camp, No. 585, Patriotic Order Sons of America, of Grover; of sundry citizens of Ellwood City; of Washington Camp, No. 557, Patriotic Order Sons of America, of Lancaster; of sundry citizens of Rankin, Swissvale, Braddock, and Wilkinsburg; and of Washington Camp, No. 303, Patriotic Order Sons of America, of Philadelphia, all in the State of Pennsylvania, praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

He also presented memorials of sundry citizens of Pittsburgh, Scranton, Etna, Sharpsburg, Allegheny County, and McKeesport; of Glass Bottle Blowers' Association, Branch No. 10, of Royersford; and of Local Union No. 107, Cigarmakers' International Union of America, of Erie, all in the State of Pennsylvania, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. CLAPP presented memorials of sundry citizens of Moorhead and Lakefield, in the State of Minnesota, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Fish Lake, Sauk Center, Minneapolis, St. Paul, Farmington, Mankato, Owatonna, Hanley Falls, Crookston, and Duluth, all in the State of Minnesota, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on Immigration.

He also presented petitions of sundry citizens of Spring Grove, Minn., praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

Mr. DU PONT presented memorials of sundry citizens of Greenville and Newport, in the State of Delaware, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. NELSON presented memorials of sundry citizens of Lakefield, Sebeka, and Moorhead, all in the State of Minnesota, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importa-

tion of intoxicating beverages, which were referred to the Committee on the Judiciary

He also presented petitions of sundry citizens of Minneapolis, Duluth, Alexandria, Vernon Center, Park Rapids, Pequot, Kasson, Blue Earth, Hallock, and Windom, all in the State of Minnesota, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. SHIVELY presented a memorial of Rich Mountain Post, No. 42, Department of Indiana, Grand Army of the Republic, and of Rich Mountain Corps, No. 125, Woman's Relief Corps, of Lebanon, Ind., remonstrating against any change being made in the United States flag, which was referred to the Committee on the Judiciary.

He also presented a petition of the Christian Temperance Society, of Berne, Ind., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. McLEAN presented a petition of Frederick A. Hill Camp, No. 15, United Spanish War Veterans, of Stamford, Conn., praying for the enactment of legislation granting pensions to widows and orphans of soldiers and sailors who served in the Spanish-American War, which was referred to the Committee on Pensions.

Mr. SMITH of Michigan presented a memorial of Stanton Post, No. 37, Grand Army of the Republic, Department of Michigan, of Stanton, Mich., remonstrating against any change being made in the United States flag, which was referred to the Committee on the Judiciary.

He also presented a petition of the Shiawassee County Medical Society of Michigan, praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented memorials of the Federation of Labor of Flint, Mich., and of sundry citizens of Detroit, Battle Creek, and Lansing, all in the State of Michigan, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented resolutions adopted by the Parliamentary Study Club, of Detroit, Mich., favoring an appropriation for the control and regulation of rivers and for the prevention of floods, which were referred to the Committee on Commerce.

Mr. TOWNSEND presented memorials of the Arbeiter Society, West Side, of Saginaw, and of sundry citizens of Detroit, Lansing, Battle Creek, Mount Pleasant, Flint, and Owosso, all in the State of Michigan, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented petitions of Evan W. Cornell, of Adrian; of the congregation of the Church of Christ, of Adrian, and of the faculty of Adrian College, of Adrian, all in the State of Michigan, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of the Parliamentary Study Club, of Detroit, Mich., praying that an appropriation be made for the control and prevention of floods and for the regulation of the waterways of the country, which was referred to the Committee on Commerce.

He also presented a petition of Fisher Grange, No. 790, Patrons of Husbandry, of Harrisville, Mich., praying for the enactment of legislation to establish a system of rural credits, which was referred to the Committee on Banking and Currency.

Mr. LODGE presented petitions of Colonel E. R. Shumway Camp, No. 28, United Spanish War Veterans, of Worcester, Mass., praying for the enactment of legislation to grant pensions to widows and minor children of soldiers of the Spanish-American War, which were referred to the Committee on Pensions.

Mr. BRANDEGEE presented a petition of Frederick A. Hill Camp, No. 15, United Spanish War Veterans, of Stamford, Conn., praying for the enactment of legislation to grant pensions to widows and minor children of soldiers and sailors of the Spanish-American War, which was referred to the Committee on Pensions.

He also presented a petition of Ben Miller Council, No. 11, Junior Order United American Mechanics, of Danbury, Conn., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

Mr. CHILTON presented resolutions adopted by the Trans-Alleghany Good Roads Association at a meeting held at Union, W. Va., favoring the enactment of legislation for the construction of good roads, which were referred to the Committee on Agriculture and Forestry.

### BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JONES:

A bill (S. 4735) granting an increase of pension to Brazil Van Dusen; to the Committee on Pensions.

By Mr. DILLINGHAM:

A bill (S. 4736) granting an increase of pension to John W. Preston (with accompanying papers); to the Committee on Pensions.

By Mr. OLIVER:

A bill (S. 4737) granting an increase of pension to Susan Arthur (with accompanying papers); to the Committee on Pensions.

By Mr. LODGE:

A bill (S. 4738) for the relief of Frances L. Snell (with accompanying papers); to the Committee on Claims.

By Mr. McLEAN:

A bill (S. 4739 granting an increase of pension to Daniel L. Tallcott (with accompanying papers); and

A bill (S. 4740) granting an increase of pension to William L. Wilson (with accompanying papers); to the Committee on Pensions.

By Mr. SUTHERLAND:

A bill (S. 4741) for the protection of the water supply of the city of Salt Lake City, Utah; to the Committee on Public Lands.

By Mr. BRISTOW:

A bill (S. 4742) granting an annuity equivalent to $30 per month to officers and enlisted men of the United States Army, Navy, and Marine Corps who have been awarded medals of honor for gallantry and heroism involving great personal peril, and authorizing the President of the United States to make rules and regulations for carrying the act into effect; to the Committee on Military Affairs.

A bill (S. 4744) granting a pension to James S. Holmes (with accompanying papers);

A bill (S. 4745) granting an increase of pension to Anthony Headley (with accompanying papers);

A bill (S. 4746) granting an increase of pension to James E. Horn (with accompanying papers);

A bill (S. 4747) granting a pension to Harrison Fox (with accompanying papers);

A bill (S. 4748) granting an increase of pension to James Fowler (with accompanying papers);

A bill (S. 4749) granting a pension to Arch B. Crawford (with accompanying papers);

A bill (S. 4750) granting a pension to William B. Ingraham (with accompanying papers);

A bill (S. 4751) granting an increase of pension to Marcene Harvey (with accompanying papers);

A bill (S. 4752) granting a pension to Hugh Chambers (with accompanying papers);

A bill (S. 4753) granting a pension to Jesse Craft (with accompanying papers);

A bill (S. 4754) granting an increase of pension to Sampson H. Wade (with accompanying papers);

A bill (S. 4755) granting a pension to Elizabeth G. Wood (with accompanying papers);

A bill (S. 4756) granting a pension to Anna Warthan (with accompanying papers);

A bill (S. 4757) granting a pension to Henry Totten (with accompanying papers);

A bill (S. 4758) granting a pension to Allen R. Vickers (with accompanying papers);

A bill (S. 4759) granting a pension to M. M. Sayre (with accompanying papers);

A bill (S. 4760) granting a pension to Susan Brobst (with accompanying papers);

A bill (S. 4761) granting a pension to Fannie A. Bordeaux (with accompanying papers);

A bill (S. 4762) granting an increase of pension to Azuba Burch (with accompanying papers);

A bill (S. 4763) granting a pension to John R. Boso (with accompanying papers);

A bill (S. 4764) granting a pension to Homer T. Bowling (with accompanying papers);

A bill (S. 4765) granting a pension to Elizabeth Pierson (with accompanying papers);

A bill (S. 4766) granting an increase of pension to Lucinda E. Nelson (with accompanying papers);

A bill (S. 4767) granting an increase of pension to Martin V. Penwell (with accompanying papers);

A bill (S. 4768) granting an increase of pension to George G. Young (with accompanying papers);

A bill (S. 4769) granting a pension to Riley Adkins (with accompanying papers);

A bill (S. 4770) granting a pension to Ebb Workman (with accompanying papers);

A bill (S. 4771) granting a pension to J. C. Matheny (with accompanying papers);

A bill (S. 4772) granting a pension to David McCollum (with accompanying papers);

A bill (S. 4773) granting a pension to Calvin S. Morehead (with accompanying papers);

A bill (S. 4774) granting a pension to George D. Miles (with accompanying papers);

A bill (S. 4775) granting a pension to Samuel W. Reid (with accompanying papers);

A bill (S. 4776) granting a pension to Bernard Savage (with accompanying papers);

A bill (S. 4777) granting a pension to Mary E. Sheppard (with accompanying papers);

A bill (S. 4778) granting a pension to Abraham Lanham (with accompanying papers);

A bill (S. 4779) granting a pension to James Lynch (with accompanying papers);

A bill (S. 4780) granting an increase of pension to Theresa Reed;

A bill (S. 4781) granting an increase of pension to Granville Lanham (with accompanying papers);

A bill (S. 4782) granting an increase of pension to Sarah J. Deboe (with accompanying paper);

A bill (S. 4783) granting a pension to Nancy J. Johnston (with accompanying papers);

A bill (S. 4784) granting a pension to Sarah M. Goff (with accompanying paper);

A bill (S. 4785) granting an increase of pension to James H. Givens (with accompanying papers);

A bill (S. 4786) granting an increase of pension to Emmie M. Lemley (with accompanying paper);

A bill (S. 4787) granting a pension to G. W. Johnson (with accompanying papers);

A bill (S. 4788) granting an increase of pension to Wilson Jones (with accompanying paper);

A bill (S. 4789) granting an increase of pension to Cyrus Traugh;

A bill (S. 4790) granting an increase of pension to J. Forsyth Harrison;

A bill (S. 4791) granting an increase of pension to Mrs. M. C. Henderson; and

A bill (S. 4792) granting a pension to Eliza Ganoe-Gilbert; to the Committee on Pensions.

A bill (S. 4793) for the relief of P. H. Harper (with accompanying paper);

A bill (S. 4794) for the relief of George Miller (with accompanying paper);

A bill (S. 4795) for the relief of the Hurricane Baptist Church, Hurricane, W. Va. (with accompanying paper);

A bill (S. 4796) for the relief of Sarah Miller (with accompanying papers);

A bill (S. 4797) for the relief of Drusilla Adkins (with accompanying papers);

A bill (S. 4798) for the relief of F. F. Morris (with accompanying paper);

A bill (S. 4799) for the relief of the heirs of John R. McClanahan (with accompanying papers);

A bill (S. 4800) for the relief of G. N. McClung (with accompanying paper);

A bill (S. 4801) for the relief of the administrator of the estate of Isaac C. Miller (with accompanying papers);

A bill (S. 4802) for the relief of the legal representatives of George W. McGinnis (with accompanying papers);

A bill (S. 4803) for the relief of Leroy Douglas (with accompanying papers);

A bill (S. 4804) for the relief of Wildly Lodge, Charles Town, W. Va. (with accompanying paper);

A bill (S. 4805) for the relief of the heirs of George W. Craig (with accompanying papers);

A bill (S. 4806) for the relief of W. H. Cooper (with accompanying papers);

A bill (S. 4807) for the relief of the heirs of Henry Conley (with accompanying papers);

A bill (S. 4808) for the relief of C. F. Cook, administrator of John Cook (with accompanying papers);

A bill (S. 4809) for the relief of M. E. Russell (with accompanying papers);

A bill (S. 4810) for the relief of Oakaley Randall (with accompanying papers);

A bill (S. 4811) for the relief of James A. Showen (with accompanying paper);

A bill (S. 4812) for the relief of the legal representatives of Isaac Stanley, deceased (with accompanying papers);

A bill (S. 4813) for the relief of George W. Stanley (with accompanying paper);

A bill (S. 4814) for the relief of the Methodist Episcopal Church and the Presbyterian Church, Keyser, W. Va. (with accompanying papers);

A bill (S. 4815) for the relief of the heirs of James L. Pyne, deceased (with accompanying paper);

A bill (S. 4816) for the relief of James W. Ward (with accompanying papers);

A bill (S. 4817) for the relief of the legal representatives of J. W. West, deceased (with accompanying papers);

A bill (S. 4818) for the relief of Celicia Jordon (with accompanying papers);

A bill (S. 4819) for the relief of the heirs of J. G. Hayman, deceased (with accompanying papers);

A bill (S. 4820) for the relief of Emma N. Warwick (with accompanying papers);

A bill (S. 4821) for the relief of J. P. Huddleston (with accompanying papers);

A bill (S. 4822) for the relief of the heirs of L. B. Lawson;

A bill (S. 4823) for the relief of J. B. Johnson;

A bill (S. 4824) for the relief of the heirs of Russell White;

A bill (S. 4825) for the relief of Andrew J. Weese;

A bill (S. 4826) for the relief of the heirs of Elias W. Phares, deceased;

A bill (S. 4827) for the relief of Granville Perry;

A bill (S. 4828) for the relief of the estate of Philip Null, deceased;

A bill (S. 4829) for the relief of Daniel Nihoof;

A bill (S. 4833) for the relief of Frances Arbogast;

A bill (S. 4834) for the relief of the trustees of the Baptist college at Blue Sulphur, W. Va.;

A bill (S. 4835) for the relief of J. D. Coleman;

A bill (S. 4836) for the relief of the heirs of William Ewing, deceased;

A bill (S. 4837) for the relief of Anthony Lawson;

A bill (S. 4838) for the relief of heirs of Mary A. Rock, deceased;

A bill (S. 4839) for the relief of J. R. Clifford; and

A bill (S. 4840) for the relief of Mrs. C. A. Smith; to the Committee on Claims.

A bill (S. 4841) to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia; to the Committee on Commerce.

A bill (S. 4842) for the relief of David N. Kinkaid (with accompanying paper); to the Committee on Military Affairs.

A bill (S. 4843) to amend section 4 of the act entitled "An act to provide for a permanent census office," approved March 6, 1902; to the Committee on the Census.

By Mr. OWEN:

A bill (S. 4844) to indemnify depositors in "member banks" as defined by the Federal reserve act, against loss in the event of the failure or suspension of business of such bank; to the Committee on Banking and Currency.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. NELSON submitted an amendment authorizing the Secretary of the Treasury to place upon the books of the Treasury to the credit of that portion of the Wisconsin Band of Pottawatomie Indians in the States of Wisconsin and Michigan the sum of $426,672.33, etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

Mr. LODGE submitted an amendment providing that all permanent officers of the Quartermaster's Corps created by the act of August 24, 1912, on the active list and below the grade of brigadier general shall be arranged in each grade according to the date of original entry into either the Quartermaster's, Subsistence, or Pay Departments of the Army, etc., intended to be proposed by him to the Army appropriation bill, which was referred to the Committee on Military Affairs and ordered to be printed.

Mr. JONES submitted an amendment proposing to appropriate $500 for assisting the county commissioners of Stevens County, Wash., in the construction of a county road across the Spokane Indian Reservation, etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

Mr. FLETCHER submitted an amendment intended to be proposed by him to the river and harbor appropriation bill, which was referred to the Committee on Commerce and ordered to be printed.

### OMNIBUS CLAIMS BILL.

Mr. CHILTON submitted two amendments intended to be proposed by him to the omnibus claims bill, which were referred to the Committee on Claims and ordered to be printed.

### HEARINGS BEFORE THE COMMITTEE ON MANUFACTURES.

Mr. REED submitted the following resolution (S. Res. 290), which was read and referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved*, That the Committee on Manufactures or any subcommittee thereof be, and the same is hereby, authorized to employ a stenographer from time to time, as may be necessary, to report such hearings as may be had on bills or other matters pending before said committee, and that said stenographer be paid as compensation not to exceed $1 per printed page, out of the contingent fund of the Senate.

Mr. REED subsequently, from the Committee to Audit and Control the Contingent Expenses of the Senate, to which had been referred the foregoing resolution, reported it without amendment, and it was considered by unanimous consent and agreed to.

### CHARLESTON (S. C.) COALING STATION.

Mr. TILLMAN. I send to the desk a resolution which I ask may be read, and then I shall ask for its immediate consideration.

The resolution (S. Res. 291) was read, as follows:

Whereas in view of the early completion of the Isthmian Canal and of its importance to the United States Navy and the national defense generally, to the development of an American merchant marine and to the development of trade with Central and South American countries, the establishment of adequate coal-supplying facilities south of Cape Hatteras is deemed imperative, and the only available harbor having sufficient depth of water for the modern battleships and larger merchant vessels, as well as extensive water frontage for the proper handling of coal, is located at Charleston, S. C.; and

Whereas the usefulness and efficiency of said harbor as a coaling station must depend upon the facilities (first) of the coal producers for reaching that port, and (second) of the coal carriers in the matter of assembling the product at the port of Charleston, including coal docks and other facilities for loading and handling, which should be accessible to all shippers and carriers alike on the same terms and conditions; and

Whereas it appears from numerous complaints now before the Interstate Commerce Commission, as well as from other sources, that the power and influence of the so-called Coal Trust is being persistently used through the management of the railroads reaching Charleston to prevent the free movement of coal not belonging to said Coal Trust, practically all of such roads being actually dominated by the same financial interests that control the great coal combines finding outlet chiefly through New York Harbor, Philadelphia, and the Chesapeake Bay ports: Now, therefore be it

*Resolved*, That the Committee on Naval Affairs be, and it is hereby, authorized and instructed to investigate the natural and strategic advantages of Charleston, S. C., as compared with Norfolk and other Chesapeake Bay ports, as a permanent point for coal distribution, and included and embraced in the scope of said investigation the said committee is further authorized and instructed to investigate into the character and proximity of the coal supply, the rates obtainable on coal from the coal fields near by Charleston Harbor and Norfolk, the relations between the railroads leading into Charleston and other South Atlantic seaports between each other and between said railroads and the owners of the bituminous coal fields of Virginia, West Virginia, Pennsylvania, Tennessee, and Kentucky, and the condition, character, and ownership of the wharfage property in said city or cities, with instructions to said committee to report to the Senate its recommendations in the premises. Said committee is authorized to sit during the sessions of the Senate and during any recess of Congress, and its hearings shall be open to the public, and it is authorized and empowered to employ counsel, coal experts, railroad-rate experts, and such other clerical and stenographic and expert assistants as it may deem necessary. Said committee shall have power to compel witnesses to testify, to send for persons and papers, to administer oaths to witnesses, and do anything necessary to arrive at all the facts. The expenses incident to the investigation herein authorized shall be paid out of the contingent fund of the Senate upon vouchers signed by the chairman of the Committee on Naval Affairs and approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

The said Committee on Naval Affairs may, in its discretion, conduct this investigation by a subcommittee of not less than seven members, to be appointed by the chairman, and shall make its report as soon as possible.

Mr. OVERMAN. Before the resolution is adopted I wish to offer an amendment to it.

Mr. WARREN. It can not be agreed to now, Mr. President.

Mr. OVERMAN. I understand it is not going to be adopted at this time; but I wish to suggest to the Senator that when it goes to the committee he add after "Charleston" the cities of "Southport and Wilmington, N. C."

Mr. TILLMAN. Put the words between "Norfolk" and "Charleston."

Mr. SWANSON. This resolution has been offered for reference, has it not?

Mr. TILLMAN. Yes; it will go to the Committee on Naval Affairs.

Mr. SWANSON. It goes to the Committee on Naval Affairs with full opportunity for amendment and vote?

Mr. TILLMAN. Certainly.

Mr. SWANSON. Then I have no objection to its reference.

The VICE PRESIDENT. The resolution will be referred to the Committee on Naval Affairs and printed.

Mr. TILLMAN. I desire to submit statements to accompany the resolution which I ask to have printed in the RECORD without reading them.

The VICE PRESIDENT. In the absence of objection, that action will be taken.

The matter referred to is as follows:

STATEMENTS.

(1) The efficiency of the fleet, and the usefulness and efficiency of Charleston as a coal-distributing center must necessarily depend upon the facilities of the coal producers for reaching that port, and of their ability to procure distributing facilities, and upon the ability of the shipping interest to procure rating and handling facilities in a manner which should be unqualifiedly accessible to all shippers and carriers alike on the same terms and conditions.

(2) The Southern Railway is dominated by financiers who are not financially interested in the coal mines of the territory traversed by the Southern Railway, but who are interested in coal properties elsewhere, and due to the power and influence of these men, it is believed that the Southern Railway is not allowed to move coal through the port of Charleston, which coal might become competitive to their larger interests elsewhere.

(3) As a concrete example of the flagrant abuse of power, the Southern Railway, having had for 10 years its own rails reaching from Charleston to the great developed coal fields of Virginia, Tennessee, and Kentucky, and reaching developed mines with a present annual capacity of from twelve to fifteen million tons of coal, which has no other outlet to tidewater, has moved no coal for outlet at that port and has made no provision for docks, notwithstanding the fact that it controls its own riparian privileges at Charleston.

(4) It is believed that efforts are now being made by individuals acting for the so-called Coal Trust, to acquire the rights for coal docks and terminal facilities in Charleston so as to monopolize the terminal facilities there in the same way that the big interests now dominate New York Harbor, Philadelphia, Baltimore, and the ports on the Chesapeake Bay.

(5) It is believed that the so-called Coal Trust is using other railroads leading to the coal fields in a similar manner, not only to destroy private property but, in many instances, wholly against the interest of the railroad thus used and tyranically unjust to the country in which these railroads are located and from which they receive their revenue and protection.

(6) It is believed that these railroads, all being dominated by the same influence, maintain a secret rate-making body of men in defiance of the law, who "farm out" the territory and make freight tariffs in such manner as to be free from every element of competition, and who have practically destroyed the usefulness of the Interstate Commerce Commission in so far as it affects the average shipper and the small shippers on account of the great expense and the extraordinary delay brought about by the tactics of the railroad whose agents resort to every method known to political trickery.

(7) It is not only necessary in the interest of the naval station and of Charleston as a commercial port, but for the protection of the whole country and particularly of that section of the country served by the railroads which lead into Charleston, that a thorough investigation be forthwith made to ascertain the whole truth to the end that these abuses may be permanently stopped by the enactment of proper laws or the amendment of existing laws, and that the port of Charleston may not be controlled by any trust or faction or individual, but be open to the use and needs of the United States and to all carriers and to all shippers on the same basis.

### COLUMBIA HOSPITAL FOR WOMEN.

The VICE PRESIDENT announced the appointment of Mr. GALLINGER to succeed himself as a director on the part of the Senate of the Columbia Hospital for Women and Lying-in Asylum in the District of Columbia, as provided for in the act of June 10, 1872.

### REGENT OF SMITHSONIAN INSTITUTION.

The VICE PRESIDENT announced the appointment of Mr. HOLLIS a member of the Board of Regents of the Smithsonian Institution to fill the vacancy occasioned by the death of Hon. Augustus O. Bacon.

### INSPECTION AND GRADING OF GRAIN.

Mr. McCUMBER. Mr. President, it was my purpose to-day at the close of the morning business to conclude my remarks on the grain-inspection bill; but the Senator from Maryland [Mr. SMITH] has given notice of his desire to bring up the Dis-

trict of Columbia appropriation bill, and with the hope that the bill may be concluded to-day, I desire to give notice that I shall endeavor to finish my remarks to-morrow after the conclusion of morning business.

TREATIES AND CONVENTIONS.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the concurrent resolution of the Senate (S. Con. Res. 11) authorizing the printing of additional copies of Senate Document No. 357, Sixty-first Congress, and Senate Document No. 1063, Sixty-second Congress, being a compilation of treaties, conventions, etc., between the United States and other powers, which was, in line 3, after the word "thousand," to insert "and for the House, 3,000."

Mr. FLETCHER. I move that the Senate concur in the amendment of the House of Representatives.

The motion was agreed to.

HUDSON RIVER BRIDGE, NEW YORK.

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 3742) to authorize the Hudson River Connecting Railroad Corporation to construct a bridge across the Hudson River in the State of New York, which were: On page 1, line 7, to strike out "viaducts and"; on page 1, line 8, to strike out "for railroad purposes only,"; on page 1, line 9, after "point" to insert "suitable to the interests of navigation"; on page 2, to strike out lines 1 to 2 inclusive; and on page 2, line 6, to strike out "3" and insert "2."

Mr. O'GORMAN. I move that the Senate concur in the amendments of the House of Representatives.

The motion was agreed to.

ADOLPH GRIMSINGER.

Mr. HUGHES. I have a copy of a brief on the jurisdiction of the United States courts in China in the case of Adolph Grimsinger, which is pending in the Supreme Court of the United States. I ask that the paper be referred to the Committee on Printing, with a view to having it printed as a public document.

The VICE PRESIDENT. That action will be taken.

COMMITTEE SERVICE.

Mr. KERN. I present a letter from the junior Senator from Delaware [Mr. SAULSBURY], which I ask may be read.

The Secretary read as follows:

UNITED STATES SENATE,
*Washington, D. C., March 10, 1914.*

*To the President of the Senate:*

I hereby tender my resignation as member of the following committees of the Senate:
Committee on Conservation of National Resources;
Committee on Engrossed Bills;
Committee on Pacific Railroads.
Yours, truly,

WILLARD SAULSBURY.

The VICE PRESIDENT. The request of the Senator from Delaware is granted.

Mr. KERN. I present a letter from the junior Senator from Florida [Mr. BRYAN], which I ask may be read.

The Secretary read as follows:

UNITED STATES SENATE,
*Washington, D. C., March 10, 1914.*

*To the President of the Senate:*

I ask leave to be excused from further service on the following committees:
Coast and Insular Survey;
To Investigate Trespassers upon Indian Lands;
Industrial Expositions.

N. P. BRYAN.

The VICE PRESIDENT. The request of the Senator from Florida is granted.

Mr. KERN. I present a letter from the junior Senator from Nevada [Mr. PITTMAN], which I ask may be read.

The Secretary read as follows:

UNITED STATES SENATE,
*Washington, D. C.*

*To the President of the Senate:*

I hereby tender my resignation as a member of the Committee on Claims and ask to be excused from further service thereon.

KEY PITTMAN.

MARCH 10, 1914.

The VICE PRESIDENT. The request of the Senator from Nevada is granted.

On motion by Mr. KERN, it was

*Ordered* (1), That JAMES HAMILTON LEWIS, a Senator from Illinois, is designated and appointed as a member of the Committee on Naval Affairs, to fill the vacancy occasioned by the recent amendment of Rule XXV, providing for an additional member of said committee.

2. That WILLIAM STANLEY WEST, a Senator from Georgia, be, and is hereby, designated and appointed as a member of the following committees:

Committee on Military Affairs, to fill the vacancy occasioned by the death of the late Senator Johnston, of Alabama;

Committee on Industrial Expositions, to fill the vacancy occasioned by the resignation therefrom of Senator BRYAN, of Florida;

Committee on Pacific Railroads, to fill the vacancy occasioned by the resignation therefrom of Senator SAULSBURY, of Delaware;

Committee on Corporations Organized in the District of Columbia;

Committee on Private Land Claims; and

Committee on Railroads, to fill the vacancies on said last-named three committees occasioned by the death of the late Senator Bacon, of Georgia.

3. That BLAIR LEE, a Senator from Maryland, be designated and appointed as a member of the following-named committees:

Committee on Claims, to fill the vacancy occasioned by the resignation therefrom of Senator PITTMAN, of Nevada;

Committee on Conservation of National Resources and Committee on Engrossed Bills, to fill the vacancies on said two last-named committees occasioned by the resignation therefrom of Senator SAULSBURY, of Delaware;

Committee on Coast and Insular Survey and Committee to Investigate Trespassers upon Indian Lands, to fill the vacancies on said two last-named committees occasioned by the resignation therefrom of Senator BRYAN, of Florida.

4. That HOKE SMITH, a Senator from Georgia, be designated and appointed as a member of the Committee on the Judiciary, to fill the vacancy occasioned by the death of the late Senator Bacon, of Georgia.

5. That WILLIAM E. CHILTON, a Senator from West Virginia, be designated and appointed as a member of the Committee on Mines and Mining to fill the vacancy occasioned by the death of the late Senator Johnston, of Alabama.

6. That WILLARD SAULSBURY, a Senator from the State of Delaware, be designated and appointed as a member of the Committee on Foreign Relations to fill the vacancy occasioned by the death of the late Senator Bacon, of Georgia.

AMENDMENT OF THE RULES.

Mr. KERN. I offer a resolution providing for an amendment to the rules and give notice that I shall call it up to-morrow.

The VICE PRESIDENT. The resolution will be read.

The resolution was read, as follows:

*Resolved*, That so much of Rule XXV of the Senate as relates to the membership of the Committee on Banking and Currency and the Committee on Transportation Routes to the Seaboard be amended to read as follows:

"A Committee on Banking and Currency, to consist of 13 Senators.

"A Committee on Transportation Routes to the Seaboard, to consist of 9 Senators."

The VICE PRESIDENT. The resolution will go over, under the rule.

DISTRICT OF COLUMBIA APPROPRIATION BILL.

Mr. SMITH of Maryland. I ask unanimous consent that the Senate proceed to the consideration of House bill 10523, the District of Columbia appropriation bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 10523) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1915, and for other purposes, which had been reported from the Committee on Appropriations with amendments.

Mr. SMITH of Maryland. I ask unanimous consent to dispense with the formal reading of the bill, that the bill be read for committee amendments, and that the committee amendments be first considered.

The VICE PRESIDENT. Is there objection to the request of the Senator from Maryland?

Mr. NORRIS. So that there may be no misunderstanding, I presume that would not preclude amendment to committee amendments being offered on the floor of the Senate?

The VICE PRESIDENT. That may be done.

Mr. SMITH of Maryland. It is only that the amendments of the committee are first to be considered, and all other amendments will be in order afterwards.

The VICE PRESIDENT. Is there objection to the request of the Senator from Maryland? The Chair hears none. The Secretary will proceed to read the bill.

Mr. SMITH of Maryland. Mr. President, before the Secretary proceeds to read the bill there is one item in it to which I wish to direct the attention of the Senate. It is the item providing a new municipal hospital for the District of Columbia.

This is a sorely needed improvement, as the present hospital is utterly unworthy of the Capital of the Nation, or, indeed, of a city even of the tenth class.

To the members of the Committee on Appropriations and the Committee on the District of Columbia it has seemed appropriate that this municipal hospital, because it promises so much improvement to Washington and so much relief from sickness, care, and misery to the people, be named in honor of the distinguished senior Senator from New Hampshire, JACOB H. GALLINGER. I am convinced the Senate, regardless of faction or aught else, will unanimously recognize the peculiar justness and fitness of this tribute to extraordinary worth.

For over 12 years the senior Senator from New Hampshire, in addition to other active and responsible duties, presided most ably, though without ostentation, as the chairman of the District Committee, and he has been a member of the committee for

over 20 years. Fortunately for Washington and for the country, his was a prophetic vision, so farseeing and broad that his influence tended always to shape the destinies of this city in right channels toward a point of perfection never before realized in any capital of any nation. Yet his work was not complete when he was succeeded by one far less worthy, but who is wise enough to recognize the talent, the honesty, and great experience of the Senator from New Hampshire.

The present chairman always sought Senator GALLINGER's advice, always sound, and looked to him for support. And that aid, advice, and support have always been frankly and freely given in the service of the people and without grudging. No man in the country, I am convinced, has a more thorough knowledge of the needs and possibilities of this Capital than the Senator from New Hampshire, and no one is in deeper, quicker sympathy with any effort from any source to promote the moral and material welfare of this District.

Throughout the Senator's long and most useful service as chairman of the District Committee the shafts of slander, charges of corruption, incompetence, or favoritism have never been directed at him, and the future alone can measure the full value of his services.

Differing from the senior Senator radically on those principles which divide the two great parties, I would despise myself if for partisan reasons I closed my eyes or blinded others to the sincerity of his acts, the simplicity and perfection of his character, and to his wonderful influence for good here and elsewhere.

I am sure I voice and share the feelings of the great majority of the people of this District, and also of those throughout the country at large, who know of his quiet, diligent, and self-sacrificing service to his country, that while it is in a way timely and fitting to name this hospital in his honor, skillful physician and accomplished statesman that the Senator is, nevertheless this act of ours, extraordinary though it be, is, after all, but a partial and inadequate recognition by Congress of the Nation's debt to him.

The VICE PRESIDENT. The Secretary will proceed to read the bill.

The Secretary proceeded to read the bill.

The first amendment of the Committee on Appropriations was, on line 5, page 2, to strike out "$5,000" and insert "$6,000," so as to read:

Two commissioners, at $6,000 each.

Mr. KERN. With the consent of the senior Senator from Maryland, I will ask unanimous consent that the bill be laid aside now, in order that the Senate may proceed to the consideration of executive business.

The VICE PRESIDENT. Is there objection?

Mr. SMITH of Maryland. I also ask that it be laid aside without prejudice, and that it be taken up to-morrow morning, immediately after the routine business, as unfinished business.

Mr. SMOOT. No, Mr. President.

Mr. WARREN. Immediately after the routine business.

Mr. SMITH of Maryland. That was my request.

Mr. LEA of Tennessee. At the close of the morning business.

Mr. SMOOT. Not to interfere with the unfinished business.

Mr. SMITH of Maryland. No; I shall ask that it be taken up immediately after the routine business to-morrow morning.

Mr. SMOOT. I understood the Senator to ask that it be made the unfinished business.

Mr. SMITH of Maryland. No; immediately after the routine business.

Mr. SMOOT. All right.

Mr. TOWNSEND. Will the Senator from Indiana yield to me to give a notice?

Mr. KERN. I yield to the Senator from Michigan for that purpose.

### WATERWAY FROM GREAT LAKES TO ATLANTIC OCEAN.

Mr. TOWNSEND. Mr. President, I desire to give notice that on Tuesday next, the 17th instant, after the conclusion of the routine morning business, I shall address the Senate upon the subject of a deep waterway from the Great Lakes to the Atlantic Ocean.

### PERSONAL EXPLANATION—RURAL DELIVERY SERVICE.

Mr. BANKHEAD. Will the Senator from Indiana yield to me to make a short statement in the nature of a correction of the RECORD?

Mr. KERN. I yield to the Senator from Alabama for that purpose.

Mr. BANKHEAD. Mr. President, during the debate in the Senate on the Post Office appropriation bill I stated that the Rural Delivery Service was not self-supporting by about thirty-five or forty million dollars, and gave as my authority for this statement the honorable Fourth Assistant Postmaster General, Mr. James I. Blakslee. On reflection and investigation I find that in this statement I did Mr. Blakslee an injustice. It was not he who made the statement.

I feel that it is proper for me to correct the statement and to do the Fourth Assistant Postmaster General justice by exonerating him to the fullest possible degree. I know how embarrassing it must be to an official in the Post Office Department to have a statement like this appear in the RECORD when he is entirely blameless. I make this correction on the floor of the Senate in order that it may have the same publicity which the statement made in the debate had.

### EXECUTIVE SESSION.

Mr. KERN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 11 minutes spent in executive session the doors were reopened, and (at 5 o'clock and 23 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, March 11, 1914, at 12 o'clock meridian.

---

## NOMINATIONS.

*Executive nominations received by the Senate March 10, 1914.*

### ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY.

John L. de Saulles, of Pennsylvania, to be envoy extraordinary and minister plenipotentiary of the United States of America to Uruguay, vice Nicolay A. Grevstad, resigned.

### PROMOTIONS IN THE NAVY.

Commander Robert W. McNeely to be a commander in the Navy from the 1st day of July, 1913, to change the date from which he takes rank as previously confirmed.

Lieut. John C. Fremont, jr., to be a lieutenant commander in the Navy from the 20th day of December, 1913.

Lieut. (Junior Grade) Earle J. Johnson to be a lieutenant in the Navy from the 20th day of December, 1913.

---

## CONFIRMATIONS.

*Executive nominations confirmed by the Senate March 10, 1914.*

### UNITED STATES ATTORNEY.

William W. Ray to be United States attorney for the district of Utah.

### UNITED STATES MARSHAL.

Nicholas F. Reed to be United States marshal for the southern district of Iowa.

## HOUSE OF REPRESENTATIVES.

### TUESDAY, *March 10, 1914.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Father in heaven, quicken, we beseech Thee, our receptive faculties, that we may have a clearer vision, a keener ear, and feel more profoundly the indwelling of Thy spirit; that we may realize with greater certainty the far-reaching purposes of life and lend ourselves with diligence to every demand laid upon us, and thus further Thy plans in the redemption of mankind from the sins which doth so easily beset us, and leave behind us a clear record and the world a little better that we have lived and wrought. For Thine is the kingdom and the power and the glory forever. Amen.

The Journal of the proceedings of yesterday was read and approved.

#### ACCEPTANCE OF STATUE OF ZACHARIAH CHANDLER.

Mr. SAMUEL W. SMITH. Mr. Speaker, on the 10th day of last June the statue of Zachariah Chandler was unveiled in Statuary Hall with appropriate exercises. I ask unanimous consent that Sunday, April 12, 1914, be set apart by the House of Representatives for the acceptance of the statue and the delivery of appropriate addresses on the life, character, and public services of Zachariah Chandler, late a Senator from the State of Michigan.

The SPEAKER. The gentleman from Michigan asks unanimous consent that Sunday, April 12, 1914, be set apart for the purpose of accepting the statue of the late Senator Zachariah Chandler and the delivery of appropriate addresses upon his life, character, and public service. Is there objection?

There was no objection, and it was so ordered.

#### AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 13679, the Agricultural appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill, with Mr. HAMLIN in the chair.

Mr. STAFFORD. Mr. Chairman, I believe that last evening I was accorded the privilege of proceeding five minutes longer to get further information regarding the experimental farms. Can the gentleman inform the committee when this experimental station at Beltsville was established?

Mr. LEVER. It was established during the last year of the chairmanship of the Agricultural Committee of Mr. Scott, of Kansas—in 1911, I think it was.

Mr. STAFFORD. At whose instance was it established; at the request of the Department of Agriculture or at the instance of some Representative in Congress or some person who had some abandoned farm to give to the Government?

Mr. LEVER. It was established at the urgent request of the Department of Agriculture.

Mr. STAFFORD. When was the experimental station established at Bethesda?

Mr. LEVER. The experimental work has been going on there for very many years; ever since I have been on the committee. I do not remember the date.

Mr. STAFFORD. Can the gentleman advise the committee why this work could not be confined to one farm rather than having two or three experimental farming stations in the immediate proximity of the city of Washington?

Mr. LEVER. I would say to the gentleman that the work at Bethesda is of an entirely different character from the work being done at Beltsville. The work at Bethesda is scientific investigation touching the various animal diseases and is really a field laboratory for the Bureau of Animal Industry. The work at Beltsville is confined largely to investigating animal breeding, poultry breeding, inbreeding, the feeding of dairy cattle, the feeding of horses, mules, sheep, and so forth, and the gathering of information as to the best kind of dairy barns that should be constructed, and so forth.

Mr. STAFFORD. But there is nothing in the character of work carried on at these respective places that would prevent it being carried on in separate parts of the same establishment.

Mr. LEVER. I think it would be impossible to put them together.

Mr. STAFFORD. I do not mean to mix them, but the work could be carried on in separate parts of the same establishment, so as to relieve the Government of the expense of upkeep of different establishments.

Mr. LEVER. Let me illustrate: At the Bethesda farm there are a dozen or more badly diseased animals, having diseases of highly infectious and contagious character, while at Beltsville the animals are all in good health and are being experimented on with a view of getting information as to the feeding value of different kinds of food, and also for the gathering of information along other lines. If you mix them, the likelihood is that you would have an outbreak of disease among them.

Mr. STAFFORD. I do not have in mind the mixing of them in the same building, but having them on contiguous farms, where the expense of upkeep would be eliminated as to one establishment.

Mr. LEVER. I think it would be very bad judgment and very dangerous to do so.

Mr. STAFFORD. The gentleman says his committee visited this model dairy farm at Beltsville——

Mr. LEVER. Oh, it is more than a model dairy farm.

Mr. STAFFORD. Will the gentleman inform the committee the necessity of expending money for the construction of additional buildings at that station, and why the committee increased the amount allowed over the estimate?

Mr. LEVER. I think the gentleman is mistaken about that.

Mr. STAFFORD. Did not the committee make an increase over the estimates? Were not the estimates $15,000, and did not the committee increase the amount $1,000 or more?

Mr. LEVER. We allowed the estimate exactly.

Mr. STAFFORD. As I recall, from my examination of the estimates, the committee increased it $1,000.

Mr. LEVER. The estimated sum was $16,500, and the committee allowed that sum.

Mr. STAFFORD. Last year it was $15,000?

Mr. LEVER. Last year it was $16,500, the same appropriation, no change whatever.

Mr. STAFFORD. Will the gentleman explain the need of spending this large sum of money for these buildings?

Mr. LEVER. I will state to the gentleman very frankly that I had the same query in my own mind and I was not satisfied to take the mere estimate of the department that they desired this work, but I had the department furnish me a detailed statement as to how they intended to expend the money.

In addition, as I said yesterday, the subcommittee made a visit to Beltsville and looked the entire station over and came back and was unanimously of the belief that the work out there was important and the request of the department for $16,500 to erect some additional buildings for the extension of that work would be money well spent.

Mr. STAFFORD. Mr. Chairman, I will not take up the time of the committee with further inquiry upon this item if the gentleman says the subcommittee was satisfied and that he has a detailed statement before him.

Mr. LEVER. I have the detailed statement in my hand which I will be glad to put in the RECORD if the gentleman so desires.

Mr. STAFFORD. I will accept the statement of the chairman of the committee that it was entirely satisfactory.

The CHAIRMAN. The time of the gentleman has expired.

Mr. TREADWAY. Mr. Chairman, I move to strike out the last word for the purpose of asking a question. I heard the gentleman refer to the experimental work at Beltsville, Md. I had the pleasure of visiting that establishment last summer, and was very much pleased with the work being done, but I would like to ask the gentleman one question in connection with it, and that is just what is expected to be accomplished by breeding the zebra stallion out there, and that sort of experimental work?

Mr. LEVER. I will say to my friend from Massachusetts that he is misinformed about the use of the zebra stallion for breeding purposes. The stallion is now out here in the National Zoological Park, and is not being used for that purpose at all.

Mr. TREADWAY. I think it is more important to have him on exhibition than at an experimental farm; and I am glad to know that since my visit to the farm a change has been made in the purposes for which the zebra is used.

Mr. LEVER. I agree with the gentleman fully.

Mr. SLOAN. I would like to ask the gentleman from Massachusetts if it is not an important fact for this Government to investigate for the purpose of obtaining breeds of animals which will be useful in the arid parts of this country, and there are qualities of the zebra that are developed in crossing with other animals known to be useful, and I think the Department of Agriculture, instead of being deterred from this, should be en-

couraged in doing the Burbank business, as far as animals are concerned, that is engaged in by that eminently experimental scientist in plants?

Mr. TREADWAY. Mr. Chairman, in reply to the inquiry of my friend from Nebraska I will say if zebra breeding appeals to him in the section of country that he has the honor to represent, I shall be very glad to vouchsafe him the right to continue the work. So far as the country which I represent here is concerned, we do not need to cross our horses with zebras to carry on our farm work. We have an excellent grazing country and no arid section of country to which my friend from Nebraska refers, so that the zebra-breeding proposition does not appeal to me perhaps as much as it does to the gentleman from Nebraska.

Mr. SLOAN. Coming from a country where acre for acre it is worth twice as much as it is in Massachusetts, I think that I am speaking with some information and I think that if this Government can discover types of animals useful upon the farm or elsewhere the Government should be encouraged to do so.

Mr. TREADWAY. The gentleman may have noticed, Mr. Chairman, I was endeavoring yesterday to have a certain line of work done in Massachusetts in order to improve our land so as to increase its farming value. I should be glad to have the gentleman's cooperation along that line, and in the same way I shall be glad to cooperate with him if he wants help in his zebra breeding.

Mr. MONDELL. Does not the gentleman think this zebra breeding is a reflection upon the Missouri mule in his value for farm purposes?

Mr. TREADWAY. No; I do not think the Missouri mule appreciates cross breeding.

Mr. MANN. I believe the Missouri mule never takes occasion to resent reflections upon it.

Mr. BOOHER. Mr. Chairman, I will say to the gentleman from Wyoming that the Missouri mule will take care of himself in any community whether there is an appropriation in the agricultural bill or anywhere else.

Mr. MOORE. In this respect the Missouri mule is very much like the hound dog, is it not?

Mr. BOOHER. Oh, no; a much more valuable animal; but the hound dog has its place in society the same as other people. [Laughter.]

The Clerk read as follows:

For the purchase, propagation, testing, and distribution of new and rare seeds, and for the investigation and improvement of grasses, alfalfa, clover, and other forage crops, $166,500: *Provided*, That of this amount not to exceed $100,000 may be used for the purchase and distribution of such new and rare seeds.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. MONDELL. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Strike out the comma after the word "seeds," at the end of line 18, page 21, and insert the words "of which sum $10,000 shall be immediately available."

Mr. LEVER. Mr. Chairman, I reserve a point of order on the amendment.

Mr. FOWLER. Mr. Chairman——

The CHAIRMAN. For what purpose does the gentleman rise?

Mr. FOWLER. For a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. FOWLER. After a point of order has been reserved to a paragraph, is it in order then to offer an amendment until the point of order is settled?

The CHAIRMAN. Well, under the practice of the House the Chair will state it is. The point of order is not made, but simply reserved, and the Chair thinks, under the practice we have been operating under, that it would be in order to offer an amendment under those circumstances.

Mr. FOWLER. Mr. Chairman, that has not been the ruling heretofore.

If there is to be a point of order made against the paragraph and that point of order is sustained, it is a waste of time to consider an amendment or entertain it.

Mr. MONDELL. Mr. Chairman, the point of order being reserved, discussion on the paragraph is in order, and my purpose is to discuss the paragraph under my amendment while the point of order is pending.

The CHAIRMAN. The gentleman from Wisconsin [Mr. STAFFORD] reserved his point of order. It is privileged at any time to make a point of order. Until he makes it, of course, there is no point of order pending against the paragraph, and the Chair thinks the amendment would be in order.

Mr. FOWLER. The regular order is the point of order against the paragraph.

The CHAIRMAN. And the Chair will say that the offering of an amendment is tantamount to demanding the regular order.

Mr. FOWLER. Mr. Chairman, I demand the regular order.

Mr. MONDELL. Mr. Chairman, I believe I am recognized, the point of order having been reserved.

The CHAIRMAN. The gentleman from Illinois [Mr. FOWLER] demands the regular order, which is to make or reserve the point of order.

Mr. LEVER. Mr. Chairman——

The CHAIRMAN. Does the gentleman from Wisconsin [Mr. STAFFORD] make the point of order?

Mr. STAFFORD. Asking for information, Mr. Chairman, I would like to know from the chairman of the committee whether th's item is not new?

Mr. LEVER. Mr. Chairman, if the gentleman will permit me——

The CHAIRMAN. If the gentleman will indulge the Chair for a moment, the gentleman from Illinois [Mr. FOWLER] demands the regular order.

Mr. STAFFORD. I make the point of order for the purpose of asking for information from the chairman of the committee.

The CHAIRMAN. The gentleman will state the point of order.

Mr. STAFFORD. It is new legislation, and not heretofore carried in the appropriation act.

The CHAIRMAN. The Chair will hear the gentleman on the point of order.

Mr. STAFFORD. Mr. Chairman, with the indulgence of the Chair, I would like to ask the chairman of the committee a question or two. I would like to ask whether this is a new paragraph in the appropriation act?

Mr. LEVER. It is a new paragraph in the sense that it is a combination of three paragraphs. It is a combination of a paragraph that heretofore has been devoted to forage-crop investigations, for which an appropriation of $25,000 was carried, and one for drought-resistant seeds, for which an appropriation of $39,000 was carried, and this appropriation is an increase of $102,500 for work of that character over the appropriation bill in the current law. It is not a new paragraph in the sense the gentleman uses the word "new."

Mr. STAFFORD. I notice the committee incorporated a provision that heretofore has been carried in the so-called congressional seed distribution, which is the second paragraph following.

Mr. LEVER. Exactly. That is true.

Mr. STAFFORD. I notice that there is a departure here, as incorporated in this provision, in that it is planned to give to Congressmen the right to send out these new and rare seeds?

Mr. LEVER. No.

Mr. STAFFORD. I gained that information by reading the hearings.

Mr. LEVER. There has been no plan set forth in the language of the bill, but, as a matter of fact, in the practical working out of the plan I take it that Members of Congress from time to time might furnish the names of progressive farmers in their districts who would be willing to cooperate with the Department of Agriculture in making the test of the value of such seed as would be sent out.

Mr. STAFFORD. Is this intended to be supplemental to the congressional seed distribution?

Mr. LEVER. This is intended to do a kind of seed-distribution work that I would like to see done only. This is intended to distribute new and rare seeds, such as alfalfa, such as the best type of cotton, such as new varieties of corn, such as the department in its stations has developed, such as Sudan grass, such as new varieties of sorghum, such as feterita, and such as Tepary beans, and a number of other rare and valuable seeds that the department itself on its own plats, in cooperation with progressive farmers, is developing from time to time. I will say to my friend that this is a kind of work that I think promises great good to the country. I would much prefer to increase the appropriation in this item if I were handling the situation personally, and do away entirely with the congressional seed distribution, but that is not for me to say. The committee has acted upon that.

Mr. STAFFORD. Mr. Chairman, although I represent a city district almost exclusively, I am in hearty sympathy with anything that intends to advance the welfare of the farmer. I am not in sympathy, and have not been for years, with the so-called congressional seed distribution. This item which we are now considering recognizes a departure, and to have some

real work that will be of value to the farmer established, and therefore I do not press the point of order, but withdraw it.

Mr. LEVER. I submit that the point of order was not well taken, anyhow.

The CHAIRMAN. The gentleman from Wisconsin withdraws the point of order, and the Clerk will report the amendment offered by the gentleman from Wyoming [Mr. MONDELL].

The Clerk read as follows:

Strike out the comma after the word "seeds" at the end of line 18, page 21, and insert the words "of which amount $10,000 will be immediately available."

Mr. LEVER. Mr. Chairman, I reserve a point of order on that.

Mr. MONDELL. Mr. Chairman, the purpose of my amendment is to enable the department to purchase some seeds and distribute them as soon as this bill shall become a law under this head of appropriation. The necessity for it arises out of this fact: That since the department began the distribution of seeds of forage plants there has grown up quite a demand for seeds of that sort. The farmers either write directly to the Department of Agriculture or to Members of Congress with regard to these seeds.

In my own State there has recently grown up a very lively demand for the kind of seeds which the department has been furnishing under this item of appropriation, and farmers have been writing directly to the department and to me for Grimm alfalfa and for certain kinds of sorghums and for certain new varieties of millet and for other seeds that the department has been furnishing under this item of appropriation. Recently the Secretary notified me that their supply was exhausted, and exhausted at a time when there were, I think, some 300 or 400 requests from my State for this class of seeds, and I have no doubt a very considerable number of requests from other localities.

Mr. LEVER. When was that?

Mr. MONDELL. That was within the last two weeks. The department had some of these seeds up to within two or three weeks ago. These particular classes of seeds are now exhausted. The Assistant Secretary, in a communication I had with him a day or two ago over the telephone, said that it was barely possible that they might find a remnant of an appropriation which they could use for this purpose, but he doubted it, and if he did not find it he expressed the hope that in some way there could be some funds made available—a small amount in the near future, to supply the present pressing demand.

Now, the chairman realizes this fact, that this is not of the nature of the ordinary congressional seed distribution. These requests come from men who know of this distribution and who have knowledge of the character of the seeds which the department is sending out, and who desire to test them. Ordinarily the department furnishes to each applicant enough of alfalfa and other forage plants to plant an acre. It is exceedingly important that we shall supply these men who have taken the trouble to write in and ask that they be supplied.

Mr. LEVER. If the gentleman from Wyoming will permit, I will suggest to him that the first appropriation for this character of seed distribution was carried in the bill last year, as I remember it, with an appropriation of $39,000. I agree with the gentleman that it is a valuable line of work. The department has not made any request upon the committee to make any of this sum immediately available, and I think the gentleman can easily depend upon the Assistant Secretary of Agriculture to be able to find some means of handling the situation until we can reach the Senate. If it then appears that we need a portion of this fund made immediately available, I shall not object to it.

Mr. MONDELL. No harm would be done by making $10,000 of this immediately available. If they find other funds—and at the last talk I had with the Assistant Secretary he had not found any other fund, although he was hopeful of doing so—if this was found not to be necessary, it could be stricken out in the Senate.

Mr. LEVER. The Secretary has the right, as the gentleman no doubt knows, under the act of Congress, to transfer 10 per cent of some other appropriation to this item. That would amount to $3,900, and I take it that the Secretary of Agriculture, with a total appropriation of $18,000,000, would find somewhere an opportunity to make a transfer, and thus tide over the necessity.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. MONDELL. Well, Mr. Chairman, accepting the statement of the gentleman from South Carolina, and feeling confident that the Secretary of Agriculture will do all he can to meet this demand, I will withdraw my amendment.

The CHAIRMAN. The gentleman from Wyoming withdraws his amendment. The Clerk will read.

The Clerk read as follows:

For general administrative expenses connected with the above-mentioned lines of investigation, including the office of the chief of bureau, the assistant chief of bureau, the chief clerk, the officers in charge of publications, records, supplies, and property, and for miscellaneous expenses incident thereto, $32,490;

In all, for general expenses, $2,320,455.

Mr. GREEN of Iowa and Mr. TOWNER rose.

The CHAIRMAN. The gentleman from Iowa is recognized.

Mr. GREEN of Iowa. Which gentleman from Iowa?

The CHAIRMAN. The gentleman from Iowa, Mr. GREEN.

Mr. GREEN of Iowa. Mr. Chairman, I move to strike out the last word, simply for the purpose of asking the chairman a question with reference to this item in regard to seeds on page 21, although my interrogatory may not be directly in connection with that.

The CHAIRMAN. The gentleman from Iowa [Mr. GREEN] moves to strike out the last word.

Mr. GREEN of Iowa. I would like to inquire whether the department makes any investigation with reference to new varieties of corn or furnishes any samples of corn?

Mr. LEVER. Yes; they do. They are doing work all the time with reference to the staple seeds of the country—cotton, corn, wheat, oats, barley, and the like of that—and if they distribute anything that they see is worth more than the ordinary kind that a community is using, it will be available under this language.

Mr. GREEN of Iowa. Does the gentleman from South Carolina know whether they have furnished any new samples of corn?

Mr. STAFFORD. Mr. Chairman, if the gentleman from South Carolina will yield to me for a moment, I may furnish the information desired. Some eight years ago I made a request on the Department of Agriculture to furnish one or two constituents in Waukesha County with some special hard Dent corn that would mature early. In response to my request the department furnished to a certain farmer a special variety of hard corn from the North Dakota experiment station. The special seed was planted, and during the growing season one of the inspectors connected with the department made his inspection and made a report. That corn was distributed generally under the supervision of the Department of Agriculture to the farmers of that neighborhood, and where before the farmers of Waukesha County had difficulty in getting a corn that would mature early enough before the frost came, under this method they did obtain this superior seed corn; and so I take it that this item is designed to furnish the department with a sufficient appropriation to meet those very conditions.

Mr. LEVER. That is true; and to supplement that, the department is doing a great deal of work to find a hardier alfalfa seed, and that is true also of cotton. I know that personally, because I know more of cotton than of these other crops.

Mr. TOWNER. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from Iowa [Mr. TOWNER] moves to strike out the last two words.

Mr. TOWNER. I do this, Mr. Chairman, merely for the purpose of asking unanimous consent to insert in the RECORD a statement of the agricultural products of the State of Iowa for the last year.

That statement shows that the live-stock products of Iowa last year amounted to $470,272,000. The showing is also made that the field crops of Iowa for the year 1913, together with the poultry, wool, and dairy products, amounted to $522,479,227; a total, Mr. Chairman, in one year of the agricultural products of the State of Iowa alone of nearly $1,000,000,000.

I ask unanimous consent that this article may be inserted in the CONGRESSIONAL RECORD.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent to insert in the RECORD a certain statement that he indicates. Is there objection?

There was no objection.

The following is the statement referred to:

IOWA IN BILLION-DOLLAR-CROP CLASS—DEPARTMENT OF AGRICULTURE SAYS NEW RECORD IS ESTABLISHED—LEADS IN LIVE STOCK—STATE'S SUPREMACY IN FARM PRODUCTS UNQUESTIONED, REPORT SAYS.

Iowa's crops in 1913, added to the value of the live stock on farms on January 1, 1914, total practically $1,000,000,000, a new record for this State, according to a report published by the Department of Agriculture in "Greater Iowa," which was sent out yesterday from the Capitol.

The statistics on live stock compiled by the Government show that Iowa's live stock on January 1 was worth $470,272,000. The field crops

for Iowa in 1913, together with the poultry, wool, and dairy products, amounted to $522,474,227.

The department says:

PRODUCTS WORTH BILLION.

"The total value of farm products together with that of farm animals show Iowa's farm products and live stock on January 1, 1914, were worth practically $1,000,000,000. This establishes a new record on the value of Iowa farm products and live stock. The total figures for Iowa live stock are only a little in excess of last year's, being $470,272,000 as against $459,396,000, but the total farm products amount to $522,747,227, making the total value of live stock and farm products $992,746,227.

"No other State in the Union approaches this remarkable record of the Hawkeye State. Iowa leads in so many products and in so many kinds of live stock that the sum total for the last few years has surpassed other States in a marked degree. Iowa is coming to be a great draft-horse State. Horses are high in price and run up into money so that Iowa's horse industry is now the most valuable of any of her live-stock industries.

"The total value of her horses on January 1 was $186,912,000. She had a total of 1,584,000, valued at an average of $118 per head. Illinois ranked second of all the States in the Union in the number and value of her horses, having 1,497,000, valued at $169,161,000. Texas is third, Kansas fourth, and Missouri fifth in number of horses, but in value Ohio is third and Missouri fourth.

IOWA LEADS IN HOGS.

"In spite of the ravages of hog cholera, which the past year has cut down Iowa's herds more than any other State in the Union, Iowa still maintains her supremacy in swine. On January 1 she had 6,976,000 head of swine, valued at $87,898,000. Illinois ranked second in swine, with 4,358,000, valued at $47,066,000.

"In cattle other than milch cows Texas holds first place, with 5,173,000 head of cattle, valued at $137,084,000. Iowa ranks second among all the States, with 2,555,000 head, valued at $100,156,000. Nebraska is third, Kansas fourth, California fifth, and Missouri sixth. In milch cows Iowa ranks third, with Wisconsin first and New York second.

"In the total value of live stock on the farms January 1, including horses, mules, swine, beef cattle, milch cows, and sheep, Iowa leads all other States, her total being $470,272,000, with Texas second, having a total of $393,471,000, and Illinois third, with $341,898,000. Iowa has fewer beef cattle and fewer swine than she had a year ago. There has been a decline of 2 per cent in the number of beef cattle in Iowa and of 20 per cent in her swine. In milch cows she has gained 1 per cent. In sheep she has held her own and in horses she has gained 1 per cent and in mules 2 per cent as compared to 1913.

DECLINE IN BEEF CATTLE.

"Throughout the United States as a whole there has been a decline of 5 per cent in the number of beef cattle as compared to a year ago. A gain of 1.2 per cent in milch cows and a decline of 3.4 per cent in sheep, a decline of 3.7 per cent in swine, a gain of 1.9 per cent in horses, and a gain of 1.4 per cent in mules.

"The Government figures on the losses in swine in Iowa are not as high as those given out by the Iowa State college. The college reports that cholera killed 2,827,907 swine in 1913, or 34.3 per cent of all the hogs in the State. This loss is estimated to be about $33,000,000. Notwithstanding that fact, however, Iowa still maintains her supremacy as a swine State."

Mr. TOWNER. I withdraw my pro forma amendment.

The CHAIRMAN. The gentleman from Iowa [Mr. TOWNER] withdraws his pro forma amendment. The Clerk will read.

The Clerk read as follows:

Purchase and distribution of valuable seeds: For purchase, propagation, testing, and congressional distribution of valuable seeds, bulbs, trees, shrubs, vines, cuttings, and plants; all necessary office fixtures and supplies, fuel, transportation, paper, twine, gum, postal cards, gas, electric current, rent outside of the District of Columbia, official traveling expenses, and all necessary material and repairs for putting up and distributing the same; for repairs and the employment of local and special agents, clerks, assistants, and other labor required, in the city of Washington and elsewhere, $257,000. And the Secretary of Agriculture is hereby directed to expend the said sum, as nearly as practicable, in the purchase, testing, and distribution of such valuable seeds, bulbs, shrubs, vines, cuttings, and plants, the best he can obtain at public or private sale, and such as shall be suitable for the respective localities to which the same are to be apportioned, and in which same are to be distributed as hereinafter stated, and such seeds so purchased shall include a variety of vegetable and flower seeds suitable for planting and culture in the various sections of the United States: *Provided*, That the Secretary of Agriculture, after due advertisement and on competitive bids, is authorized to award the contract for the supplying of printed packets and envelopes and the packeting, assembling, and mailing of the seeds, bulbs, shrubs, vines, cuttings, and plants, or any part thereof, for a period of not more than five years nor less than one year, if by such action he can best protect the interests of the United States. An equal proportion of five-sixths of all seeds, bulbs, shrubs, vines, cuttings, and plants shall, upon their request, after due notification by the Secretary of Agriculture that the allotment to their respective districts is ready for distribution, be supplied to Senators, Representatives, and Delegates in Congress for distribution among their constituents, or mailed by the department upon the receipt of their addressed franks, in packages of such weight as the Secretary of Agriculture and the Postmaster General may jointly determine: *Provided, however*, That upon each envelope or wrapper containing packages of seeds the contents thereof shall be plainly indicated, and the Secretary shall not distribute to any Senator, Representative, or Delegate seeds entirely unfit for the climate and locality he represents, but shall distribute the same so that each Member may have seeds of equal value, as near as may be, and the best adapted to the locality he represents: *Provided also*, That the seeds allotted to Senators and Representatives for distribution in the districts embraced within the twenty-fifth and thirty-fourth parallels of latitude shall be ready for delivery not later than the 10th day of January: *Provided also*, That any portion of the allotments to Senators, Representatives, and Delegates in Congress remaining uncalled for on the 1st day of April shall be distributed by the Secretary of Agriculture, giving preference to those persons whose names and addresses have been furnished by Senators and Representatives in Congress, and who have not before during the same season been supplied by the department: *And provided also*, That the Secretary shall report, as provided in this act, the place, quantity, and price of seeds purchased, and the date of purchase; but nothing in this paragraph shall be construed to prevent the Secretary of Agriculture from sending seeds to those who apply for the same. And the amount herein appropriated shall not be diverted or used for any other purpose but for the purchase, testing, propagation, and distribution of valuable seeds, bulbs, mulberry and other rare and valuable trees, shrubs, vines, cuttings, and plants.

Mr. SUMNERS. Mr. Chairman, I make a point of order against the paragraph, particularly against that part of the paragraph on page 23, line 3, beginning after the words "United States" and extending down to and including the word "department," in line 5, on page 24.

The CHAIRMAN. The gentleman from Texas [Mr. SUMNERS] makes a point of order against the paragraph, and particularly on that portion beginning with the word "An," in line 3, on page 23, and extending down to and including the word "department," on page 24, line 5.

Mr. STAFFORD. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. STAFFORD. Does the gentleman make a point of order against the entire paragraph?

The CHAIRMAN. Yes; but particularly against the portion indicated.

Mr. LEVER. Mr. Chairman, before the gentleman begins, I desire to be heard in opposition to the point of order.

The CHAIRMAN. The gentleman will be recognized. But first the gentleman from Texas [Mr. SUMNERS] will be heard on the point of order.

Mr. SUMNERS. Mr. Chairman, the part of this paragraph against which the point of order is directed provides for what is ordinarily known as the congressional distribution of seeds. I beg to direct the attention of the Chair to the fact that in the act creating the Department of Agriculture in 1862 and defining its duties, among those duties is enumerated the duty to procure, propagate, and distribute among the people new and valuable seeds and plants.

Another section of the same act provides that the Secretary of Agriculture—

shall select new and valuable seeds and plants; shall test, by cultivation, the value of such of them as may require such tests; shall propagate such as may be worthy of propagation; and shall distribute them among agriculturalists.

Mr. Chairman, this is all the law there is with reference to the distribution of seeds. I direct the attention of the Chair to the fact that the method of distribution is left to the Secretary of Agriculture, with the single limitation indicated in that section.

Of course it was not intended by those who enacted this law that the Secretary of Agriculture should himself, in person, distribute these seeds. The purpose was to have him direct that distribution.

The part of the paragraph against which the point of order is especially directed provides that—

An equal proportion of five-sixths of all seeds, bulbs, shrubs, vines, cuttings, and plants shall, upon their request, after due notification by the Secretary of Agriculture that the allotment to their respective districts is ready for distribution, be supplied to Senators, Representatives, and Delegates in Congress for distribution among their constituents, or mailed by the department upon the receipt of their addressed franks, in packages of such weight as the Secretary of Agriculture and the Postmaster General may jointly determine.

Now, the original act provided that the Secretary should distribute these seeds among the people of the United States and among agriculturalists. This section of the paragraph provides that he shall not do that, but that he shall distribute five-sixths of them among the Members of Congress.

The CHAIRMAN. Will the gentleman permit the Chair to ask him a question right there?

Mr. SUMNERS. Yes.

The CHAIRMAN. The law provides for the distribution of these seeds by the Secretary of Agriculture, but does not say how he shall do it. Now, is it a change of existing law if Congress indicates to him how it wants him to distribute these seeds, whether through the Members of Congress and Delegates, or whether directly by himself? That is one proposition. Is it a change of existing law if we do that?

The second proposition is, having given him the authority to distribute these seeds, does it violate that other rule in taking from him the discretion given him by law when we direct him to distribute a portion of them through the congressional delegation?

Mr. SUMNERS. I answer both those interrogatories in the affirmative, if the Chairman please; but I desire to direct my remarks especially to the latter inquiry of the Chairman, because if that is sustained the point of order is sustained.

Mr. Chairman, who is it, under this proposed provision, that is to determine where the seeds are to go or to whom they are to go? Clearly the law places upon the Secretary of Agri-

culture—there can be no question about that—the duty to determine where and to whom these seeds are to go; and this provision in the pending bill takes from the Secretary that discretion. Not only is that true, but the Secretary of Agriculture does not distribute the seeds under this proposed section. Why does he not distribute them? His department acts merely in a clerical capacity for the Members of Congress, because they, in the exercise of their judgment, tell him to whom these seeds are to go and where they are to be sent. Mr. Chairman, I do not know what the chairman of the Committee on Agriculture will suggest, but the point seems to me to be so clear that I scarcely know how to discuss it to the Chair. It is as plain as human language can make it. This provision says that five-sixths of these seeds, which the law declared the Secretary of Agriculture should distribute among the people, shall, instead of being distributed among the people by the Secretary of Agriculture, be distributed among the Members of the Congress, and that the Members of the Congress shall distribute them among the people of the United States. I am a new Member here, and I do not know just what the procedure of the House is. I shall not discuss this further; but I should like to have the right, if under the rules I may have it, to close the debate on this matter after the chairman of the Committee on Agriculture has stated the reasons why, in his judgment, the point of order should not lie against the paragraph.

Mr. McKELLAR. Will the gentleman yield?

Mr. SUMNERS. Yes.

Mr. McKELLAR. Does the gentleman think this provision on page 23 of the bill does anything else except provide for a method of distribution among the people of the United States by the Department of Agriculture? Does the gentleman think the fact that it uses Members of Congress as a means of distribution affects the law at all?

Mr. SUMNERS. I do not agree with the gentleman in his conclusion. I think instead of the Department of Agriculture using Members of Congress for the distribution of seeds, it is clear that the Members of Congress use the Department of Agriculture for the distribution of seeds, because they tell the Secretary of Agriculture where to send them and to whom to send them. The Agricultural Department does not call upon Members of Congress for their service. And I may say in passing, though it has no bearing on the point of order, that the Secretary of Agriculture has suggested that this method of distribution ought to be discontinued in order that the appropriation may be used in a constructive way.

Mr. LEVER. Mr. Chairman, I desire to call the attention of the Chair to section 526 of the Revised Statutes, which contains this language:

> The Commissioner of Agriculture shall procure and preserve all information concerning agriculture which he can obtain by means of books and correspondence and by practical and scientific experiments, accurate records of which experiments shall be kept in his office by the collection of statistics and by other appropriate means within his power; he shall collect new and valuable seeds and plants; he shall test, by cultivation, the value of such of them as may require such tests; shall propagate such as may be worthy of propagation; and shall distribute them among agriculturists.

Clearly, there is no doubt of the right of the Secretary of Agriculture to collect and distribute seeds. The statute gives him that right. The only proposition involved is whether or not the language in this bill is a limitation upon the means of distribution which the Secretary may employ in getting these seeds out to the people. That is a close point, but I want to call the attention of the Chair to the fact that no matter what the opinion of the Chair may be as to whether or not this is a limitation upon the means of distribution at the hands of the Secretary of Agriculture of these garden and flower seeds, the House itself, on at least one occasion, has held that this language is not obnoxious to the rule. I do not remember in what Congress it was, but the gentleman from Texas, Mr. SHEPPARD, now a Senator from that State, made the point of order against this identical language. The Chair sustained his point of order. The gentleman from Mississippi [Mr. CANDLER], who sits on my right, immediately appealed from the decision of the Chair, and on a direct vote of the House the appeal of the gentleman from Mississippi was sustained.

My recollection is that a similar appeal was taken from a later ruling of the Chair, but of that I am not entirely certain. My recollection is that, again, on that occasion the House sustained the appeal and overruled the Chair.

Now, it seems to me that upon a question of so much doubt as this the Chair should take judicial notice of the former action of the House, for, after all, the House and not the Chair makes the rules.

Mr. MANN. Will the gentleman yield for a question?

Mr. LEVER. Certainly.

Mr. MANN. Is the gentleman quite sure that Mr. Powers in the chair sustained the point of order and the House overruled him?

Mr. LEVER. That is my recollection. I have not looked the matter up, and my recollection is concurred in by the recollection of the gentleman from Mississippi [Mr. CANDLER].

Mr. CANDLER of Mississippi. As I recollect, the gentleman from Vermont, Mr. Foster, was in the chair and not Mr. Powers, of Maine.

Mr. MANN. I have the RECORD before me, and perhaps the gentleman had better wait until I make this statement. On that occasion, May 1, 1906, no appeal was taken. The point of order was withdrawn. Mr. Wadsworth, of New York, chairman of the Committee on Agriculture, made the point of order. I think the gentleman from Vermont, Mr. Foster, was in the chair, and after discussion the point of order was withdrawn. The gentleman from Virginia, Mr. Lamb, in making his argument, made this statement:

> But we are not without precedents in this case. Every gentleman who was in the last Congress—

The gentleman was mistaken about this—

> remembers when a point of order was made by my friend from Texas, Mr. SHEPPARD, and the gentleman from Maine, Mr. Powers, was in the chair, that this very question was discussed. I will not stop here to read the ruling of the gentleman from Maine, Mr. Powers, on that occasion, because so many of these gentlemen who are interested in this subject have read it and know just as much about it as I do. The ruling is familiar. Mr. Chairman, you can not rule against us in this matter unless you overrule the decision of the gentleman from Maine, Mr. Powers, in an exactly analogous case, one standing on all fours with this.

I do not know which gentleman was in error, but the gentleman from Maine, Mr. Powers, took part in the discussion and stated that they could not rule this out on a point of order, in his opinion.

Mr. LEVER. I want to say that I have a very distinct recollection of the fact that Representative SHEPPARD made a point of order against this language. I can place him standing right back here now. The Chair sustained the point of order. There was a good deal of interest in the item. The House was filled that morning, and the gentleman from Mississippi [Mr. CANDLER] promptly rose and appealed from the decision of the Chair. That was in 1907, and the appeal was sustained.

Mr. MANN. The decision of Mr. Powers was before 1906. In 1906, May 1, the point of order was made by the gentleman from New York, Mr. Wadsworth, and, after discussion, was withdrawn. In 1907 I made the point of order on this paragraph and subsequently withdrew it. It was renewed by some one else.

Mr. LEVER. By Mr. SHEPPARD.

Mr. MANN. No; by Mr. JONES of Washington. I have now the RECORD before me, and this is the time when the gentleman from Mississippi [Mr. CANDLER] appealed from the decision of the Chair. This was the ruling of the Chair at that time:

> The CHAIRMAN. This question was raised before the committee in almost similar terms a year ago and was discussed fully. It was admitted at that time that it was a close question. Finally the point of order was withdrawn, and the Chair, therefore, was not called upon to rule. If this were a new question, it seems to the Chair that there could be no doubt in any mind as to the duty of the Chair to sustain the point of order. While, owing to some decisions and some precedents in the past, the question is somewhat complicated and there is some doubt about it, the Chair feels that this question should be determined by the House once and for all, and therefore the Chair sustains the point of order.
>
> Mr. CANDLER. Mr. Chairman, I have very great respect for the opinion of the Chair and the highest personal regard for the gentleman who now occupies the chair; still I am constrained to respectfully appeal from the decision.
>
> The CHAIRMAN. The gentleman from Mississippi appeals from the decision of the Chair. The question is, Shall the decision of the Chair stand as the judgment of the committee?
>
> The question was taken, and the Chair announced that the "noes" appeared to have it.
>
> Mr. WADSWORTH. I demand tellers.
>
> Tellers were ordered.
>
> Mr. Wadsworth and Mr. Lamb were appointed tellers.
>
> The committee again divided; and the tellers reported that there were—ayes 84, noes 136.
>
> So the decision of the Chair was not sustained.

I call that to the attention of the present occupant of the chair.

Mr. CANDLER of Mississippi. The Chairman stated that he submitted it to the House to be settled for all time.

Mr. MANN. No; he decided the question himself, and an appeal was taken.

Mr. LEVER. I am satisfied that if we search the RECORD we will find that a similar action took place on the point of order raised by the gentleman from Texas, Mr. SHEPPARD. I do not think I can be wrong about it.

Mr. MANN. That was on the decision I have referred to when the gentleman from Maine, Mr. Powers, was in the chair.

Mr. LEVER. Then I was not so far wrong.

Mr. MANN. It was not identically the same question, but very similar.

Mr. LEVER. Now, Mr. Chairman, in view of the statement which the Chair has had read to him, and which the Chair himself has finished reading, it seems to me that upon a question so close as this the Chair is bound to take cognizance of the judgment of the Committee of the Whole in the past on this proposition.

Mr. MANN. Let me say that it was the gentleman from Vermont, Mr. Foster, who was in the chair when the decision of January 29, 1907, was overruled by the House.

Mr. HUGHES of West Virginia. Mr. Chairman, will the gentleman yield for a question?

Mr. LEVER. Certainly.

Mr. HUGHES of West Virginia. I would like to ask in what respect the language in this bill for the purchase and distribution of seeds differs from the language of the last bill, and if it is the intention of the committee to frame the language in this bill so that there will no longer be a distribution of seeds take place as at present, and that it will be strictly in the hands of the Secretary of Agriculture with reference to distribution?

Mr. LEVER. There are only three changes in the language of this bill against the language of last year. The first change you will find, on page 22, line 2, where you will see that we have added the word "congressional." Then we have cut out a little further down the language "of which amount not less than $257,000 shall be allowed for congressional distribution," because we added the word "congressional" above. Then we have cut out the item for distribution of drought-resistant seeds, because we put it in another paragraph and have reduced the amount. There is no real change; the seeds will be distributed as they have been before.

Mr. SUMNERS. Mr. Chairman, I do not desire to take up the time of the committee with furthering discussion of the point involved. The only suggestion that has come from the gentleman from South Carolina [Mr. LEVER] indicating a possible reason why the Chairman of this committee should rule against the point of order is that at former sessions of Congress other men occupying the position which the Chairman now occupies have ruled against the point of order. I recognize that some weight should be given to precedents, but I also recognize that in the nature of things if there is to be any progress and improvement each man charged with responsibility must act upon the responsibility of his own judgment, and I respectfully submit to the Chairman that no argument or statement has been submitted by the gentleman from South Carolina in opposition to the statement that this paragraph in the bill not only takes from the Secretary of Agriculture discretion with reference to the distribution of these seeds but takes from him the distribution of these seeds and makes him merely an instrument, an agent, of the Members of Congress. Whether the Secretary of Agriculture distributes these seeds or Members of Congress distribute these seeds seems to me very easily determined by submitting it to this test—who is it that determines where the seed is to go? Who is it that determines to whom the seed is to go? Whoever determines those two points makes the distribution, regardless of the clerical agency used to do the work.

Mr. PAGE of North Carolina. Mr. Chairman, it seems to me that in the argument on this point of order gentlemen who are opposed to it and the chairman of the committee, the gentleman from South Carolina [Mr. LEVER], have emphasized unduly the action of a former Committee of the Whole in overruling the ruling of the Chair upon this question. This is not a matter for the decision of the committee. This is a matter of law; it is a matter of the observance of the rules of the House of Representatives, and the present occupant of the chair is charged with the responsibility of deciding this point of order, not upon any former action of the committee, but upon the facts as they exist and whether this is contrary to the rules of the House.

I desire to call the attention of the Chair to the fact that, to say the least, the law on the statute books regulating the distribution of these seeds by the Secretary of Agriculture left to him the power and the right to distribute them as he pleased. The language of this bill and the bills that have gone before it have written into the law a limitation upon that power, limiting the Secretary of Agriculture in the discharge of the duty that was imposed upon him by the law creating the department, and the only point that I care to call especially to the attention of the Chair is the fact that after all is said this limitation is legislation upon an appropriation bill and obnoxious to the rules of the House.

Mr. LEVER. Mr. Chairman, just one moment in answer to the gentleman from North Carolina [Mr. PAGE]. Let me suppose this situation for the benefit of the Chair. The Chair has been called upon time after time to rule on the same proposition. The Chair has uniformly ruled the same way, and the House has universally on appeal overridden the judgment of the Chair. Would it not be reasonable for the Chair to take notice of the judgment of the House on a proposition of that kind? The Chair has been overruled in this particular instance only once, because the question has been brought to the direct attention of the Chair only once and passed upon; but the Chair was overwhelmingly overruled in that instance, and it does seem to me the Chair is not going beyond his jurisdiction or right when he accepts the judgment of this House on its construction of a rule of the House as his own judgment. I ask for a ruling.

Mr. GORDON. Mr. Chairman, I do not know that I can add anything to this discussion, except that the remarks of the gentleman from South Carolina [Mr. LEVER] have just suggested to my mind this point: The Chairman has not yet received the judgment of this House upon this parliamentary question. This threat to overrule the Chair reminds me of the recall of judicial decisions. The question the Chair has to decide is a question of parliamentary law, and the Chair has no right to delegate to the committee of this House or any former House of Representatives the duty of deciding that question.

Mr. QUIN. Mr. Chairman, I beg to submit that I believe in the consideration of this point of order the Chair ought to take cognizance of the will of the House. My interpretation of law is that it breathes the heart and the sentiment of the people. These Representatives come from the people. We are the mere functionaries for the people we represent, and they form our opinions for us. The people of America, when we come to the fundamental principles of our Government, make the law, and the strict technical ruling of this Chair should be the sentiment of this House. If the House of Representatives, the people's representatives, believe that the distribution of garden seeds to the farmers, the people of this country, should be committed to their Representatives, the Congressmen, instead of to a centralized power, one head far removed from the people, then I think the ruling of the Chair should express that sentiment. I believe that it is proper for the Chair in considering this ruling to consider the will of the House, and I believe that the Members of this House should distribute the garden seeds.

Mr. MCKELLAR. Mr. Chairman, I merely want to suggest this about the parliamentary question involved. For a period of 25 years, ever since the establishment of the Department of Agriculture, a uniform construction of this statute has been had. It has been the uniform custom from 1889 until the present time to distribute these seeds in this way. It seems to me that when the parliamentary question is presented to the Chair the natural thing to do would be to follow the uniform construction of statute by the parties, by both the Department of Agriculture and by this House, during all of these 25 years. As I understand, it has never been departed from. It has been the same; it has been uniform from the beginning until now—that is to say, the seeds have been distributed by Members, as at present—and I suggest that the burden is certainly upon the gentlemen who are attacking it, and not upon the chairman of the Committee on Agriculture or upon the Chairman of the Committee of the Whole House, if he should be in doubt about it. In case of doubt, the doubt should be resolved in favor of that construction of the statute which the parties themselves have uniformity given to it all these years. Of course, I am in favor of the provision and believe the seed should be distributed as heretofore, and that the only amendment should be that a larger quantity of seed should be provided.

Mr. MANN. Mr. Chairman, I do not think it is the duty of the Chair, in rendering a decision upon parliamentary law, to pay any attention whatever to the feelings of the House, to the sentiment of the House, or to the wish of the House; nor is the fact that this item has been in the statute for years any guide, because many items that are subject to points of order remain in bills because the points of order are not made. I can not see how the Chair has much chance for individual opinion in this case. It was a controverted proposition here for years as to whether this seed item was in order. In 1906, on a point of order to an amendment offered by Capt. Lamb, the point of order was discussed at considerable length, and such eminent parliamentarians as Mr. Olmsted, Mr. Dalzell, Mr. UNDERWOOD, and others, took part in that discussion, all admitting that it was a somewhat close question under the law. The point of order was withdrawn and the amendment went in. In 1907, when the bill was again before the House, a point of order was made, and the Chair sustained the point of order; but the Committee of the Whole House on the state of the Union, on appeal, overruled the Chair. It is not necessary to be a lawyer to

know that a decision of a court in one case ought to be, at least, somewhat binding on the same court when the same question arises in another case. Without that decisions become purely arbitrary and personal, and it has always been the rule in parliamentary bodies that where the Chair decided a parliamentary question and subsequently another chairman was called upon to decide the same question that he paid great deference to the former decision; and it has been the universal rule, I think, in parliamentary bodies that where the Chair decides a parliamentary question and an appeal was taken from the decision of the Chair and the decision was overruled by the parliamentary body that that would guide the next chairman in the decision of the same question—not upon his individual opinion, but upon the former ruling of the parliamentary body over which he presided. Now, if the Chair sustains the point of order here or overrules the point of order, it still leaves the power in the committee to overrule the Chair; but if the House heretofore in Committee of the Whole has decided itself upon this parliamentary question, the Chair is bound by that decision, and then if this House desires to reverse the ruling of the Chair, that can be done on appeal.

Mr. CANDLER of Mississippi. Mr. Chairman, I desire to say only one word upon this point suggested by the gentleman from Illinois. The previous Chairman, Mr. Foster of Vermont, when this question was presented to him, no doubt knowing at that time an appeal would be taken from his decision, stated at the time he rendered his decision sustaining the point of order that he did so that it might be submitted to the House, in order that it might be forever and eternally settled, and the House settled it at that time by overruling the decision of the Chairman. In the construction of all statutes passed by legislative bodies the supreme courts of the various States take into consideration the intention of the legislative body in the passage of any law; hence in the construction of this statute the intention and the purpose of the House certainly should be considered by the Chair in ruling upon this question; and if the present Chairman does so, he will overrule the point of order made by the gentleman from Texas [Mr. SUMNERS].

The CHAIRMAN. The Chair is ready to rule. The Chair recognizes that this question is not entirely free from difficulties in reaching a proper conclusion on the law in reference thereto, but it is a question that has arisen every time for a number of years when the Agricultural appropriation bill has been up, and the Chair will say to the gentleman from Texas that the Chair thinks he is in error as to the ruling on this proposition by former Chairmen, and that the rulings have heretofore been largely in favor of the gentleman's contention; so the question is not without difficulty to decide. Section 527 of the Revised Statutes reads:

> The purchase and distribution of seeds by the Department of Agriculture shall be confined to such seeds as are rare and uncommon to the country, or such as can be made more profitable by frequent changes from one part of our own country to another.

In 1904 the gentleman who represented in part then the State of Texas, Mr. SHEPPARD, made a point of order against a certain provision of the Agricultural bill which was identical with the provision we are now considering, to wit:

> The purchase and distribution of seeds by the Department of Agriculture shall be confined to such seeds as are rare and uncommon to the country, or such as can be made more profitable by frequent changes from one part of the country to another.

After the debate the Chairman, who was then Gov. Powers, of Maine, said:

> The question raised by the gentleman from Texas [Mr. SHEPPARD] presents some difficulties. The Chair is inclined to construe the bill somewhat as if it read in a little different manner—as if it read thus: "And the Secretary of Agriculture is hereby directed to expend the said sum, as nearly as practicable, only on the following conditions: For the purpose of testing and distribution," etc.
>
> And while admitting that you can not place a limitation upon the discretion of the Secretary where the law gives him a right to exercise it, yet construing this paragraph not as a limitation upon his discretion, but rather an addition, and a limitation upon which the appropriation is granted, I shall not sustain the point of order to the whole section—
>
> And so forth.

And then the Chair went into a discussion of another feature of the bill that is not in this section under consideration now. The Chair observes that he ought not and could not, because it is unnecessary, take into consideration the opinion of the present committee, but he does feel that he ought to be governed somewhat by the recorded decisions of former committees upon this identical proposition. The House makes the rules; it is the duty of the Chairman to follow those rules as he understands them; and if in the past a Chairman so construed those rules or any part of them in a way that he thinks they ought to be construed, and the House overrules him, the Chair is of opinion that a succeeding Chairman ought to be governed rather by the decision of the House or by the committee than by the individual opinion of the Chairman. On that the Chair finds a record, of date of January 29, 1907, that the gentleman from Illinois [Mr. MANN] made a point of order on this practically identical proposition when Mr. Foster, of Vermont, was Chairman, and the gentleman from Illinois having withdrawn the point of order, it was renewed by another Member, so that the identical question was passed upon. The gentleman then occupying the chair said this:

> This question was raised before the committee in almost similar terms a year ago, and was discussed fully. It was admitted at that time that it was a close question. Finally the point of order was withdrawn, and the Chair therefore was not called upon to rule. If this were a new question, it would seem to the Chair that there could be no doubt in any mind as to the duty of the Chair to sustain the point of order. While, owing to some decisions and some precedents in the past, the question is somewhat complicated and there is some doubt about it, the Chair feels that this question should be determined by the House once and for all, and therefore the Chair sustains the point of order.

There was an appeal taken from that decision, and the Chair was overruled by a vote of 84 to 136.

Now, the present occupant of the Chair feels inclined to think that he ought to attach some importance, at least, to the decision of the committee at that time when the matter was squarely and fairly before them. And therefore recognizing there is some doubt about it, and, in fact, great doubt about it, thinking perhaps that former decisions may have been erroneous in holding that the provision was out of order, because this section is undoubtedly very broad, and being of the opinion that the law that gives to the Secretary of Agriculture the right to make this distribution would perhaps entitle a succeeding Congress, without being charged with enacting new legislation, to indicate the manner in which this distribution may be made—how the Secretary of Agriculture may make this distribution—but I say, leaving that question out of it, it seems to the Chair that a former committee having so emphatically construed this rule itself, the Chair ought to be bound by it, and therefore overrules the point of order. [Applause.]

Mr. GREEN of Iowa and Mr. SUMNERS rose.

The CHAIRMAN. The Chair will recognize the gentleman from Texas [Mr. SUMNERS].

Mr. SUMNERS. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Texas [Mr. SUMNERS] offers an amendment, which the Clerk will report.

The Clerk read as follows:

> Amend by striking out all of pages 22 and 23, down to and including line 14, on page 24, and insert in lieu thereof the following:
>
> "For the purchase, propagation, testing, and distribution of valuable seeds and plants, for the investigation and improvement of grasses and forage crops, $175,000: *Provided*, That of this amount not to exceed $100,000 may be used for the purchase and distribution of such seeds and plants."

Mr. LEVER. Mr. Chairman, I will not reserve a point of order, because I do not think it is subject to a point of order. I would like to arrange, however, if I might, to limit the debate on this paragraph and all amendments thereto.

Mr. SUMNERS. Mr. Chairman, I do not know how many gentlemen may want to speak in favor of the amendment.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto be closed in 30 minutes.

Mr. MANN. You had better make it an hour.

Mr. MADDEN. Make it an hour. A lot of us will want to talk on it.

Mr. LEVER. An hour is a little long.

Mr. MADDEN. It may take longer than that if you do not agree to it.

Mr. MANN. Better make it an hour.

Mr. LEVER. In deference to the gentlemen who seem to want to talk on this proposition I ask unanimous consent that all debate on this paragraph and amendments thereto close in one hour's time, one half to be controlled by myself and the other half by the gentleman from Texas [Mr. SUMNERS].

Mr. MADDEN. I do not think there ought to be any agreement as to who is to control the time. I think it ought to be done under the five-minute rule.

The CHAIRMAN. The gentleman from South Carolina [Mr. LEVER] asks unanimous consent that all debate on this paragraph and all amendments thereto be closed in one hour. Is there objection? [After a pause.] The Chair hears none.

The gentleman from Texas [Mr. SUMNERS] is recognized.

Mr. SUMNERS. Mr. Chairman, the amendment just read by the Clerk is intended to have the same effect as the point of order made by myself against the paragraph dealing with what has come to be known as congressional distribution of seed. This amendment is in line with that part of the last report of

the Secretary of Agriculture in which he suggested the advisability of discontinuing the present method of seed distribution in order that the seed might be used in a constructive way. I have the honor, Mr. Chairman, to represent in part, as Congressman at Large, the State of Texas, which ranks high in agriculture. In my campaign for the nomination I promised if elected to oppose the method of distribution of seed known as congressional distribution. The act creating the Agriculture Department and defining the duty of the Secretary of Agriculture authorizes and directs the Secretary of Agriculture to procure, propagate, and distribute certain seed and plants among the people.

The act does not authorize promiscuous distribution by any agency. There is no more authority under this or any other act for distribution of seed by Members of Congress than there is for their distribution by the doctors or lawyers of the country. Members of Congress belong to an entirely different branch of the Government from that to which the Secretary of Agriculture belongs. But notwithstanding that fact, this bill sets apart five-sixths of the seed, the purchase of which is provided for in the section under consideration, to be distributed as Members of Congress direct. Under this appropriation bill Members of Congress are to determine where and to whom the seed are to be sent. This is in direct violation of the law, which places that discretion and duty with the Secretary of Agriculture. But my objection to this method of distribution goes beyond the mere matter of its violation of enacted law. I believe that custom to be against public policy, contrary to the substantial interest of the agricultural classes, and that it works injury to the prestige of the Congress of the United States. It is well understood that many Members of Congress consider this privilege to be a valuable political asset. They believe that these packages of seed, paid for out of the Public Treasury, bearing upon each package their name, aids them in getting reelected. If it does aid them, it is an improper aid. Members of Congress seeking reelection by agricultural constituency should have to trust to their record in dealing with the great interest, agriculture, rather than to trust in part to the impression created upon the minds of the credulous that the package of garden seed, paid for by the Government and sent out under the Member's frank, addressed by his secretary from the poll tax or other general list of names, is an evidence of the Member's personal concern in their welfare.

There is no wisdom in a public policy which would permit that distribution of garden seed to profit in a political way the people's representative in Congress. I want the day to come when the Members of Congress, facing their constituencies, must answer to them with reference to their efforts to deal effectively with the great economic and constructive problems of the farmers. It is not a spoonful of garden seed that the farmers of this country need each year and a lot of hot air during the campaign, but a better system of credits and a better system of marketing for their products. They do not need the charity of the Government. They want justice only and the recognition on the part of the Government that their vocation is not a mere commissary, valuable only to feed business, but that theirs is a great business, and should be dealt with as such in shaping the economic and governmental policy of the country. They should not be treated as children, to be pleased and obligated to their Congressmen by a few seed. They should be treated as full-grown, independent American citizens. If Congress is determined to have these seed sent out as now, let it direct by proper legislation the Secretary of Agriculture to send them to each family, to the schools, and to whoever or whatever else it is determined to have them sent. We belong to the legislative branch of the Government.

The Secretary of Agriculture belongs to the executive branch. The distribution of seed is not a legislative, but an executive service. What warrant is there for us, under the letter or the spirit of the Constitution, which we have sworn to uphold, to invade the province of the executive branch and become the distributors of the seed, which the law says is the duty of the Secretary of Agriculture? We would have no right to pass such a law, much less do we have such a right in this appropriation bill. This is not ordinary legislation, this is an appropriation bill. Congress in the passage of such a bill is limited to the provision of the money necessary to put into effect existing legislation. Existing law limits seed distribution to the Secretary of Agriculture. There is not one word in the law authorizing congressional distribution. In the face of the Constitution, in violation of the law, which has left whatever discretion there is to the Secretary of Agriculture, we propose to give to Members of Congress, acting not even as the Congress but as individual Members, the power to direct the Secretary of Agriculture where and to whom five-sixths of these seed are to be sent. In this appropriation bill we illegally deprive the Secretary of Agriculture of the discretion, which the law gives him, and gives this discretion, with reference to the exercise of a duty belonging to a part of the executive branch of the Government, to ourselves as individual Members. Is it any wonder that people seeking for the reason which prompts us to do this extreme, and as I believe clearly illegal, thing conclude that we are seeking to do ourselves a political service?

We are the censors of the official conduct of all the officers of the Government, from the President of the United States down. We owe the duty to ourselves, to our respective constituents, and to the country at large, to free ourselves from the suspicion that we are breaking through the constitutional barrier which separates us from the executive branch of the Government, taking from an officer of that branch of the Government the discretion vested in him by law; that we are going even to the Treasury of the United States, and then with the money which we get there, and with the Secretary of Agriculture deprived of his legal discretion, we make him our agent to do for us the work of sending out these seeds, and that in so doing we are not unmindful of the incidental political benefit to ourselves. Mr. Chairman, it is absurd to talk about the Secretary of Agriculture being permitted under the language of this appropriation bill to distribute the five-sixths of the seed referred to. He has no discretion. He has no say. He has no choice. There is not one thing left for him to do, except to do as the individuals who happen to be Members of Congress tell him to do. He is their clerk, that is all. His office merely does the clerical work of pasting on their franks and sending this seed for them to those to whom in the exercise of their discretion Members of Congress direct him to send them. They may send them only to the members of their respective parties, and, as a matter of fact, many Members of Congress do this. They may send them to their party committeemen to be distributed by them. Some Members do this. All of them have the power to direct the Secretary of Agriculture to send out their quota of seed this way. This is wrong, and ought not to be continued. I do not purpose to reflect upon Members who differ from me. In a measure they are the victims of a custom which has grown up here; when Members come to Congress they find it here. This custom is deeply rooted now, and I fully realize the hopelessness of my efforts on this occasion. But the day will come when this custom will have to go, just as other things have gone which in former times were not questioned.

Mr. MADDEN. Mr. Chairman, I rise to oppose the amendment offered by the gentleman from Texas [Mr. SUMNERS]. I do not agree with him at all that the distribution of these seeds through Members of Congress has anything whatever to do with the politics of the country. We men who come from great cities——

Mr. SUMNERS. Will the gentleman yield?

Mr. MADDEN. I have not the time. I have only five minutes. We men who come from great cities feel that we can do no better work than distribute seeds to the children who attend the public schools and, under the direction of those who are paid out of the public treasury to teach these children, enable them to learn how to cultivate the seeds and to enjoy the beauties that come from the development of them. No such work can be done through any distribution of seeds made direct by the Secretary of Agriculture. No such systematic distribution of the seeds can be made in any other way.

I recall very well that in the public schools of the district that I have the honor to represent, where we have more than 50,000 children attending those schools, demands far in excess of my ability to provide come for the seeds which are furnished as the result of this legislation. The children are happy in the work which they are able to do by reason of the cultivation of these seeds. They receive an education which no curriculum can afford by reason of the opportunity which the distribution of these seeds supplies.

I do not know how it is in the agricultural districts of the country, whether the people want the seeds or not; but, strange as it may seem, the men and women and children everywhere throughout the densely populated sections of the country, in the cities, are not only anxious to receive them and to have them distributed in this way but their requests are far in excess of the ability of the Member to supply. By reason of the opportunity afforded through this legislation, we find in the tenement-house districts in the great cities flower boxes in every window, flower gardens in every back yard, flower gardens surrounding the houses that otherwise would know no color of verdure of any kind. This, in my judgment, is not only salutary legislation, but, by all means, it is the manner of

distribution that ought to apply. This is not money expended in vain. It is no waste of public funds. It is not only no extravagant expenditure of the public funds but, in my judgment, it is one of the best expenditures that can be made.

I sincerely hope that the recommendation of the Secretary of Agriculture, if one has been made, that this system of distribution be discontinued, will not be adopted, nor that the amendment offered by the gentleman from Texas [Mr. SUMNERS] will prevail. The distribution of seeds by the Secretary of Agriculture must necessarily be limited in its scope, but the distribution of these seeds through the Members of Congress reaches almost every household in the land.

Is there any other activity that we could employ that would interest the people more? Is there any activity that the people could engage in which would be more beneficial to the communities in which they live than to be given an opportunity to develop these rare seeds that are purchased at high prices by the Government of the United States in order that the people of the country may know exactly what can be done by their development? [Applause.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. DIES. Mr. Chairman, I am in favor of the farmer and his sons and his daughters getting their usual allotment of garden and flower seed, and I am in favor of its being received by him under the frank of his Congressman, just as he has been accustomed to getting them. [Applause.]

I know there are a lot of smart people all over the country, some of them in Washington and some of them at home, who poke fun at us because we send packages of garden seeds to our farmer constituents. I am not dismayed when I go home and some fellow makes fun of the package of garden seed that I sent to him, because almost every day's mail brings me some acknowledgment from some little boy or some little girl or some humble farmer in the country thanking me for the package of seed that had been received from the Congressman; and there are a good many of them in my district who, when they get a package of garden seed, get about all that is left for them after we have paid the bills for pensions and battleships. [Applause.]

I am for the farmer's package of garden seeds. I know that the newspapers want to make fun of the congressional seed distribution. They use it somewhat as they do the mother-in-law joke, as something pert and smart and funny. But I want to say, Mr. Chairman, that the Congressman who sends a package of seed out into the country where some farmer's boy or farmer's girl may plant them in the back yard and learn the rudiments of agriculture, and watch them grow with all the pride of proprietorship, propably does about as much good in that regard as he does in a good many other things.

What is the object of this amendment? It is to strike out the farmer's garden seed. And what do they propose to put in its stead? A provision for the expenditure of money in the way that is already provided for in the bill. Is it economy that the gentlemen seek in striking out the pitiful sum for the farmer's garden seed? If so, where were they on last pension day, when in this House and in this committee we suffered the enactment of a private pension bill which took the equivalent of $8,000 in behalf of a man who had drawn two pensions and who had defrauded the Government, according to the admission of the commissioner himself.

It is a far cry to give any credence to the carping critics of this country who make fun of the garden-seed distribution and who demand that it shall be discontinued. I want it to go into the household of every man in my district. I want every child in my district to learn the way I sign my name. [Laughter and applause.] I want to be known by them, and I want to be loved and respected by them; and I am none too good and none too big in this age, when we are voting vast sums for big battleships, and for big Army and Navy appropriation bills, and for automobiles for Cabinet officers, and pensions for clerks, and pensions for men who draw two pensions, to be ashamed of the package of garden seed which I send out; and I would be ashamed of myself if in the interest of economy I were to assist in striking down the little package of garden seeds, which is about all that some farmers get out of Congress.

At any rate, I am not afraid of the gimlet-headed dude in the town who will make fun of me at home because I send out a package of seed. I send it to the men and their families who I know have used it to good purpose. Down in my district they are putting the little back yards into gardens, and in the cities and in every other place in this country we are teaching the people to turn the unused earth into a garden and feed the human family. And now some wise economist says that because some carping newspaper critic has criticized him, because some gimlet-headed dude has made fun of him, the farmer's seed must go. [Laughter.]

Mr. Chairman, it will never go by my vote. I will vote to give him a package of garden seed, and to give every member of his family a package of garden seed; and we will not leave it to the Secretary of Agriculture and his clerks to send them out, but we will send them out ourselves, with our names on them, and our franks on them. [Laughter and applause.]

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. GREEN of Iowa. Mr. Chairman, I rise to support the amendment, but for reasons different from those proposed by the mover thereof.

I am opposed to the provision in the bill as it stands, not because I do not believe there are benefits derived therefrom, but because I believe the benefits derived therefrom are not in proportion to the amount expended. But I am more especially opposed to the provision as it stands because I think the manner of distribution has a tendency to bring discredit upon Members of Congress; not that I think it is improper, but because of the manner in which it is continually harped upon and talked about, as the gentleman from Texas [Mr. DIES], who has just taken his seat, has stated; and I think it would be better for us to dispense with the few benefits that may be derived from this provision than to continue to have this discredit cast upon Congress.

As I stated, I am opposed to this provision because I think the benefits are not in proportion to the amount expended. We all know that a large number of these seed packages reach people who care nothing for them, and who will make no use of them, and they are wasted in that way.

Mr. CALLAWAY. Will the gentleman yield?

Mr. GREEN of Iowa. Yes.

Mr. CALLAWAY. Does the gentleman think the benefit derived from the expenditures for rivers and harbors is in proportion to the amount expended?

Mr. GREEN of Iowa. I must decline to enter into a discussion of the river and harbor bill.

Mr. CALLAWAY. Does the gentleman think the benefit derived from the expenditure for battleships is in proportion to the amount expended?

Mr. GREEN of Iowa. I do not care to discuss that question. But the gentleman from Texas [Mr. SUMNERS], who made this motion, has asserted that the object of this provision was that Members of this House might use it for their political benefit. I deny that the provision is any benefit in a political way to any Member of this House. It has been no benefit to me, and I believe other Members have had the same experience. On the contrary, it has been a large expense and quite a burden, and I am getting tired of being charged with this provision as a sort of congressional graft, when, in fact, as I have stated, it is an expense and burden. I send out these seeds because when this provision is put in the bill a large number of my constituents expect them, and I intend that they shall have them if the provision is continued in the bill, as it may be.

But, Mr. Chairman, as I have said, this provision has a tendency to cast discredit on the Members of Congress, because we exercise our privilege of selecting the persons to whom the seeds shall be sent. In the majority of cases, and, I think, in practically all cases we do it fairly, sending the seeds as much as possible to those who will make the best use of them and those who desire them, and not with any purpose to make political capital out of them; because, whether we desire it or not, we are bound to lose more than we will gain out of this provision. In my judgment it is more of a liability than an asset to any Member of Congress. Therefore I support the motion.

Mr. QUIN. Mr. Chairman, whether the distribution of these seeds is a liability or an asset, I am against this motion to strike out this provision. Some men are trying to take away from the farmers of the United States what little they have. Who is it that would object to the farmers of this country getting each a nice package of a special variety of garden seeds? We are always talking about telling the farmer what to do. We have a Bureau of Biology down here, and you have got men walking around over the conservation parks of the United States picking bugs off the trees and digging into the bark, and yet gentlemen here object to the farmers having garden seeds sent to them by their Congressmen. We may not accomplish much here, but I want to say that, as one Congressman, I want the privilege of sending my farmers a package of garden seed. I know that they appreciate them. I know that the great majority of them plant these seeds; they watch them grow; they cultivate them; they do their best to make them profitable.

The plants grow up, and the farmer appreciates them. He feels that the Federal Government has an interest in him, and, instead of being a liability, I believe this is an asset to every Congressman. [Applause.] I know that, for my part, I am going to send every package of seeds the Government allows me and then some. [Laughter and applause.] The farmers of this country appreciate the interest that the Government takes in them. They appreciate what this Congress is endeavoring to do for them. The farmers of the United States are entitled to consideration. This little dab of $257,000 to give a choice variety of garden seeds and flower seeds to 22,000 people in each congressional district is worth a great deal to the people of this Republic.

When the Government gets willing to do more for the agricultural class, then we will be on the road of progress; the people of this country will see the dawn of a brighter day.

Mr. DIES. Does my friend from Mississippi realize that this pitiful $257,000 that we are sending to the farmers in the way of seeds would buy another 14-inch gun for one of these $15,000,000 battleships that we are going to authorize in a day or two?

Mr. QUIN. I did not know it would buy a whole gun.

Mr. DIES. Yes; it will buy a whole gun.

Mr. QUIN. I know there are many Congressmen who would rather put it into a gun to go out and waste the people's money than to distribute it to 10,000,000 farmers in the United States to raise vegetables and start the trucking business in their community. Why, sir, this little pitiful allowance that would be enough for one gun will raise vegetables enough for 40,000,000 people next summer, and they will save the seeds and plant them in the fall, and then have a good fall and winter garden.

Mr. DIES. I hope the gentleman will remember that in a few days it is proposed to create six vice admirals and increase their pay from $9,000,000 to $11,000,000 a year, and we need some money for that.

Mr. QUIN. That is very true; but here is one Member of the House of Representatives who is going to jump on that thing with both feet. The excuse for it is that the Navy needs some officers qualified to play royal society in foreign ports. If this House follows the Senate and creates this position of vice admiral for six promotions, then the Army will want places created for six additional officers of corresponding rank. I am going to stand here and fight against that proposition. I am going to do everything I can on this floor for the farmer, too. [Applause.] I know that the gentleman from Texas [Mr. DIES] has a heart for the great mass of the people who work for a living in the United States. I know that he is in sympathy with the toiling masses.

Mr. DIES. Does my friend realize that we will be made fun of for voting to give packages of garden seeds to the farmer?

Mr. QUIN. I know that. I have noticed this thing in a few papers and in some of the Washington papers. I have noticed that they call the distribution of garden seeds by the Congressman a species of graft.

Mr. DIES. They are afraid some of this money will get away from them, are they not?

Mr. QUIN. They are afraid it will get away from the District of Columbia. It seems to me that every time it is proposed to tax the people of the District of Columbia like our constituents are taxed back home the Member who proposes that is a blockhead; he is not a progressive man for the people; but just as soon as a Member gets up on this floor and says one word for the District of Columbia to be kept up and maintained by taxing our constituents to the utmost, they either have his picture in the paper or great, big headlines telling what a noble statesman he is. [Laughter.]

Sir, I am against this pending motion. The people are entitled to these garden seed and should have them. Who is it that hath the "gall" to take away from the farmers the little "mite" now allowed in seeds? I favor giving the American farmer more encouragement. [Applause.]

Mr. PAGE of North Carolina. Mr. Chairman, having on several previous occasions marched up against this congressional distribution of seeds, I realize the fate of this amendment at the hands of this committee. I realize also and I appreciate the frankness of the gentleman from Texas [Mr. DIES] and of the gentleman from Mississippi [Mr. QUIN], who have just addressed the committee. They are to be commended for frankly admitting that this is to them a political asset. No man on this floor appreciates more the esteem of his constituents than do I, but I want to obtain and retain the esteem and respect of the agricultural constituency that I represent on some other ground than sending them a package of garden seeds. [Applause.] The Department of Agriculture was instituted and inaugurated for the purpose of serving the agricultural classes of this country and of furthering the great interests of that productive class that feeds all of us. I believe there is just as much warrant in the law for an appropriation in this bill or any other bill to send to the farmers or any other class of citizens in this country a hoe to cultivate the garden with as to send him seeds to plant the garden.

Mr. MADDEN. Will the gentleman yield?

Mr. PAGE of North Carolina. With pleasure.

Mr. MADDEN. Does the gentleman consider that it would be any different to authorize the Secretary of Agriculture to send it through a clerk in the office than the proposition contained in the bill.

Mr. PAGE of North Carolina. I do; I recognize a great difference, because the provision in the amendment offered by the gentleman from Texas, which is the provision submitted to this committee by the Agricultural Department itself, that seeds worth having will be sent to the agriculturists of this country and seeds of new species and new varieties that will mean something to the producing agriculturists of the country.

Mr. TRIBBLE. Will the gentleman yield?

Mr. PAGE of North Carolina. No; I can not. I have not the time. As I said, I can not but know what the result of the vote is going to be. I will tell you something else. There is not an audience in the United States of America of a like size that you can address on this subject that will not agree with me except this audience. There is not another body of men of this size that you can gather in the United States of America, in my humble judgment, that will make the same decision on this question that you are going to make. For five campaigns in my district I have the honor to represent on this floor ever since I have been in this body I have consistently voted against congressional distribution, and making it an issue in the district I represent. I never yet mentioned it to an audience of agriculturists that they did not agree with me. There is not a newspaper in the district I represent that is not opposed to congressional graft, because it is that and nothing else.

Mr. ASWELL. Is it not possible that the gentleman's speeches have convinced his constituents on the subject?

Mr. PAGE of North Carolina. I think not.

Mr. PLATT. Is it not a fact that the National Grange is on record against the free distribution of seeds?

Mr. PAGE of North Carolina. Every farmer's organization in the United States of America is against it. I can produce resolutions from hundreds of local organizations of farmers' unions in my district and the district represented by the gentleman from Mississippi [Mr. CANDLER] who have passed resolutions against this distribution, and which were forwarded to me because of my opposition on the floor of the House.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. SLOAN. Mr. Chairman, I am not specially interested in the discussion of this appropriation, but one principal source of argument for this amendment has not been mentioned. The gentleman from North Carolina speaks about the number of farm organizations favoring this amendment. I presume that every seed-selling establishment in the United States would also agree with him.

Mr. PAGE of North Carolina. I never have been able to see why the seed-producing establishments in the United States should object to this. They sell the seed to the Agricultural Department. It is bought in the open market. There is no force in that argument.

Mr. SLOAN. Well, I will leave that to the House.

Mr. CANDLER of Mississippi. If the gentleman will pardon me, we tested that several years ago and held very extensive hearings before the committee. All the seed houses in the United States were here present opposing this congressional seed distribution. Not only that, but they maintained an office in the city of Washington, in charge of a gentleman employed by them to create sentiment against it.

Mr. SLOAN. I want to emphasize this proposition. The great value of the seed distribution lies in the fact that they go to the homes of millions of people throughout the United States. Every man who has seeds to sell, either by wholesale or retail, knows, as a matter of fact, that in millions of gardens, back yards, and fields throughout the country their seeds are to be measured up against the seed furnished by the United States Department of Agriculture, which are standard seeds. The great value of the distribution of seed from year to year has not been a political value or an asset, but it has tended toward the standardization of seed in every part of the United States. Every dealer in seed knows that his customers, who are liable to receive good, pure, vital seed from Washington, will know that the seed which he tenders them will be measured by

weight, by handling, by its production in the bed, the patch, or in the field. The greatest opposition comes from the people who desire to sell seed throughout the country without having it from year to year measured up against the millions of packages of seed that are distributed to the people of the United States in every State and in every section from the Department of Agriculture. [Applause.]

Mr. TRIBBLE. Mr. Chairman, every Member of this House recognizes the fact that one of the great needs of this country is the beautifying of the home and making it attractive. I have sent great quantities of flower seed into my district, at considerable personal cost, but I feel amply paid for the trouble and expense in realizing that my constituents appreciate them and in knowing that many of these seed reach the homes of good families of limited means, thus affording them pleasure and adding to the table comforts. It is a source of pride to me to see the flower beds and green gardens as I travel through the county and hear the honest housewife tell of her successes with the Government's contribution to her garden and flower yard.

I send flower seeds into my district as well as vegetable seed. They seem to appreciate flower seeds as much as, if not more than, garden seeds. Not only the people who are not able to buy the seed appreciate them, but people who are wealthy appreciate them. As we grow older I think we like flowers more than we do in youth.

Mr. Chairman, since the Christmas holidays, I have received, I can safely say, as many as 3,000 requests for additional seed. These letters tell me of the success of the Government seed and the joy they bring to the home. I am in favor of increasing the appropriation instead of defeating it.

Many of these requests come from people who can not write very well, who can not spell some of their words very well, and I have some difficulty in reading some of their letters. But O Mr. Speaker, I find a heart in these letters. I understand these good people and love to grant their requests. Many letters come to thank me for the seed that I have sent them. This appropriation for seed is so small that no man should object.

Mr. Chairman, I did not intend to say anything on this occasion, but gentlemen stand here and try to defeat this seed appropriation in the name of economy. When I see such inconsistency on the part of gentlemen I can not remain silent. Millions upon millions are appropriated for purposes that never benefit the great common people who pay the taxes, and yet this little pittance, that carries comfort and pleasure to the very heart of the masses, is held up and denounced as extravagant. I call attention to the fact that during the month of December I stood on the floor of this House and called attention to the fact that an appropriation for the District of Columbia carried $123,390 for the purpose of paying janitors in the District of Columbia. I now remind you that the janitors for school buildings in this city paid out of the National Treasury is about one-half the amount carried in this bill for seed distribution. Think of it! Janitors, $123,390, that should be paid by the citizens of this city if they need janitors; $257,000 seed distribution for all the people all over the United States. Gentlemen should not begin to practice economy on the farmer. Be it understood that I shall favor increases for agricultural purposes, retrenchment and economy where it is needed in other departments, and you will never take the small pittance appropriated for the farmer's seed without a protest from me.

Mr. SIMS. Mr. Chairman, this seed war is 17 years old, according to my personal knowledge. I came here 17 years ago, and the amount allowed to each Member then was about 4,000 or 5,000 packages. The small amount caused considerable trouble, for we could not send the seed to a third of the people who wanted them. I used to go out and buy seed at my own expense—not from the Government, of course, but from seed dealers—put them in an envelope, and send them out. The people of my district wanted them, and they wanted them badly. We kept on with our war until we got the appropriation to where it was a little more decent until we could send out 20,000 packages to each congressional district, and even now I have a demand for over 30,000 in my district. None of them are ever returned, and they could have been, for they are first-class mail. If anyone has any doubt about it, I wish he would come over to my office and see a package of letters a foot high from people whom I have left out unintentionally. Objection is made to a little, insignificant package of seed that enable some people to know the National Government exists, who have no other evidence of it in the way of direct personal benefit, in order that they may cultivate vegetables in their gardens and to some extent reduce the cost of living. Some gentlemen will stand here and vote for a $15,000,000 battleship and then balk at giving a farmer a package of seed. It is a strange thing to me that we should waste so much time every time this bill comes up about this little, insignificant seed appropriation when we throw away money by the millions on less meritorious appropriations. I know the people want them. They are tested and approved. Some people talk about the seedmen selling to the Government and therefore not opposed to this distribution. They want to sell to the people who have no means of testing their seeds, and if it were as profitable to sell to the Government as to private purchasers they would not always fight this appropriation. I say it is a waste of time to take up the time of the House every time this seed question comes up in talking about graft.

Mr. BOOHER. Mr. Chairman, will the gentleman yield for a question?

Mr. SIMS. Certainly.

Mr. BOOHER. I would like to ask the gentleman from Tennessee if this is not about the only appropriation in this bill that does not pass through the hands of some expert, somewhere, where he gets some part of it?

Mr. SIMS. Yes; who gets a rake-off or a commission or something for doing it.

Mr. BOOHER. Where it goes through an expert or a demonstrator.

Mr. SIMS. It is a whole lot of trouble to address these seeds; it is a whole lot of trouble to get lists of names. I pay money out of my own pocket for lists of names with post-office addresses every year in order to send seeds to the people of my district.

Mr. LOBECK. And is it not a fact that the real demonstrator gets hold of these seeds at home?

Mr. SIMS. Yes; the best demonstrator on earth is the man who plants them and grows his own vegetables.

Mr. BOOHER. It is a demonstrator that does not cost the people any money when you get it into the hands of the farmer at home.

Mr. SIMS. That is true. He is not a Government demonstrator. I am at a loss to know why gentlemen who are great statesmen, who are men of great ability, waste their brain power in opposition to sending out a package of garden seed to some poor constituent that otherwise might not know he lived under the flag. I hope this amendment and all others like it will be voted down. Stop the leaks that amount to something, and let these seeds go to that class of our citizens that never get anything directly from the Government otherwise, and who take the time to write and thank you for the seed and tell you the success they have had with them. We know that seeds sent from one section of the country to another section produce better results than to plant the same old seed in the same locality year after year. There is no question about that. We are not losing anything. The people are making something out of this appropriation. The cost of living is getting to be the greatest problem that now faces us. I saw a little back yard in this city last summer, owned by a policeman, not much larger than the space in the well of the House, and he told me that he raised vegetables enough in that back yard during the season to save him $6 a month.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. FOWLER. Mr. Chairman, I am exceedingly glad to know that the Committee on Agriculture has brought in a bill here recognizing the head of every family in the United States. I am in favor of this provision in the bill as it is written, and if there should be an amendment offered to increase the amount, I would vote for it. I do not believe that 20,000 packages of seed to the congressional district are enough. Talk about graft! It is very easy to say "it is graft" when the poor people of the country are getting the benefit of the appropriation, but it is a disgrace to suggest graft when the millionaires of the country are getting the benefit of the graft. Let us have legislation for the people, the men who are needing it. The fellows who have plenty do not need any legislation at all. Go back to the farm, go back to the village and the city, where labor is living in rented houses with a little piece of ground in his back yard. Give him an opportunity to raise some potatoes——

Mr. GOOD. Will the gentleman yield?

Mr. FOWLER. In just a minute. To raise some potatoes, some beans, some peas, so that he can have something fresh to eat as a change from the stale stuff usually found on the markets. Now I yield to the gentleman.

Mr. GOOD. I wanted to ask the gentleman from Illinois if he would favor a provision that would provide that the seeds be distributed by the Secretary of Agriculture, so that the name of the Member of Congress sending them would not appear upon the frank? [Laughter.]

A MEMBER. Think that over.

Mr. FOWLER. I want to say to my friend from Iowa that if I were working for my own personal interest to save labor and money which I have been expending in buying seeds, I would answer him in the affirmative, but when I have at heart a consideration for every family in my district alike, I say no, because the Secretary of Agriculture does not know my people and I do. [Applause.]

Mr. GOOD. The reason I asked the question of the gentleman is this: There is a question raised, I think, in the minds of a great many people as to whether the sending out of these congressional seeds with the name of the Member of Congress appearing on the frank, the seeds only going to the congressional district in which he lives, is a sort of a purchase of his support and his vote. Now, my object in asking the question was simply to ascertain if it would not be better if the Member did not——

Mr. FOWLER. That idea comes from an idiotic source and not from an intelligent source. [Laughter.] I am surprised that any intelligent man should suggest the idea that any man would sell his vote for a package of garden seed or a package of flower seed. My constituents——

Mr. GOOD. Will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. FOWLER. No; not yet. My constituents stand on a plane of honor the same as I do. [Applause.] And it is an aspersion upon their good name for any man to indicate that they are purchased in any way whatever. It is the loyalty that throbs in their bosoms and for the good of their country that causes them to go to the polls and vote and no other consideration, and that is the reason I am here to represent them to-day. [Laughter and applause.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MOORE. Mr. Chairman, I am sorry the gentlemen from Texas, in particular, raise the question of battleships in a discussion affecting seeds for farmers. It seems to me to be an unfortunate illustration.

The propriety of appropriating $257,000 for the purchase of seeds has nothing to do with the cost of battleships. The gentleman from Tennessee [Mr. SIMS] has also made that kind of an argument. It is not a good argument, especially at this time, when the Nation is in the throes of uncertainty and may need the services of battleships to the extent of inducing some of those who have been preaching peace to reverse their votes. When the gentlemen from the farming districts asked for good roads I voted with them because I believed the country ought to have good roads, notwithstanding that in my city good roads had already been paid for by the inhabitants thereof. I voted for good roads not because some gentleman wanted to stop building battleships to protect this Government against foreign foes and to maintain its honor and dignity upon the high seas, but because I believed that in the administration of the affairs of this country the time had come to do what we could to provide good roads and afford better transportation facilities for the farmers of the country, and the city folks as well.

As a city man, who does not have an unimproved acre of ground in his district, I have supported nearly every proposition that has been advanced by the farmer, and at the same time have withstood the assaults that have come from the farming districts against the industrial districts. I have done this because I believe in keeping the farmer prosperous, and I have observed that from year to year the appropriations for his benefit have been increased and the allowances by Congress have been growing greater and greater all the time.

Mr. McKELLAR. Does not the gentleman think that is exactly right?

Mr. MOORE. I think it is, or I would not vote that way. I voted against reciprocity because I did not believe it to be in the interest of the farmers of this country; and I am prouder of that vote to-day, when the farmer is beginning to complain of tariff legislation, than I was the day I voted.

SEVERAL MEMBERS on the Democratic side. Oh, no!

Mr. MOORE. Oh, the gentleman from Illinois [Mr. FOWLER] may say "Oh, no!" He is the one particular star of "the masses" who seem to congregate solely in his district in Illinois, but he may laugh upon the other side of his face in a very few months when he finds that the farmers of his district will need these seeds perhaps as much for soup as they will for agricultural purposes. [Laughter on the Republican side.]

Mr. Chairman, I am in favor of voting this appropriation without question to the farmers of the country. It is not altogether special to the farmer, for every congressional district shares in the distribution. And as the seeds are now distributed, it is a perfectly fair proposition. The Secretary of Agriculture could not improve, no matter what powers we might give to him, upon the present method of distribution. These seeds go into my district, as they go into yours, and I want to say to you that there are as many worthy people in the district I represent, wherein the ground is all built over, to whom these seeds are of genuine service, as there are in the districts represented by some of you gentlemen, where there are large areas of farm lands. These seeds go into the homes of the people; and if we do not use the vegetable seeds, that are more useful to you than they are to us, we can very readily exchange with you, as we do, for the flower and the garden seeds which our people use and which serve, as the gentleman from Georgia [Mr. TRIBBLE] said a little while ago, to ornament and beautify the home.

They tend to bring the youthful mind to a realization of the value of agriculture. They make the children in the public schools, where I send many of them, think of the fresh air of the country, and as they grow and develop in the little city gardens they serve as useful object lessons to the children of the city in teaching the wholesomeness of country life. They go not only into the homes of those who live upon the asphalted streets, but they go into the hospitals also, where they are a great benefit and comfort to the sick and distressed. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HEFLIN. Mr. Chairman, I am very glad to find my good friend from Pennsylvania [Mr. MOORE] and myself agreeing upon this very important question, one that means so much to the people of the country, especially the farmers. I am surprised that any gentleman would offer an amendment here to strike this provision from the act. It is not much, gentlemen, and yet you give the people in the rural districts the opportunity through this plan once a year to get the very best seed grown in the various sections of the country—in the South, in the North, in the East, and in the West. We learn what they are growing up in the North, and they learn what we are growing in the far South; and so with the East and the West. Care is now exercised in selecting seed and good seed are being sent out. Gentlemen, the organic act creating this Department of Agriculture provided that these seeds should be distributed amongst the people. I think that it was a wise provision, and I never cast a vote for anything in this House that I cast more cheerfully than the one for seed distribution amongst the plain people of this country. [Applause.] They are entitled, gentlemen, to this little recognition at the hands of Congress. A great deal that the farmers do is paying taxes that support the Government, and they do not get much directly in return except seed, and some gentlemen would take away from them their seed. [Laughter and applause.]

Why, I want to say to my good friend from Texas [Mr. SUMNERS], who is now representing the State of Texas at large, but who will, I hope, come from a congressional district some day—and I hope to see him continue to come to Congress—that when he goes through his district and sees a little stick standing at the end of a row in the garden and on the stick a little envelope telling the kind of seed that came in it, and up in the corner of it he beholds his name just above the letters "M. C.," and he sees the little green stuff peeping above the ground, growing from the seed that he sent the farmer, he will be thankful that we did not allow him to strike out the provision of seed distribution. [Applause.]

Mr. CANDLER of Mississippi. Mr. Chairman, the chairman of the Committee on Agriculture [Mr. LEVER] has requested me to close the debate on this question on the part of the committee, and at his request I do so. As was stated by the distinguished gentleman from Tennessee [Mr. SIMS], this objection and this obstruction to this appropriation has been offered for many, many years. It has met with the same fate at the hands of the Congress of the United States every time it has been presented, and I dare say that it will meet the same fate to-day, because the Representatives upon the floor of this House are going to respond to the sentiment of the people and continue to send them the seeds which they so much desire. [Applause.] It has oftentimes been said that people do not want them. If Members will examine their mail morning after morning, they will come to the conclusion themselves that they are mistaken in that view. In my mail there comes to my office every day, without a single, solitary exception, letters from people all over my district, requesting me to send them garden seed, and to send them flower seed, and to send them bulbs, and to send them all the variety of seed it is possible to secure for them. It always gives me pleasure, it gives me happiness, to respond to their request, and to do that which they desire to be done at my hands.

Mr. JOHNSON of Washington. Mr. Chairman——

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Washington?

Mr. CANDLER of Mississippi. I do.

Mr. JOHNSON of Washington. In regard to bulbs, how many requests does the gentleman receive?

Mr. CANDLER of Mississippi. I receive a great many more requests than I can supply, because the gentleman no doubt knows we get a very limited number of boxes for distribution—only 20, I believe.

Mr. JOHNSON of Washington. Does not that lack appear also in regard to the number of packages of seeds for a district?

Mr. CANDLER of Mississippi. There are 20,000 packages of garden seed for each congressional district, which is not enough, because I have to get more, and if the gentleman responds to the requests from his district, I dare say he has to secure more.

Mr. GORDON. Will the gentleman yield?

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Ohio?

Mr. CANDLER of Mississippi. I do.

Mr. GORDON. Suppose you got a lot of requests for money from your constituents?

Mr. CANDLER of Mississippi. If I had it, I would send it to them. Unfortunately, I have not. [Laughter.] There is one rule I have followed since I have been a Member of the Congress of the United States, and that is to respond to every request of every constituent of mine when it was in my power to do so. And so long as I continue to have the honor to represent them upon this floor I expect to continue to pursue that course. [Applause.]

Mr. BUTLER. Will the gentleman include some of us outside of his district in the distribution of money?

Mr. CANDLER of Mississippi. I would include my good friend from Pennsylvania. I would give him anything I possessed.

Mr. BUTLER. All right. I will come early and avoid the rush.

Mr. CALLAWAY. I would like to say to my friend that these Ohio and Indiana and Iowa fellows usually send money out to their constituents, do they not?

Mr. CANDLER of Mississippi. I can not speak advisedly and with knowledge on that subject.

Mr. CALLAWAY. They sent out about $50,000,000 last year and this year in pension bills. Do they not every other Friday here send out money? [Laughter.]

Mr. CANDLER of Mississippi. The gentleman from Texas knows I have not in the past and do not now favor these pension bills. Now, Mr. Chairman, I want to call specific attention to this amendment offered by the gentleman from Texas [Mr. SUMNERS]. It says:

Amend by striking out all of pages 22 and 23 down to and including line 14, on page 24, and insert in lieu thereof the following:

"For the purchase, propagation, testing, and distribution of valuable seeds and plants, for the investigation and improvement of grasses and forage crops, $175,000: *Provided*, That of this amount not to exceed $100,000 may be used for the purchase and distribution of such seeds and plants."

Now, in the bill, just preceding that, there is an item which has already been passed and is now a part of the bill providing as follows:

For the purchase, propagation, testing, and distribution of new and rare seeds, and for the investigation and improvement of grasses, alfalfa, clover, and other forage crops, $166,500: *Provided*, That of this amount not to exceed $100,000 may be used for the purchase and distribution of such new and rare seeds.

The gentleman's amendment is almost an identical copy of the provision immediately preceding this proposition, which is offered by the gentleman from Texas [Mr. SUMNERS] in his amendment.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. MANN. Mr. Chairman, I ask unanimous consent that the gentleman from Mississippi may have five minutes more [applause] and that the general time be extended for five minutes.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] asks unanimous consent that the gentleman from Mississippi [Mr. CANDLER] may have five minutes more, and that in order to give him five minutes more the general time be extended five minutes. Is there objection?

There was no objection.

Mr. CANDLER of Mississippi. Mr. Chairman, I desire to thank my good friend from Illinois [Mr. MANN] for his kindness, and I am grateful to the House for its indulgence.

I was just calling attention to the fact that the provision offered by the gentleman from Texas [Mr. SUMNERS] is almost identical, word for word, a copy of a paragraph preceding, in this identical bill, and hence if this provision were adopted, as suggested by him, it would be a duplication of the appropriation made in the preceding paragraph. Therefore, if he is insistent that this paragraph ought to go into the bill and his amendment is adopted, this other paragraph certainly ought to go out of the bill. But it has already been adopted, and will become a part of the law as it stands.

Now, Mr. Chairman, the distribution of seed is no new proposition. I read:

The purchase and distribution of seeds and plants by the Government may be said to date back to colonial days. As early as 1743 the British Parliament granted $600,000 to promote the cultivation of indigo and other crops in the American Colonies, and the assemblies of various Colonies appropriated small sums from time to time to encourage the cultivation of plants new to the country, such as hops in Virginia, mulberry trees for silk culture in Georgia, and vineyards for the establishment of an American wine industry.

Franklin, while in England as agent for Pennsylvania, sent home silkworm eggs and mulberry cuttings. Thomas Jefferson during the five years he represented this country as minister to France (1784–1789) forwarded numerous seed samples of grasses, rice, peppers, and olives to correspondents at home, especially to the Society for the Improvement of Agriculture at Charleston, S. C. It was to this society that he sent samples of rice seed, from which some of the best rice in the world was raised in the Carolinas. Other representatives of our Government in the early days of its history followed the example of Franklin and Jefferson, until during the administration of John Quincy Adams instructions were given to all United States consuls to forward rare plants and seeds to Washington for distribution. A botanical garden was later established at Washington, in which were grown many of the rare and interesting plants imported from foreign countries, and considerable quantities of such seeds and plants were distributed by the Commissioner of Patents.

Notwithstanding these efforts to introduce new seeds and plants, many varieties of fruits and vegetables with which we are familiar were scarce or unknown in the early part of the nineteenth century. There were but few seed farms, nurseries, or seedsmen, and the illustrated seed catalogues of our day were unknown. Seeds were mostly grown by the farmers themselves, and there was no improvement from year to year. Interest in better seeds and in securing new seeds and plants resulted largely from the agricultural fairs inaugurated by the various societies for "promoting agriculture" which were organized at Charleston (1784), New York (1785), Philadelphia (1791), Boston (1792), and Washington (1809).

In 1839, through the efforts of Hon. Henry L. Ellsworth, Commissioner of Patents, an appropriation of $1,000 was made for the purpose of collecting and distributing seeds, prosecuting agricultural investigations, and procuring agricultural statistics, with which 30,000 packages of seeds were purchased and distributed. This appropriation marks the beginning of our present Department of Agriculture. Similar appropriations continued to be made, increasing in amount from year to year as the importance and value of the work came to be recognized, but prior to 1865 the appropriations were always for the combined purposes of purchasing seeds and collecting statistics, so that the actual amount expended for seeds alone can not be determined. From 1839 to 1862 the work was handled by a small force of clerks in the Patent Office, but in 1862 it was transferred to the newly created Department of Agriculture. For 40 years thereafter the work was carried on by a group of employees known as the "Seed Division," until 1901–2, when various affiliated but hitherto independent branches of the department were brought together to form the present Bureau of Plant Industry. During the period of 72 years from 1839, when the first appropriation of $1,000 was made, to 1911, when $289,680 was appropriated, the quantity of seed distributed has steadily increased and the methods of handling it have undergone many changes.

The law under which the Department of Agriculture was organized provides—

"There shall be at the seat of government a Department of Agriculture, the general design and duties of which shall be to acquire and diffuse among the people of the United States useful information on subjects connected with agriculture in the most general and comprehensive sense of that word and to procure, propagate, and distribute among the people new and valuable seeds and plants." (Sec. 520, R. S.)

There can be no doubt that the purpose of the earlier legislation for the purchase and distribution of seeds was to introduce into this country new and improved varieties of vegetables, fruits, flowering plants, and new crops in order to increase the horticultural and agricultural products of the United States, and for many years attempts were made to confine the distribution to new varieties of vegetables, grains, sorghums, and fruits. The distribution of such seeds has undoubtedly left a decided impression upon the agriculture of this country. As the demand for the new seeds and plants introduced by the department increased, however, such demand very naturally found expression in requests made to Senators, Representatives, and Delegates in Congress, and the number of these requests soon became so great that it was impracticable to fill them with strictly new varieties of seeds. The practice of sending out larger and larger quantities of vegetable seeds thus developed. These seeds, while in no wise new, were useful in the new communities to which they were largely sent.

During the years from 1889 to 1893 practically the entire seed appropriation was expended for standard varieties of vegetable and flower seeds. In 1894 a change was advocated and action was taken to discontinue the customary distribution. This action was not approved by Congress, which in the act approved April 25, 1896, changed the wording of the previous acts, which for many years had read "for the purchase, propagation, and distribution, as required by law, of valuable seeds," etc., to read as follows:

"For the purchase, propagation, and distribution of valuable seeds, bulbs, trees, shrubs, vines, cuttings, and plants, and expense of labor, transportation, paper, twine, gum, printing, postal cards, and all necessary material and repairs for putting up and distributing the same, and to be distributed in the localities adapted to their culture, $150,000. And the Secretary of Agriculture is hereby authorized, empowered, directed, and required to expend the said sum in the purchase, propagation, and distribution of such valuable seeds, trees, shrubs, vines, cuttings, and plants, and is authorized, empowered, directed, and required to expend not less than the sum of $120,000 in the purchase at public or private sale of valuable seeds, the best he can obtain, and such as shall be suitable for the respective localities to which same are to be apportioned and in which the same are to be distributed as hereinafter stated, and such seeds so purchased shall include varieties of vegetable and flower seeds suitable for planting and culture in the various sections of the United States."

Under the wording of this act the Attorney General, to whom the question was submitted for decision, held that the purchase and distribution of seeds, including vegetable and flower seeds, were mandatory and left the Secretary of Agriculture without discretion.

So it will be seen that the author of the Declaration of Independence and the founder of the Democratic Party could even hear the call for seed across the waves of the ocean, and he responded to it. [Applause.] Franklin, the great philosopher, who stood, away back yonder in the olden days, for the rights of the people and published a great periodical known as the Saturday Evening Post, which is still propagating the gospel that he believed in at that time and is still dispensing the philosophy that he advocated, favored seed distribution. [Applause.]

Why, the distribution of seed, gentlemen, is an evidence of statesmanship [laughter] and an evidence of the very best philosophy and thought, as is evidenced by its advocacy by Jefferson and Franklin. [Applause.] He who would be a great statesman at any time, on any occasion, should always respond to the pulse beats of his people and always hear their requests and always heed their desires and meet their wishes; and the man that fails to respond to the requests of the people who have honored him and who respect him fails to show the appreciation of their confidence which he ought to show, and fails to realize the patriotic duty that devolves upon him to respond to their wish and their call, and to send them whatever they may desire when he can legitimately secure it, no matter what it may be. [Applause.]

Talk to me about graft. It makes me sick and tired to hear people talk about graft when you are sending the people what they desire and what they want themselves and what they request at your hands. [Applause.] Why talk about graft, and say it is graft, simply because it is sent out by Members of Congress under their name? Why, it was patriotically said by one of the gentlemen who preceded me, "I am glad to have the honor to send out a package of garden seed under my name. I am glad to have the people see my name come to them, even on a package of garden seed or anything else." [Applause.]

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Nebraska?

Mr. CANDLER of Mississippi. With pleasure.

Mr. SLOAN. According to the gentleman's new version, speaking of Franklin and Jefferson, is it true that Patrick Henry said, "Give me seed, or give me death"? [Laughter.]

Mr. CANDLER of Mississippi. Oh, no. He said, 'Give me liberty, or give me death," but "liberty" meant "seed.' [Laughter and applause.] Because the seed is what goes down into the ground and produces the wealth of this country, and without seed there would be no production of any kind, and without production we would soon be dependent and have no liberty, and hence seed is a great thing. [Applause and laughter.] Patrick Henry stood for liberty, and the farmer for whom these seed are intended is the greatest exponent and defender of liberty in this country. [Applause.]

The CHAIRMAN. The time of the gentleman from Mississippi has again expired.

Mr. CANDLER of Mississippi. Has my time expired, Mr. Chairman?

The CHAIRMAN. Yes.

Mr. CANDLER of Mississippi. Let me say just this word, and then I shall have finished. I want each and every man in this House to have the opportunity to send seed to the men who write to him, and especially to the ladies and the bright-eyed, rosy-cheeked girls, wheresoever they may live. [Laughter and applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas [Mr. SUMNERS].

The question was taken, and the Chairman announced that the "noes" seemed to have it.

Mr. PAGE of North Carolina. A division, Mr. Chairman.

The committee divided; and there were—ayes 36, noes 96.

So the amendment was rejected.

The announcement of the result was greeted with applause.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Total for Bureau of Plant Industry, $3,053,975.

Mr. BORLAND. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Missouri [Mr. BORLAND] moves to strike out the last word.

Mr. BORLAND. Mr. Chairman, a day or two ago the gentleman from Nebraska [Mr. SLOAN], in answer to some remarks which I had made favoring the extermination of the southern cattle tick and the promotion of the cattle-feeding industry in the Southern States, as provided for under one of the items of this bill, took occasion to fire what I believe to be intended as a political shot at the Democratic tariff bill. He placed in the RECORD a statement showing the importations of cattle from Mexico during the months of October, November, December, and January, just past, by which it appeared that the total importation was 271,387 head; and he made the statement that that was twice as many cattle as were imported during the similar period one year before from all sources.

Evidently his purpose in so doing was to lead the American farmer, in some way or another, to believe that the free-cattle and free-meat provision of the Underwood tariff bill was working a hardship or an injustice to the American farmer; that by reason of the free-cattle provision cattle were rushing in here as never before and it was due entirely to that change in the tariff law.

It is not necessary to justify the free-meat and free-cattle provision of the tariff law to the wage earners of the cities. They know well enough that the diminishing supply of beef cattle in this country is responsible for the high cost of meat. The American wage earner is a highly efficient man. He is accustomed to a good supply of meat, and he is entitled to have it. The number of beef cattle in this country has decreased in the last seven years from 52,000,000 head to 35,000,000 head, while the number of meat eaters has increased. It is poor politics for our standpat, high-tariff friends to lay tribute upon the food supply of the great toiling and producing masses. They will not stand it.

But he seeks to appeal to the cupidity or fears of the farmers by representing that they are being ruined by a flood of cheap cattle from abroad. He is all wrong about his facts. Now, let us see if he is not.

I said to him then what I believed to be the fact, that the importation of cattle from Mexico at this time is not and can not be a normal importation. I believe the Mexican herders are driving off their herds and selling them on this side of the line for the purpose of realizing what cash they can. I believe, in other words, that that importation of cattle from Mexico is due to the disturbed conditions there; that cattle herding in northern Mexico is unsafe, and consequently there is an unusual importation into this country. The Mexican authorities do not regard the exporting of cattle from Mexico to the United States as a good thing, as is evidenced by the fact that they have tried in every way to stop the exodus of cattle from Mexico. They realize that their ranges are being depleted and they have put a very heavy export charge on the exportation of cattle from Mexico. If the cattle are coming in from Mexico in alarming numbers it must be due to conditions down there, which are temporary in their nature and not due to a steady market for cattle in this country.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. BORLAND. Yes; if I can get more time.

Mr. HUMPHREY of Washington. How does the gentleman account for the increased importation of cattle from Canada? Does the Mexican situation have anything to do with that?

Mr. BORLAND. I am coming to that question. The question which the gentleman from Nebraska [Mr. SLOAN] raises was the increased importation from Mexico. I have no figures on the increased importation from Canada, if there be an increase, and the gentleman from Nebraska had figures only on the increased importation from Mexico. Now, I want to say that the increased importation from Mexico which the gentleman from Nebraska cited as being so unusual, so large, and so alarming has had no effect in lowering the prices of cattle at the nearest great cattle market north of the Mexican boundary.

Mr. BALTZ. Will the gentleman yield?

Mr. BORLAND. Yes.

Mr. BALTZ. I have heard it stated numerous times on the other side of the aisle that the importation of cattle into this country from these other countries since the Underwood tariff bill passed has decreased the price of these cattle. I want to say right here that I sold one beef animal the other day that brought $155.

Mr. BUTLER. That will not reduce the cost of living in this country.

Mr. BORLAND. Let me say to the gentleman that the cattle coming in from Mexico, as I believe, are not all of them fat cattle. They are not all of them butchers' stock. The great majority of the cattle that have come from Mexico for the last four or five years have been thin cattle, grass cattle, which, when they came over into this country, have gone into the hands of the farmers and stock raisers, who have fed them with winter feed to put flesh on them and fatten them for the market. Mexico has been a source of supply, I will say to the gentleman

from Washington [Mr. HUMPHREY], as Canada now is a source of supply for stockers and feeders. The price of land in the country surrounding our cattle markets has become so high that farmers can not afford to raise their own feeders. Now, listen to what the effect has been. I will read from the Kansas City Star of last Saturday, giving a review of last week on the cattle market.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BORLAND. I ask for five minutes more.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent for five minutes more. Is there objection?

Mr. LEVER. Mr. Chairman, reserving the right to object, I think it is only fair to say that when the gentleman from Nebraska [Mr. SLOAN] has had an opportunity to reply, as I presume he will want to reply, I trust that the debate on this tariff proposition will not be continued in the time that ought to be given to the consideration of the agricultural appropriation bill.

Mr. BUTLER. I only want to insert a few figures that will take no time. The gentleman will not object to that, I am sure.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri [Mr. BORLAND]?

There was no objection.

Mr. BORLAND. As a matter of fact, I defended on the floor of this House the free cattle and meat provision of the Underwood tariff bill. I did it on the theory that we have not now in this country a sufficient supply of stockers and feeders to eat up the grass and the nubbins of corn and the winter feed that we have on our farms; but if we have an ample supply of feeders to bring onto the farm, where they can be fattened and put onto the market, the importation of feeders will be a good thing for the stockmen and farmers. I still think that is true, and I am going to show you why it is true by this weekly report of the cattle market:

THE WEEK'S TRADE IN LIVE STOCK.

To-day's Kansas City live-stock receipts were about a low record—only 240 hogs, 100 cattle, and no sheep. There was no trade in cattle and sheep. The hogs sold at $8.30 to $8.40, about steady prices. Packers said choice hogs would have brought $8.55 to $8.60. Chicago received 7,000 hogs and the five western markets 14,740. * * *

Following a moderate decline on Monday, the cattle market turned up and the week closed with prices net unchanged to 15 cents higher. Native steers yesterday were 10 to 25 cents higher than Monday. From Tuesday on receipts were light, but total receipts for the week were about 3,000 larger than last week.

A new March record was made for fat steers at $9.25. Nineteen steers, weighing 1,346 pounds, sold at that price. The former record, $9, was paid in March last year. Some Texas steers sold at $8.80, also a March record on that class. The marketing zone widened and several bunches that sold at $7.70 to $8.50 were hay-fed steers from Montana, Wyoming, and Idaho. Native-fed steers are far below normal supply.

Trade in butcher cattle was active. Prices fluctuated 10 to 15 cents and closed strong. Some choice cows sold at $7.55 and heifers $9. * * *

Demand for stockers and feeders was active. Prices were firm.

Native-fed steers are far below normal supply. Now, where do the native-fed steers come from? They come from the feeders that are bought and fed by the farmers and then shipped when fat to Kansas City or some other primary market. Native-fed steers fell below the normal supply, and that accounts for the $9.25 beef. If we had an ample supply of steers as stockers and feeders for the western farmers you would have lower prices for beef and more active trade in cattle and more money for the stock producers.

Mr. WILLIAMS. Can the gentleman enlighten us as to the price a year ago, and how it compares with the price now?

Mr. BORLAND. That is stated right here in what I read. Nine dollars was the high-water mark in March, 1913, and $9.25 is the new high-water mark for 1914. It is 25 cents higher. This article says:

Trade in butchering cattle was active. Prices fluctuated 10 to 15 cents and closed strong. * * * Demand for stockers and feeders was active.

Now, some of you gentlemen understand, as my friend from Nebraska [Mr. SLOAN] certainly does, that the cattle-feeding market not only controls cattle, but also hogs, because a man who is feeding cattle with winter feed—with corn—is also feeding hogs. The economical way to get the best use of feed is to let the hogs run with the cattle. A farmer feeds hogs along with the cattle when he has a bunch of cattle that he is fattening.

This market report shows that the demand for stockers and feeders was active. That shows that the farmers and stockmen of the Missouri Valley are not scared to death by the so-called flood of free cattle coming in from Mexico or from Canada, either. If they were afraid their business of feeding cattle was about to be ruined by the new tariff law, the demand for feeders and stockers would not be active. Good feeders are selling up above $7 a hundred. And yet our standpat friend is trying to throw a scare into the farmers. He will not succeed, because he is wrong on the facts in two important particulars.

First. The so-called flood of imported cattle has made no impression on the prices in the great cattle market of the Southwest. Cattle are higher now than they were a year ago, because the supply is short and the demand is great.

Second. The demand for stockers and feeders is active. The stockmen need more feeders and they ought to have them, if the cattle business is to be saved; and, goodness knows, the wage earners need the meat. Let us quit trying to throw scares into the farmers and other business men and give them some constructive legislation that will help them. The stock business has changed wonderfully in the last generation. I do not claim to know about many businesses, but I do know something about the stock business. I worked on a stock farm when I was a boy, and I spent three years as a boy at the Kansas City stock yards. In those days we used to get the range cattle from the plains. Meat was cheap because cattle were abundant. There were millions of acres of free pasture in the Southwest. Oklahoma was still Indian Territory and was an open range. We used to get train loads of the long-horned fellows from Texas. The cattlemen of Kansas City built up a great market in those days that has benefited the entire country. While we still have the great market, conditions of doing business have changed radically. The range has been fenced up into little farms. Cattle are now fed on the farm in small bunches. A farmer who has pasture and good water will come to a market like Kansas City and buy a bunch of feeders to take home and fatten. With the increased price of land very few farmers can afford to raise their own young stock. The stock business is done on as close a margin as any mercantile business, and it takes a careful and experienced man to come out with a profit. Often the stockman must borrow the money from the bank to pay for the feeders, and he must market them within a limited time to pay his note.

The Missouri Valley is the greatest corn belt and blue-grass belt in the world. It is an ideal stock-feeding country. Our beef cattle are the best in the world and bring the best prices. The best way to use corn and grass is to feed it on the farm. It saves the land from impoverishment and uses up feed of the farmer and his neighbors that might not be good to ship. But we need cattle to stock the pastures, or the cattle business will suffer and the cattle market of Kansas City will suffer. The drought last summer caused the farmers to sell off most of their stock, and they are now trying to restock their pastures. Anything that helps the farmer and the stockman helps Kansas City, and anything that hurts the live-stock industry in the West hurts Kansas City. The stockman is not hurt by free cattle coming in on the hoof, because they are not fat cattle that come in competition with his stock, but thin cattle that go on his pasture and eat his corn. The demand for food products in this country is growing faster than the supply, and it only needs to be intelligently handled. The stockman is not afraid of free cattle—the only thing he is afraid of is scare-breeding politicians.

The cattle market is controlled all over the Mississippi Valley by the supply of the stockers and feeders. To-day, the middle of March, 1914, when the gentleman says this extraordinary number of cattle is coming in from Mexico, the demand for stockers and feeders is still active. Does any man of average intelligence pretend to say that cattle coming off the range or from grass, sold in a hasty market in February and March, is butcher stock? Not 10 per cent of it is butcher stock. They may go to the butcher, but they ought not to. The cattle that come in from the grass reach the butcher from September to November, and after November little grass cattle come in ready for the butcher. All cattle that come in February or March ought to be sold as stockers and feeders, and there is where the farmer in the Mississippi Valley who has corn to sell makes his market. He can not ship the corn now in interstate commerce unless it grades up to a certain point. All the corn that is below the standard fixed by the Agricultural Department, that has too much moisture or is too dry, the nubbins, must be fed on the farm. What are you going to feed it to? You have stopped the farmer from shipping his corn. What are you going to give him to feed his corn to unless you give him stockers and feeders? If you will give him stockers and feeders that he can feed this corn to, you will make his business active and aid him not only to make money but to bring down the price of beef for the wage earner in the city. [Applause.]

Mr. BUTLER. Mr. Chairman, I move to strike out the last word. I ask unanimous consent of the committee that I may insert a few figures in the RECORD, drawing a comparison of

the imports of wool between the month of January, 1913, and January, 1914, that I have clipped from the Philadelphia Ledger.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The following is the matter referred to:

LOW TARIFF TRIPLES IMPORT OF WOOLENS—FIGURES FOR JANUARY, 1914, $4,670,348 COMPARED WITH $1,468,228 IN SAME MONTH LAST YEAR—FULL EFFECT NOT YET FELT BY EITHER PRODUCER OR CONSUMER IN THIS COUNTRY—PHILADELPHIA INTERESTED.

WASHINGTON, *March 5.*

Astounding increase in the importation of manufactured woolen articles, the duty of which was greatly reduced by the Underwood tariff bill, is seen in the figures for January, 1914, to-day obtained by the Public Ledger. The importation for January this year of wool manufactures amounted to $4,670,348, as compared with a total valuation of the same character of importations of $1,468,228 in January, 1913, during the operation of the Payne-Aldrich tariff law.

The importations were three and a half times as great under the reduced tariff schedules as they were a year previously. The experts say that the full effect of such importations has not as yet been felt either by the producers in this country or the consumers. The flooding of American markets with foreign-made goods has not caused an appreciable effect upon the mills here and will not until some months later. The price of clothing has not been reduced in any wholesale way, although one New York firm has advertised a slight reduction in ready-made clothing.

The figures made public to-day are of great interest to Philadelphia, which will be most affected in the end by the importations of manufactured wools. The following table shows the contracts:

*Imports of wool manufactures for January, 1913.*

| | |
|---|---|
| Carpets, etc., 66,610 square yards | $300,426 |
| Cloths, 504,360 pounds | 625,981 |
| Dress goods, 1,650,516 square yards | 345,402 |
| Wearing apparel | 104,293 |
| All other manufactures | 92,126 |
| Total | 1,468,228 |

*Imports of wool manufactures for January, 1914.*

| | |
|---|---|
| Wool press cloth | $25,864 |
| Wool wastes, 802,091 pounds | 129,058 |
| Wool carpets, 96,091 square yards | 363,814 |
| Wool cloths, 1,723,987 pounds | 1,962,233 |
| Wool dress goods, 1,151,928 pounds | 1,217,981 |
| Wool wearing apparel | 213,003 |
| All other wool manufactures | 545,968 |
| Manufactures of angora, alpaca, etc | 210,428 |
| Total | 4,670,348 |

The difference in the basis of valuation of dress goods appears to be a discrepancy. In 1913 they were valued by the square yard, whereas under the new system the basis is square yards.

The figures showed such a remarkable and unexpected heavy importation that the experts in the Bureau of Foreign and Domestic Commerce held them up for a careful investigation. As the result they were not given to the public until to-day and then pronounced absolutely correct.

The importations of raw wool for January, 1914, were:

| | Pounds. | Dollars. |
|---|---|---|
| Wool, raw, free: | | |
| Class 1 | 14,217,699 | 3,282,269 |
| Class 2 | 2,047,118 | 496,092 |
| Class 3 | 7,846,187 | 1,337,561 |
| Total | 24,111,004 | 5,115,942 |
| Angora, alpaca, etc., dutiable | 354,636 | 103,196 |
| Total, free and dutiable | 24,465,640 | 5,219,138 |

An increase of 75 per cent in the imports of raw wool for January, 1914, over the same period last year is seen in the figures on these importations.

The Clerk, proceeding with the reading of the bill, read as follows:

FOREST SERVICE.

Salaries, Forest Service: One forester, who shall be chief of bureau, $5,000; one administrative assistant, $2,000; 1 chief of office of accounts and fiscal agent, $2,500; 7 district fiscal agents, at $2,000 each; 1 forest supervisor, $2,700; 1 forest supervisor, $2,600; 8 forest supervisors, at $2,400 each; 20 forest supervisors, at $2,200 each; 48 forest supervisors, at $2,000 each; 66 forest supervisors, at $1,800 each; 5 forest supervisors, at $1,600 each; 1 deputy forest supervisor, $1,800; 4 deputy forest supervisors, at $1,700 each; 27 deputy forest supervisors, at $1,600 each; 31 deputy forest supervisors, at $1,500 each; 18 deputy forest supervisors, at $1,400 each; 7 forest rangers, at $1,500 each; 21 forest rangers, at $1,400 each; 78 forest rangers, at $1,300 each; 286 forest rangers, at $1,200 each; 650 assistant forest rangers, at $1,100 each; 80 assistant forest rangers, at $1,100 each, for periods not exceeding six months in the aggregate; 1 property auditor, $1,800; 1 clerk, $2,100; 3 clerks, at $2,000 each; 13 clerks, at $1,800 each; 26 clerks, at $1,600 each; 9 clerks, at $1,500 each; 18 clerks, at $1,400 each; 8 clerks, at $1,300 each; 97 clerks, at $1,200 each; 69 clerks, at $1,100 each; 51 clerks, at $1,020 each; 30 clerks, at $960 each; 128 clerks, at $900 each; 2 clerks, at $840 each; 1 game warden, $1,400; 1 game warden, $1,200; 1 compiler, $1,800; 1 draftsman, $2,000; 3 draftsmen, at $1,600 each; 2 draftsmen, at $1,500 each; 6 draftsmen, at $1,400 each; 4 draftsmen, at $1,300 each; 8 draftsmen, at $1,200 each; 2 draftsmen, at $1,100 each; 3 draftsmen, at $1,020 each; 1 draftsman, $960; 4 draftsmen, at $900 each; 1 artist, $1,400; 1 artist, $1,000; 3 map colorists, at $900 each; 1 map colorist, $720; 1 photographer, $1,600; 1 photographer, $1,400; 1 photographer, $1,200; 1 photographer, $1,100; 1 lithographer, $1,200; 1 lithographer's helper, $780; 1 machinst, $1,260; 1 carpenter, $1,200; 2 carpenters, at $1,080 each; 1 carpenter, $960; 1 electrician, $1,020; 1 laboratory aid and engineer, $900; 3 laboratory assistants, at $900 each; 1 laboratory assistant, $800; 1 laboratory helper, $720; 1 laboratory helper, $660; 1 packer, $1,000; 1 packer, $780; 4 watchmen, at $840 each; 1 messenger or laborer, $960; 3 messengers or laborers, at $900 each; 4 messengers or laborers, at $840 each; 3 messengers or laborers, at $780 each; 4 messengers or laborers, at $720 each; 6 messengers or laborers, at $660 each; 5 messengers, messenger boys, or laborers, at $600 each; 2 messengers, messenger boys, or laborers, at $540 each; 3 messengers or messenger boys, at $480 each; 3 messengers or messenger boys, at $420 each; 12 messengers or messenger boys, at $360 each; 1 apprentice boy, $480; 1 charwoman, $540; 1 charwoman, $480; 1 charwoman, $360; 11 charwomen, at $240 each; in all, $2,305,160.

Mr. FOWLER. Mr. Chairman, I reserve a point of order against the paragraph. I desire to call the attention of the chairman of the committee to page 24, line 25, and ask for the necessity of creating a deputy forest supervisor at $1,800. It is a new position.

Mr. LEVER. This is not the creation of a new place. It is a transfer, in accordance with his own idea, of this man with the same salary from the lump-sum appropriation, which lump sum has been reduced accordingly.

Mr. FOWLER. What lump sum?

Mr. LEVER. The lump sum for the Forestry Bureau, the general expenses.

Mr. FOWLER. You had in the bill before a forest supervisor at a salary of $1,700, and now you have increased it to $1,800.

Mr. LEVER. No. I will say to my friend from Illinois that the policy of the Department of Agriculture is that as rapidly as possible a transfer to the statutory rolls of all classes of employees shall be made that should go there under the act of Congress. Of course it has been impossible to get them all so transferred at first, and hence these transfers which we have from time to time. It is an effort to have, as the gentleman would have it done and as I would have it done, the placing of all these employees on the statutory rolls as far as possible.

Mr. FOWLER. I think they all ought to go in classes according to the character of the work done.

Mr. LEVER. That is the same man at the same salary.

Mr. FOWLER. In line 21, you have increased the forest supervisors from five to eight.

Mr. LEVER. Yes.

Mr. FOWLER. In the Sixty-second Congress you carried an appropriation of five forest supervisors at $2,400 each, and now you have eight at $2,400 each.

Mr. LEVER. The explanation of that is this: The chief of the Forestry Service intends to reduce the number of supervisors' positions in the Forestry Service. With that in mind, he has dropped five forest supervisors, at $1,600, and increased the number—three—at $2,400, making a net decrease for that work of $800.

Mr. ANDERSON. What does the gentleman think of that kind of economy?

Mr. LEVER. It is a decrease of $800.

Mr. ANDERSON. Yes; but there are two men less.

Mr. LEVER. These men are dropped from the service.

Mr. ANDERSON. But their services ought to be worth more money.

Mr. LEVER. They are not in the service.

Mr. ANDERSON. As I understand it, the Secretary drops five supervisors, at $1,600, and retains three of them, at $2,400.

Mr. LEVER. It is an increase of the number at $2,400 by three and a decrease of five at $1,600, making a decrease of the total of $800.

Mr. ANDERSON. And the saving of $800 results in the loss of the services of two supervisors.

Mr. LEVER. If we dispense with the services of two it is economy to that extent.

Mr. ANDERSON. I do not know that it was an economy to increase the salaries in that way.

Mr. HAUGEN. I believe that is a fair statement, to say that it is an increase of salary of $800 to three men. You propose to drop five employees serving at $1,600 a year and raise the salaries to $2,400 a year.

Mr. LEVER. There is a decrease of $800 in the amount. There is a decrease of the $1,600 position of five and an increase of the $2,400 position of three, making a total decrease in the $1,600 grade of $800.

Mr. ANDERSON. The result is that you save $800 and decrease the number of employees three.

Mr. LEVER. Not necessarily so.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. LEVER. I ask unanimous consent that the time of the gentleman from Illinois be extended five minutes.

The CHAIRMAN. The gentleman from South Carolina asks that the time of the gentleman from Illinois [Mr. FOWLER] be extended five minutes. Is there objection?

There was no objection.

Mr. MANN. There is no increase of $800 in salary. Here are three supervisors at $2,400, but there are supervisors at $2,200 and $2,000 and $1,800. Of course, this will give an opportunity to increase the salary of several gentlemen $200 possibly.

Mr. LEVER. The probability is, as it will work out, that this will provide a line of promotion to the lower-grade men. But it does not so show on its face.

Mr. FOWLER. Why did you not drop the $2,400 men and increase the salary of the $1,600 men and get more men?

Mr. LEVER. The probability is that the department——

Mr. FOWLER. For the same money or less money?

Mr. LEVER. The chances are that the Forestry Service desires to promote certain valuable men, and at the same time, by making the promotions, make a saving of $800 in the total.

Mr. FOWLER. There is really quite an increase of something like $65,000 in salaries above what was carried in the bill a year ago.

Mr. LEVER. No; that is not a real increase, but an apparent increase, due to the fact that the increases in this statutory roll have all been transfers from the lump-sum appropriation, which lump sum has been reduced accordingly, and from the Division of Accounts and Disbursements. There is really not a single increase in this statutory roll, except the one to which I have just referred.

Mr. FOWLER. Certainly there is an increase in the deputy forest supervisors, because the bill carried four of them a year ago at $1,700, and now you have five, one at $1,800 and four at $1,700.

Mr. LEVER. The statutory roll does show such an increase, but it is a transfer from the lump sum.

Mr. FOWLER. Were there deputy forest supervisors carried in the lump sum?

Mr. LEVER. Yes.

Mr. FOWLER. Why, then, did you carry any deputy forest supervisors in the bill? Why didn't it all come out of the lump sum?

Mr. LEVER. Mr. Chairman, the gentleman understands that the committee is trying very hard, and I think the department also, to put on the statutory roll all classes of clerks that can be properly classified as statutory clerks, but the work was begun only a few years ago, and the work of transferring these people from the lump sum to the statutory roll is going to take some time.

Mr. FOWLER. If the chairman of this committee will permit, I will say to him that I think that he is a big enough man to classify this whole service, and that he is able to do it, and that I will hail the day when he begins this work, and will cheerfully cooperate with him in my feeble way in whatever services I can render.

Mr. LEVER. My friend will find me very energetic in that direction in the future, with the time at my disposal.

Mr. FOWLER. Mr. Chairman, inasmuch as there was a provision a year ago carrying a fixed salary for all of the employees who were designated in the bill, and inasmuch as this is an effort to increase the salary of a very good salaried office, I make the point of order against the salary of one deputy forest supervisor of $1,800. I think the discussion has thoroughly brought out the entire evidence surrounding this increase. The rule of law is, as has been the practice in this House heretofore, that where a class of employees has been established, such as deputy forest supervisors—and the last bill carried, say, four forest supervisors at $1,700—the chairman of the committee might report a bill adding to that service any number of increases in number but not in salary, and a point of order made against such an increase of salary has been sustained. I am aware that the chairman of the committee says there has been a transfer from the lump-sum employment of deputy forest supervisors to the bill; but, Mr. Chairman, if there was a transfer from the force that was paid out of the lump sum to the statute, then there is no provision of law fixing the salary above what was fixed by statute a year ago, of $1,700. This is an effort to increase the salary of one man above that of the other men doing the same character of service, and is subject to a point of order.

Mr. LEVER. Mr. Chairman, the fact is that this one deputy forest supervisor at $1,800 is merely a transfer from the lump sum of the Bureau of Forestry. It is not in any sense the creation of a new place, but I submit to the Chair that the point of order would not lie even if it were the creation of a new place, because the Chair is familiar with section 169 of the revised statutes, which permits heads of departments to make employment of such persons as they see fit to carry on the work of their respective offices.

The CHAIRMAN. Is this an increase in the salary of this particular person?

Mr. LEVER. It is a transfer of the same man at the same salary, and there is a corresponding reduction in amount in the lump sum. It is exactly the same man and there is no increase or change except that the department is trying to get the employees of this class to the statutory roll and away from the lump sum.

Mr. FOWLER. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. FOWLER. The gentleman says that this deputy forest supervisor was paid out of the lump sum at $1,800 heretofore?

Mr. LEVER. Yes.

Mr. FOWLER. I ask the gentleman if there has been any statute heretofore passed, either in current or permanent law, fixing his salary at $1,800?

Mr. LEVER. No; not that I know of, except the general statute which permits the Department of Agriculture to fix the salaries for scientific men up to a certain point, not to exceed $4,000, and I presume this man heretofore has been carried as a scientist. The department wants to transfer him, at the same salary, to the statutory roll, where we can keep a line on him.

Mr. FOWLER. Does the gentleman not think these deputy supervisors all do the same character of work?

Mr. LEVER. In a general way; yes.

Mr. FOWLER. Does not the gentleman think they all ought to receive the same salary?

Mr. LEVER. Not necessarily so, because I can easily see why a deputy supervisor in one district might have a different character of work and a much more difficult kind of work to perform. I think there ought to be some discretion in the Department of Agriculture to take care of the more efficient men and encourage more efficient service.

Mr. FOWLER. When you transfer them to the statutory roll do not you place them all on a level in the grades?

Mr. LEVER. When we do that we will have to depend upon the whim of Congress as to the promotion of the more deserving men.

Mr. FOWLER. You can grade them and put them in different grades. For instance, you could put them at different grades of service in the Forest Service; you could organize grades in the service.

Mr. MADDEN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. LEVER. As a matter of fact, we have done this very thing. Here are deputy supervisors at $1,400, $1,500, $1,600, $1,700, and——

Mr. MADDEN. My parliamentary inquire is, whether or not this colloquy between the gentleman from Illinois and the gentleman from South Carolina is on the point of order?

The CHAIRMAN. It is presumed to be.

Mr. LEVER. Mr. Chairman, I will ask the Chair to rule.

The CHAIRMAN. The Chair is ready to rule. The Chair thinks it would be establishing a pretty dangerous precedent to throw open the doors for transfer from one department to another and claim it does not infringe upon the rule in respect to the creation of new places, because if that were done, it seems to the Chair, that all sorts and kinds of new places could be created by transfers from one department to another, or from one division to another, and as this seems in fact to be a new place in the service——

Mr. LEVER. Mr. Chairman, before the Chair rules, if the Chair will permit me, I did not anticipate the ruling just indicated, or I would have been a little more specific. The Chair has been holding, I will say to the Chair, that these transfers from the lump-sum to the statutory roll did not constitute the creation of a new place at all. That has been the ruling of the Chair itself all along the line; and this is not, in fact, the creation of a new place at all, but a transfer of a man who is in the department now from the lump-sum roll to the statutory roll, so Congress may know what we are doing with him.

Mr. MADDEN. Will the gentleman permit a question there?

Mr. LEVER. I will yield to the gentleman.

Mr. MADDEN. When men are placed on the lump-sum appropriation roll and afterwards by legislation transferred from that roll to the statutory roll, are they required to stand a civil-service examination, or do they have to do that in the first instance?

Mr. LEVER. They have to do that in the first instance. I desire to call the Chair's attention to the fact that a few years ago Congress enacted a statute requiring that all clerks should be transferred from the lump-sum fund of the Department of Agriculture to the statutory roll. Now, if the Chair will look on the statutory rolls of these various bureaus which we have passed, say the Bureaus of Plant Industry and Animal Industry, he will find we have transferred a number of men from the Division of Accounts and Disbursements and other bureaus to the statutory roll of the bureau in which they were really doing the work, and the Chair has held that points of order against such transfers were not well taken. Now, this is exactly the same case.

Mr. FOWLER. Mr. Chairman, I beg leave to differ entirely with the gentleman. The Chair has been holding in a very few instances where a man who did the same identical work that was provided for in one division and yet he happened to be carried in another division, that it was proper to transfer him over to the division where he had been doing the work; but here is an effort to transfer by legislation from that which has never been known to the current law a man who is said to have been paid out of the lump-sum appropriation, creating a new place entirely.

The CHAIRMAN. Let the Chair make an inquiry, that he may get a clear conception of this. The Chair might have had a wrong idea as to the facts. This man has been doing the same kind of work, being paid out of the lump sum at this same salary?

Mr. LEVER. That is the understanding of the gentleman who is in charge of this bill, and it is the statement of the officials who are in charge of this man.

The CHAIRMAN. The Chair held the other day on practically the same proposition that where a man was engaged in identically the same services and was paid the identical salary the fact that his position was called by some other name did not change existing law, and the Chair desires to find out if this particular place is in fact identical with the one ruled on heretofore.

Mr. LEVER. The fact is that it is the same man at the same salary, and he is called by the same title. The only difference is that he is now being paid out of the lump-sum appropriation of the Bureau of Forestry, and it is our intention in this bill to allow the department to transfer him to the statutory roll, increasing the statutory roll that much and decreasing the lump-sum fund that much, making no change whatever.

Mr. FOWLER. In fact, Mr. Chairman, he never was known in the current law before. This is his advent therein.

The CHAIRMAN. But let me say to the gentleman from Illinois, we do not want to split hairs in this way, and I know the gentleman does not. The gentleman has looked it up, and the Chair will ask him if he understands that this man is to do the identical work here that he was doing in the other place, and that there is no charge in salary and no change except in the fact that he would be paid out of a different fund than the lump sum?

Mr. FOWLER. Now, there is an effort to create a new place in the current law.

The CHAIRMAN. That is exactly what the Chair wants to find out, namely, whether in fact there is a new place created.

Mr. LEVER. This is not the fact, I will say to the Chair, at all. This is an effort to do what the gentleman from Illinois [Mr. FOWLER] has been contending that the committee ought to do, namely, to put these men on the statutory roll and classify them and take them away from the lump fund. And now the gentleman, instead of permitting that to be done, is standing here taking the time of the committee and protesting against his own baby.

Mr. FOWLER. Indeed, Mr. Chairman, I am not. [Laughter.] I am contending, Mr. Chairman, against the creation of a new office, and that is exactly what this is. It was never known in the statute before, either current or permanent, and this is the first time that his visage ever came up above the statutory horizon.

The CHAIRMAN. The gentleman from Wisconsin [Mr. STAFFORD] has suggested that he can give the Chair some information.

Mr. STAFFORD. Perhaps I may be able to enlighten the Chair and also some members of the committee, but maybe not all the members of the committee. I have before me the Book of Estimates referring to this item, which says:

One deputy forest supervisor (by transfer from lump fund), $1,800.

Unquestionably the item in controversy is that which is referred to. Besides that which is printed in parentheses it refers to the act of February 1, 1905, and the act of March 4, 1913. That of 1913 is the last Agricultural appropriation act. The former act is that which transfers the Bureau of Forestry from the Department of the Interior to the Department of Agriculture and carries this language, which gave full authorization to the Forester to employ, I assume, this individual out of the lump-sum appropriation. I direct the attention of the Chair to the following language:

SEC. 5. That all money received from the sale of any products for the use of any land or resources of said forest reserve shall be covered into the Treasury of the United States for a period of five years from the passage of this act and shall constitute said fund, available until expended, as the Secretary of Agriculture may direct, for the protection, administration, improvement, and extension of Federal forest reserves.

I assume that the Forestry Service has been employing this man by authorization of law, under the lump-sum appropriation. Now, the question before the committee, I assume, is whether this individual has been receiving a salary of $1,800. If he has been receiving that salary, and we have the assurance of the chairman of the committee that he has——

Mr. LEVER. And also the statement of the department itself.

Mr. STAFFORD. And also the Book of Estimates to confirm that. Then, I think it is in order to incorporate the item in this appropriation act.

Mr. LEVER. If the Chair will permit——

The CHAIRMAN. The Chair is ready to rule.

Mr. FOWLER. If the gentleman from Wisconsin [Mr. STAFFORD] will yield——

Mr. STAFFORD. I have not control of the time, but with the indulgence of the Chair I will yield.

The CHAIRMAN. The Chair is ready to rule.

Mr. FOWLER. Mr. Chairman, I want to say that one of the rules of evidence is that the best evidence must be produced. Now, the best evidence as to what this man received, if he ever did receive a salary, is what the last bill provided for, and the provision in the last bill for these deputy forest supervisors was $1,700. Now, I am not denying the right to provide for five supervisors at $1,700, but I am denying the right to provide for a forest supervisor at a salary above $1,700, because that is the fixed salary for this position. The salary fixed in the last current law has always been regarded as the salary to govern future legislation, unless there was a permanent salary fixed by a permanent statute different from that in the current law.

The CHAIRMAN. The only question in the Chair's mind was whether this is in fact a new position or not. From the statements made by different gentlemen, the Chair is of the opinion that it is not. The Chair believes it is his duty to keep constantly in mind the good of the service, and would suggest that the old axiom is absolutely true that, "While the letter may kill, the spirit keepeth alive." I believe the spirit of this rule is, and of the law is, to try to do that which is best for the service. The Chair, feeling that way about it, concludes from the statements made that this is not in fact a new position, but is the same party, receiving the same salary, doing the same work, but is designated under a different title. A rose by any other name would smell just as sweet. And therefore the Chair overrules the point of order.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word. I would like to ask the gentleman from South Carolina [Mr. LEVER] a question or two. Under the Forestry Service, for salaries, this bill provides for the expenditure of $2,305,160, and for general expenses, $3,238,096, making altogether $5,543,256. Now, I want to ascertain from the gentleman from South Carolina how much the revenue of the Forest Service amounts to. It has been said in years gone by that within a year or two this service would be self-sustaining. I would like to know how nearly self-sustaining it is or how much the increase of the loss is from year to year.

Mr. LEVER. I will say to my friend from Illinois that in 1912 the receipts from the sale of timber in the national forests amounted to $1,089,702.04; for grazing, $968,842.26; for special uses, $98,811.27; or from all sources, $2,157,356.57. For the fiscal year 1913—and this is according to the report of the Forester—the receipts from timber were $1,341,337.63; from grazing, $1,007,739.51; from special uses, $118,012.93; or a total of $2,467,090.07, or an increase for the fiscal year 1913 over the fiscal year 1912 of a little more than $300,000.

Mr. MADDEN. So that for 1912 there was a loss to the Government in the Forestry Service of $3,386,000 and in 1913 there was a loss of $3,075,066.

Not long ago we were given to understand that this service would be on an increasing revenue basis and that the time would soon come when it would at least be self-sustaining, and we were led to believe that a profit might accrue to the Treasury of the United States from the conduct of the Forestry Service. But I notice, Mr. Chairman, that as time goes by

the expenses increase very rapidly and the income increases very slowly, so that instead of getting anywhere near a balance between the expenses and the receipts we are running behind millions of dollars every year.

Mr. LEVER. Mr. Chairman, if my friend will permit me, I would say that the present deficit below the total cost of the Forest Service, including the Washington office and the research work—that is, matters in Wisconsin and the like—is $2,956,404.

Mr. MADDEN. That is for 1913?

Mr. LEVER. Yes; that is for 1913.

Mr. MADDEN. How does the gentleman figure that? The items in the appropriation bill this year for the Forest Service amount, for salaries, to $2,305,160, and for general expenses $3,238,096, making a total of $5,543,256, from which must be deducted the income from all sources, and that leaves the balance of the deficit, amounting to $3,075,666. Where does the difference come in?

Mr. LEVER. The difference is caused by the fact that the gentleman is figuring some of his expenses in one bill and some in another bill, and he does not account for the receipts from the national forests of $300,000.

Mr. MADDEN. Yes; I am accounting for it.

Mr. LEVER. I took these figures from the statement of the Chief of the Forest Service, and I think that his figures are accurate; and he says, speaking on December 11, that the deficit is $2,956,000.

Mr. MADDEN. There is about $100,000 of difference between us, then?

Mr. LEVER. Yes. That could easily be adjusted, I think.

Mr. MADDEN. I would like to know from the gentleman from South Carolina, if he knows, what excuse the Forest Service gives for this large deficit, in the face of the promises they have been making from time to time, that the deficit would grow gradually less every year?

Mr. LEVER. I can say to my friend from Illinois, without any hesitation, that if it is the will of Congress to exploit the national forests, to make them self-sustaining, without regard to how we use them, it is entirely feasible and possible to do it, in my judgment, in the course of three or four years. But I do not believe, nor does the committee believe, that it is the intention or wish of Congress to make the national forests of the United States a business proposition which is going to pay a profit. What we are engaged in primarily is the conservation and preservation of these forested areas—168,000,000 acres of land.

But I am glad to say to my friend that the hope held out to us by Mr. Graves, Chief Forester, that this service is ultimately to become self-sustaining, is encouraging, and as an incident to the main purpose of creating the forests it would be desirable if they shall become self-sustaining. His statement before the committee was that there are a number of forest units now which are, in fact, self-sustaining, that there are a number of other forest units which are almost self-sustaining, and there are some in which there is a large deficit, of course. But he believes that the entire service will become self-sustaining in 12 or 15 years.

Mr. MADDEN. I wish to say, Mr. Chairman, that my criticism of the deficits that have occurred from year to year is not based on the idea that we ought to exploit the national forests that are held in reserve by the United States, but it is based entirely upon the promises of those in charge of the Forest Service from year to year that we might hope and reasonably look forward to a profit from the Forest Service rather than a large deficit.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Washington?

Mr. MADDEN. Yes.

Mr. HUMPHREY of Washington. I will ask the gentleman if he does not think or believe that while the national forests ought not to be exploited, yet the Forest Service ought to cut more than 7 per cent of the natural increase of the forest reserves; or, in other words, stop letting 93 per cent rot in the woods?

Mr. MADDEN. I really must confess frankly that I am not sufficiently familiar with what ought to be done to be able to answer the gentleman's question intelligently, but I am familiar with the promises made by the various men who have been in charge of the Forest Service, to the effect that we might reasonably look forward at an early date—and I thought that date had arrived—to a profit, rather than a loss, in the service.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield for another question?

Mr. MADDEN. Yes, sir.

Mr. HUMPHREY of Washington. I will ask the gentleman whether or not, as a business man, he does not believe that the Forest Service ought so to manage a billion dollars' worth of property as to at least be able to sell enough forest products to pay their own salaries, which they have not done?

Mr. MADDEN. It looks to me as though it ought to be done on a business basis.

Mr. HUMPHREY of Washington. Does the gentleman believe that to be a business basis?

Mr. MADDEN. No; I do not; because otherwise I would not be criticizing the Forest Service. I believe it is a service that ought to be encouraged, but not encouraged to such an extent as to leave to the officers of the service the widest possible latitude as to the expenditure of public money without holding them to a strict account for the proper administration of the properties under their jurisdiction.

Mr. LEVER. Mr. Chairman, I do not think my friend from Illinois would charge the Forest Service with being unduly extravagant. On the contrary, I do not believe that there is a service in the Government——

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MADDEN. Mr. Chairman, I ask that the gentleman may have five minutes more in which to elucidate this question, if he can.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the time be extended five minutes. Is there objection?

There was no objection.

Mr. LEVER. Considering the wide range of work that it must necessarily take, I do not believe there is a service of the Government that is more economically administered than the Forest Service.

Mr. HUMPHREY of Washington. Will the gentleman yield for a question?

Mr. LEVER. In a moment I will.

Mr. HUMPHREY of Washington. All right.

Mr. LEVER. The receipts from the national forests have increased during the past fiscal year over $300,000, and if my recollection is not at fault that is the largest increase that we have had in a single year for many years.

Mr. MADDEN. Will the gentleman state right in that connection——

Mr. LEVER. The increase asked for in this estimate by the Bureau of Forestry is only $143,000.

Mr. MADDEN. All told?

Mr. LEVER. All told.

Mr. MADDEN. I wanted to know what the increase in the expenses was, and the gentleman has answered that without my asking.

Mr. LEVER. It is $143,000.

Mr. BOOHER. I should like to ask the chairman of the committee if he thinks that the Forestry Service is conducted on a business basis?

Mr. LEVER. I will answer that in this way: I think it is conducted in as nearly a businesslike way as any Government service can be. The gentleman understands that the construction of a public building by the Government costs, in my judgment, about twice as much as it would cost a private individual.

Mr. MADDEN. That is not the fact if the specifications are the same.

Mr. BOOHER. Is it not the fault of Congress that we permit that to go on?

Mr. MADDEN. That is not the fact if the specifications are alike in each case. For example, if a private individual was going to erect a building under exactly the same specifications that the Government erects it, the cost to the two would be the same.

Mr. LEVER. I agree to the gentleman's proposition; and I realize, of course, that in the construction of Federal public buildings the specifications are very much more exacting than if the building were to be constructed out of private funds; but the purposes for which the building is to be used could be just as well served with a very much smaller expenditure of money. I think everybody will agree to that.

Mr. MADDEN. That is true, but——

Mr. LEVER. I will say to my friend from Missouri [Mr. BOOHER] that I believe the efficiency of the administration of the Forestry Service has been increased year by year since I have been a member of this committee; and I believe now it is up to the highest point that I have seen it. I do not think it is perfect, by any means. When you are trying to protect 168,000,000 acres of land, which is an enormous territory, as my friend will realize, and when you have between 4,000 and 5,000

employees, there will necessarily be some lost motion and probably some lack of efficiency; but I believe the man at the head of this service is sincerely devoting his time to bringing value received to the Government for the appropriations we are giving.

Mr. BOOHER. Does not the chairman of the Committee on Agriculture think that if we had 168,000,000 acres of territory under the management of a set of business men they would so conduct it that it would pay expenses?

Mr. LEVER. I will say to my friend, as I suggested in answer to the gentleman from Illinois a moment ago, that undoubtedly the Forest Service can be made self-sustaining, but to do so might be at the expense of the national forests in the future. It is the hope of the committee, and it is the intention of the Forest Service, to increase the receipts of the national forests as rapidly as possible by the cutting of mature timber and by encouraging the use of the forests so that they will get to the point of self-sustenance pretty soon; but we do not want to go more rapidly in this direction than is warranted by good judgment and a wise administration of the forests. It is the people's service, and we must deal with it as a trust fund, using it for the benefit of those to whom it belongs and not for exploitation or commercial gain.

Mr. BOOHER. In that connection I should like to call the attention of the committee to this fact and ask why it is that pasturage for sheep on land just outside of national forests rents for 3.6 cents per head per month and in the forest reserve that is so well taken care of by the Government the same pasturage for sheep rents for 1.4 cents per head per month? Why this difference?

The CHAIRMAN. The gentleman's time has again expired.

Mr. BOOHER. I ask that the gentleman have five minutes more.

The CHAIRMAN. The gentleman from Illinois has the time.

Mr. BOOHER. I ask to be recognized in my own right.

The CHAIRMAN. The gentleman from Missouri [Mr. BOOHER] is recognized in his own right.

Mr. LEVER. If my friend will permit me, I shall be glad to answer that question. It is a pertinent and important inquiry. The Forest Service is between two fires—one on the part of men who want to get into the forests to exploit them; the other from another class of men who want to go in and use the forests but not exploit them. Now, here are cattlemen and sheepmen who desire to go into the forests. These forests are national property, which belong to all the people. I take it that the Forestry Service believes it is a wise policy to make the national forests as attractive for grazing purposes as possible, because the more sheep and cattle we raise upon these forests the greater the meat supply of the country, and all the people are thereby benefited. That seems to be the policy of the department.

Mr. BOOHER. Why should there be a different rule in relation to renting pasture lands in the forests than there is for the sale of the timber? Why does not the department put up the pasture land to the highest bidder, the same as it does the timber?

Mr. LEVER. I will say to my friend in that connection that the department is right at this moment considering a general proposition right along the line that he has suggested.

There is now before another committee of this House—the Committee on Public Lands, I think—a bill introduced by the gentleman from California [Mr. KENT], a grazing bill, which has the purpose of which the gentleman from Missouri speaks.

Mr. WINGO. Will the gentleman yield?

Mr. BOOHER. Yes.

Mr. WINGO. I want to ask the gentleman from South Carolina, who has justified the practice of the department in reference to grazing on the ground that it would help increase the food supply, if it would not help to increase the food supply if the rich agricultural lands held in many reserves were thrown open for settlement?

Mr. BOOHER. I think so.

Mr. LEVER. I will say to the gentleman from Arkansas that the policy of opening up the national forests for homestead entry was begun by this committee in this Congress a year ago, and this committee has allowed an increase of $85,000 for that work in this bill.

Mr. WINGO. Why does it take the action of a committee of Congress and an appropriation to throw open the great agricultural territory that under a mistaken policy has been included in forest reserves?

Mr. LEVER. The purpose is to provide for detailed surveys of these lands so that they can be patented and the title passed to the homesteader. The quicker they do that the quicker the man gets his title.

Mr. WINGO. At the present rate you are going it will take 40 to 100 years to complete it.

Mr. LEVER. Oh, no; at the rate we are going we ought to get all of the agricultural lands out of the national forests within the next few years. That is the statement of the forestry officials.

Mr. WINGO. I have not observed that they make any progress; certainly not any in my district.

Mr. LEVER. The gentleman is taking these matters up out of turn, so that it is a little confusing to me, because I can not carry all these figures in my mind.

Mr. WINGO. Then I will let it rest until we reach the provision.

Mr. BOOHER. Mr. Chairman, I want to call the chairman's attention to the testimony in the hearings on the question of grazing lands:

The CHAIRMAN. You have not stated, Mr. Potter, the fees received from grazing.

Mr. POTTER. About $1,000,000 is the total revenue from grazing at the present time.

Now, that was the revenue by renting the grazing land for sheep at 1¼ cents per head per month, when outside the same quality grazing land brought 3.6 cents per head per month, almost three times as much. If you had charged twice as much you would have had $2,000,000 and would have done away with a million-dollar deficit.

Mr. LEVER. I do not think that follows.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. BOOHER. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri? [After a pause.] The Chair hears none.

Mr. BOOHER. Now, this testimony continues:

Mr. REILLY of Wisconsin. Why should not the same rule for the sale of timber be followed in the sale of forage—to the highest bidder?

Mr. POTTER. Mainly for the reason that it would work against the bona fide settler.

Mr. REILLY of Wisconsin. I mean, after taking care of the bona fide settler, why should not the cattlemen who want the privilege of using the forest reserves pay for that the same as they do for timber?

Now, I want to call special attention to his answer.

Mr. POTTER. It is entirely a matter of policy, sir, as to what should be the basis of the charges. If it is desirable to increase the revenue and place the grazing on a commercial basis, that would be the proper way in which to do it.

Mr. BOOHER. Are you not placing the Forestry Service on a commercial basis, trying to get the most out of it you can?

Mr. LEVER. On the contrary, as I have said, the committee does not believe that the national forests, which belong to all the people of the country, should be exploited. We believe that in time we ought to go to a basis where they will be self-sustaining, but we do not want to go so rapidly that we are going to allow any undue and expensive exploitation of public property by private interests.

Mr. BOOHER. You have more than 7,000,000 sheep on the forest reserves, and they would not eat any more or destroy any more at 3⅗ cents than they would at 1⅖ cents.

Mr. MADDEN. If it is reasonable to charge 3⅗ cents for grazing sheep per head per month outside the forest reserves, and the pasturage is just as good inside as it is outside, does not the gentleman think it is just and reasonable to charge the same rate for sheep that may be allowed to graze within?

Mr. LEVER. Let me answer the question by asking this: We sell timber in the national forests upon bids. We have the right, if we desire to do it, to put the timber on the market at a price fixed by ourselves very much below the price of timber being sold on the outside. Does the gentleman say that in order to reduce the price of lumber in the local market the national forests should reduce its price below the actual price of the timber as fixed by the laws of trade on such markets?

Mr. MADDEN. If the policy to reduce the cost of living is to be pursued to its legitimate conclusion, I say yes.

Mr. LEVER. If the policy is to be pursued to its legitimate conclusion you would make every obstacle against the grazing in national parks as small as possible.

Mr. BOOHER. I will answer it in my own way. I think the Government ought to conduct this business as any man would conduct his own important affairs, and if it is worth 3.6 cents for grazing on the outside it is worth 3.6 cents on the inside. It ought to be governed by the same rule. You ought to put it up in certain quantities, as you do the timber, and make a sale. Put it up for sale to the highest bidder, get the most money you can, and put it into the Treasury without injuring the forest reservation.

Mr. LEVER. The gentleman knows that the committee would have no jurisdiction to fix the rates.

Mr. BOOHER. I am asking why the officials of the Forestry Bureau do not do this thing.

Mr. LEVER. Because the committee does not look upon the national forests as something they ought to exploit from a commercial point of view, but to preserve and protect them for use of the public.

Mr. BOOHER. Let me call the attention of the gentleman to this statement in the hearings:

Mr. MAGUIRE. This $2,000,000 a year of which the cattlemen are getting the benefit might be used to protect the forest reserve if they paid it?

What $2,000,000 was that? I have been unable to find out, but in some way, somehow, that has come in here.

Mr. LEVER. It is the $2,900,000 deficit to which I called the attention of the gentleman from Illinois.

Mr. BOOHER. Then the cattlemen are getting the benefit of that, and I notice the expert, Mr. Potter, did not answer it or pretend to answer it.

Mr. LEVER. I do not think the cattlemen particularly are getting the benefit of it or the sheepmen, any more than are the lumbermen. I simply think that we have not reached the point where the Forest Service is prepared to say that it is on a self-sustaining basis.

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I desire to ask the gentleman something about the salary roll, but before I do that I want to submit a few observations in regard to the question raised by the gentleman from Illinois [Mr. MADDEN] as to when these forests are going to be self-sustaining. Seven years ago Mr. Pinchot, the great light of forest conservation, made the statement that in five years from that time these forests would be self-sustaining.

Mr. BOOHER. Mr. Chairman, I think the gentleman is mistaken in his time. It was 10 years ago he made that statement.

Mr. HUMPHREY of Washington. I will accept the amendment. As I recall, President Roosevelt repeated that statement in one of his messages. We now have some light on when these forests will be self-sustaining. If you will turn to the hearings, at page 48, you will see that there are now 44 of the national forests that are self-sustaining out of 163, that the estimate is that in one year 22 more will be self-sustaining, and then they estimate that 15 will not be self-sustaining for 25 years, and that 18 are of such an indefinite character that they will not even undertake to make a guess.

Mr. WILSON of Florida. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREY of Washington. I decline to yield at this time. Then Mr. Graves ends with this statement:

This would make, as my estimate to cover all expenses—I think a conservative one—12 to 15 years to make the Forest Service, including Washington office, investigational work, and the entire work which the service might have to do, self-sustaining.

Compare that with Pinchot's prophecy and get what comfort you can.

If you will look over the history of the Forest Service you will find that up until the last report the total cost has been $23,323,000 and the total revenue $11,495,000, and that includes the receipts from the rent for pasture. In other words, the Forest Service has not been able with 163,000,000 acres of land to sell enough timber to pay more than about one-half of the salaries expended in administration. The chairman of the committee says that the Forest Service is a very economical and effective branch of the Government service. If that is true, I would like to ask him how he can explain the fact that over in British Columbia they can so operate their forest reserves that last year instead of having a deficit upon their small forest reservation, as compared with ours, they had a net profit of over $3,000,000? Yet we have a Forest Service that can not take $2,000,000,000 worth of property, according to the estimate of Mr. Pinchot, and so manipulate it as to pay one-half of their salaries. I now want to ask the chairman of the committee just a question or two before we leave this paragraph. How does he account for the fact that they need 447 clerks?

Mr. LEVER. I will say to the gentleman from Washington that there is absolutely no increase in the number of clerks, and I take it that the service needs such as we have provided in the control and management of these forests. That is the idea the committee has about it.

Mr. HUMPHREY of Washington. I submit this to the gentleman and ask if this is correct. It is my understanding that there is a clerk for every forest reserve in the country.

Mr. LEVER. I do not think that is entirely correct. I think some of the larger units do have a clerk in connection with the supervisor, but such clerks have other than mere clerical duties to perform.

Mr. HUMPHREY of Washington. It is my understanding that in the Chugach Forest Reserve in Alaska, to illustrate, there are six men, and that one of those men is a clerk who receives from $1,200 to $1,400 a year for keeping the accounts of the other five men.

Mr. LEVER. I will state very frankly that I do not know whether that is the fact or not—it is probably true.

Mr. HUMPHREY of Washington. I hold in my hand a list of the different forests and the number of men employed upon them. I find several of them running down as low as 5 and 10 men, and it is my understanding that there is a clerk on each of these forest reserves to keep the accounts of the few men employed. I would like to know what the clerk does to earn $1,200 or $1,400 a year keeping the accounts of 5 or 6 men?

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LEVER. We have in that forest, the Chugach, as I have it here, employees as follows: A forest supervisor, a deputy forest supervisor, and two other men, making a permanent force of four men, with a temporary force of six men. In other words, there are four permanent men and at times they will have six. The expenditure for this forest for 1914 was $22,530.

Mr. HUMPHREY of Washington. How much did they receive?

Mr. BOOHER. $22,530.

Mr. HUMPHREY of Washington. Oh, no; that was the expenditure. They did not receive anywhere near that amount. My recollection is they received about one-fifth of that.

Mr. LEVER. We have that information here, but I can not put my hands on it right now.

Mr. HUMPHREY of Washington. The gentleman can hand it in later.

Mr. LEVER. I will put it in the RECORD.

Mr. HUMPHREY of Washington. Now, the question is, Does the gentleman know whether one of these five men is a clerk?

Mr. LEVER. I really do not. I do not know whether he is a clerk or not. It does not say in this book whether he is a clerk.

Mr. HUMPHREY of Washington. As I said awhile ago, I may be in error, but it is my understanding; for instance take the Okanogan National Forest in my State that has some 10 or 12 men, and I understand that 1 of those 12 men is a $1,400 clerk to keep the accounts of the others. Now, another question. Which one of those items in this particular paragraph is to pay the publicity agent of the Forest Service?

Mr. LEVER. If there is any publicity agent of the Forest Service the chairman of this committee does not know it.

Mr. HUMPHREY of Washington. I can say for the gentleman's information, I think there is one and that he bears the honored and classic name of Smith, and that is the only information I can get.

Mr. LEVER. That is a classic name, and if the gentleman will point out that position I am sure both the chairman and the committee will be glad to strike it out.

Mr. HUMPHREY of Washington. If the gentleman will pardon me, and I am not trying to criticize the committee at all, but it does seem to me if I were chairman of the committee or a member of the committee and had the Forestry Service head before me I would find out something upon that point. I do not want to criticize the gentleman, because I know by experience it is almost absolutely impossible to get any information from anybody connected with the Forest Service.

Mr. LEVER. I am of the opinion myself that if the gentleman were chairman and the views of the committee concurred with his in three years' time there would not be any national forests at all.

Mr. HAUGEN. I suggest the gentleman makes the statement that there are 12 people employed in the Okanogan National Forest and that 1 is employed as a clerk to keep the accounts of the others, and if the gentleman states that as a fact the thing to do is to take it up with the officials.

Mr. HUMPHREY of Washington. I am stating my information. I do not know whether it is correct or not. I wish I did. I want to call attention to the fact that there is evidently a publicity man connected with the Forest Service. We used to have a whole army of them when Pinchot was at the head of the force. Then we paid more for publicity than for fighting forest fires. Here is one of the pieces of information which was sent out: "Squirrels aiding as collectors." Here is a great

item telling of the great work that has been done by squirrels in assisting in reseeding of forests.

Mr. LEVER. Just one minute on the proposition of the publicity agent. Several years ago there was put into this bill this provision by the gentleman from Wyoming [Mr. MONDELL]:

That no part of this appropriation shall be paid or used for the purpose of paying for, in whole or in part, the preparation or publication of any newspaper or magazine article, but this shall not prevent the giving out to all persons without discrimination, including newspaper and magazine writers and publishers, of any facts or official information of value to the public.

Now, that is the law, and if these gentlemen of the department are violating the law and the gentleman has any evidence of that fact, the committee would certainly be glad to have it.

Mr. HUMPHREY of Washington. I have a number of these clippings taken from the papers right here now, and it is perfectly evident by looking at them that somebody connected with the Forestry Service prepared them.

Mr. LEVER. I regret that the gentleman, who has an intimate knowledge of the Forest Service, living, as he does, out there in close contact with the practical operations of the service, did not come before the committee and produce his evidence, thus affording the committee an opportunity to look into it, instead of bringing it here on the floor of the House, and giving us no opportunity to make an investigation, to send for the officials and make a cross-examination of them, to ascertain if the conditions as represented are correct.

Mr. HUMPHREY of Washington. I think the gentleman had an opportunity to do it.

Mr. LEVER. Well, the gentleman has had as much opportunity to come before the committee——

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. Mr. Chairman, I believe it is proper to say that the committee has accepted the statements of the officers and chiefs of the bureaus. Now, if we have misplaced our confidence and the gentleman has some information on the subject the House ought to know, I think he is rendering a very valuable service if he will submit that statement, and nobody will more cheerfully——

Mr. HUMPHREY of Washington. I do not know whether the statement is true or not. I have here a lot of these publicity stories. Here is one I show to the House. There is one of the articles to which I referred [exhibiting].

Mr. Chairman, I have here an editorial from the Seattle Post-Intelligencer of March 4, 1914, entitled "British Columbia forestry." It is interesting as showing the efficiency of that service as compared with our own. I spoke of this matter a few moments ago. It reads as follows:

BRITISH COLUMBIA FORESTRY.

The report of the provincial chief forester of British Columbia is an instructive document. It shows that the Province during the past year has received a net income of $3,000,000 from the sale of timber on the public lands. Further, it is the only Province in Canada which is not overcutting its forest lands. The forester believes that the revenues will grow greater year by year until the annual forest cut "keeps pace with the normal forest growth," which is not the case at present.

The timber growth of British Columbia is identical with that of this State, and logging and milling conditions are similar in both. In the Province all of the Crown lands, the title to which is theoretically in the King of England, are administered for the benefit of the people of the Province, by local officials, under the immediate control of the people of the Province.

In this State of Washington the forest lands, the title to which is theoretically in the Federal Government, are administered under the direction of a bureau at Washington City, 3,000 miles away. As a result the cost of administration here is more than the income from the lands. Further, the cutting of timber on the Federal reserves is but a petty fraction of the annual growth. Moreover, there is a tremendous economic loss every year because of the failure to cut the matured timber, which is deteriorating probably as fast as the new growth of young trees is proceeding.

British Columbia has practical forestry administration, for the benefit of the people of the Province. This State has theoretical forestry administration, ostensibly for the benefit of the Federal Treasury, but practically at a loss to the Federal Treasury of $3 for every dollar of revenue collected.

No better or more practical argument for the State administration of the State's resources could probably be furnished than the contrast between results in British Columbia and those seen in this State in handling forests of identical character, under identical climatic and other natural conditions.

Mr. MANN. Mr. Chairman, I do not know how far the Forest Service may be giving out information to the Members, but I do know this, that I never have employed a publicity agent myself, and I think the gentleman from Washington has never employed a publicity agent, but I suspect one could collect more clippings relating to myself than he can in reference to the Forest Service.

I do not think it becomes necessary to employ a publicity agent for the purpose of disseminating certain information. I have no doubt certain press agencies regularly visit the Forest Service and other services in the Government to obtain such information as they can, although I have noticed that most of the information which I have seen in the papers relating to the different bureaus of the Government is taken from public documents which I have read, receiving them as they come out and before they appeared in the newspapers. I have frequently called the attention of newspaper correspondents to some interesting things I have seen in some of the public documents which came to the House, which few Members look at but which I go over, and afterwards I have seen this very interesting information going the rounds of the newspapers. I think it is a good thing. I believe that the more disseminated the information is which comes from the bureaus of the Government the better it is. We did take exception at one time to the idea that the man should be employed in one of the bureaus for the purpose of advertising the good qualities of the bureau and the bureau chiefs; but giving the information which they acquire so that it is accessible to press agencies, so that it may appear in the newspapers throughout the country, in my opinion is a matter to be praised rather than to be condemned.

Mr. WILSON of Florida. Mr. Chairman, I move to strike out the last word. May I ask the gentleman from South Carolina [Mr. LEVER] if the Florida National Forest referred to on page 30, line 23, includes the Choctahatchee Reservation?

Mr. LEVER. I can not tell my friend from Florida offhand. I will put the information in the RECORD for him. All the information in reference to these forest units—and there are 163 of them—I think is included in this book which I hold in my hand, and it is a very hard matter, as the gentleman knows, for anybody to carry all these details in his head. If the gentleman desires the information put in the RECORD I will be glad to do it.

Mr. WILSON of Florida. I do not care anything about its being put in the RECORD. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. WILSON of Florida. May I offer an amendment at this time?

Mr. LEVER. The gentleman does not want to offer it to that paragraph, because we have not come to it yet.

Mr. GUERNSEY. Mr. Chairman, I move to strike out the last word.

In some instances there may be ground for criticism of the Forestry Service appropriations. I venture to assert, however, that no governmental work undertaken in recent years is of such great importance and capable of producing such grand results for the present and future generations as that of the Forest Service of this Government in its efforts to conserve and protect what is left of the great forests which were the birthrights of this Nation.

The water supply necessary for the very existence of ninety millions of people in continental United States and the hundreds of millions that these States will eventually contain can only be maintained and continued by preserving and increasing our forests.

The streams that create the water powers which our people will, as time goes on, become more and more dependent upon for light, heat, and to move the wheels of industry will shrink to insignificance, if not disappear from the face of the earth, unless the forests at their source are preserved.

When President Washington was sworn in as the first President of the United States, a magnificent forest swept the whole length of the Atlantic seaboard, from Maine to Florida; to-day it has practically disappeared; only a remnant of this great timber wealth in its virgin state remains, and, strange to relate, that remnant is in the earliest settled section of the country, the State of Maine. The coast of Maine was settled as early, if not earlier, than Jamestown, Va.

The Appalachian White Mountain forest-conservation policy adopted by the Government two or three years ago was so important and wise a step in the right direction that no man or party would dare to advocate its abandonment, yet the money expended in those sections will be largely to restore the forests that have disappeared. In Maine, at the headwaters of the great Maine rivers in the Mount Katahdin region, are virgin forests that this Government can and should continue. I hope before it is too late that the forest-conservation policy of this Government and its Forest Service will be extended to that wonderful mountain forest and lake region that it may become a national asset. I hope at some more opportune time to address the House at length on the desirability of the passage of the Mount Katahdin national park and forest reserve bill which I have introduced in this Congress. In the meantime, and now, I want to express my most emphatic indorsement of the desirability of the continuance of the appropriations in this great supply measure for the continuance of

the Forest Service and the general forest-conservation policy of the Government.

Mr. SLOAN. Mr. Chairman, I desire to call attention to the fact that the gain of the Government is not measured in the amount of lumber that is sold or the timber that is sold, or by the bookkeeping that takes into account the salaries and expenses paid and the amount of lumber sold. These do not represent the real gain, profit, or loss to the Government.

Mr. HUMPHREY of Washington. Will the gentleman tell how much they have sold during the past year?

Mr. SLOAN. I am not taking up that feature of it. I am taking up an entirely different one. That was discussed and this was not, and I want to call the attention of the committee to it. I want to direct attention to the statement of the Forester, on page 17 of the hearings, where he was asked:

Do you figure that during the last five years there has been a substantial increase in the lumber or stumpage in these forest reserves; in other words, has the growth greatly exceeded the destruction and removal?

Mr. Graves said:

Without any question, the forests are increasing in the production of timber. In other words, when we took hold of the forests there were a great many gaps; not only large areas which had been burned over and where reproduction is very slow, but a great number of smaller gaps where there were still seed trees in the neighborhood. These areas are seeding up with great rapidity. This summer I was astonished, on visiting some of the California forests in the Sierras, to see the result our protection is securing in actually extending the conifers down into areas where a number of years ago they did not exist. There is not any question but that the forests are on the increase, whereas previously, on account of unregulated fires, the forests were on the decrease.

And in point of value, covering the five years that have been discussed by gentlemen here to-day, I have no doubt that the real living timber supply has been increased a great many per cent, and that, together with that which has been marketed, would more than equal the excess of expenditure which has been complained about. In other words, if the protected lumber and the growth that has come out of that protection had been marketed by the Government, instead of the balance sheet showing against the Government it would show a large surplus to the credit of the forest-reserve protection given by the Forestry Bureau.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. SLOAN. I will.

Mr. HUMPHREY of Washington. I will ask if Mr. Graves does not say in the same hearings, and show, that they are only cutting about 7 per cent of the natural increase and leaving 93 per cent to decay in the forests?

Mr. SLOAN. They are only cutting that amount, and the balance becomes a valuable asset owned by the Government.

Mr. HUMPHREY of Washington. When does it become a valuable asset—when it rots? They could cut 6,000,000 feet instead of what they are cutting and not decrease the supply. The Forester has said that repeatedly in the report, and he repeats it in the hearings.

Mr. SLOAN. I know of no forest reservation containing live trees that rot.

Mr. HUMPHREY of Washington. The gentleman probably knows forest reserves contain ripe timber that rots?

Mr. SLOAN. There has been a great deal greater growth than there has been decay, and that fact has appeared in the hearings.

Mr. LEVER. Mr. Chairman, I see that the gentleman from Washington [Mr. JOHNSON] about to rise. I suggest to him that he first let us read the general expense item.

The CHAIRMAN. The Clerk will read.

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. JOHNSON of South Carolina having taken the chair, a message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 751. An act to repeal section 3480 of the Revised Statutes of the United States.

The message also announced that the Senate had agreed to the amendment of the House of Representatives to Senate concurrent resolution No. 11, to print additional copies of Senate Document No. 357, volumes 1 and 2, Sixty-first Congress, and Senate Document No. 1063, Sixty-third Congress, being a compilation of the treaties, conventions, international acts, protocols, and agreements between the United States of America and other powers from 1776 to 1913.

AGRICULTURAL APPROPRIATION BILL.

The committee resumed its session.

The Clerk read as follows:

General expenses, Forest Service: To enable the Secretary of Agriculture to experiment and to make and continue investigations and report on forestry, national forests, forest fires, and lumbering, but no part of this appropriation shall be used for any experiment or test made outside the jurisdiction of the United States; to advise the owners of woodlands as to the proper care of the same; to investigate and test American timber and timber trees and their uses, and methods for the preservative treatment of timber; to seek, through investigations and the planting of native and foreign species, suitable trees for the treeless regions; to erect necessary buildings: *Provided*, That the cost of any building erected shall not exceed $650: *And provided further*, That hereafter no part of the appropriation made by this act shall be used for the construction, repair, maintenance, or use of buildings or improvements made for forest-ranger stations within the inclosed fields of bona fide homestead settlers who have established residence upon their homestead lands prior to the date of the establishment of the forest reservation in which the homestead lands are situated, without the consent of the homesteader; to pay all expenses necessary to protect, administer, and improve the national forests; to ascertain the natural conditions upon and utilize the national forests; and the Secretary of Agriculture may, in his discretion, permit timber and other forest products cut or removed from the national forests to be exported from the State, Territory, or the District of Alaska in which said forests are respectively situated; to transport and care for fish and game supplied to stock the national forests or the waters therein; to employ agents, clerks, assistants, and other labor required in practical forestry and in the administration of national forests, in the city of Washington and elsewhere; to collate, digest, report, and illustrate the results of experiments and investigations made by the Forest Service; to purchase necessary supplies, apparatus, and office fixtures, and technical books and technical journals for officers of the Forest Service stationed outside of Washington, and medical supplies necessary for immediate relief of artisans, laborers, and other employees engaged in any hazardous work under the Forest Service; to pay freight, express, telephone, and telegraph charges; for electric light and power, fuel, gas, ice, washing towels, and official traveling and other necessary expenses, including traveling expenses for legal and fiscal officers while performing Forest Service work; and for rent outside of the District of Columbia, as follows:

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] moves to strike out the last word.

Mr. HUMPHREY of Washington. Mr. Chairman, I wish to call attention to the fact that of the total appropriation carried in this bill supposed to be for the benefit of the farmers of this country almost one-third of it is to maintain the Forest Service that in no way benefits the farmer. The only result that comes to the farmer from the Forest Service is to be compelled to pay more for his timber, as the Forest Service joins with the great timber owners of the country in keeping up the price of lumber and other forest products. One reason why we have no larger sales of timber by the Forest Service is that they prefer that the trees shall decay in the forests rather than put them upon the market.

I call the attention of the committee to some of the statements made in the hearings when the Agriculture bill was being considered by that committee. I read first from page 26 from the testimony of Mr. Greeley, who was connected with the Forest Service. Here is the question which was propounded to him:

"Mr. PATTON. How does your stumpage price compare with the local price?

"Mr. GREELEY. The stumpage price for national-forest timber is usually rather higher than the local price, because of the fact that no interest is required on deferred payments. You can readily appreciate that in a long-term sale this is a very important factor to the operator. It greatly reduces the investment which is required and that should justly be compensated for in the price paid for the timber. For that reason our prices probably range a little higher than the prevailing price for private timber in the same locality."

Then a little further on they asked this question:

"Mr. PATTON. And that makes it more expensive to operate?

"Mr. GREELEY. Yes, sir.

"The CHAIRMAN. In no case have you attempted to influence the market price of the lumber?

"Mr. GREELEY. Not at all.

"The CHAIRMAN. You follow the market price?

"Mr. GREELEY. Yes, sir.

"The CHAIRMAN. Your scale of prices would be higher on account of the reasons just given by you?

"Mr. GREELEY. I think so, although that is a point, Mr. Chairman, on which I would not like to make a sweeping statement."

Then, on the very next page, the examination continues:

"Mr. HOWELL. You do not maintain that this timber which you have, if it were disposed of at a lower stumpage rate, would not have some influence on the price of lumber?

"Mr. GREELEY. It would not reduce the price of lumber. It would simply give the purchaser from the Government a much larger profit. He would get the same price for his lumber that other manufacturers obtain, as a result of these broad, competitive conditions which I have just described."

I desire to place in the RECORD some history of this so-called conservation policy. I have heretofore called the attention of this House to the fact that the Santa Fe Railroad secured

1,200,000 acres of the best part of the public domain for an equal number of acres of worthless, barren, treeless land. This transaction was consummated through the influence of those who have been back of the forest "conservation" movement. I have also called attention upon the floor of this House to the fact that the Northern Pacific Railway has secured some 690,000 acres of the best timbered land on this continent for an equal number of acres of practically treeless land of very little value. This transaction also had the approval of those who were back of this movement to "conserve" our forests.

I will give some interesting history of the men who conserved our forests, and will try to give some of the men and interests who furnished the money and the brains for the propaganda. I need hardly say that those who have done this have reaped their reward.

Read the names and the occupations of those prominent in this movement. Read the names of the officers, contributors, and supporters of the American Forestry Association. It is worth while. The Forest Service and the timber barons have worked together for a common purpose.

It is an illuminating story.

FORCES BEHIND "CONSERVATION."

During the past 10 or 15 years there has been created in the United States a definite public opinion that only by Federal reservation and administration may the coal, timber, water power, and other resources of the public lands be saved from being looted by "the interests."

What force created it?

The public has been educated to believe that the States wherein those public lands and resources lie have no right to them whatsoever over the rights of the States which contain no public lands.

It has been taught that the individual public-land States are too powerless or too corrupt properly to administer the resources within their borders as the older States administered theirs.

The lesson has been driven home that the public lands in the new Western States belong to the whole people of the United States, and must be administered for the benefit and revenue of this "whole people."

Gifford Pinchot has produced figures purporting to show that in these lands and resources "there is about $700 in sight for every man, woman, or child in the United States."

The fact that the original thirteen States administered their own public lands to their individual benefit is entirely disregarded in the treatment of the subject, or else met with the statement that conditions are different; that Pennsylvania, for instance, as a distinct commonwealth of prerevolutionary birth, inherently had the right to her public lands, whereas the territory of the Western States was acquired by the expenditure of the "blood and treasure" of the people of the Eastern States.

In other words, the idea has been fostered that the public-land States are mere Federal provinces. It is assumed that only by Federal control of their resources can the rights of the whole American people in these resources be protected.

Any opposition to these new ideas of the treatment of a State's natural resources is condemned by Gifford Pinchot, his adherents and his newspaper and magazine supporters, as being animated by "the interests," meaning thereby the predatory corporations.

Historical facts and the basic law are swept aside by the proponents of the Federal reservation and control idea.

In the law it is a matter of acknowledged truth that the Federal title to the public domain is but that of a trustee for the States. This has been determined by the highest tribunals time and time again. Furthermore, so far as the "Oregon country" is concerned—that region now containing the States of Washington, Oregon, and Idaho, the western part of Montana and the northwestern part of Wyoming—it cost the older States not one drop of blood nor one cent of treasure. Title was won to the United States by pioneer "occupation and discovery."

The Federal-control propaganda has disregarded the fact that all of the past evils complained of in the treatment of the public domain have been through Federal, not State, maladministration.

Any plea in behalf of the public-land States that they be permitted to get possession of the lands granted to them in their enabling acts, any argument that the States are in better position than the Federal Government to deal with the administration of water powers, instantly brings the charge that such pleas and such argument are made solely in the interests of the "land thieves" and the "Water Power Trust."

Extravagant estimates have been placed on the value of the coal, metalliferous, and water-power-site lands remaining in the trust possession of the Federal Government.

The result is that wholesale Federal reservations have been established covering great areas of the public-land States, removing those lands from the possibility of taxation by the States and thus curtailing the State's legitimate sources of revenue.

The promoters of the movement teach that title to coal and other mineral lands must never pass from the United States; that water-power sites must never be sold; that timberland must never be sold; but that all operations on these properties shall be on leasehold, the revenue derived therefrom going to the Federal Treasury.

Resources in only 13 States would be materially affected by this plan. There are 48 States in the Union. Thirty-five States, having secured the undivided benefit of their own resources for themselves, would have a share also in the resources of the 13 new ones.

Federal tax—or royalty, or lease, for it is all a tax—on the resources of the 13 States imposes a handicap on the development of those resources. It imposes a charge that does not exist on the same kind of resources in the older States nor on the resources in the newer States to which the Federal Government has already passed title.

Thus, Federal control of and Federal tax on mines, fuel supply, and sources of power for manufacturing must inevitably hold back the development of the newer States in the interests of the older ones, and also in the interests of those favored corporations and persons in the newer States who have secured their patents from the Federal Government. Instead of preventing monopoly, the Federal-control policy promotes monopoly.

If the manufacturing, transportation, coal-mining, and power-owning interests in the older States be selfish, it is hardly probable that they would oppose the advance of the Federal-control propaganda.

Equally, it is hardly to be supposed that those aggregations of capital which have secured large land grants in western States, or, through Federal negligence, have been enabled to secure vast areas of valuable lands by other means, would oppose the Federal reservation plan. They have "got theirs."

It may be noted in this connection, and for illustrative purposes, that the creation of national forest reservations aggregating 12,000,000 acres in the State of Washington sharply and extravagantly advanced the value of the 1,200,000 acres of timberland owned in the State by the Weyerhaeuser interests, and also increased the value of the Northern Pacific granted timberlands.

Hence it seems highly improbable that the "interests" cited by the Federal-control advocates as the enemies of their policy can be the same interests that are generally known in the country as the "vested interests."

But probabilities should not be considered. Facts as to the exact source of the Federal-control propaganda are more valuable than conjecture.

Trace back through any of its many channels the flow of Federal-control advocacy and it leads to the one fountainhead—the American Forestry Association. It was in this association that the movement had its birth. It is due to the agitation of this organization that it has grown to maturity. From this association came the money to pay for the maintenance of press bureaus, traveling lecturers, and all the other mediums so lavishly used to "educate" the people of the country.

Formed as the American Forestry Congress at a tree-planting festival at Cincinnati in 1882, the American Forestry Association has grown into a great and powerful body, with about 7,000 members, having permanent offices in Washington, where it may watch legislation closely, and publishing a monthly magazine of large circulation.

It is the membership of the American Forestry Association that furnished the funds for the propaganda, with this qualification: After Gifford Pinchot secured control of the Forest Service of the United States Federal funds of that service were available for publicity of various sorts.

In the membership of the American Forestry Association there has been represented for years every corporate interest that would be benefited by the Federal-control policy.

A large proportion of the officers and membership is and has been for years made up of representatives of Pennsylvania coal and iron companies, New England manufacturing interests, electric and water power interests, the wood-pulp interests, the land-grant railways, and the great timberland barons and great lumber-manufacturing interests of the country.

Frederick Weyerhaeuser, who acknowledges the title of "lumber king," was vice president of the association for years and also a member of its advisory board.

The coal railroads, such as the Reading and the Lehigh Valley, have long had their representatives in powerful place in the association.

The Morgan-owned Southern Railway, which handles much Atlantic range coal and southern lumber, kept a place on the list of officers for years. When President Spencer, of the Southern, lost his life the new president, W. W. Finley, promptly was elected director of the association in his place.

The great financial interests of Wall Street, the Pulp and Paper Trust, the huge privately owned irrigation enterprises—all these have been contributing for years to the treasury of the American Forestry Association to assist in carrying on the work in favor of the Federal control idea.

A reading of the list of officers and members for years past is like reading a directory of the vested wealth of the United States and Canada. Canada from the beginning has had a prominent part in the association. For many years Sir Henri G. Joly de Lotbiniere, now dead, a man of wealth, formerly premier of Quebec and later lieutenant governor of British Columbia, was a vice president of the organization and several times presided over its annual deliberations.

It is impossible and would be tedious to the reader to set forth just what all the individual members of the association represent. Some of them are dreamers who believe wholly in the theory that the propaganda is for the public good; some of that great class which has been aptly termed the "unintelligent intellectuals," some of those who are disciples of the uplift for salary only, and many of those who know precisely what they are there for. Here, however, are some of those whose money, through their membership in the association, has been poured out to create public opinion:

Charles Francis Adams, Boston (member), president of the Union Pacific Railway, 1884–1890; Government director Union Pacific Railway, 1877–1890. Of the famous Adams family of New England, which gave two Presidents to the United States and has had a powerful finger in the Government ever since. Mr. Adams has a winter home in Washington. The family has been identified with the Union Pacific Railway from its inception and from the time the prodigious land grants and financial aid from the Government were obtained. Mr. Adams is heavily interested in privately owned irrigation enterprises in the West, notably, the Lewiston-Clarkston project in Asotin County, Wash.

Charles Francis Adams, 2d, Boston (member), vice president of the City Trust Co. and of the electric corporation; trustee of many Massachusetts gas and electric power companies.

Edward D. Adams, New York (life member), the chief figure in the company which controls the power of Niagara Falls, representative in the United States of the Deutsche Bank, of Berlin, since 1893, and one of the most powerful financiers in the United States. The Deutsche Bank played a considerable part in financing the Northern Pacific Railway at the time of Henry Villard. In recent years Mr. Adams has paid particular attention to water-power development and the creation of hydroelectric powers. He is president and director of the Cataract Construction Co. and its allied companies at Niagara, and has been since 1889. He figured in the reorganization of the Northern Pacific Railway Co. (a land-grant road) and was chairman of the board of directors of that company in 1896. He is still a large stockholder in the road. He is chairman of the board of directors of the Empire Engineering Corporation; president of the Bullock Electric Manufacturing Co.; director of the Allis-Chalmers Co., of the Allis-Chalmers-Bullock (Ltd.), of Montreal; of the American Cotton Seed Oil Co.; of the Central & Southern American Telegraph Co.; of the Union Petroleum Co.; and of the Guatemala Railway Co.; also of many other corporations. He wears the Prussian order of the crown, second class, conferred upon him by the Kaiser for services to German capital in the United States.

J. Edward Addicks, Wilmington, Del. (member), "Gas" Addicks, the subject of some lurid remarks by Thomas Lawson in "Frenzied Finance." He is president of the Bay State Gas Co., Boston, and president of gas companies in Brooklyn and Wilmington, with dependent interests in coal mines.

James S. Ames, Mrs. F. L. Ames, Susan Ames, and Mary Ames, North Easton, Mass. (three life members and one member). These are representatives of the famous North Easton or Oakes Ames branch of one of the richest manufacturing families in America. Oakes Ames's name will be recalled in connection with the Credit Mobilier and the presidency of the Union Pacific Railway. Robert Ames, son of Oakes, is president of the Ames Shovel & Tool Co., Oliver Ames & Son Corporation, T. Rowland's Sons (Inc.), Wright Shovel Co., R. M. Myers Co., Elwood Fuel Co., Easton Investment Co., American Trust Co., First National Bank of Easton, Kensley Iron & Machine Co., and Carver Cotton Co. Another member of the North Easton family is Oliver, who is president of the Ames Plow Co., Fisher Manufacturing Co., director of the Kensley Iron & Machine Co., Washington Mills, Emery Manufacturing Co., Union Copper Mining Co., vice president and treasurer of the Oliver Ames & Son Corporation, director of the Chicago & North Western Railway, Oregon Short Line, Union Pacific Railway, Old Colony Railroad, Western Union Telegraph Co., General Electric Co., Electric Corporation, Edison Electric Illuminating Co., and many other corporations.

Samuel P. Avery, New York (now dead, sustaining member), wealthy merchant, who was a figure in New York high finance.

Joshua L. Bailey, Philadelphia (vice president; director, 1909–10), millionaire dry-goods merchant of varied interests; member of many philanthropic societies.

John Birkinbine, Philadelphia (member executive committee, 1897), consulting engineer, reporting on mines and industries, also interested in the manufacture of charcoal. Editor for nine years of the Journal of Iron Workers; editor of Forest Leaves.

Cornelius N. Bliss, New York (now dead; life member), Secretary of the Interior, 1897–1899; treasurer Republican national committee, 1892–1908; director of the American Cotton Co.; trustee American Surety Co., Central Trust Co.; director Home Insurance Co. and of the Fourth National Bank of New York.

James H. Bowditch, Boston (life member), representative of the Bowditch family of cotton spinners and manufacturers. Among the family interests are the Massachusetts Cotton Mills, with mills both in the Bay State and in Georgia; the Pepperill Manufacturing Co., the Saco Water Power Co., and similar corporations.

William M. Canby, Wilmington, Del. (now dead; vice president 1898 to 1904, inclusive), president of the Wilmington Institution; once receiver of the Wilmington & Western Railway.

Hugh J. Chisholm, New York (life member), the "wood-pulp king." A Canadian-born promoter, who developed the wood-pulp business and in a measure controls it. In 1881 he established the Umbagog pulp mill at Livermore Falls on the Androscoggin River, and later organized the Otis Falls Pulp Co.; developed water power at Rumford Falls, organized the Rumford Falls Power Co., and organized and is president of the Portland & Rumford Falls Railway, the Rumford Falls & Rangeley Lakes Railroad, and, with W. A. Russell and others, organized the International Paper Co. and is now its president. He is president and director of a number of other pulp and paper companies.

Austin Corbin, New York (sustaining member), banker; executor of the estate of his late father of the same name. President Rockaway Park Improvement Co.; president Manhattan Beach Co.; treasurer New England Mortgage Security Co.; was associated with relatives in backing railway and other enterprises in the State of Washington and in British Columbia, promoted by D. C. Corbin.

Frederick A. Delano, Chicago (vice president; life member), president of the Wabash Railroad; president of the Wheeling & Lake Erie Railroad; chairman of the board of directors of the Metropolitan West Side Elevated Railroad, Chicago; director of the Hamilton National Bank, Chicago, of the Union Mining Co., of Maryland, and of various other corporations.

P. H. Dudley, New York (life member), consulting engineer of the New York Central lines.

Arthur F. Estabrook, Boston (life member), senior member of the banking firm of Estabrook & Co.; director of the Boston Safe Deposit & Trust Co. and other corporations.

W. W. Finley, Washington (director 1907; vice president 1908–9), president of the Southern Railway and of the Mobile & Ohio Railway.

Addison G. Foster, Tacoma, Wash. (vice president 1902–1904), Senator from the State of Washington 1899–1905; vice president of the St. Paul & Tacoma Lumber Co.; president of the Consolidated Lumber Co.; owner of large areas of timberland; "active in the development of coal mines and in railroad building," to quote his authorized biography.

David R. Francis, St. Louis (vice president 1909–10), Secretary of the Interior under President Cleveland 1896–7; president of the St. Louis Exposition. Made his fortune in the grain trade. Trustee of the New York Life Insurance Co.; vice president of a St. Louis bank; and interested in many financial and industrial enterprises.

John L. Gardener, Boston (now dead; life member), husband of Mrs. Jack Gardener, Boston's famous and eccentric millionaire society leader and art patron. The Gardener money is chiefly in manufacturing.

Robert H. Gardiner, Gardiner, Me. (member), director of the Arlington Mills, Webster & Atlas National Bank, Cochrane Chemical Co., the Falls Co.; trustee the Boston & Albany Railroad.

Robert Garrett, Baltimore (director 1908), partner in the banking firm of Robert Garrett & Sons; director of the Western National Bank, the Provident Savings Bank, and the Colonial Trust Co.

Edwin Ginn, Boston (life member), head of the firm of Ginn & Co., publishers of school and college textbooks, and interested in paper manufacturing.

Curtis Guild, Boston (president 1909–10, vice president 1913), recently ambassador to Russia; twice governor of Massachusetts; owner Boston Commercial Bulletin; heavily interested in manufacturing.

Warren Higley, New York (president, 1885–86), highly successful corporation lawyer; president of the Adirondack League, 1901–1906.

Gen. Thomas H. Hubbard, New York (life member), member law firm of Butler, Stillman & Hubbard; vice president and director Southern Pacific Railway Co.; president Mexican International Railroad, 1897–1901; Houston & Texas Central, 1894–1901; president Guatemala Central Railroad, 1901; president Pacific Improvement Co., 1903; director National Bank of Commerce; director and chairman executive committee Chicago & Alton Railroad, Toledo, St. Louis & Western Railroad, American Light & Traction Co; director and member executive committee Wabash Railroad, Western Union Telegraph Co.; director and member finance committee Metropolitan Life Insurance Co.; director Equitable Trust Co., Philippine Railway Co., and other corporations.

Archer M. Huntington, New York (life member), son of Collis P. Huntington, who for years was at the head of the Southern Pacific Railway. Mr. Huntington is the inheritor of much of his father's wealth.

D. Willis James, now dead, New York (patron), vice president and trustee United States Trust Co.; director Ansonia Brass & Copper Co., Ansonia Clock Co., Commercial Mining Co., Copper Queen Consolidated Mining Co., Northern Pacific Railway, and United Globe mines.

Morris K. Jesup (now dead), New York (life member), banker; once president of the New York Chamber of Commerce.

William M. Ladd, Portland, Oreg. (life member), president Ladd & Tilton Banking House, with large and varied interests through the Pacific Northwest.

Amory Appleston Lawrence, Boston (life member), president Salmon Falls Manufacturing Co., Ipswich Mills, Gilmanton Mills; vice president Provident Institution for Savings; director National Union Bank, Boston Manufacturing Co., Waltham Bleachery & Dye Works, Dwight Manufacturing Co., Cocheco Manufacturing Co., New York, New Haven & Hartford Railway, Boston & Maine Railway, Maine Central Railway.

Cyrus H. McCormick, Chicago (member), president International Harvester Co.; director Chicago & North Western Railway, Merchants' Loan & Trust Co., National City Bank, of New York.

Abraham Gilbert Mills, New York (life member), vice president of the Otis Elevator Co., president of the Adirondack Co., and director of various financial and industrial enterprises.

D. O. Mills, New York (now dead; life member), the great banker of the bonanza days in California; largely interested in the Southern Pacific Railroad.

George H. Maxwell, Chicago, and Sonoma, Cal. (director 1909–10), organizer of the National Irrigation Congress, editor of an irrigation newspaper, and interested in various irrigation enterprises.

George T. Oliver, Pittsburgh (vice president, 1909), United States Senator and millionaire steel manufacturer and investor; president Youngstown Car Manufacturing Co.

Charles L. Pack, Lakewood, N. J., formerly Cleveland, Ohio (director), for a quarter of a century one of the largest manufacturers of lumber in the country; owner of thousands of acres of timberlands in the West; formerly operated in Michigan; president National Conservation Congress; director Seaboard National Bank, of New York.

William Jackson Palmer, Colorado (now dead; life member), president Denver & Rio Grande Railroad, 1870–1883; president Mexican National Railroad for seven years; president Rio Grande Western Railroad, 1883–1901.

John E. Parsons, New York (life member), corporation lawyer; director Metropolitan Trust Co.; trustee Bank for Savings.

George Foster Peabody, New York (director, 1907; vice president, 1908–1910), banker; treasurer Democratic national committee, 1896–1905; vice president and director of the Mexican Northern Railway, the Potosi & Rio Verde Railway Co., the Mexican Coal & Coke Co., the Alvarez Land & Timber Co., the Compania Metalurgica Mexicana, the Montezuma Land Co.; director of the Mexican Mineral Railway Co., Conquista Coal Railway Co., and Southern Improvement Co., of New York.

Henry Phipps, New York (life member), next to Andrew Carnegie the largest owner in the Carnegie Steel Co.; director of the United States Steel Corporation and of the Mellon National Bank, of Pittsburgh.

H. A. Pressey, Washington, D. C. (director, 1906–1908), vice president Spencer Water Co., Colonna Dry Dock Co.; director Southern Public Service Corporation, Oxford Water & Electrical Co., Graham Water & Electric Co., Morgantown Water Co.; consulting engineer New York State Water Supply Commission.

Redfield Proctor (dead), Proctor, Vt. (vice president, 1893–1902), United States Senator and head of the largest marble producing company in the world.

Frank West Rollins, Concord, N. H. (vice president, 1902), governor of New Hampshire, 1890–1901; first vice president E. H. Rollins & Sons, bankers, Boston.

Isaac N. Seligman, New York (life member), member of the banking firm of J. & W. Seligman and one of the financial powers in New York.

Charles Axel Smith, Minneapolis (vice president, 1908; member advisory board, 1909–10), president C. A. Smith Timber Co., Northwestern Composition Board Co.; director Swedish-American National Bank and several other corporations; "has vast timber holdings in Minnesota, Oregon, and California," to quote his authorized biography; director and treasurer Northern Pine Manufacturers' Association. In September, 1910, the Government recovered by court decree 5,000 acres of Oregon timber land which Mr. Smith had attempted to acquire for himself from the public domain. Fraud in the entry was alleged by the Government.

Samuel Spencer (dead), New York and Washington (director, 1906), president Southern Railway; one-time president and director Alabama Great Southern Railroad, Georgia Southern & Florida Railroad, Mobile & Ohio Railroad; director Central of Georgia, Chicago, Milwaukee & St. Paul, Erie, and Northern Pacific Railways.

Charles Warren Stone, Warren, Pa. (member), heavily interested in lumbering, oil producing, and coal; represented twenty-seventh district of Pennsylvania in the Fifty-first to the Fifty-fifth Congresses.

George C. Thomas, Philadelphia (sustaining member), retired banker; formerly a member of the banking firm of Jay Cook & Co., which financed the Northern Pacific Railway. Later of the firm of Thomas & Shoemaker. From 1883 to his retirement was a member of the banking firm of Drexel & Co., Philadelphia; Drexel, Morgan & Co., New York; and Drexel, Harjes & Co., Paris. Has been director of the Lehigh Valley Railroad, the Philadelphia & Reading, the Reading Co., and the Philadelphia & Reading Coal & Iron Co.

Louis C. Tiffany, New York (sustaining member), president and director of the Tiffany Glass & Decorating Co.

George W. Vanderbilt (now dead), New York (life member), son of William H. Vanderbilt. Has a private park of 150,000 acres near Asheville, N. C., devoted to forestry. Gifford Pinchot originally was his forester.

Thomas F. Walsh (now dead), Colorado and Washington (life member; director, 1901–2; vice president, 1903–4), mine owner and engineer and also interested in private irrigation enterprises.

Samuel D. Warren, Dedham, Mass. (life member), lawyer and manufacturer. Partner in S. D. Warren & Co., manufacturers, and part owner in Cumberland mills, Portland, Me.; Copescook mill, Gardiner, Me.; and Forest Paper Co., Yarmouth, Me.

George Peabody Wetmore, Newport, R. I. (vice president, 1904; life member), United States Senator 1894–1913.

Frederick Weyerhaeuser, St. Paul (vice president, 1904; member advisory board 1908–1910): The "lumber king" of the world. President of the Weyerhaeuser Timber Co.; president of the Weyerhaeuser Syndicate; president of the Duluth & Northeastern Railroad and of the Missabe Southern Railroad. Purchased from the Northern Pacific Railway much of its granted timberlands in the Northwestern States, and also purchased from the same much forest-lieu land scrip, by which he was enabled to increase his timberland holdings vastly.

James S. Whipple, New York (director, 1909–10): Lawyer. President and director of the Fair Haven Ore Co.; secretary and director of the Elko Paint Co. Has extensive lumber interests. Forest, fish, and game commissioner of New York for several years.

Nathaniel Wilson, Washington, D. C. (director, 1897–98): Lawyer. Attorney for the American Security & Trust Co., the Great Falls & Old Dominion Railroad, and other corporations.

All of the foregoing were active in the association at the time of its greatest growth and during the period when it was building up in the country the so-called "conservation" sentiment.

Officers of the American Forestry Association for 1913 are as follows:

President: Dr. H. S. Drinker, president of Lehigh University, South Bethlehem, Pa.

Vice presidents: Joshua L. Bailey, Philadelphia; John R. Clancy, New York; Frederick A. Delano, president of the Wabash Railroad; Dr. Charles W. Eliot, president emeritus of Harvard; Dr. B. E. Fernow, dean of forestry, University of Toronto; Walter L. Fisher, former Secretary of the Interior; Henry S. Graves, chief of the United States Forest Service; Curtis S. Guild, recently ambassador to Russia; Everett G. Griggs, of Tacoma, Wash., president of the National Lumber Manufacturers' Association; Hiram Johnson, governor of California; Asbury F. Lever, Member of Congress from South Carolina; Gifford Pinchot; Filibert Roth, dean of forestry, University of Michigan; Dr. J. T. Rothrock, secretary Pennsylvania State Forest Reservation Commission; Joseph N. Teal, chairman Oregon Conservation Commission; Oscar W. Underwood, Congressman from Alabama; Dr. Robert S. Woodward, president of the Carnegie Institution, Washington, D. C.

Treasurer: Otto Luebkert, Washington, D. C.

Executive secretary: P. S. Risdale, Washington, D. C.

Assistant Secretary: J. A. P. Farnham, Washington, D. C.

Directors: E. T. Allen, secretary of the Western Forestry and Conservation Association; Robert T. Bass, former governor of New Hampshire; W. R. Brown, president of the New Hampshire Forestry Commission; Herman H. Chapman, professor of forestry, Yale; Dr. Henry S. Drinker, president of Lehigh University; John E. Jenks, Washington, D. C.; Otto Luebkert, Washington, D. C.; Chester W. Lyman, International Paper Co.; Thomas Nelson Page, author, Washington, D. C.; Charles F. Quincy, New York; J. E. Rhodes, National Lumber Manufacturers' Association; Ernest A. Sterling, Pennsylvania, forest and timber engineer; John L. Weaver, Washington, D. C.; J. B. White, Kansas City, lumberman and former president of the National Conservation Congress.

Auditors: E. A. Sterling and C. F. Quincy.

In addition, there is an advisory board consisting of three members from each of the following organizations:

Yellow Pine Manufacturers' Association, National Wholesale Lumber Dealers' Association, Northern Pine Manufacturers' Association, Massachusetts Forestry Association, Lumbermen's Exchange, Philadelphia; Camp Fire Club of America, North Carolina Forestry Association, National Association of Box Manufacturers, Carriage Builders' National Association, Boston Paper Trade Association, Philadelphia Wholesale Lumber Dealers' Association, New Hampshire Timberland Owners' Association, Empire State Forest Products Association, California Forest Protective Association.

These, then, are the men who control the activities of the National Forestry Association. The predominance of interests that have profited and will continue to profit by the federalization of western lands and resources is evident in the list of officers and in the preceding statement as to the class of people whose money has kept up the propaganda.

And still Mr. Pinchot would have the public believe that the "interests"—the public fondly believing that he means the timber and lumber barons by the term "interests"—are opposing his so-called conservation policy. In truth, it is the men who control those very interests that have financed the gigantic work of creating a false public sentiment that has approved the iniquities perpetrated in the sacred name of conservation.

An examination of the membership and the history of the American Forestry Association demonstrates that it is a sordid commercial body, organized and maintained to forward the fortunes of those whose wealth has been acquired from the exploitation of natural resources, and who want no further exploitation of the remaining resources in order that the value of their holdings may be enhanced thereby.

Federal control, it has been demonstrated, spells stifling of development and nonuse of resources on the public domain. Federal control is what the interests behind the American Forestry Association are and have been demanding.

It is interesting to trace the development of the federalization idea in the American Forestry Association and the throttling of the State-control idea. In the body from the beginning was a group, headed by Bernhard Edouard Fernow, strenuously insistent upon Federal control of western lands, while, in the earlier days, was a group that vainly attempted to resist the progress of such a policy, but this group years ago was swept aside.

Mr. Fernow, or Dr. Fernow, as he is now known, spelled his name in the earlier days Bernard Edward. He was a young Prussian, who, equipped by a splendid German technical education, had arrived in this country in 1876, and in 1882 was employed as a chemist at Lehigh furnaces in Pennsylvania. He attended the first meeting of the American Forestry Association at Cincinnati in 1882 with credentials from the Journal of the Iron Workers' Association of Philadelphia. Since then he has been attending all the association meetings, usually as an officer.

To him rather than to Mr. Pinchot belongs credit for creating the idea of Federal control. Mr. Pinchot in the early days was a pupil at the knees of the Prussian, and in time came to hold more imperial ideas than his tutor.

In 1884 Mr. Fernow became corresponding secretary of the association. He has held office in the organization practically ever since, for many years past being a vice president.

Mr. Fernow in 1896 became Chief of the Division of Forestry in the Department of Agriculture and served as such through the formative period until 1898 when he retired to become director and dean of the New York College of Forestry. He remained there five years, going thence to the University of Toronto as dean of forestry.

The Cincinnati meeting, where the association was organized, was the outgrowth of a celebration held there incident to a public planting of trees for the beautification of the city. A leading figure in the meeting was Dr. G. B. Loring, of Massachusetts, commissioner of agriculture in the Department of the Interior. This was before the establishment of the Department of Agriculture as a separate department of the Government. The work of Dr. Loring as commissioner had much to do with enlarging the division to Cabinet proportions. He was elected president of the forestry congress (association later) and was reelected in 1883 at the annual meeting held at St. Paul, and was again reelected at the annual meeting at Sartoga in 1884, but that finished him. His ideas, which were for the promotion of individual forestry, were not in accord with the imperial theories of the Fernow group.

In addressing the first meeting at Cincinnati Dr. Loring expressed impatience at the reiteration of examples of success from Government control of forestry in European countries. He said:

"The nature of property in timberlands as adjusted for the State and the individual in all those countries where the forests have attracted the special attention of the Government, particularly in the Old World, has so much exclusiveness and reservation for the gratification of personal desires that we can derive but little benefit from its study. The rights and powers and duties of State and Federal legislation as regards our forests require the most careful and ingenious consideration."

Again, in his annual address at the third meeting at Saratoga in September, 1884, he pointed out emphatically that the proper work of the association was in securing State rather than national legislation, advice which was not taken, save in few States. Then he passed out.

Dr. Loring, like Gen. Chittenden, Prof. Willis Moore, and other scientists of to-day, stubbornly resisted the Fernow doctrine that deforestation of an area resulted in a change of climate and promoted floods over such area. In a discussion of the subject at a meeting of the Massachusetts board of agriculture at Haverhill in 1884 there was quite a row. Dr. Loring there said that he did not believe that the climate would be one degree different from what it was "if there was a forest from here to Minnesota." Of course, this was heresy, and an anonymous correspondent wrote to the New York Tribune about it, protesting that Dr. Loring, holding these ideas, was no right manner of man to be president of the forestry congress.

There remained, however, in the body some men who believed that the States could best handle the problem, and that in justice and equity they should do so in the interests of preventing waste. At the Denver meeting of the congress, in September, 1886, this, among other resolutions, was adopted:

"That the public lands at the sources of the streams, necessary for the preservation of the water supply, should be granted by the General Government to the States to be held and kept by such States in perpetuity for the public use, with a view to maintain and preserve a full supply of water in the rivers and streams."

There was a flash of State development ideas at the 1887 meeting of the congress, held at Springfield, Ill., when a letter was read from Joaquin Miller, the Poet of the Sierras, in which this passage occurred:

"Let the few remaining millions of forest lands be ceded to the States, and then on down to the counties and even smaller divisions such as school districts. Then let the foresters—men

of plain, hard, common sense—follow the Indian's simple method of preserving his property. * * * Whoever heard of either flood or fire in the Indian's home until the white man came to make it his monopoly?"

But no action was taken on the suggestion.

At the 1888 meeting at Atlanta, Fernow, then entrenched at the head of the Forest Bureau and striving for more power, put down the last effort for work among the individual States and assumed leadership under the banner of federalization. At the same time a movement was started within the organization, backed by the theorists but opposed by the lumbermen, to have the tariff taken off of lumber in the interests of conservation. This is one point on which all the elements in the association never entirely agreed. J. D. W. French, of Massachusetts, at the Atlanta meeting, offered a resolution praying Congress to put lumber on the free list, but after a hot discussion it went over until the next year.

The session of 1889 was held at Philadelphia, and was presided over by Vice President H. G. Joly, later known as Sir H. G. Joly de Lotbiniere, of Quebec. Mr. Fernow, who now appears as Dr. Fernow, made an earnest plea for free trade in lumber and the admission without duty of the Canadian product, saying that the tariff "tends to the destruction of our forests." Mr. French offered his resolution again, but a Pennsylvania delegate named McPherson raised such a fuss about it that it was tabled. Mr. McPherson objected to a convention presided over by a Canadian and containing many Canadian delegates making suggestions to Congress regarding the United States tariff laws.

To leap ahead a bit, the Fernow group, later the Pinchot group, urged free trade in lumber for a number of years, but finally, as the association grew more and more powerful and more and more commercialized, changed to a policy of protection. In 1909, when the House Ways and Means Committee was making what later became known as the Payne-Aldrich tariff bill, Mr. Pinchot testified before that committee, and later repeated the statement in a letter to Chairman PAYNE, that the duty should be retained on lumber, but threw a sop to the publishers by urging that the duty be taken off wood pulp and reduced on print paper made from wood pulp.

To digress for a moment, Mr. Pinchot was aided in his fight for protection on lumber, in 1909, before the Ways and Means Committee by Mr. Edward Hines, of Chicago, president of the National Lumber Manufacturers' Association. Mr. Hines then was and had been for several years active in the work of the American Forestry Association and also in the work of the National Conservation Association. But Mr. Hines got himself mixed in the matter of the election of Senator Lorimer, of Illinois, and subsequently obtained some unpleasant notoriety. Since then he has not appeared in either the forestry or the conservation organizations.

However, since the National Lumber Manufacturers' Association has such a community of interest with the National Forestry Association the former still is represented in the latter. Everett G. Griggs, of Tacoma, president of the National Lumber Manufacturers' Association in succession to Mr. Hines, is now vice president of the Forestry Association, and Mr. J. E. Rhodes, also of the lumbermen's organization, is a director.

"The National Lumber Manufacturers' Association," to quote a speech made by Mr. Rhodes before the directors of the American Forestry Association, at Asheville, N. C., March 25, 1913, "is a federation of practically all of the associations of lumber manufacturers in the United States, and represents a combined membership of about 1,500 of the largest sawmills of the country, having an annual output of over 14,000,000,000 feet of lumber."

And now to return to the chronology of the American Forestry Association.

At the annual meeting of the association at Philadelphia in 1889 Prof. Fernow eloquently urged that the United States get into practical forestry at once. He frankly declared for the Government entering the lumbering business. He pleaded that the Federal Government was not properly backing up the States in their efforts to protect the forests, and that the States were getting discouraged. He spoke of this as a lack of cooperation between the States and the Nation. Oddly enough the argument to-day is that the States do not cooperate with the Nation.

Carl Schurz, who addressed the meeting at length, urged a qualified national control of forests. He said: "It seems to me that the policy of the Government should be wherever the forests cover the headwaters of great rivers the Government should keep possession." But that was as far as he would go.

There was a flareback of State control sentiment at the 1891 meeting at Washington, but it was choked off speedily. The suggestion was advanced that Federal control was abortive and that the forest lands remaining in the public domain should be ceded to the States for administration. Edward A. Bowers, corresponding secretary of the association and Assistant Commissioner of the General Land Office, expressed the views of the majority in saying that such a "policy would be ruinous, because a new and raw State, where land is not esteemed properly, would not take the necessary care of the reservations."

The association declared unequivocally for national forest reserves, and that year the first of these were secured, although no definite forest policy was adopted by the Government.

It was at the Philadelphia meeting of the association, in 1892, that "Prof. Gifford Pinchot, of New York," appeared for the first time of record in the affairs of the organization. He read a paper on "The Development of a Protective Forest Policy in Europe."

The next few years were ones of rapid development for the organization. The Pennsylvania group of forestry advocates, a number of whom were allied with the coal and iron trade, grew in power in their own State and also in the affairs of the national association. In Pennsylvania the agitation they kept up for "scientific forestry" made rapid advances, and the State was induced to take it up. As a beginning the coal and iron companies sold to the State for "forestry" purposes some 600,000 acres of waste land, which they had gutted above and below ground, on which the State was to begin its forestry work. This area, by increased purchases, has now risen to about 800,000 acres, at a total cost to the State of something more than $3,000,000.

The American Forestry Association was incorporated in the District of Columbia on January 25, 1897, for 20 years. As set forth in the incorporation papers, "The objects of the organization are the discussion of subjects relating to tree planting, the conservation, management, and renewal of forests, and the climatic and other influences that affect their welfare; the collection of forest statistics and the advancement of educational, legislative, or other measures tending to the promotion of these results."

The incorporators were Edward A. Bowers, Gardiner G. Hubbard, Joseph C. Hornblower, B. H. Fernow, Nathaniel Wilson, George P Whittlesey, and Samuel Maddox, all of Washington.

At the fifteenth annual session, held in Washington on February 5, 1897, the Federal reservation idea, so long advocated by Fernow, Bowers, and others, was in full flower, and there was not a breath of State-control opposition. Pennsylvania was furnishing most of the backing for the idea. At that meeting the executive committee reported that, pursuant to instructions, it had induced the Secretary of Agriculture to ask the advice of the National Academy of Science regarding the adoption of a policy for the treatment of the forests on the public domain. The national academy then, as now, revolves chiefly about the University of Pennsylvania.

The academy committee, appointed at the request of the Secretary of Agriculture, reported learnedly, advocating the national forest system much as it is now in force, and in favor of giving increased power and authority to the Forestry Bureau.

At the sixteenth annual meeting of the association, held at Washington on December 8, 1897, the executive committee reported that on the report of the National Academy's committee, of which Gifford Pinchot was secretary, the desired legislation for a national forest service had been secured. In view of what has subsequently transpired in the way of the acquirement by land-grant railroads and other special interests of forest lands, and in view of the facts contained in this article, the following from the report of the executive committee as to how the legislation was obtained is of peculiar interest:

"And while it was brought about by motives and interests extraneous to those which had hitherto any concern with the forestry movement, nevertheless such legislation was possible only as a result of the preparatory work of education which the association has carried on within and without congressional halls."

It is well to bear in mind that the legislation referred to gave to President Cleveland authority to do, as he did on February 22, 1897, 10 months before the above report was presented, namely, create forest reserves to the extent of 21,000,000 acres.

But possibly that is not the legislation the committee had in mind. It was about that time that Congress enacted what is known as the lieu-land legislation. This gave to the land-grant railroads the right to trade the mountain tops and barrens, which might be included in forest reserves, for timberland elsewhere. This more fully explains the "motives and interests" hinted at in the committee report above referred to.

By this time the association had a membership of 608, of which only 70 were life members.

But in the succeeding 10 years the association gained in membership more than ten times that number. The same "motives and interests" apparently had awakened to what a good thing for them was the national forestry and conservation movement.

Whatever the cause, the securing of the legislation desired, the beginning of the Federal administration policy, the certainty that forest reservations were to grow rather than to be curtailed, brought to the association a large number of those representatives of great wealth and landed proprietorship that now makes up its membership.

It was contemporaneous with this movement that the "western land thief" began to figure in the journals of the day as the modern villain. No stress was laid on the fact that the eastern-owned land-grant railroads and unwise Federal administration of Federal land laws had created the frauds and had alienated great areas of the public domain. It was taught that the westerner was the only thief.

All this talk led Elwood Mead, the famous irrigationist, a member of the association, to remark, in the February, 1898, number of the association magazine:

"Their cooperation [the westerners] ought to be invoked instead of their being treated as they have been, with distrust and abuse."

However, he brought about no material change in the association's attitude toward the "raw States" and their inhabitants.

The association magazine and the output of the association press bureau began to teem at this time with matter emphasizing the revenue idea in the treatment of national forests. A favorite example held up in these articles was Bavaria, a German kingdom, with a total area somewhat smaller than that of South Carolina. It was shown that Bavaria, with national forests of 2,091,930 acres, received more than $4,000,000 a year revenue therefrom, to the reduction of taxes and the benefit of the whole people.

Strangely enough, this was used as an argument for national rather than State control of forests in the United States. Though Bavaria is merely a State of the German Empire, a unit in the Confederation of German States, all of that $4,000,000 revenue goes to the State and not to the federal or imperial treasury, the Bavarian rather than the Empire's coffers.

It is interesting to note that while national administration of national forests in the United States has been a reality since 1897, and that the Forester's report for 1912 showed an area of 165,027,163 acres under his charge, the total revenue therefrom in that year was only $2,157,356.57, while the cost of administration was $5,217,847.51.

In other words, the policy advocated 15 years ago as a revenue producer has resulted, by adoption, in a net deficit of more than $3,000,000 a year.

The year 1905 marked a high tide in the affairs of the association. That was the year of the conservation meeting of governors in Washington. The Forestry Association held its annual meeting in Washington also, on January 2 to 6. Here are some of those who were on the committee of arrangements: A. J. Cassett, president of the Pennsylvania Railway; Howard Elliott, president of the Northern Pacific Railway; John Hays Hammond; T. J. Grier, superintendent of the Homestake Mining Co., of Lead, S. Dak.; and Frederick Weyerhaeuser.

National control was never more strongly advocated and commended; the corruption, ineffectiveness, and general uselessness of State governments never more strongly condemned. George H. Maxwell, of Chicago, the irrigationist, was heartily applauded when he said in a speech:

"There was one thing the President said yesterday that I as a western man can not fully indorse. He said, in substance, that if the forests of the West are to be saved, the people of the West must save them. I say to you that if the forests of Oregon and Idaho and Washington and Colorado are not to be saved unless the people of those States save them, they never will be saved. If they are to be saved at all, it will be by Theodore Roosevelt and the people of the East."

More militant than ever became the association after this meeting. For 1907, Dr. Thomas Elmer Will was installed as secretary and also as editor of the association magazine. At the same time Mr. Pinchot had him on the pay roll in the Forest Service as "agricultural collaborator." In his official biography Dr. Will says that his work in the Forest Service was to edit and lecture, but "agricultural collaborator" is a sufficiently obscure title to cover most anything in a pay roll.

Dr. Will is an aggressive individual and his stay in the office of secretary and editor of the association produced internal discord. He resigned in October, 1909, and since then he has been selling Florida lands and lecturing on Washington street corners in advocacy of home rule for the District of Columbia.

The association magazine was known originally as The Forester, and its publication was begun at Hays Landing, N. J., in 1895 as the organ of the New Jersey Forest Association. With the number for January, 1898, it passed to the control of the American Forestry Association, and in 1907 to the ownership of that body. For the first seven years of its life, beginning in 1895, it was known by its original title, but volumes 8 to 14 bore the name "Forestry and Irrigation." Dr. Will changed this and called the magazine "Conservation." After he departed the name was changed to "American Forestry," with this explanation:

"The change of name to Conservation, made without due consideration in 1908, never met with the approval of the majority of the association, and the directors, with the approval of the members of the advisory board and other officers, determined that, beginning with the present volume, it should be published under the name American Forestry."

Edwin A. Start, formerly a Tufts College professor of history, succeeded Dr. Will as secretary of the association and editor of the magazine. Two years ago he drifted away to the West to a professorship in the University of Washington, and was succeeded by P. S. Risdale, who was brought, properly accredited by the interests behind the association, from Scranton, Pa.

The two chief agitations now being kept up by the Forestry Association are making more secure the federalization of lands in the West and the exemption of privately owned forest lands from taxation. Work on the tax-exemption plan began in 1905. At the annual session of the association in that year resolutions were adopted commending to all States the enactment and enforcement of laws "for reducing the burdens of taxation on lands held for forest reproduction in order that persons and corporations may be induced to put in practice the principles of forest conservation."

Since then impetus has been given to this movement by all the forces commanded by the association. Timberland owners are heartily in sympathy with it.

About the time, or just prior to it, that this agitation started, another agitation started in the State of Washington and in other western timbered States. It was an agitation to compel the timberland owners to pay something like their just proportion of State and county taxes. It was notorious that they had escaped taxation by getting county assessors to put absurdly low valuations on their holdings. The political power of what was known as the "sawdust ring," otherwise the lumber and timber men, was great.

But the people had revolted from the domination of this ring. In Washington, for example, there was established in the various counties a system whereby expert timber cruisers were employed to value timberlands. This system compelled timber companies for the first time to pay taxes on a reasonable valuation. Forced to justice by the people of the States, the "sawdust ring" turned for sympathy and help to the American Forestry Association and secured it.

The association magazine and numerous unthinking uplift editors, knowing nothing of the subject, have vigorously espoused the cause of the landowners. Mr. Frederick Weyerhaeuser, then vice president of the association, at the 1905 meeting read a paper on the iniquity of taxing standing timber. Since then Outlook and the Review of Reviews have printed articles taking the same view. The association magazine in its monthly issue never fails to have something to say in favor of the Weyerhaeuser idea.

Mr. Pinchot believes with Mr. Weyerhaeuser. In his letter to the Ways and Means Committee of the House in March, 1909, Mr. Pinchot said:

"The States * * * have failed to provide adequate fire protection. They have often taxed standing timber so heavily that the owner was forced to cut it off as quickly as possible and then let the land go back to the State, without provision for a future crop."

J. E. Rhodes, of the National Lumber Manufacturers' Association, who is a director of the Forestry Association, in addressing the directors of that body at Asheville, N. C., on May 25, 1913, dwelt on the subject. "The timbermen generally," he said, "are looking to agencies like the American Forestry Association to work out these problems—the problems of taxation—for the benefit of the future." He might very well have added, "but particularly for the benefit of the timbermen themselves."

A full report of Mr. Rhodes's remarks appears in American Forestry for May, 1913.

"The lumbermen feel," said Mr. Rhodes, "that the foresters alone can show the public that nothing can be done toward preserving the Nation's resources so long as forests continue to be taxed on the basis of an annual crop."

He gave some more light on the attitude of the lumber and timber interests toward the federalization idea when he said:

"They (the lumbermen) are almost unanimously opposed to the Federal Government transferring any of the national forests to the States in which they are located."

And still Mr. Pinchot would have the public believe that the timber and lumber interests are those that are opposing his federalization idea. Opposition to that idea comes from no aggregation of wealth.

It is not too much to say that the whole agitation for Federal control of forest lands has been built on false statistics. The country for years has been led to believe that "the end of the timber is in sight," and presently there will be no timber standing in the country.

The only available statistics are those presented by prejudiced sources—the Forest Service of the United States. But an analysis of the showing made by that service shows some remarkable things. It shows, for example, that we have one-third more standing timber to-day in the United States than the same service said we had eight years ago, and more than three times as much standing timber as the statistics showed we had when the agitation started in 1882.

"The Timber Supply of the United States" is a Forest Service bulletin, written by R. S. Kellogg, forest inspector, and issued April 24, 1907, as Forest Service Circular No. 97. On page 8 thereof Mr. Kellogg presents a table showing the Government and other estimates of standing timber in the United States, beginning with the census returns of 1882, on which, as said, the original forest reservation agitation was started. Shorn of extraneous matter Mr. Kellogg's presentation shows the figures for the years named were as follows:

| | Board feet. |
|---|---|
| 1880 | 856, 290, 100, 000 |
| 1898 | 1, 400, 000, 000, 000 |
| 1900 (census) | 1, 390, 000, 000, 000 |
| 1902 | 2, 000, 000, 000, 000 |
| 1905 | 1, 970, 000, 000, 000 |

Herbert Knox Smith, Commissioner of Corporations, in his investigations into the alleged Lumber and Timber Trusts, had occasion to go exhaustively into this subject of standing timber in the United States, and in that research he had the expert assistance of the Forest Service. His report, printed first in February, 1911, raised all previous estimates as to the amount to 2,800,000,000,000 board feet, an increase of more than 30 per cent.

His results have been accepted by the Forest Service. Forester Graves, in his report for 1912, says that the Government owns in its national forests about one-fifth of the total timber stand of the country, and he gives that one-fifth as 600,000,000,000 feet. This 600,000,000,000 feet is one-fifth of 3,000,000,000,000 feet, as against the less than 2,000,000,000,000 feet estimated by the Forest Service no longer ago than 1905.

So in reality we have one-third more standing timber than when Mr. Pinchot and his supporters were shouting to high heaven that the end of the timber was in sight.

The Forest Service report for 1912 shows that the Government is permitting to be cut on the national forests only 7 per cent of the estimated annual crop, leaving 93 per cent to go to waste and rot. Further, it maintains high prices for Government timber. If there was a gentlemen's agreement between the timbermen and the Government, nothing better could be devised to fatten the coffers of the big timberland owners.

It will be seen from the foregoing presentation that the so-called forest-conservation movement has operated solely to bull the lumber and timber market, and that some very excellent gentlemen have lent the power of their personality to this commercial undertaking in the mistaken belief that they were aiding the uplift. Unfortunately the uplift that they have aided is the price of forest products to the consumer.

Mr. LEVER. Mr. Chairman, in the first place, the national forests were not created for the sole benefit of the farmers of this country, and this is the first time I have ever heard that suggestion as the purpose of their creation. The national forests were created for the purpose of serving all the people of the country. They were created for the purpose of preventing the forests from being gobbled up by big private interests.

We have a great public territory, comprising 168,000,000 acres of land. That territory does not belong to the State of Washington nor to the State of South Carolina, but it belongs to all of the States of this Union. Congress has undertaken to preserve this great territory to all the people. It is the duty of Congress to protect it and to protect it in such a way that it does not become of less value as time goes on.

Now, the statement is made that a large part of this money is spent in salaries. That is true. A large part of all of the funds appropriated for the Department of Agriculture is expended for salaries. For what other purpose could you expend it? For what other purposes could you expect to expend these funds? What we are doing in the national forests is to employ men to protect the national forests and to make the national forests useful to the public. The salaries of these men must be paid.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from South Carolina yield to the gentleman from Washington?

Mr. LEVER. I will in one second. But I think it is only fair for me to say that any criticism which would make it appear that a large part of these salaries is being spent in overhead charges in Washington is an unjust criticism and not founded upon the facts.

Now, for salaries for 1913 there was expended a total outside of Washington of $2,039,000. I will give the figures in round numbers. In Washington there was expended for salaries only $193,000—20 to 1 out of Washington. Of the lump fund $1,092,000 was expended out of Washington and $140,000 in Washington. For transportation $130,000 was expended out of Washington; $16,000 in Washington. For meals and lodging $180,000 was expended out of Washington; $19,000 in Washington.

Mr. MADDEN. Mr. Chairman, will the gentleman yield right there?

The CHAIRMAN. Does the gentleman yield?

Mr. LEVER. In a moment. For wages $537,000 was expended out of Washington; $1,502 in Washington. For subsistence supplies $123,000 was expended out of Washington; $300 in Washington.

The statement or insinuation that would bear the idea that the bulk of these expenditures is being made in Washington for overhead charges is not supported by the cold-blooded testimony and the facts.

Now I yield to the gentleman from Illinois [Mr. MADDEN].

Mr. MADDEN. Will the gentleman say why it is necessary to spend any part of this fund for meals and lodging in Washington?

Mr. LEVER. Oh, I take it that when a man is brought here from his post, for instance in Idaho, following the custom, he is given subsistence when he is away from his post. The gentleman understands that custom. It is a law, I think.

Mr. BOOHER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from South Carolina yield to the gentleman from Missouri?

Mr. LEVER. I will yield to the gentleman from Missouri.

Mr. BOOHER. I move to strike out the last two words.

The CHAIRMAN. The gentleman from Missouri [Mr. BOOHER] moves to strike out the last two words.

Mr. BOOHER. I want to call the attention of the committee at this time to something further on the grazing question, which will be found on page 37 of the hearings. I read it in connection with what the gentleman from Washington [Mr. HUMPHREY] said concerning the sale of timber.

I can not see why the same rule should not apply to pasturage that applies to the timber business. The timber on the reserves sells higher than timber outside; yet the pasturage on the reserves sells for less than one-third than the pasturage outside sells for. I want to call the attention of the committee to the hearing, so that you may see just exactly the condition of things, and see if there is not some remedy for it some way. I call the attention of the committee to it because I think it is a situation that ought to be remedied. I believe that the Forestry Bureau can be made self-sustaining if it is only conducted in a businesslike way, and it could be made self-sustaining by selling this pasture for what it is worth.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. BOOHER. Yes.

Mr. HUMPHREY of Washington. Can the gentleman imagine any reason why the Forest Service in this country can not be as well handled as it is in British Columbia?

Mr. BOOHER. It ought to be as well handled. It ought to be self-sustaining. Why, the little forest reserves in British Columbia are so conducted that they put $3,000,000 into the treasury every year. We are so conducting ours as to take money out of the Treasury every year, and we have twenty times as much in forest reservations as they have in Canada. But I want to read this testimony, in connection with what I read before. This is found on page 37:

Mr. McLAUGHLIN. Another question: Of course, you know every year this bill is up there is an attack on the policy of the department in making a charge for grazing, and the charge is made that the cost is too high. I would like to have your opinion on that and some comparison between the Government's charge and private charges for the same kind of privilege.

Now, listen to this:

Mr. POTTER. We made a very careful study of that question because of the protests that have been made from some sources against the payment of a fee, and also to the claim that the fees were out of proportion and unreasonable in certain regards. We found, from a compilation of some 900 cases, in the use of lands outside of the national forests, that the average rental paid for the grazing of cattle was 11.7 cents per month, while the average charge for grazing cattle on the national forests is 3.9 cents per month.

Now let us go on and see whether the conditions are the same. If the conditions were not the same, then we might conclude the bureau was justified in the manner it was handling the grazing proposition.

Mr. HAWLEY. Does that comparison include the value of the area for grazing purposes?

Mr. POTTER. Yes, sir. It only included lands on the outside which were grazed under comparatively the same conditions as the lands within the forests.

Mr. HAWLEY. Of course, the comparison would be valuable if the same kind of forage grew on one acre as grew on another. If it did not, it would not be.

Mr. POTTER. These were comparisons with comparatively the same kind of land and used under practically the same conditions.

Mr. HAWLEY. And the same amount of forage per acre?

Mr. POTTER. Practically the same amount; yes, sir.

Mr. SLOAN. And in contiguous or neighboring territory?

Mr. POTTER. Yes, sir; in neighboring territory to the national forests. We found as to sheep that the average price per month which was being paid for outside land was 3.6 cents per head, as compared with a charge on the national forests of 1.4 cents per head per month. Compared with the use of practically the same kind of lands outside of the national forests and under practically the same conditions, the stockmen were voluntarily paying three times as much money for privately owned land as for the Government lands.

Now I do not believe this Forestry Bureau is doing its duty so far as the pasturage of these forest reserves is concerned.

Mr. LEVER. Let me say to my friend, if he will permit, that the sale of timber, under the law, is made upon competitive bidding.

Mr. BOOHER. Yes.

Mr. LEVER. The testimony before the committee, as I recall it, with reference to grazing, is that if we put grazing upon a competitive basis the effect would be absolutely to shut out the little fellow and to give a monopoly to a few of the big grazers.

Mr. BOOHER. That claim is without any merit whatever. The bureau could make regulations which would shut out the big man and let the little man in. That is what could be done, just as easily as to shut out the little man and let the big man in. I trust the Committee on Agriculture will look closely into this situation and provide a remedy.

NOT PROPERLY THE WORK OF COMMITTEE ON AGRICULTURE.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last three words. I want to say to the committee that I come from a district which I believe is the most heavily conserved of any district in the United States. There are three large forest reserves in my district, and I am of the opinion that the people there do not want to break down conservation at all. Personally, I want to thank this agricultural committee for the great work it has done on this bill; but I do feel that the handling of the Forest Service, and the great expenditures which are necessary, should not be a part of the work of the Committee on Agriculture. The expenditure of $5,500,000 for this great Forest Service, not including purchases in the East, and the care of the enormous forests which were a part of the public domain in the West, and which belong to all the people, constitutes a gigantic project; and the probabilities are that instead of the sum carried in this bill, these expenditures ought to be three times that sum. In my own county, one-half of which is in the forest reserve, there is in the half outside of the reserve so great a stand of green timber that if we keep on cutting it at the same rate that we now cut the timber, it will not all be cut in 100 years. There is nearly as much in the half of the county in the forest reserve to the north of us which has fine agricultural bottom lands in it, where people homesteaded lands before the Forest Service was thought of. Now, we have become accustomed, out my way, to hearing all the people of the United States, except in the 11 Western States, shout that these forest reserves belong to all the people. I grant that; but let me tell you that in my own county this very year we, the taxpayers of that county, have spent $100,000 for building roads in the forest reserve. Why should the taxpayers of my county have to pay that sum on the property of the Government? And what is more, to do a complete job of road building in the Olympic reserve, three times $100,000 should be spent and will in time have to be spent. We have about given up all hope of the Government doing it. Is this fair?

The point is exactly this: If these great forests belong to all the people, then all the people should not begrudge us enough to properly care for these great timbered areas.

The whole heart of our country is chopped out by these forest reservations. The trails are of little use as roads. I may say for your information that it costs $10,000 a mile to build a wagon road in that country, and we have had to go on doing that in the United States reserves at our own expense, and yet we are unable to get relief.

LAID UP WHERE NEITHER MOTH, RUST, NOR TAXES CAN CORRUPT.

Every alternate section in some of these forest reserves in that part of the country belonged at one time to the railroads. Since then these sections have been sold to great timber interests, and the people everywhere fondly dream that the remaining sections of the great checkerboard belong to all of us of all the States—belong to the people; but under the lieu-land system there came up from the Santa Fe Forest Reserve down in New Mexico, where there is not a tree in a hundred miles, the holders of lieu-land scrip, and that scrip has been plastered over the remaining sections that did not belong to the railroads. Mr. Chairman, I am a newspaper man and have been a bit of an observer; I discovered in my country that Democrats, Republicans, and Progressives are all exactly alike; if they get a chance to lay up a little scrip they do it gladly, for they seem to know they have laid up wealth where neither moth, rust, nor taxes can get at it. [Laughter.]

If you try to look into the forest reserves you are buffeted about from the Land Office to the Forestry Service, from the Interior Department to the Agricultural Department, and back again. I have always contended that the land lying in the great forests unsurveyed, and not likely to be surveyed for 50 years, that is being held by scrip should be forced to come under patent after a reasonable length of time and to pay taxes to the county and the State. Whole counties in western States have been stripped and almost broken down by the Forestry Service, which is so much larger than the people generally can possibly conceive.

[Mr. JOHNSON of Washington, by unanimous consent, was given leave to extend his remarks in the RECORD.]

Mr. LONERGAN. Mr. Chairman, the bill under consideration meets with my approval. I am, and always have been, in favor of legislation that provides for appropriations for the maintenance of the Department of Agriculture and for extension in educational work in that department.

Statistics show that our production of meat and wheat is not keeping pace with the growth of the population of the country. Unless the productiveness of our agricultural resources can be increased we shall be confronted with a serious situation.

The bill carries for the Department of Agriculture, exclusive of permanent appropriation, the sum of $18,947,232. This sum is not a dollar too large, in view of the remarkable work of the Department of Agriculture. The activities of the department are carried on in every direction and come into the most intimate contact with all the people of the country, reaching them through the 15 main groups into which the department is divided—Office of Secretary, Weather Bureau, Bureau of Animal Industry, Bureau of Plant Industry, Forest Service, Bureau of Chemistry, Bureau of Entomology, Bureau of Biological Survey, Division of Accounts and Disbursements, Bureau of Soils, Division of Publications, Bureau of Statistics, Library, Office of Experiment Stations, and Office of Public Roads.

The Connecticut district, which I have the honor to represent, is especially interested in all matters relating to agriculture. The census figures show that Hartford County, which comprises the first district, contains 5,201 farms, averaging 63.1 acres, and of this land 33.2 acres on an average is improved. The value of our total farm property is $35,416,482, and of this 41.4 per cent represents land; in fact, 70.3 per cent of the entire area of Hartford County is in farms and 52.6 per cent of Hartford County is improved farm land.

HARTFORD COUNTY'S FARMS.

Of special interest is the fact that 4,567 of Hartford County's farms, or 87.8 per cent, are operated by their owners. This shows that in the last 10 years there has been an increase in farms owned by the people who work them of over 200. It is pleasing, also, to find from the census that 2,265 of those farms operated by the owners were entirely free in 1909 from all mortgage debt. The value of farm buildings and domestic animals in 1909 was over $35,000,000.

In this fertile and well-managed agricultural district, in addition to tobacco, in 1909—the last figures available—we raised 685,000 bushels of corn. Our 115,000 apple trees yielded over

274,000 bushels. Our 111,000 peach and nectarine trees gave over 25,000 bushels, and our 23,000 vines yielded over 220,000 pounds of grapes.

24,000,000 POUNDS OF TOBACCO.

But, after all, Hartford's major agricultural crop is tobacco, and the Department of Agriculture has conducted many experiments with the view of helping the agriculturist of the Connecticut Valley in his work of raising tobacco. Our function is to supply the cigar type of tobacco, and we have made great advance in growing Sumatra tobacco under shade. Certainly to-day Hartford's 24,000,000 pounds of tobacco makes it difficult to believe that the following statement from the early history of the tobacco industry issued by the Department of Agriculture could have been true:

During the first quarter of the nineteenth century the manufacture of cigars had its infant beginning as a household industry in some of the Connecticut Valley country towns. The industry grew very slowly at first, and correspondingly slow progress was made in the growing of the cigar leaf, which likewise had its beginning in the Connecticut Valley in the section between Hartford, Conn., and Springfield, Mass.

The agricultural lands of Hartford County are recognized by experts as including acreage as fertile and valuable in certain sections of the county as can be found east of the Mississippi River.

The tobacco land of Hartford County is of such a high degree of fertility that it stands in a class by itself. Credit must be given to the ability, industry, and enterprise of the men who work the farms. A fine opportunity is afforded Connecticut boys to learn farming in all its branches and on practical and scientific lines through the Connecticut Agricultural College, at Storrs, Conn. At that institution the boys are admirably equipped for agricultural life, and it is to be regretted that larger numbers of them do not take advantage of the opportunity offered.

If a sufficient number of people will take the right interest in farming and will demand a maximum of productiveness, the markets of this country can be supplied by its own people. Fertilization and cultivation are important factors in securing fullest measure of production. There are 711,980,000 acres of undeveloped public land in the United States. Any proper movement for the extension of agriculture should be encouraged.

CIRCULATING LITERATURE.

That there is widespread interest in agricultural life is evidenced by the fact that there is a great demand for the publications supplied by the Department of Agriculture. Thousands of these requests were made the last year in the first district, and all applications for publications were filled, so far as possible, by the Division of Publications of the department.

It was not many years ago when the department relied wholly on the issuance of printed bulletins to get this information into the hands of the farmer. It frequently took a great deal of time to prepare these bulletins and a number of weeks to get them printed. Their circulation then was more or less accidental and it was not at all certain that a bulletin dealing with some condition in Connecticut would reach all the farmers in that State affected by the conditions or that it would get to them in time for them to apply the measures recommended to the saving of growing crops. Frequently the department's discoveries, to be of value to the farmer during the season, must be put within his reach in from two to seven days.

The department, therefore, has established a weekly news letter, which goes to the 20 leading farmers of every county, in which warnings as to crop dangers, advice as to methods, and the results of discoveries of seasonal application can be communicated each week in official form to the agricultural population. This weekly news letter the crop correspondents who receive it are requested to communicate to the local newspapers, and in this way put the information quickly within the reach of all farmers.

In addition, the department frequently sends out, in the form of typewritten notices to the papers, information which they should receive before the weekly news letter can be issued. This matter is printed extensively in local papers and agricultural papers, so that instead of this valuable data reaching only those who receive the limited editions of farmers' bulletins, it now goes to many millions of American farmers through this medium.

Of special interest to the farmer also is the newly created Office of Markets. This office will conduct extensive investigations to determine the best methods for the farmer to market his produce, and, if possible, to overcome any waste between the farm and actual consumer. The work of the Office of Markets will be carried on for the present under the following headings:

1. Promulgation of market grades and standards.
2. Cooperative marketing and distribution.
3. Surveys of supply and demand and demonstrations in the organizations of consumers.
4. Study of methods and costs of distribution in the matter of terminal markets, etc.
5. Study of transportation problems, shipping and distributing organizations, etc.
6. The investigation of the feasibility of a market news service for perishable products.

A line of educational work which the Department of Agriculture has commenced and which should receive the encouragement of the residents of rural towns is the forming of boys' corn clubs. These clubs have been formed in many States and have been conducted with marked success. On the recent visit to Washington of the large number of champions from the various States—the boys who were the prize winners in the corn-club contests—there were boys whose yield ranged from 55 bushels to the acre in North Dakota to 235 bushels per acre in Alabama. Some of the most effective and conspicuous results are found in the boys' demonstration work in the South, where 480 members of the boys' corn clubs in the various Southern States produced yields of over 100 bushels of corn to the acre. The boys who are organized in the corn-club movement, and who visited Washington recently, came from North, East, South, and West. The present enrollment in this work amounts to about 60,000 boys and girls, who are systematically organized into boys' corn clubs, girls' canning clubs, potato clubs, sugar-beet clubs, vegetable garden clubs, and so forth. The average yield per acre of all the corn-club members reporting this year was 74.5 bushels, with a net profit of $25.55 per acre; 480 made 100 bushels or more, and 1,078 made over 60 bushels per acre. The boys have proved that in countless instances the yield of corn per acre can be doubled. The Department of Agriculture supplies detailed information to the boys, giving full directions on all phases of corn raising. The corn-club movement is an excellent way of aiding the boys to get more out of the soil than they have been getting in the past. Such clubs could be formed in instances where the superintendents of schools and school boards take the initiative, forming the organizations of boys and interesting them in work which will be good for body and mind, and at the same time contributing to the sum total of the agricultural advancement.

I regard it very important that attention be directed to the necessity of doing all possible to increase the corn yield. The report of the Secretary of Agriculture shows that during 1913 the corn crop, the most valuable farm product of this country, according to the estimates fell below 2,500,000,000 bushels, which is smaller than any crop since 1903, and about 660,000,000 bushels smaller than the record crop of 1912. The estimated yield is 23 bushels, compared with a yield of 29 bushels in 1912, and an average yield of about 27 bushels. In only 9 of the past 47 years has the yield per acre been less than 23 bushels.

Another activity in which the department is showing creditable interest is the matter of experimenting in irrigation for tobacco. The millions of dollars derived from tobacco raising render the crop far too valuable to be left dependent on the elements. The department is taking steps to solve this problem, which is one that is perplexing many growers.

One firm in the first district has contracted for an irrigating system at a cost of upward of $20,000. With Government assistance it is to be hoped that the practicability of irrigation will be demonstrated and will be put in general use in the near future.

Among the items of this bill is one appropriating $25,000 for the investigation and improvements of tobacco production and handling. I am pleased to note this appropriation, for under it there will be investigated the questions of growing, curing, fermenting, and handling the tobacco; also the question of improving the yield and quality through breeding and selection, crop rotation, increasing the quantity of humus in the soil, proper and profitable use of fertilizers.

I note with satisfaction the change that has been recommended with reference to seed distribution. The Secretary of Agriculture says on the subject in his annual report that the beneficial results from distribution of such field seeds as alfalfa, feterita, kafir, milo, millet, Sudan grass, and other forage crops and certain cereals suggest the advisability of radically changing the seed distribution so as to accomplish the purpose for which it was originally established, namely, the introduction into practical farming of new and valuable crops needed in the improvement and development of agriculture. In the past there have been instances where valueless seeds were sold to the Government and these were distributed promiscuously, too often to be discarded in the homes in which they were sent, or else planted and because of their lack of quality failed to bear. I am pleased to know that this is to be guarded against in the

future, and that the $166,500 appropriated in this bill, exclusive of the appropriation of $257,000, will largely be expended for the purchase, propagation, testing, and distribution of such rare and new seeds as may be found valuable for agricultural purposes. A great saving can be made by confining the distribution upon congressional order or application to the department of flower, vegetable, and other seeds to those who have a desire to use them, avoiding the errors of the promiscuous distribution method, with the attendant wastefulness of the past.

The State of Connecticut, which I have in part the honor to represent, appropriates large sums of money annually for the construction and maintenance of public highways, and farmers, in common with other residents of the Nutmeg State, are getting the benefit of the State's improved highway system. Good roads are indispensable in agricultural districts and facilitate the transportation of products to market.

The loss is too great between the grower and the consumer. Facilities for handling the products of the farm can be improved. Market places should be provided for the farmer for the purpose of facilitating the disposal of his products and enabling the consumer to receive them at the least possible outlay in cost and time. I am in entire accord with the Secretary of Agriculture in his statement:

We have been suddenly brought face to face with the fact that in many directions further production waits on better distribution and that the field of distribution presents problems which raise in very grave ways the simple issue of justice. That under existing conditions in many instances the farmer does not get what he should for his product, that the consumer is required to pay an unfair price, and that unnecessary burdens are imposed under the existing systems of distribution, there can be no question. Just what part of the burden is due to lack of systematic planning or inefficiency and economic waste or to unfair manipulation one can not say. As difficult as are the problems of production, they are relatively simple as compared with those of distribution, and there is danger not so much that nothing will be done but that pressure will be brought to bear on the department to take action everywhere before it is prepared to act intelligently anywhere.

It is fitting that it is during the present administration that the Department of Agriculture reaches its highest degree of efficiency, for this administration is especially distinguished as regards achievement in every department. One of the important facts established during the months past has been the determined movement to legislate for the welfare of those who constitute the bone and sinew of the Nation. It would be difficult to single out the greatest accomplishment of this remarkable legislative year; much would depend upon the point of view: to some it would be the downward revision of the tariff, to others the income-tax law, and to others currency reform. And when judged by its record, fair-minded critics must concede that the present administration has established in one short year a record for constructive legislation beneficial to the country which has few if any parallels in American history.

One of the most important subjects with which we have to deal is that of food supply, and the close relation existing between agricultural development and food production is apparent to all. Let it be clearly understood that the good resulting from judicious agricultural legislation is not by any means confined to the farmer; it directly affects the household of the consumer, no matter what his occupation may be.

Meat and bread are the staffs of life; these and countless other necessities come from where? The farm. It would be difficult to conceive legislation which more closely affects every man, woman, and child than those laws which have to do with the development and extension of our agricultural resources. [Applause.]

The Clerk read as follows:

Angeles National Forest, Cal., $16,774.

Mr. HUMPHREY of Washington. Mr. Chairman, I want to make a remark or two about the expenditure of money by the Forestry Service. The chairman of the committee a while ago was talking about salaries. I call attention to the fact that out of the total expenditure of $3,164,463 for the service, $1,233,218 was for salaries. And I call the committee's attention to another item. The most important duty of the Forestry Service, it seems to me and I believe that is the general opinion, is to classify these national forest lands, and while they can expend $1,233,000 a year for salaries, they expended only $32,505.55 for the classification and surveys of lands.

Mr. LEVER. Will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. LEVER. The gentleman realizes that for the first time in the history of the service Congress allowed last year an appropriation for doing the very work to which the gentleman calls attention, and this year we give an increase of $100,000.

Mr. HUMPHREY of Washington. I know, and I compliment the committee on that fact, but it only emphasizes the policy pursued by the Forestry Service. It is a fact that no one will dispute that practically one-third of all the land in the forest reserves has no merchantable timber on it and never has had. No man can find out how much nontimberland there is in the forest reservations. The Chief Forester will not tell you how much, the Secretary of Agriculture will not tell you. They can tell you how many feet of timber there is in all the forests combined, or in any particular reserve, but you ask anyone connected with the Forestry Service how much of the land is nontimbered and you will be unable to get a reply. I have been trying for two years, both by cross-examination when talking with the Forester and sending letters, and he will not hazard a guess. There is a reason for concealing this information. It is a fact that a great many of the forest reserves do not have a single tree upon them.

Why do not they classify the lands? They have started to do this, but they will do only what they are forced to do.

Now a word or two in reply to the statement of the chairman of the committee that the Forestry Service is efficient and that it is competently conducted. I want to call his attention to the fact that for the last eight years the Forestry Service has so conducted our forests of 163,000,000 acres that they have sold 1 cent's worth of timber to the acre and that is all. They have so conducted the Forestry Service that it brings 6 per cent on a valuation of 16¼ cents per acre; yet our forest reserves include some of the most valuable timberland on the face of the earth. Do you tell me that is competency, that the service is efficient when they can not find a sale for only 1 cent's worth of timber for each acre under their control?

The Clerk read as follows:

Apache National Forest, Ariz., $8,610.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. I want to ask the gentleman how much merchantable timber there is on this Apache National Forest Reserve in Arizona?

Mr. LEVER. The only information that the chairman of the committee has is as follows:

The Apache National Forest is situated in Apache and Greenlee Counties of central eastern Arizona. It consists of a gross area of 1,276,400 acres, of which 1,256,376 acres are owned by the Government.

The southern portion of the forest lies in the Clifton district of the Arizona highlands, which is characterized by the lack of any well-defined mountain system. The northern portion includes some of the highest peaks of the White Mountains and lies for the most part at high altitudes.

About 66 per cent of the area is timbered. The total stand of timber is estimated at 2,172,000,000 board feet and 275,000,000 feet of cord wood. Over 65 per cent of the timber is western yellow pine.

This is a very heavily timbered forest, having one of the heaviest bodies of timber in Arizona. It comprises the headwaters of important tributaries of the South and Gila Rivers, the most important sources of water for irrigation in Arizona.

I can set out, if the gentleman would like to have it, the number of sales of timber.

Mr. HUMPHREY of Washington. I do not care anything about that.

Mr. LEVER. The grazing permits, the special uses, and the number of fires extinguished, and the number of trespasses, and so forth. The receipts from that forest amounted to $21,360.

Mr. HUMPHREY of Washington. That is not one of the reserves that was made out of the more than 1,200,000 acres of treeless land that were exchanged with the Santa Fe Railroad for timbered lands? For this worthless land the railroad secured timbered lands all over the country?

Mr. LEVER. I really could not say.

Mr. HUMPHREY of Washington. I want to ask the gentleman this question. Does he know of a single instance since we commenced the creation of our forest reserves where timbered land outside of forest reserves was exchanged for nontimbered land and the timbered land put into the forest reserves?

Mr. LEVER. I do not know that I quite understand the gentleman's question.

Mr. HUMPHREY of Washington. I will put it in this way: I have been able recently to trace over 2,000,000 acres of land that were put into forest reserves that do not contain any merchantable timber, much of it not a single stick, and in return for that land, that nontimbered land in the forest reserves, the railroads—the Northern Pacific and the Santa Fe—were permitted to select an equal number of acres of heavily timbered land; but I have never been able yet to find where the Forest Service has exchanged nontimbered land for timbered land and put this timbered land into the Forest Service.

Mr. LEVER. Does the gentleman have the date of that transfer?

Mr. HUMPHREY of Washington. Yes; I can give you the dates of all of them.

Mr. LEVER. I will be glad to have the dates.

Mr. HUMPHREY of Washington. I can give the gentleman the date of the one in Montana.

Mr. LEVER. When was that?

Mr. HUMPHREY of Washington. I can not give him the date without looking it up.

Mr. LEVER. Was it within the last two years?

Mr. HUMPHREY of Washington. No; it was not within the last two years, but within the last six or seven years.

Mr. LEVER. Was it under the present administration or a different administration?

Mr. HUMPHREY of Washington. The transfer of the Santa Fe was under Secretary Hitchcock, before the Forestry Service was transferred to the Agricultural Department.

Mr. LEVER. Of course, the gentleman would not expect me to know anything about that. That was before I was born. [Laughter.] When was the one in Montana transferred?

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. I think it was about 1907, but in any event I can fix the date in this way: The gentleman probably remembers a bill was brought into the House to prohibit the further exchange of lands in forest reserves by lieu-land scrip.

Mr. LEVER. I recall that.

Mr. HUMPHREY of Washington. It was just at the time that bill was pending. While that bill, as I recall, passed the House and was pending over in the Senate a forest reserve was created in Montana containing about 240,000 acres of land, or it was extended to that amount, practically all nontimbered land, and the land of very little value, and while that bill was being held in the Senate the Northern Pacific Railway, with the consent and active assistance of the Forest Service, was permitted to exchange those 240,000 acres of practically worthless land, acre for acre, for some of the best timbered land on the Pacific coast, a great deal of it in my State.

Mr. LEVER. Will the gentleman permit an interruption?

Mr. HUMPHREY of Washington. Yes.

Mr. LEVER. The gentleman, of course, will be fair enough to say that that happened at a period when the present Chief of the Forestry Service was not connected with the Government at all, and when the present Secretary of Agriculture was not the Secretary of Agriculture, and the gentleman will also be fair enough to say that he has permitted this iniquity upon the Government, as he describes it, to grow hoary with age without calling attention to it until this late date.

Mr. HUMPHREY of Washington. Oh, the gentleman is mistaken. I have called attention to it before.

Mr. LEVER. Not before this Congress.

Mr. HUMPHREY of Washington. Oh, yes.

Mr. HAUGEN. Mr. Chairman, I do not believe it is fair to put the responsibility on the Secretary. If I recall, the Congress authorized the exchange of land. If my recollection serves me right, two years ago it went on in the Senate.

Mr. LEVER. I think the gentleman from Iowa has a different case in mind. We did that in one case, I remember.

Mr. HUMPHREY of Washington. The gentleman is entirely mistaken. Congress never authorized the exchange of land in any of these cases. What Congress did was this: We passed a law and then the Secretary of the Interior held that it applied to railroads, a construction Congress never intended; and, over the protest of the people of Arizona and the West, after it was called to his attention, he permitted this exchange to be made. It must be remembered that the law in no way compelled the Secretary to make these exchanges. It gave him only the privilege where he thought it was to the best interest of the Government. The law left it entirely to his discretion. You might just as well say that a judge would be responsible because he appointed a guardian and that guardian went out and stole the funds of his ward as to say that Congress was responsible for these gigantic frauds. The responsibility rests solely with the executive officers that ratified the exchanges.

Mr. SHERWOOD. Who was responsible for this transfer?

Mr. HUMPHREY of Washington. The Secretary of the Interior was responsible for a part of it, and since that time the other officials whose duty it was to approve them. The Forest Service is mostly responsible, if not entirely, for this last transaction with the Northern Pacific.

Mr. SHERWOOD. How many acres of land were involved in that transaction?

Mr. HUMPHREY of Washington. Two hundred and forty thousand acres; but the point I am making is this, that while word has gone out to this country that the Forest Service is a thing sacred and holy, that you can look through the history of it from the beginning and while those gigantic frauds and steals have taken place by the railroads—and no man denies that they have taken place—the men connected with the Forest Service, while it was their duty to speak, stood silent; and yet the same men who stood silent and permitted the railroads to loot the public domain of millions of acres raised a protest if, perchance, a settler in my district or anywhere in the West attempted to get a homestead. If he went on a piece of land and claimed it for a homestead, they said he was trying to rob the Government of that much timber; but these same men could not see the Santa Fe Railroad grabbing 1,200,000 acres at one time. They could see no danger in the looting of the public domain when that bill was being held up in the Senate and 240,000 acres were given to the Northern Pacific Railway. They could see the small steal by the weak, but not the giant steals by the rich and powerful.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FOWLER. Mr. Chairman, I ask unanimous consent that the gentleman from Washington may have his time extended for five minutes.

Mr. HUMPHREY of Washington. I am perfectly willing if somebody wants to ask me a question, but I have finished my statement at the present time.

Mr. FOWLER. I did not think the gentleman had finished. He is on a very important question to me.

The CHAIRMAN. The gentleman from Washington states he does not desire more time.

Mr. HUMPHREY of Washington. Unless gentlemen have questions they desire to ask.

Mr. FOWLER. I would like to ask the gentleman a question.

Mr. HUMPHREY of Washington. I will yield if I have the time.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that the gentleman from Washington may proceed for one minute.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the gentleman from Washington may proceed for one minute. Is there objection? [After a pause.] The Chair hears none.

Mr. FOWLER. Does the gentleman know of any other forest reserves which were practically robbed in the way in which the gentleman stated the Northern Pacific robbed the United States of the valuable timber area?

Mr. HUMPHREY of Washington. It was not the Northern Pacific that did that, but those who were in authority who permitted it to be done. I understand what the gentleman means. Now, I referred to the exchange of lands by the Santa Fe. In that exchange there were 1,200,000 acres of land, which was valued by the railroads at from 5 to 18 cents per acre, as I recall, for taxable purposes.

Mr. FOWLER. What was the value of the lands transferred in lieu thereof to the Government?

Mr. HUMPHREY of Washington. They received in lieu for those lands which were taken in the forest reserve scrip which permitted them to go out and select, acre for acre, any of the public domain of the United States anywhere. They used that scrip in 22 different States of the Union, and they took up something over 50,000 acres in my own State that I have been able to trace, and some of the land they took out in our State under that scrip is worth $200 per acre for the timber alone.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. HUMPHREY of Washington. I just want to say this: I hope the chairman of the committee will not think I am criticizing the committee in making these statements, because I am not. On the other hand, I think the committee is doing good work. I want to congratulate the gentleman upon the splendid way in which he has handled this bill and the fairness and courtesy he has shown during its consideration. None of my remarks are intended to criticize any member of the present committee.

Mr. LEVER. I am very much obliged to my friend from Washington for the compliment, but I know that his remarks were not so intended. I ask that the Clerk may read.

The Clerk read as follows:

Bighorn National Forest, Wyo., $15,100.

Mr. MONDELL. Mr. Chairman, the gentleman from Washington [Mr. HUMPHREY] has referred to some interesting history. Among other things he referred to the passage of the bill which prohibited the creation of forest reserves in certain Western States except by act of Congress. Prior to the passage of that act forest reserves were created and extended by Executive order. Acts of the Executive in connection with the passage of that bill have been frequently criticized. It has been said that

after the bill had passed both Houses, or, at least, after both Houses had passed upon the matter affirmatively, but before the bill was signed, which took from the President the right to create or extend forest reserves, a number of forest reserves, I think some 19 or 20, were largely increased in area. The fact is that the statements that have ordinarily been made of the matter are not entirely correct.

It has been said that after the Congress had acted and before the bill was signed the areas of these reserves were increased by many millions of acres. What actually happened was this: That between the time when Congress had passed on the proposition and declared that thereafter no addition should be made to reserves except by act of Congress and before the Executive signed the bill some sheets were signed that contained words something like this: "The Bighorn Forest Reserve," for instance, "in the State of Wyoming"—using that as an illustration. I do not know that that was one of them—"shall from and after this date consist of the following areas, or shall be described by boundaries as follows."

Mr. SHERWOOD. What is the date of that transaction?

Mr. MONDELL. These headings or captions were signed prior to the signing by the Executive of the act of Congress.

Mr. SHERWOOD. What was the date? What year was it?

Mr. MONDELL. March, 1906, I think. These title pages or captions were signed before the bill taking from the Executive the power to enlarge reserves was signed. That occurred, I think, on the 4th of March; but in quite a number of cases the actual area to be included in the reserve was not set out and described until some time after.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. MONDELL. I ask unanimous consent for two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MONDELL. The delimitation of the reserve, the description of the actual area of lands included, was not made until along during the summer, the last, I believe, about the 1st of the following July.

Mr. MADDEN. So the papers were signed in blank, were they?

Mr. MONDELL. The title sheets—the captions—were signed before the bill actually became a law, but the areas were described on separate sheets, and in quite a number of cases, I am told, and believe, these descriptions were not made until some time after Congress had passed the law taking from the Executive the power to extend reserves. These new descriptions included increased areas.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. MONDELL. I think my time has expired.

The CHAIRMAN. The time of the gentleman from Wyoming has expired. The Clerk will read.

The Clerk read as follows:

Chiricahua National Forest, Ariz. and N. Mex., $3,750.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word, and ask the chairman a question. I would like to ask him if we can not by agreement pass over the next item until to-morrow morning? I mean the one in reference to the Chugach National Forest.

Mr. LEVER. In Alaska?

Mr. HUMPHREY of Washington. Yes.

Mr. LEVER. I have no objection, if you will make the request.

Mr. HUMPHREY of Washington. Mr. Chairman, I make the request, and I will say to the gentleman that it is in my judgment very important, and I do not want to interfere now with the reading. I feel there ought to be more people present than there are now, to consider this item. I ask unanimous consent that the next item, relating to the Chugach National Forest in Alaska, be passed for the present, to be taken up immediately on the next consideration of the bill.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] asks unanimous consent that the item referred to be passed over, to be taken up at the next consideration of the bill. Is there objection?

There was no objection.

Mr. DAVIS. Mr. Chairman, I move to strike out the last word.

I do not think I shall occupy more than two or three minutes of the five minutes that perhaps would be allowed to me. I have stood here and listened for the last few moments to a statement by the gentleman from Wyoming [Mr. MONDELL] on the subject of certain methods used in extending the area of forest reserves.

I gather from his remarks—and I might say insinuations—that those proceedings were had in an illegal and unlawful manner. Now, I desire to ask the gentleman from Wyoming if it is his intention, in making his last remark, to say that the extension of those forest reserves in the manner he has indicated was an illegal method of transacting the public business, either by the Executive or by any other officer connected with the Government at that time?

Mr. MONDELL. The gentleman from Minnesota has had quite as much experience in public affairs as I have. He understands the meaning of laws and limitations quite as well as I do, and he can form his own opinion and judgment from the statement of the facts as I have made it.

Mr. DAVIS. To proceed a little further, if the gentleman please, was there any law prohibiting the proceeding from being had in the manner that has been suggested by the gentleman? Does he know of any law, national or otherwise, to prohibit it as a matter of law?

Mr. MONDELL. I have not the law before me to which I referred, but the effect of that law was to prevent or to prohibit the creation or the extension of forest reserves except by act of Congress. The act recited, as I recall it, that hereafter no forest reserves shall be created or extended within certain States except by act of Congress.

Mr. DAVIS. One word more, and then I shall have finished. Will the gentleman put in the RECORD the statement that any forest reserve was extended, as a matter of fact, in contravention of law after the signing of that bill by the Executive?

Mr. MONDELL. The gentleman will leave in the RECORD just what he has said, and the gentleman from Minnesota heard what I said. I stated the facts. The gentleman may draw his own conclusion as to whether that was an entirely proper procedure or not.

Mr. DAVIS. Anything the gentleman has said concerning the legality of that is based, in my opinion, wholly upon circumstances that do not show that there was any law or custom prohibiting it.

Mr. MONDELL. I have said to the gentleman that the law I referred to was a law that provided that from and after its passage and approval no forest reserves should be extended except by act of Congress.

Mr. DAVIS. Was one extended? That is the question I wish to ask the gentleman. Was one extended after the signing of that law?

Mr. MONDELL. I have said to the gentleman that after the signing of that law certain descriptions were filled in.

Mr. DAVIS. Was that illegal?

Mr. MONDELL. Well, the gentleman is a lawyer; I am not.

Mr. DAVIS. I should judge not.

Mr. HUMPHREY of Washington. What does the gentleman say about it?

Mr. DAVIS. I do not know, and I do not think the gentleman knows; and I will say, further, that I do not think anybody connected with the service at that time or the Chief Executive would do anything prohibited by law.

The CHAIRMAN. The time of the gentleman from Minnesota has expired. The Clerk will read.

The Clerk read as follows:

Cochetopa National Forest, Colo., $7,000.

Mr. SELDOMRIDGE. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Colorado [Mr. SELDOMRIDGE] moves to strike out the last word.

Mr. SELDOMRIDGE. Mr. Chairman, I have just listened with great interest to the colloquy between the gentleman from Wyoming [Mr. MONDELL] and the gentleman from Minnesota [Mr. DAVIS]. Living, as I do, within a State that contains forest reserves to the amount of almost one-third of its area, I was very much interested in the statement made by the gentleman from Wyoming to the effect that some of those forest reserves were created in a rather peculiar manner.

It was my privilege to be connected with a legislative body in which a rule prohibited the introduction of bills after a time limit of 30 days, and it grew to be a custom in that body that members having measures to introduce would avail themselves of the privilege of introducing bills in what was known as a skeleton form. In other words, we introduced a bill with the enacting clause in it and leaving the matter to be covered blank, which might be filled in at a later time.

I inferred from the remarks made by the gentleman from Wyoming that some of these forest reserves might have been created in skeleton form, leaving the flesh and blood and substance of the skeleton to be filled in at a later day. I would like to ask those who have had experience in this matter of for-

est legislation if there is anything in connection with the administration of the law which would justify that assumption?

Mr. DAVIS. Mr. Chairman, will the gentleman permit a question?

Mr. SELDOMRIDGE. I was addressing myself to the gentleman from Washington [Mr. HUMPHREY]. I will be glad to hear from him.

Mr. HUMPHREY of Washington. I was going to suggest to the gentleman that if that was a proper procedure, of what force and value was the law we passed? If the Forest Service could have unlimited blanks ready to sign at any time that they pleased, what was to prevent them under that system from placing in the forest reserves all the rest of the United States?

Mr. SELDOMRIDGE. I want to say that, so far as I am concerned, while it might not have been a technical violation of the law, yet I consider it a willful violation of the law both in spirit and in form.

Mr. DAVIS. I am unfortunate in not knowing the State from which the gentleman comes.

Mr. SELDOMRIDGE. I come from Colorado.

Mr. DAVIS. I would like to ask the gentleman if that was the method of procedure in the legislature out in Colorado?

Mr. SELDOMRIDGE. It was only resorted to under extraordinary conditions or on extraordinary occasions.

Mr. DAVIS. It was permitted in Colorado? It took place in Colorado, did it?

Mr. SELDOMRIDGE. Well, it grew into a custom. It was probably unwise.

Mr. DAVIS. I am not asking whether it was wise or unwise, but whether it was permitted.

Mr. SELDOMRIDGE. It did not conduce to good government.

Mr. DAVIS. It took place in Colorado, did it?

Mr. SELDOMRIDGE. It did. I did not know that the custom had taken place in Washington. I am sorry to learn that some of the unwise customs of our State have even extended to the operations of the General Government.

Mr. DAVIS. I am glad it did not take place in Minnesota. I am glad to say that nothing of that kind occurred in Minnesota.

The CHAIRMAN. The time of the gentleman from Colorado has expired. The pro forma amendment will, without objection, be withdrawn. The Clerk will read.

The Clerk read as follows:

Dakota National Forest, N. Dak., $835.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] moves to strike out the last word.

Mr. HUMPHREY of Washington. Mr. Chairman, I do so for the purpose of asking a question for information; and in asking the question I want it to be understood that it is not an insinuation or a criticism. But I have had the curiosity to know why it is that in this forest reserve and in at least one other there is only one man employed. What does one man do in charge of a forest reserve?

Mr. LEVER. Which one?

Mr. HUMPHREY of Washington. That is on page 30, line 12.

Mr. LEVER. Dakota National Forest, N. Dak.?

Mr. HUMPHREY of Washington. Yes. Unless I have been mistaken in running through this list there is only one man in that forest. I would like to know what one man does in a forest reserve alone.

Mr. JOHNSON of Washington. He harasses the settlers. [Laughter.]

Mr. LEVER. We will see if we can give the gentleman the information he desires. The Dakota National Forest is situated in Billings County, in eastern North Dakota. Its gross area is 13,920 acres, of which 6,734 are owned by the Government. Deep, winding gulches and ravines in a "bad-land" country above, with stretches of rolling, grassy mesa country, with an occasional solitary butte, constitute the principal and prominent topographic features of the Dakota forest. The total stand of timber is 800,000 board feet, consisting almost entirely of western yellow pine, the larger portion of which has local markets only. This forest was created at the direct request by petition of the people living in the vicinity of it. Its main purpose is conservation of the small supply of timber for the local market.

I take it this one employee is kept there for the purpose of protecting that timber. The forest has a very small area, and hence he can protect it.

Mr. HUMPHREY of Washington. I find, further, that in the Marquette National Forest, in Michigan, you have one man; but the man in North Dakota only receives $835 a year, while the one man in charge of the forest in Michigan receives $1,170 a year. I have wondered what the different duties of the two men are, and why one is paid so much more than the other.

Mr. LEVER. The difference is just exactly this, and I think it is a compliment to the efficiency of the Forestry Service: In the forest unit to which the gentleman called attention a moment ago there are about 13,000 acres. In the one to which the gentleman now calls attention there are 31,843 acres. The amount of work is greater, and hence the compensation of the gentleman in charge of it ought to be greater.

Mr. HUMPHREY of Washington. Does the gentleman really think, where there is a forest reserve like that one in Dakota, there is any necessity under heaven for keeping a man out there? You do not sell any of the timber.

Mr. LEVER. I do think there is a necessity for keeping a man there.

Mr. HUMPHREY of Washington. For what purpose?

Mr. LEVER. The sale of the timber is by no means the important part of the reason for the keeping of a national forest.

Mr. HUMPHREY of Washington. What is the important part?

Mr. LEVER. The important reason for having employees to take care of the national forests is the protection of the forests. Every national forest is a national asset. It belongs to the people.

Mr. HUMPHREY of Washington. I know——

Mr. LEVER. And while the sale of timber and the renting of the grazing privileges are incidents, the protection of the forests for the benefit of all the people is the fundamental purpose of the original creation of the forests.

Mr. HUMPHREY of Washington. The thing I had in mind was the absurdity of a single man protecting a forest reserve.

Mr. LEVER. Let me show the absurdity of the gentleman's position——

Mr. HUMPHREY of Washington. Wait until I finish my statement. I am reminded of an order that was issued to one of the forest rangers in my section of the country. He was a lone man in charge of one of these forest reserves, which was about as large as the State of Delaware. One day he received a dispatch to cut a trail around the outside of his forest reserve and then go over it every day.

Mr. LEVER. I do not know anything about that——

Mr. HUMPHREY of Washington. It shows how absurd and how foolish the ideas of the Forestry Service sometimes are. Now this one man does nothing except draw his salary. It is a small item, but it ought to be stricken out.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Florida National Forest, Florida, $6,180.

Mr. WILSON of Florida. Mr. Chairman, I offer the amendment which I send to the Clerk's desk.

The CHAIRMAN. The gentleman offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 30, line 23, after the figures "$6,180," insert the following: "*Provided*, That no charge shall be made for the grazing of cattle or sheep on any national forest reservation in the State of Florida."

Mr. LEVER. To that, Mr. Chairman, I reserve a point of order.

Mr. WILSON of Florida. Mr. Chairman, I would like to ask the chairman of the committee, if, in a State like Florida, any possible injury could be done by the roaming of cattle over the reservations and grazing thereon. The gentleman understands the features of our country?

Mr. LEVER. Yes; I would say that probably in his case the grazing of the lands in the forest reserve would not be detrimental to it, but it would be setting a precedent in this bill, which would rise and stare us in the face in every item of the bill and would result in breaking down the Forestry Service.

Mr. WILSON of Florida. I am prompted to offer this amendment for this reason. In Florida we have no fences. The people turn the cattle out, and they roam as they may, and in order to keep them off the farms the farmers have to build the fences. Here is a forest reserve in my district with farms all around it. The people have been used for many years to allowing the cattle to roam through this country; but now if a cow gets over onto the reservation and bites a little wire grass, if there happens to be a watchman or other employee around the owner is called upon to pay a penalty, and in default he must be prosecuted.

One other question I wish to ask the gentleman. I am not very well acquainted with conservation. I believe it is the right thing if properly administered; but upon this reservation in my district they box the trees for turpentine purposes, and they cut trees down, some of them, and sell them to sawmill people. Does the gentleman think that is conservation, especially the boxing of the trees for turpentine?

Mr. LEVER. The theory now is that boxing the tree for turpentine does hurt it for lumber purposes. I take it that the Forestry Service only boxes or cuts trees that have fully matured.

Mr. WILSON of Florida. That is the theory. Now, one other question and I am through. In the light of the discussion and amendment coming under the present law, can a reservation be created, extended, or abolished by Executive order?

Mr. LEVER. That is my impression; yes.

Mr. WILSON of Florida. Without legislation?

Mr. LEVER. Yes. I appreciate the gentleman's position and his point of view, but I am constrained to make the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. TRIBBLE. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. JOHNSON of Washington. Mr. Chairman, reserving the right to object, I want to ask the gentleman from Georgia if he has in his State the Appalachian forest reserve, concerning which the service sent a bulletin to the press not to be released until April 3, 1913—sent to all the leading newspapers in the United States—stating that the Forestry Service had just sold some timber in the Appalachian forests, and the material disbursed was $7 worth of logs bought by a Georgia farmer, and that it was a foretaste and indication that we are going to have the service pay in 10 or 12 years.

I predict that it will not be self-supporting for 30 or 40 years.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia? [After a pause.] The Chair hears none.

The Clerk read as follows:

Kaibab National Forest, Ariz., $4,840.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. I do so for the purpose of asking unanimous consent to insert in the RECORD a newspaper clipping in regard to this reserve.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to extend his remarks in the RECORD. Is there objecton?

There was no objection.

The Clerk read as follows:

Olympic National Forest, Washington, $25,650.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word. The Olympic National Forest Reserve, for which $25,000 is required for operating expenses, is, in round numbers, once and a half as large as the State of Massachusetts. This is the reserve of which I spoke a few minutes ago, where one county has to spend $100,000 to help out the Forestry Service. This is the reserve where one county this last year—and that county larger than the State of Connecticut—received from the Forestry Service as its share of the 25 per cent returns the sum of $24.65; think of it, that sum in lieu of taxes for a territory as large as the State of Connecticut.

Mr. HUMPHREY of Washington. Mr. Chairman, I want to call attention to the fact that in this particular forest reserve some gentlemen were building a hotel and health resort. They expended a good many thousand dollars building a road through that forest. My recollection is that the road cost over $100,000. It was of great benefit to the reserve. By accident they cut some timber on the Government land. When that was discovered the proprietor of the hotel—the man who was responsible and had at his own expense built the road—immediately had that timber measured, and sent a check to the Forest Service for the value. The Forest Service rejected the check and demanded that the hotel proprietor should pay the value of the timber after it was manufactured, instead of the stumpage value. They have been having trouble about it ever since. I do not hold the Forest Service responsible, of course, for all the acts of all of the men they employ. I know it is impossible to control them all, but I want to call this fact to the attention of the House to show one of the reasons why there is complaint from people in the West as to the way the Forest Service is administered. I will insert a newspaper article about this affair:

[From the Seattle Post-Intelligencer, June 13, 1913.]

PERSECUTION BY FOREST SERVICE TOLD BY EARLES—SUIT OF GOVERNMENT FOR TIMBER CUT OFF RESERVE IS ANALYZED—PAYMENT WAS OFFERED—FULL VALUE OF STUMPAGE TENDERED WHEN ERROR WAS FOUND; WORTH OF MILL PRODUCTS DEMANDED—IMPROVEMENTS DISCOURAGED AT SOL DUC.

"We have no fear of the outcome of the prosecution of the Government, which is really persecution directed against the business interests which, although handicapped by the Government, are attempting to develop the Northwest," said Michael Earles, president of the Sol Duc Hot Springs Co. and the Puget Sound Mills & Timber Co., regarding the suit of the Government for the recovery of damages for known trespass on the Olympic National Forest Reserve by the Sol Duc Hot Springs Co.

An amended complaint was filed in the Federal court yesterday by United States District Attorney Charles F. Riddell. The land in question is in the southwest corner of section 29, township 29; and the Government charges that timber to the value of $1,551.73 was cut and that it was worked into lumber and shingles to the value of $5,649.40. The Government asks judgment against the defendant company for the full amount of the value of the lumber products into which was cut the timber alleged to be on Government ground, or about $6,000.

PERSECUTION, SAYS EARLES.

Mr. Earles is bitter in his denunciation of the suit, and states that it is one of the most unfair pieces of persecution that has ever come to his notice. In speaking of the case yesterday, Mr. Earles said: "We own 320 acres at Sol Duc, and we have been anxious to have at least a part of it cleared. We built our mill there and at the time were under the belief that it was on our own ground. Agents of the Forest Service were on the ground many times during the construction of the mill and after it was in operation, and they at the time believed that we were building and working on our own ground. After we had cut about 500,000 feet of lumber a complaint was filed and local agents of the Forest Service ordered the land surveyed.

SEVENTY FEET ON RESERVE.

"It was then found that our mill was 70 feet on the Government reserve and that we had cut a great deal of the timber from the Government reserve. The next thing that we heard of the case was the filing of the suit. We have offered to settle the case by paying the Government $1,000, which would be a stumpage rate of $2 a thousand. This is more than timber is selling for on the stump on the Puget Sound coast at present, and the timber which we cut was 25 miles inland.

PENALIZED FOR BUILDING ROAD.

"Another example of persecution: Some time ago I built a 15-mile automobile road through the same section, and almost entirely through the Olympic reserve, at a cost of more than $100,000. This road is graded 30 feet wide in a mineral soil and is a natural firebreak. The Forest Service has the free use of this road at all times. When this road was under construction I was compelled to furnish a cash bond of $500 as a guaranty of good faith in burning brush and in other ways living up to regulations. When the road had been completed and my part in the arrangements had been fulfilled, I applied for the return of my cash bond of $500, but instead the Forest Service sent me a bill for $7, stating that the price of the timber which I had cut in the construction of this road was $507.

CAN'T TOUCH WATER POWER.

"That is a good example of the treatment that we have been receiving, but there are others. When we built the Sol Duc Hotel we first thought of making our electric light by water power. An investigation developed the fact that it would be impossible to use the water power which was going to waste all around us, and to-day, with water tumbling down the mountains to waste all around the Sol Duc Hotel, we are making our electric light in the old-fashioned way, with a battery of boilers."

Mr. MANN. Mr. Chairman, that is the only case I have heard of in a good while where anybody was able to get even with a hotel man.

Mr. HUMPHREY of Washington. But they have not been able to get even with him yet.

Mr. TREADWAY. Mr. Chairman, as one of those men I am afraid my friend from Illinois has not realized the high cost of hotel supplies. The profits in that business, as the gentleman from Pennsylvania and I can testify, are very small.

Mr. MANN. I never kick on any hotel bills I have to pay when I am traveling if I have the money. May I ask the gentleman from South Carolina in reference to some of these items? This Olympic National Forest has for this year a little over $16,000. The bill carries for next year $25,000. The St. Joe National Forest, Idaho, has for this year something over $45,000, and this bill carries $34,000. There are items where there is an increase and some where there is a decrease. Generally what is the change in the situation which produces the difference in the estimated cost of operation?

Mr. HUMPHREY of Washington. Mr. Chairman, if the gentleman will permit, I call his attention to page 53 of the report, where that is explained.

Mr. LEVER. Mr. Chairman, I tried to explain that in the report; but I will say that the testimony before the committee generally was to the effect that, in some of these forests, for instance, there was a contract for the sale of timber, which might be made this year, which was not made last year, and, of course, they would have to send in their forest cruisers and do the other work necessary in completing that sale of timber, and that expense would then be charged against that forest unit. That in a general way is the reason for these changes. In another forest, where there is a decrease, the contract for the sale of timber will have been completed by the time this appropriation becomes available, and hence the estimate for a smaller amount for the protection of the forest.

Mr. MANN. So far as the other forests are concerned, where there is no sale of timber, are the amounts in the bill substantially what were carried by the existing law?

Mr. LEVER. Substantially as carried by the existing law.

Mr. MANN. When these items were segregated, only a few years ago, we endeavored to and did fix certain amounts for

certain forests, but nobody was able to say then whether the amounts then fixed were the amounts that will be necessary. The Forest Service said they could not tell.

Mr. LEVER. The gentleman will notice there is a total decrease in these estimates of $7,000.

Mr. MANN. That is immaterial.

Mr. LEVER. That is small, of course, and immaterial.

Mr. MANN. Have they reached the point now where they can tell or do they know what is the normal cost of maintaining each of these forests?

Mr. LEVER. Yes; and that is shown by the fact that this bill, as far as the protection of the national forests goes, is practically what it was last year.

Mr. MANN. That is not necessarily shown by that fact, because under the provisions of this bill there is a chance to use any amount of money in any forest, practically.

Mr. LEVER. Fifteen per cent.

Mr. MANN. Of course the amounts carried in the bill are the same. Are these amounts actually expended in these forests, or about those amounts?

Mr. LEVER. Yes; substantially so; practically all of it expended. We felt that is the amount that should be charged against this service. Now, if we can finish this page of the bill, I promise the committee to rise.

The Clerk read as follows:

Rainier National Forest, Wash., $15,400.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. I notice, according to the statement of the report, that there is an increase of $1,000 for the Mount Rainier reserve. On page 53 of the hearings I read:

Increase of $1,000, to provide additional scalers to handle an increased cut of approximately 5,000,000 board feet under approved sales.

Now, I want to call the attention of the committee to the fact that this is an illustration of the policy that prevails throughout the whole service. The regular cost of scaling 5,000,000 feet of logs would be $250, if I am not mistaken; or, in other words, just four times as much as the customary charge. I notice that occurs in several other places.

I call attention to an editorial in the Seattle Post-Intelligencer of December 13, 1913, entitled "The Chief Forester's Report," It is as follows:

[From the Seattle Post-Intelligencer, December 13, 1913.]

THE CHIEF FORESTER'S REPORT.

Mr. Henry S. Graves, Chief Forester of the United States and head of the Forestry Bureau of the Department of Agriculture, is certainly an optimist. His latest report, covering the fiscal year 1912–13, spreads a cheerful aspect over some very depressing figures. This is done by holding out "hope for the meat supply."

"The forage resources of the national forests," says the report, "contribute to the maintenance of more than 20,000,000 head of live stock." It further shows "sales of 2,000,000,000 feet of timber" out of a possible 6,000,000,000 feet, a cut, however, of only 500,000,000 feet, revenues of "slightly less than $2,500,000," and expenditures of "a little more than $4,600,000."

Analyzing the statement concerning forage, and granting that it is true, it is proper to remark that there are 40,000,000 acres of forests in western Washington, Oregon, and in Alaska that contribute nothing to the maintenance of any live stock whatever. The forage areas are in the dry or partially dry belts of the country where the timber resources are small compared with those areas which are without forage for live stock—the 40,000,000 acres mentioned above.

Taking up the figures, and making all allowance for the indefinite phraseology in the "little more than" and "slightly less than" qualifying clauses which characterize the Federal Forest Bureau reports, and three facts remain.

The service sold one-third of its own estimate of the crop on long-time sales, the bulk of them going to the large lumbering concerns. It cut but one-twelfth of what the bureau itself gives as the proper estimate of annual new growth. In other words, it took off the ground but 8 per cent of what the ground produced.

The year's administration of this estate—an area of national forests in the aggregate as large as all Germany—produced another deficit for the fiscal year of "a little more than" $2,100,000, a total deficit since 1908 of "about" $14,900,000.

What no service report has ever shown is a comparison between field and office expenditures, nor has there ever been an exact itemized statement of any kind printed. The financial operations of the service are placed before the country in a hazy, indefinite form which would never be tolerated coming from any private institution or any other Government bureau.

Like all previous reports, this one clouds the real issue as to whether or not forestry pays or ever will pay, by indulging in cheap buncombe about the "future of the meat supply."

To get down to dollars and cents, however, why do the national forests produce nothing but deficits?

I also call attention to two editorials from the Seattle Times that speak forcibly for themselves upon this question of forest conservation as practiced.

[From the Seattle Times, May 24, 1913.]

THE TRAGEDY OF CONSERVATION.

Seattle was treated to the tragic side of conservation the other day in Federal court when a homestead of 160 acres in Snohomish County was restored to the Federal reserve because the couple who settled on it and vainly fought for a title to their property had died while the case dragged its weary length through the courts.

Of the asininity of Pinchotism, of the unfeeling selfishness with which mad theorists plan to build up a Federal empire in the sovereign States of the West and in Alaska, of the deliberate dilatoriness of public servants in surveying lands in the so-called "conservation States"—of all these things Seattle long has had knowledge.

This little case—insignificant in itself, but important because of the principle involved—has introduced the tragic element and demonstrated the change that has come over Uncle Sam.

Once the friend of the homesteader and the settler, the old gentleman has become a niggard, seeking to hoard up useless wealth simply that it may not be enjoyed by others.

Who can measure the worry, the heart-burning anxiety, the depressing dread, and hopeless anticipation of defeat of this unfortunate couple?

Guilty of no crime, they were haled into court to defend the little tract of land upon which they had settled and which mad theorists had decreed should be part of a Federal reserve.

Such things as this drive people to desperation. Alien overlordship of this kind drove hundreds of thousands from Ireland to free America.

[From the Seattle Times, August 4, 1913.]

PINCHOTIAN THEORY IN UTAH.

Press "dope" from the Forestry Service of the Department of Agriculture contains the somewhat remarkable statement that "more persons make use of the national forests in Utah than in any other State."

The foregoing observation, with others like it, influences the Railway and Marine News to devote considerable space to the so-called forests of Utah.

It brings to light the interesting fact that outside of the Panguitch pine forests and some of the timbered section bordering the Grand Canyon of the Colorado and Kaibab Plateau there is probably no marketable timber obtainable in the whole State.

Every tie on every railroad was taken into the country by the railroad as it progressed, with the possible exception of some early contracts on the Union Pacific and the Rio Grande.

Probably nine-tenths of the forests have no resemblance to a forest. The creation of the reserves forced cattlemen and sheepmen to withdraw until they could get grazing permits, whence is drawn the picturesque yarn in the press "dope" of the Forestry publicity department. The Railway and Marine News says:

"When it is considered that vast sums have been expended by the Forestry Bureau to publish the wild theories of Gifford Pinchot, such foolish vaporings as the above, emanating from these high-priced publicists, are extremely laughable.

"Meanwhile, the timber merchants of outside places are supplying Utah with ties, telephone poles, mining timbers, and all construction timber, so that the limited areas preserved in that State can be used by future generations."

When it be remembered that the Panguitch pine forest is at least a hundred miles from the nearest railroad, and that in a radius of 50 miles there is not a population of 50,000 it will be seen that the publicity service of the Forestry Bureau has picked a shining mark for exploitation.

Utah is a splendid example of Pinchotian theory applied indiscriminately to the vast spaces of the West.

Its application there is no more ridiculous than in Washington, where rather more than one-third of the entire State is literally blanketed by forest reserves.

I also will insert in the RECORD two articles from the Railway and Marine News, of Seattle:

[From the Railway and Marine News, Seattle, February, 1914.]

FORESTRY BUREAU SEES LIGHT.

The Forest Service, United States Department of Agriculture, sends out a lengthy press letter covering the disposal of 1,000,000,000 feet of yellow pine from the Kaibab National Forest on the Utah-Arizona line. The press letter praises the Forestry Bureau and shows that in order to get this timber out it will be necessary to build a railroad approximately 200 miles long. For years such a railroad has been under discussion in Utah, and it will undoubtedly be built either from Marysvale, on the Rio Grande, or from Acoma or Modena, on the Salt Lake Route, and the possibility of its construction is a matter of deep interest to the intermountain country. However, it required a good deal of effrontery for the Forestry Bureau to take any credit in this connection, simply because the Kaibab Forest should never have been created. The absolute withdrawal of the limited and, in most cases, far-distant timber areas of the intermountain country have forced the people of that section to look to other markets for their lumber supplies during the last decade. If it had not been for the unjust withdrawal of these lands, a railroad would have been built years ago to the Kaibab Plateau for the purpose, primarily, of tapping a timber supply and incidentally to develop an agricultural area of southern Utah, which is badly in need of transportation. The Forestry Bureau, therefore, has deliberately held back for 10 years the industrial development of the entire south central part of the State of Utah by its wasteful conservation policy, and while it is a matter for congratulation that public opinion has forced it to open the Kaibab Forest, it deserves no encomiums of praise, but rather the severest arraignment possible for its wasteful policy in strangling that section of the country for the past decade.

[From the Railway and Marine News, August 1, 1913.]

UTAH'S THEORETICAL FORESTS.

"More persons make use of the national forests in Utah than in any other State. Nearly 27 per cent of all the permits for sheep and cattle grazing on the forests are taken out in this State. This does not mean, however, that Utah carries one-fourth of all the national-forest cattle and sheep; it happens that many small grazing interests make use of the forests there; and individual flocks and herds are larger elsewhere."

The above is a sample of the "press dope" that the Forest Service, United States Department of Agriculture, puts out and which hundreds of unthinking papers publish in good faith. In this case the theoretical conservationist of Broad Street, Pennsylvania Avenue, or Broadway will read with rare zest, the fact that the wonderfully preserved forests of Utah are being put to such splendid use. They will have visions of majestic trees and hundreds of acres of fine forests in which the gentle-faced cow or the sad-faced sheep disport themselves in and about the trunks of these noble trees. But the average reader has never been in Utah. If he has, he will know that the Escalante Desert or the Salt Lake Desert or the great American Desert produce no foliage, while the highly cultivated chain of valleys, extending like a string of sausages from Cache to Washington County, produce everything from most luscious strawberries to the daintiest peach, but the pine, fir, and cedar are unknown.

In the high mountains of the Wasatch range and in the canyons leading thereto from the valleys, one will find quaking asp, cottonwood, poplar, and the small trees of the pine and spruce families which are native to Utah. A few 6-inch planks can be cut. But outside of the Panguitch pine forests, and some of the timbered section bordering on the Grand Canyon of the Colorado, and Kaibab Plateau, there is probably no marketable timber procurable in the whole State of Utah. Every tie on every railroad that was built to develop that interior State was taken into the country by the railroad as it progressed, with the possible exception of some contracts held by local citizens in the early days of the construction of the Union Pacific and Rio Grande, which antedated the era of preserving the trees for future generations.

In brief, probably nine-tenths of the national forests in the State of Utah have no resemblance to a forest, and when they were created in the past they served chiefly to withdraw grazing lands from cattle and sheep owners, and it is these cattle and sheep owners who have since procured permits to graze on the public land, which fact produces this picturesque story by the press agent of the Forestry Bureau in Washington. When it is considered that vast sums have been expended by the Forestry Bureau to publish the wild theories of Gifford Pinchot, such foolish vaporings as the above emanating from these high-priced publicists are extremely laughable. Meanwhile the timber merchants of outside places are supplying Utah with ties, telephone poles, mining timbers and all construction timber, so that the limited areas preserved in that State can be used by future generations.

P. S.—At the last writing, the Panguitch pine forest was 100 or more miles from the nearest railroad. In a radius of 50 miles there is not a population of 50,000 people.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word. I want to say I have several letters here, but I will only put in a portion of one received from a very intelligent man, a pioneer homesteader in western Washington, who writes the following:

We have not only been "experted" beyond the point of physical endurance, but we are literally being conserved out of existence. For 20 miles in every direction from my home I can locate nothing but abandoned homesteads and deserted cabins.

Brother JOHNSON, while we are slowly starving to death the work of conservation goes on. We had no Christmas, we had no New Years, and are getting old before our time because of no money and no way of getting employment to earn money. We have no hope. We have nothing to look forward to but the visit of the forest ranger.

Let us have a demonstration of practical conservation that will guarantee the use of natural and national resources to the end that we may live in the present and our families may have some promises of life in the future and we will try to be happy in the development of the gifts of nature and the creation of wealth on the shores of Puget Sound.

Mr. MANN. That is a confession of Democratic adversity, not of national conservation.

Mr. JOHNSON of Washington. A good bit of both, I think.

The Clerk read as follows:

Salmon National Forest, Idaho, $13,690.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 13679 and had come to no resolution thereon.

### LEAVE OF ABSENCE.

By unanimous consent, Mr. BUCHANAN of Texas was granted leave of absence for 10 days, on account of important business.

### ACCEPTANCE OF STATUE OF ZACHARIAH CHANDLER.

Mr. SAMUEL W. SMITH. Mr. Speaker, I ask unanimous consent that the order may be set aside fixing Sunday, April 12, for exercises in relation to the acceptance of the statue of Zachariah Chandler, for the reason that it occurs on Easter Sunday.

The SPEAKER. The gentleman from Michigan asks unanimous consent that the order made this morning fixing Sunday, April 12, to make speeches about Senator Zachariah Chandler be set aside. Is there objection? [After a pause.] The Chair hears none.

Mr. SAMUEL W. SMITH. Mr. Speaker, I now desire to offer the following resolution.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 436.

*Resolved*, That exercises appropriate for the reception and acceptance from the State of Michigan of the statue of Zachariah Chandler, erected in Statuary Hall, in the Capitol, be made the special order for Sunday, April 19, 1914.

The question was taken and the resolution was agreed to.

### SENATE BILL REFERRED.

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

An act (S. 751) to repeal section 3480 of the Revised Statutes of the United States; to the Committee on Military Affairs.

### ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 43 minutes p. m.) the House adjourned until to-morrow, Wednesday, March 11, 1914, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, with a letter from the Chief of Engineers, submitting a report on preliminary examination of Holmes River, Fla. (H. Doc. No. 820); to the Committee on Rivers and Harbors and ordered to be printed.

2. A letter from the Secretary of the Treasury, submitting supplementary estimate of appropriations for the Treasury Department for the fiscal year 1915, under the head of "Salaries, Office of the Secretary, Government actuary," salary $3,000 per annum instead of $2,250 per annum (H. Doc. No. 819); to the Committee on Appropriations and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. ADAMSON, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 14385) to amend section 5 of "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912, reported the same without amendment, accompanied by a report (No. 362), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. CANTRILL, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 11625) to increase the appropriation for the erection of an immigration station at Baltimore, Md., reported the same with amendment, accompanied by a report (No. 363), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. STEPHENS of Texas, from the Committee on Indian Affairs, to which was referred the bill (H. R. 12463) to authorize the withdrawal of lands on the Quinaielt Reservation, in the State of Washington, for lighthouse purposes, reported the same without amendment, accompanied by a report (No. 364), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. CANTRILL, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 13415) to increase the limit of cost of public building at Shelbyville, Tenn., reported the same without amendment, accompanied by a report (No. 365), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. CLANCY, from the Committee on Indian Affairs, to which was referred the bill (H. R. 14196) authorizing the Tuscarora Nation of New York Indians to lease or sell the limestone deposits upon their reservation, reported the same without amendment, accompanied by a report (No. 366), which said bill and report were referred to the House Calendar.

Mr. McGUIRE of Oklahoma, from the Committee on Indian Affairs, to which was referred the bill (H. R. 7025) to authorize the Atchison, Topeka & Santa Fe Railway Co. to change its line of railroad through the Chilocco Indian Reservation, State of Oklahoma, reported the same with amendment, accompanied by a report (No. 367), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. FALCONER: A bill (H. R. 14430) to provide revenue and encourage the industries of the United States; to the Committee on Ways and Means.

By Mr. TAGGART: A bill (H. R. 14431) to extend the provisions of the pension laws to include the Eighteenth and Nineteenth Regiments Kansas Volunteer Cavalry; to the Committee on Invalid Pensions.

By Mr. JACOWAY: A bill (H. R. 14432) to provide for the improvement of navigation on the Arkansas River; to the Committee on Rivers and Harbors.

By Mr. TREADWAY: A bill (H. R. 14433) to establish a fish-cultural station at some point in the State of Massachusetts; to the Committee on the Merchant Marine and Fisheries.

By Mr. DALE: A bill (H. R. 14434) providing for the appointment of a board of survey for the purpose of selecting a suit-

able site for a powder plant at or near the Borough of Brooklyn, in the State of New York, and submitting an estimate of the cost thereof; to the Committee on Military Affairs.

By Mr. SELDOMRIDGE: A bill (H. R. 14435) to authorize the sale of certain public land within the State of Colorado; to the Committee on the Public Lands.

By Mr. SABATH: A bill (H. R. 14436) to regulate the conduct of trials in actions to recover damages for personal injuries; to the Committee on the Judiciary.

By Mr. CURRY: A bill (H. R. 14437) for the relief of persons suffering damages by the construction of the canal diverting the waters of the Mormon Slough into the Calaveras River; to the Committee on the Judiciary.

Also, a bill (H. R. 14438) for the relief of persons suffering damages by the construction of the canal diverting the waters of the Mormon Slough into the Calaveras River; to the Committee on the Judiciary.

By Mr. WILSON of Florida: A bill (H. R. 14439) to provide for the erection of a public building at Quincy, Fla.; to the Committee on Public Buildings and Grounds.

By Mr. EDWARDS: A bill (H. R. 14440) providing for the purchase of site and for public building at Guyton, Ga.; to the Committee on Public Buildings and Grounds.

By Mr. RAKER: A bill (H. R. 14441) to increase the limit of cost of site and public building at Red Bluff, Cal.; to the Committee on Public Buildings and Grounds.

By Mr. PROUTY: Joint resolution (H. J. Res. 227, creating a commission to examine the relations between the District of Columbia and the Federal Government; to the Committee on the District of Columbia.

By Mr. POST: Memorial of the Legislature of the State of Ohio relative to proper Federal and State action to abate the loss sustained from hog cholera; to the Committee on Agriculture.

## PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARNHART: A bill (H. R. 14442) for the relief of Edward S. Carr; to the Committee on War Claims.

By Mr. BRITTEN: A bill (H. R. 14443) granting an increase of pension to John R. Skidmore; to the Committee on Invalid Pensions.

By Mr. CANTRILL: A bill (H. R. 14444) for the relief of the heirs or estate of J. Howard Sheffer, deceased; to the Committee on War Claims.

By Mr. CURRY: A bill (H. R. 14445) granting a pension to Charles H. Woodward; to the Committee on Pensions.

By Mr. DALE: A bill (H. R. 14446) granting an increase of pension to Harry Landau; to the Committee on Pensions.

By Mr. DERSHEM: A bill (H. R. 14447) granting a pension to Emma S. Owen; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14448) granting an increase of pension to William Bay; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14449) for the relief of the legal representatives of William Findly Morrow; to the Committee on War Claims.

By Mr. EAGLE: A bill (H. R. 14450) for the relief of Martin & Co., of Houston, Tex.; to the Committee on Claims.

By Mr. FALCONER: A bill (H. R. 14451) granting a pension to Clarence Sass; to the Committee on Invalid Pensions.

By Mr. FOWLER: A bill (H. R. 14452) granting an increase of pension to J. J. Boyer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14453) granting an increase of pension to John W. Oakes; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14454) granting an increase of pension to L. C. Penninger; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14455) granting an increase of pension to Abraham Stine; to the Committee on Invalid Pensions.

By Mr. GARD: A bill (H. R. 14456) granting a pension to A. H. Barnes; to the Committee on Pensions.

Also, a bill (H. R. 14457) granting a pension to William Bogen; to the Committee on Pensions.

Also, a bill (H. R. 14458) granting a pension to John R. Callahan; to the Committee on Pensions.

Also, a bill (H. R. 14459) granting a pension to Charles W. Cox; to the Committee on Pensions.

Also, a bill (H. R. 14460) granting a pension to Charles H. Jennings; to the Committee on Pensions.

Also, a bill (H. R. 14461) granting an increase of pension to William J. Light; to the Committee on Pensions.

Also, a bill (H. R. 14462) granting a pension to Pearl B. Scully; to the Committee on Pensions.

Also, a bill (H. R. 14463) granting an increase of pension to S. N. Burdsall; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14464) granting a pension to James M. Dinwiddie; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14465) granting an increase of pension to James Dougherty; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14466) granting a pension to Levi Essick; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14467) granting an increase of pension to Moses Goldstein; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14468) granting an increase of pension to Samuel M. Guy; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14469) granting an increase of pension to Mary Kohler; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14470) granting a pension to Wilson S. Mears; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14471) granting a pension to Martha A. Mouse; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14472) granting a pension to Alexander Price; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14473) granting an increase of pension to Vesta Shoemaker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14474) granting an increase of pension to Abraham Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14475) granting an increase of pension to William H. Snoderly; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14476) granting a pension to Jackson Weathers; to the Committee on Invalid Pensions.

By Mr. GILLETT: A bill (H. R. 14477) granting a pension to Spencer Le R. Burbank; to the Committee on Pensions.

By Mr. GREGG: A bill (H. R. 14478) granting an increase of pension to Lucy W. Powell; to the Committee on Pensions.

Also, a bill (H. R. 14479) for the relief of the legal representatives of Sarah J. Montgomery, deceased; to the Committee on War Claims.

By Mr. HAWLEY: A bill (H. R. 14480) granting a pension to William Bell; to the Committee on Pensions.

Also, a bill (H. R. 14481) for the relief of George W. Peters; to the Committee on War Claims.

By Mr. HULINGS: A bill (H. R. 14482) granting an increase of pension to Alonzo Cole; to the Committee on Invalid Pensions.

By Mr. KONOP: A bill (H. R. 14483) granting a pension to Amelia Kuhn; to the Committee on Invalid Pensions.

By Mr. KREIDER: A bill (H. R. 14484) granting an honorable discharge to Eliphas W. Reed; to the Committee on Military Affairs.

By Mr. SHERLEY: A bill (H. R. 14485) granting an increase of pension to Mary K. Kalis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14486) granting an increase of pension to Sarah K. Lyberger; to the Committee on Invalid Pensions.

By Mr. TAVENNER: A bill (H. R. 14487) granting an increase of pension to John W. Shawley; to the Committee on Invalid Pensions.

By Mr. TEMPLE: A bill (H. R. 14488) granting a pension to Margaret Mars; to the Committee on Invalid Pensions.

By Mr. WINGO: A bill (H. R. 14489) granting a pension to Anna Sorrels; to the Committee on Pensions.

Also, a bill (H. R. 14490) for the relief of heirs of Samuel N. Pryor, deceased; to the Committee on War Claims.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petitions of A. E. Birmingham and W. E. Sewell, of Bland, and sundry citizens of Union, Mo., protesting against national prohibition; to the Committee on the Judiciary.

Also (by request), petitions of the Past Presidents' Association of Middlesex County, Mass., protesting against "One hundred years of peace celebration"; to the Committee on Foreign Affairs.

By Mr. ALLEN: Petition of 15 citizens of Harrison, Ohio, favoring national prohibition; to the Committee on the Judiciary.

Also, petitions of 300 citizens of Cincinnati, Ohio, protesting against national prohibition; to the Committee on the Judiciary.

Also, petitions of F. J. Schwab and 270 other citizens of Hamilton County, Ohio, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. ANSBERRY: Petition of sundry citizens of Ohio, against national prohibition; to the Committee on the Judiciary.

Also, petition of the Hickory Grove Sunday School and Church of the Brethren, of Pioneer, Ohio, against House bill

11312, relative to foreign exhibits at Panama-Pacific Exposition; to the Committee on Patents.

Also, petition of New York Typographical Union, No. 6, favoring Bartlett-Bacon anti-injunction bill; to the Committee on the Judiciary.

Also, petition of sundry citizens and churches of Ohio, favoring national prohibition; to the Committee on the Judiciary.

By Mr. ANTHONY: Petition of various banks of Kansas, favoring amendment to income-tax law; to the Committee on Ways and Means.

By Mr. ASHBROOK: Resolutions of the Agricultural Commission of Ohio in favor of the franking privilege for the State departments on agricultural bulletins; to the Committee on the Post Office and Post Roads.

Also, resolutions of the 330 members of the Granville (Ohio) Methodist Episcopal Church, in favor of nation-wide prohibition; to the Committee on the Judiciary.

Also, resolutions of the Eugene Snell Camp of Spanish War Veterans, of Coshocton, Ohio, in favor of the Spanish War veterans' widows' pension bill; to the Committee on Pensions.

By Mr. BALTZ: Petition of sundry citizens and organizations of Illinois, against national prohibition; to the Committee on the Judiciary.

By Mr. BARCHFELD: Petitions of sundry citizens of McKees Rocks, Homestead, and Camden, State of Pennsylvania, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. BOWDLE: Petitions of Sam Johnson and 1,951 other citizens of Ohio, protesting against national prohibition; to the Committee on the Judiciary.

Also, petitions of 80 citizens of Lockland, Ohio, favoring national prohibition; to the Committee on the Judiciary.

By Mr. BRITTEN: Petition of the Grand Lodge of the Independent Order of Vikings, favoring erection of a statue to John Ericsson; to the Committee on the Library.

By Mr. BROWN of New York: Petitions of sundry citizens of the first congressional district of New York, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. BRUCKNER: Memorial of the Associated Chambers of Commerce of the Pacific Coast, protesting against repeal of the canal tolls exemption; to the Committee on Interstate and Foreign Commerce.

Also, petition of the Federated Central Body of New York City, favoring passage of the seamen's bill (S. 136); to the Committee on the Merchant Marine and Fisheries.

Also, petition of District Grand Lodge No. 1, Independent Order of B'nai B'rith, of Springfield, Mass., protesting against the immigration bill in its present form; to the Committee on Immigration and Naturalization.

Also, petition of the Merchants' Association of New York, protesting against further extension of parcel post; to the Committee on the Post Office and Post Roads.

Also, petitions of the Pleasant Valley Wine Co., of Rheims, N. Y., and of sundry citizens of Hammonds Port, N. Y., protesting against national prohibition; to the Committee on the Judiciary.

By Mr. DALE: Petitions of Henry Wolf and B. Goodman, of Kings County, N. Y., protesting against national prohibition; to the Committee on the Judiciary.

Also, petition of New York Typographical Union, No. 6, favoring passage of House bill 1873, the anti-injunction bill; to the Committee on the Judiciary.

Also, petition of the Major Frank Kerk Camp, No. 53, Department of New York, United Spanish War Veterans, favoring passage of House bill 13044, known as the soldiers' and sailors' widows and orphans pension bill; to the Committee on Pensions.

Also, petition of Thomas Roulston, of Brooklyn, N. Y., favoring passage of anticoupon bill, providing for 2-cent tax on coupons and stamps; to the Committee on Ways and Means.

By Mr. DAVIS: Petition of the Associated Chambers of Commerce of the Pacific Coast, of San Francisco, Cal., favoring repeal of the canal tolls exemption; to the Committee on Interstate and Foreign Commerce.

Also, petition of the Minnesota Federation of Women's Clubs, of St. Cloud, Minn., favoring passage of Lindquist pure-fabric bill; to the Committee on Interstate and Foreign Commerce.

Also, petition of the Northfield (Minn.) Ministerial Association, protesting against House bill 12928, relative to Sunday work in post offices; to the Committee on the Post Office and Post Roads.

By Mr. DICKINSON: Petitions of 200 citizens of Everton, 75 citizens of Raymore, 85 citizens of Rich Hill, 28 citizens of Centerview, 100 citizens of Osceola, and 100 citizens of Sprague, all in the State of Missouri, favoring national prohibition; to the Committee on the Judiciary.

By Mr. DYER: Petition of sundry citizens of Missouri, favoring House bill 13044, providing pensions for widows of Spanish War veterans; to the Committee on Pensions.

Also, petition of J. H. Boughton, of St. Louis, Mo., favoring the Barkley relief bill relative to flood control; to the Committee on Rivers and Harbors.

Also, petition of E. F. Shaw, of St. Louis, Mo., favoring Ransdell-Humphreys bill, relative to flood control; to the Committee on Rivers and Harbors.

By Mr. EAGLE: Affidavit of H. D. Martin in reference to claim of Martin & Co., of Houston, Tex., for refund of duty; to the Committee on Claims.

By Mr. FITZGERALD: Memorial of the Colonel John Jacob Astor Camp, No. 98, United Spanish War Veterans, of New York, favoring passage of House bill 13044, the widows and orphans pension bill; to the Committee on Pensions.

Also, petitions of the Swedish Singing Society Svea of New York City, and the Scandinavian Hundred Men Society of Brooklyn, N. Y., favoring passage of bill for monument to John Ericsson; to the Committee on the Library.

By Mr. GARDNER: Petition of sundry citizens of Massachusetts, favoring national prohibition; to the Committee on the Judiciary.

Also, petition of the Captain John M. Pettingell Camp, No. 52, United Spanish War Veterans, favoring bill relative to pensions for widows of Spanish War veterans; to the Committee on Pensions.

Also, resolutions adopted by the general court of Massachusetts, favoring the passage of the Hamill bill, providing for the retirement of all civil-service employees of the Post Office Department; to the Committee on Reform in the Civil Service.

By Mr. GARRETT of Tennessee: Petition of Methodist Sunday School at Martin, Tenn., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of the bartenders of the United States of America, protesting against national prohibition; to the Committee on the Judiciary.

Also, petitions of 200 citizens of New Franklin, 150 citizens of Bayard, and 350 citizens of Carrollton, all in the State of Ohio, favoring national prohibition; to the Committee on the Judiciary.

By Mr. WILLIS: Petition of Court Gilson and 18 other citizens of Marysville, Ohio, against House joint resolution 168, relating to national prohibition; to the Committee on the Judiciary.

Also, petition of Rev. George B. Wiltsie and 26 other citizens of Forest, Ohio, in favor of House joint resolution 168, relative to national prohibition; to the Committee on the Judiciary.

## SENATE.

### WEDNESDAY, *March 11, 1914.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we come to Thee conscious of our limitations and our weakness. If Thou didst not speak to us we would be willing to die as the beasts of the field. When Thou dost speak Thou dost stir within us great aspirations, noble and lofty aims, and ideals to fill out all the years and reach into the eternal. We pray that Thou wilt speak to us this day, and that under the inspiration of Thy call to our hearts and consciences and minds we may go forward to discharge the duties that pertain to life.

We seek from Thee a sphere in which we may make the investment of our influence, that we may bring happiness and blessing to those about us, and faithfully discharge all the duties of our sacred office as in Thy sight. We ask Thy blessing this day. For Christ's sake. Amen.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. SMOOT and by unanimous consent, the further reading was dispensed with and the Journal was approved.

#### BUREAU OF ENGRAVING AND PRINTING (S. DOC. NO. 447).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, transmitting an item of appropriation for inclusion in the urgent deficiency appropriation bill for repairs and alterations on the old building of the Bureau of Engraving and Printing, Washington, D. C., which was referred to the Committee on Appropriations and ordered to be printed.

#### MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the Speaker of the House had signed the following enrolled bills, and they were thereupon signed by the Vice President:

S. 48. An act to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes; and

S. 3742. An act to authorize the Hudson River Connecting Railroad Corporation to construct a bridge across the Hudson River in the State of New York.

#### INSPECTION AND GRADING OF GRAIN.

Mr. McCUMBER. Mr. President, I desire to state that the Senator from Maryland [Mr. SMITH] waited all day long yesterday with great patience to get an opportunity to bring up the District appropriation bill, of which he has charge. I will again yield my notice that I would address the Senate this morning after the close of the morning business on Senate bill 120 in order that the Senator from Maryland may proceed with and finish the appropriation bill. I shall then hope to take up Senate bill 120, and I give notice that I shall call it up tomorrow morning, if the appropriation bill has been disposed of.

#### PETITIONS AND MEMORIALS.

Mr. McCUMBER presented petitions of sundry citizens of Fargo and Forman, in the State of North Dakota, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. NELSON presented a memorial of sundry citizens of Moorhead, Minn., and a memorial of Local Lodge No. 91, International Association of Machinists, of Minneapolis, Minn., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of the Ministerial Association of Duluth, Minn., remonstrating against the enactment of legislation to change the present compensatory time privilege of postal employees, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of the Olmsted County Farmers' Association, of Minnesota, praying for the enactment of legislation to establish a different method of building good roads, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of Duluth, Minn., praying for the adoption of an amendment to the Constitution to prohibit polygamy, which was referred to the Committee on the Judiciary.

He also presented a petition of Local Lodge No. 91, International Association of Machinists, of Minneapolis, Minn., praying for the enactment of legislation to make lawful certain agreements between employees and laborers and persons engaged in agriculture or horticulture, and to limit the issuing of injunctions in certain cases, and for other purposes, which was referred to the Committee on the Judiciary.

Mr. BRISTOW presented a memorial of sundry citizens of Rice County, Kans., remonstrating against the enactment of legislation to make October 12, Columbus Day, a legal holiday, which was referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Larned, Kans., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented a memorial of Local Union No. 1, Coopers' International Union, of Kansas City, Kans., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Pittsburg, Kans., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Wallace County, Gove County, Dickinson County, and Trego County, and of sundry citizens of Salina, all in the State of Kansas, praying for the enactment of legislation to provide a term of the United States district court at Salina, Kans., which were referred to the Committee on the Judiciary.

Mr. MYERS presented memorials of sundry citizens of Missoula and Butte, in the State of Montana, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. BURTON presented petitions of sundry citizens of Petersburg, Alliance, Troy, Winchester, East Palestine, Columbus, Findlay, Geneva, Youngstown, Cleveland, Clyde, and Chillicothe; of the congregations of the Grace Methodist Episcopal Church, of Akron, the First Methodist Episcopal Church of Columbus, the Methodist Episcopal Church of Belfast, and the Methodist Episcopal Church of New Lexington, all in the State of Ohio, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of Local Union No. 127, Bartenders' League, of Massillon, Ohio, and a memorial of Local Union No. 67, Toledo Cloak and Skirtmakers' Union, of Toledo, Ohio, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. HITCHCOCK presented a memorial of the German American Alliance of Nebraska, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a petition of the Omaha Grain Exchange, of Nebraska, praying for the enactment of legislation to pro-

vide for Federal supervision and inspection of grain, which was ordered to lie on the table.

Mr. BRANDEGEE presented a petition of Scandinavian Grand Lodge of Connecticut, International Order of Good Templars, of New Britain, Conn., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. LODGE presented a memorial of the Past Presidents' Association, Ancient Order of Hibernians, of Middlesex County, Mass., and a memorial of Jefferson Branch, American Continental League, of New Bedford, Mass., remonstrating against the repeal of the clause of the Panama Canal act exempting American coastwise vessels from the payment of tolls, which were referred to the Committee on Interoceanic Canals.

Mr. SHIVELY presented memorials of sundry citizens of Indianapolis, Bedford, Anderson, Gibson County, La Fayette, Dubois County, Howard County, Evansville, and Warrick County, all in the State of Indiana, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of Local Council No. 16, Daughters of America, of Marion, Ind., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

Mr. KERN presented memorials of sundry citizens of Indianapolis, Fountain County, and Knox County, all in the State of Indiana, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Worthington, Crotherville, Michigan City, and Oakland City, all in the State of Indiana, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of sundry citizens of Newcastle, Ind., remonstrating against the enactment of legislation to change the present compensatory time privilege of postal employees, which was referred to the Committee on Post Offices and Post Roads.

Mr. BORAH. I present a petition signed by a large number of settlers and landowners within the Black Canyon irrigation district in Canyon County, Idaho. The petition is very short, and I ask that the body of it, omitting the names, may be printed in the RECORD, and that it be referred to the Committee on Irrigation and Reclamation of Arid Lands.

There being no objection, the petition was referred to the Committee on Irrigation and Reclamation of Arid Lands, and the body thereof was ordered to be printed in the RECORD, as follows:

*To the Senate and the House of Representatives of the United States of America:*

We, the undersigned settlers and landowners within the Black Canyon irrigation district, hereby petition the Congress of the United States to provide some means whereby money may be available by the Reclamation Service in order that the said Reclamation Service may construct the irrigation system to water the lands within the Black Canyon irrigation district in Canyon County, Idaho.

That said district comprises about 90,000 acres of very fertile land, and that this land is arid in character and requires artificial application of water in order to become productive; that the most of said land has been settled for the last eight or nine years, and the greater number of the settlers have spent all their savings in constructing homes, digging wells, and making improvements on the land, expecting that water would be available within a short time, and are now almost destitute. The Reclamation Service informs us that it can not proceed to construct the works required to irrigate the lands on account of the lack of money in the reclamation fund, and petitioners pray Congress make the provision, as aforesaid.

Mr. JONES presented a memorial of the Commercial Club, of Hoquiam, Wash., remonstrating against the repeal of the provision in the Panama Canal act exempting American coastwise shipping from the payment of tolls, which was referred to the Committee on Interoceanic Canals.

He also presented memorials of sundry citizens of Seattle, Hoquiam, Renton, Olympia, Burlington, Spokane, Aberdeen, Bellingham, Tacoma, South Tacoma, Southbend, Roslyn, Port Angeles, Bremerton, and Walla Walla, all in the State of Washington, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. SMITH of Michigan presented petitions of the Women's Christian Temperance Union, of Burr Oak; of the congregations of the First Presbyterian Church of Hastings; the Methodist Episcopal Church of Howard City; the Methodist Episcopal Church of Buchanan; the First Baptist Church of Adrian; the United Brethren Church of Bates; and of the Young People's Society of Christian Endeavor of the Methodist Episcopal Church of Adrian, all in the State of Michigan, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of Hackett Corps, No. 60, Women's Relief Corps, of Bronson, Mich., remonstrating against any change being made in the American flag, which was referred to the Committee on the Judiciary.

He also presented a petition of Holland Camp, No. 38, United Spanish War Veterans, of Holland, Mich., praying for the enactment of legislation granting pensions to widows and orphans of soldiers and sailors who served in the Spanish-American War, which was referred to the Committee on Pensions.

Mr. WEEKS presented memorials of Local Union No. 77, Bartenders' Union, of Boston; of Local Union No. 113, Bartenders' Union, of Northampton; of the German-American Alliance, of Clinton; of Local Union No. 90, Bartenders' Union, of Lawrence; and of Local Union No. 95, Bartenders' Union, of Worcester, all in the State of Massachusetts, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of Jefferson Branch, American Continental League, of New Bedford, Mass., and a memorial of the Past Presidents' Association, Ancient Order of Hibernians, of Middlesex County, Mass., remonstrating against an appropriation for the celebration of "One hundred years of peace among English-speaking peoples," which were referred to the Committee on the Judiciary.

Mr. BRADLEY. I present 178 individual memorials from citizens of Kentucky, remonstrating against the passage of the joint resolution proposing an amendment to the Constitution for the prohibition of the manufacture and sale of alcoholic liquors. I ask that the memorials may be received and referred to the Committee on the Judiciary.

The VICE PRESIDENT. The memorials will be referred to the Committee on the Judiciary.

Mr. BRADLEY presented a petition of Ashland Council, No. 143, Junior Order United American Mechanics, of Ashland, Ky., and a petition of sundry citizens of Newport, Ky., praying for the enactment of legislation to provide an educational test for immigrants to this country, which were referred to the Committee on Immigration.

He also presented a memorial of 255 citizens of the first congressional district of Kentucky, and a memorial of sundry citizens of Kenton, Ky., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

## WOMAN SUFFRAGE.

Mr. WORKS. Mr. President, a few days ago there was printed in the RECORD at my request an address of some of the women of California on the subject of woman suffrage, and particularly intended to show what has been the effect of suffrage in that State. Since that time the whole subject has been very thoroughly discussed on the floor of the Senate.

In the meantime an investigation has been made by some of the women of England along the same line. The North American Review, in its last issue, contains a summary of the results, giving the questions that were sent out and their answers. I should like to have that statement printed in the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

### THE WORKING OF EQUAL SUFFRAGE.

The extraordinary uses to which the national platform of the dominant political party have been put of late call for more precise analysis and more extended consideration than can well be accorded in this number of the Review. In passing, however, while cheerfully heeding the call of consistency to indorse the Kansas farmers' opinion that "there is a mighty smart man in the White House," we can not but question the sagacity of the President's response to the advocates of equal suffrage who sought his aid and uncommon counsel. To hold seriously, in view of certain unauthorized proposals already made to Congress, that he could not properly urge legislation not yet subjected to "organic consideration,' seems altogether too much like shilly-shallying behind an unpetticoated platform.

Mr. UNDERWOOD defined the traditional Democratic position perfectly when he replied that all matters of the franchise were reserved to the States, and that, consequently, the suggestion of Federal action could not be entertained. Possibly Mr. Wilson felt that he could not well make his wholly natural and conclusive rejoinder while simultaneously he was demanding presidential primaries, but if so the circumstance is unfortunate in consideration of the fact that more than one-sixth of the electoral vote in 1916 will come from States where women vote.

But it is not the political aspect of this incident, nor, indeed, the incident itself in its broader phase, that now engrosses our attention; it is the working of equal suffrage in actual practice as ascertained by an impartial investigating committee composed of 12 distinguished English

ladies, headed by Adeline, Duchess of Bedford, and the Marchioness of Salisbury. These ladies obtained letters of introduction to a representative selection of prominent citizens of the States concerned—clergy and ministers of different denominations, lawyers, educationalists, publicists, business men, former holders of public office, and the like, and a few eminent women; to all of whom a list of questions was forwarded, accompanied by the following appeal:

"Several Englishwomen who are much interested in the question of the enfranchisement of women are desirous of knowing how it works in the States of America where it has been put into operation.

"They hold very different views on this subject, some being in favor of the change and some against it, but they all wish to know the result in these countries where it has been tried.

"They therefore beg that you will answer the questions on the inclosed paper, or as many of them as you can, and return it in the addressed envelope which is inclosed."

Sixty-three replies were received, and are summarized in the Nineteenth Century from the suffragist and antisuffragist points of view by the Hon. Robert Palmer and Mr. A. MacCallum Scott, M. P., respectively. A rough classification shows 46 favorable to equal suffrage, as against 8 neutral, 5 vaguely unfavorable, and only 4 definitely hostile. This Mr. Palmer pronounces "a very striking result," showing that the principle "is passing from the realm of controversy to that of universal approval among those who have seen it at work." Following is a consensus of the replies under the seven headings into which the questionnaire was divided:

"Q.1. Reasons for adoption.

"(a) Was it a party question?—A. Nowhere, except partially in California and Colorado.

"(b) Was there militancy?—A. None anywhere.

"(c) Where did the strength of the movement and opposition to it lie?—A. Strength mainly came from 'moral' influences and women's clubs; opposition from saloons and machine politicians.

"Q.2. Conditions.

"A. The qualifications are the same for men as for women; about 15 per cent fewer women are on the register, on an average; women are everywhere eligible to the legislature.

"Q.3. How is the vote exercised?

"(a) What percentage polls?—A. About 5 per cent fewer than men, on an average.

"(b) Have women formed new parties?—A. Nowhere.

"(c) Is the balance of existing parties altered?—A. No.

"(d) Do wives vote with their husbands?—About half say 'yes' and half 'no'; clearly individuals vary.

"(e) Has the female vote affected the character of candidates for offices?—Thirty-eight replies say 'yes,' often quoting instances; 13 say 'no.'

"Q.4. How has equal suffrage affected women's position?

"(a) Has it caused ill feeling between men and women?—Over 50 say 'no'; 2 say 'yes.'

"(b) Has it increased women's interest in politics?—Over 50 say 'yes'; about 6 doubt it.

"(c) Has it impaired their usefulness in the home?—Nearly 50 replies say 'no'; 8 say that in some cases it has. One picturesque answer perhaps hits the nail on the head in saying 'your flannel-mouthed suffragist is not a home-making woman at all.' But, after all, it is the agitation for suffrage which breeds the flannel-mouthed type; the grant quiets them.

"Q.5. Is there any agitation for its repeal?

"A. None.

"Q.6. What is your general impression of the change?

"A. This has already been summarized.

"Q.7. What legislation dealing with the following subjects has been passed since the women had the vote? Can the influence of the female vote be traced in any such legislation?

"(a) Conditions of female labor.

"(b) Protection of women and girls.

"(c) Temperance.

"(d) Education.

"(e) Sanitation and milk.

"(f) Industrial arbitration.

"(g) Widows' pensions.

"(h) Divorce."

Legislation on subjects a, b, and g is recorded in every suffrage State except Kansas, which had had no legislation since the grant, and "useful laws" have been passed in all of the States except Oregon and Arizona on subjects a, b, c, d, e, f, and g. The questionnaire selects the eight subjects on which it is thought women are most likely to use their votes. The replies from Washington and California, where three and two sessions, respectively, have been held since the grant of woman suffrage, show that the legislatures of both have already passed laws on seven out of those eight subjects in those sessions. On the "coincidence" theory the odds would be almost infinitely against such a thing happening, and when we find 21 answers from these two States affirming in unequivocal terms that these laws have been carried by means of the women's votes, no impartial mind can resist the conclusion that such is the truth. And in the still more extreme case of Oregon, where equal suffrage had been in force nine months, the only reply which deals with this part of the questionnaire enumerates laws of 1913 on subjects a, b, e, and g, and adds: "These were all due to the influence of women."

It may be further mentioned in this connection that on the only two of these eight topics on which reliable information covering all the States of the Union is to hand at the moment, namely, widows' pensions and the protection of girls by raising the age of consent to 18, the proportion of suffrage States which have legislated on these points is strikingly higher than that of nonsuffrage States. Thus 17 States altogether have widows' pension laws. Of these, 6 are suffrage States and enacted the laws since becoming so, and 11 are nonsuffrage. But the 6 are 6 out of 9 (2 of the remaining 3 having had equal suffrage less than a year), and the 11 are 11 out of 39. Similarly, of the 9 suffrage States, 7 have raised the age of consent to 18 since granting equal suffrage (an eighth having done so just before the grant), while of the nonsuffrage States the figures for 1911–12 (the latest available) show that then only 4 out of 39 had so raised it.

The eight neutral answers are perhaps the least instructive, as they come from those who either think it is too soon to judge or from those who have not observed any results from the change which justify a definite opinion. Not one of them mentions a single evil result, or fear of any, from the grant of equal suffrage.

The answers classed as vaguely unfavorable read like those of men who were opposed to woman suffrage and still bear it a lingering grudge, but can find no definite charge to lay against it. Most of them describe themselves as neutral. The worst they can find to say are the following: "Personally I do not believe in women voting, but I believe we can not help it." "Much freak legislation, possibly due to women's influence." "Nothing accomplished which could not have been done as well or better without suffrage." These are absolutely the three most unfavorable phrases in these answers, which can none of them allege any definite harm to have resulted from women's votes, while four of the five admit some definite good.

Of the four definitely antisuffragist replies, the following is a fair example:

"I should say * * * that women's suffrage has not affected the situation in legislation at all. It has added an increased responsibility, which responsibility has, I think, been well borne, and it has sharpened animosities and lengthened them. Plainly speaking, the granting of the suffrage is an increase of the ignorant vote. That it has not been so in Wyoming is due to the fact that * * * there is a very high intellectual average among our women. The experience of Wyoming is no guaranty of the effect of suffrage where conditions are different."

"And this," remarks Mr. Palmer, "is what on a rough classification was set down as one of the four hostile replies. On second perusal, its place seems to be rather (unconsciously) among the most favorable. For here an obviously 'unfriendly witness' coming from the Eastern States (where he had not seen equal suffrage at work), full of prejudice against it, tries to answer that it has been a failure, and is inadvertently betrayed into admitting that it is a success, but hastens to add that it might very likely be a failure somewhere else. The rest of the replies are uniformly favorable."

He concludes with these words:

"Is not the matter quite fairly stated thus? If the women of England use their votes in the same kind of way and on the same kind of subjects as the women of these nine American States are stated to be using them, then the grant of woman suffrage will surely be a notable gain to England's welfare. And is there any ground whatever for supposing that they will use them otherwise or less sensibly? Let us leave it at that."

Mr. MacCallum Scott's summary differs in no material point from Mr. Palmer's. Indeed, the most noteworthy feature of both reviews is the scrupulous impartiality of admitted partisans as to matters of fact. But each is "of the same opinion still." Mr. Scott sums up as follows:

"The conclusion to which I have come after reading through all the answers is that women through their votes have had some influence, quite different from the moral influence which they exercise without the vote, upon legislation. It is difficult to define this influence precisely. Frequent reference is made to the manner in which 'moral issues' appeal to women. I can not accept the view occasionally expressed that women have 'a somewhat higher moral standard' than men, but it is quite possible that, holding the same moral standard, they may give different effect to it in politics.

"I am impressed by several suggestions that women are much stricter and more ardent partisans than men; that they look to moral character in candidates rather than to ability; and that they have, in a greater degree than men, 'a tendency to regulate morals by law.' Men are on the whole more tolerant than women and inclined to allow a wider latitude of personal moral freedom so long as the rights of others are not interfered with. Women are, on the whole, more inclined to make their personal moral code a moral code imperative for others also and to apply coercion to secure conformity.

"Coercive legislation, depending as it does upon the physical arm of the law for its enforcement, if it is to be effective, must have behind it the physical strength of the country. If the majority of men should be against it, if its chief support comes from women who, while unable as individuals to exercise physical coercion, are yet able, through the ballot box, to evoke the physical arm of the law, then there is grave danger in extreme cases of a general conspiracy to evade the law. Authority, finding itself with a task beyond its power, will wink at the offenders. Law will fall into disrespect. There will gradually grow up a hypocritical feeling toward legislation. 'What does it matter what they pass? Let them pass anything they like, and if we find it inconvenient we will evade it.' If this became a general attitude, it would destroy that sense of responsibility and of respect for law which is the firmest foundation for stable government."

Suffragists will take slight exception to an argument whose sole basis is vague apprehension that the enactment of better laws will imbue men as a sex class with a spirit of law defiance. The plain logic of such reasoning is that it is not women, but men, who are unfitted to perform the duties of citizenship.

Taken as a whole, the result of the interesting inquiry constitutes a powerful backlog of evidence in favor of equal suffrage.

## PANAMA CANAL TOLLS.

Mr. WORKS. I ask that a resolution of the Associated Chambers of Commerce of the Pacific Coast, relating to Panama Canal tolls, may be printed in the RECORD.

There being no objection, the resolution was referred to the Committee on Interoceanic Canals and ordered to be printed in the RECORD, as follows:

THE ASSOCIATED CHAMBERS OF COMMERCE
OF THE PACIFIC COAST,
*February 21, 1914.*

Hon. JOHN D. WORKS,
*United States Senate, Washington, D. C.*

DEAR SIR: The Associated Chambers of Commerce of the Pacific Coast submit for your careful and favorable consideration the inclosed copy of a resolution, relative to Panama Canal tolls, adopted January 24, 1914.

Yours, very truly, C. W. BURKS, *Secretary.*

Resolution adopted by the Associated Chambers of Commerce of the Pacific Coast January 24, 1914.

Whereas on October 2, 1911, the Associated Chambers of Commerce of the Pacific Coast, at a meeting at which were present representatives of the Chambers of Commerce of San Francisco, Los Angeles, San Diego, Oakland, Portland, Tacoma, Seattle, and Spokane, adopted the following preamble and resolutions by a unanimous vote:

"Whereas the building of the Panama Canal was undertaken by the people of the United States in pursuance of the great national policy, amongst other things of providing for the national defense, of opening up the shortest possible water route between the respective coasts of the United States and foreign countries, to provide, through natural methods and to prevent monopoly of transportation, means for transportation between the various sections of the Union at the lowest possible cost, to build up and expand our commerce with foreign nations and incidentally to encourage the upbuilding of a now decadent merchant marine: Be it

"*Resolved*, That it is the sense of this meeting that there should be no tolls charged through the canal to vessels coastwise flying the American flag;" and

Whereas Congress in due time passed a law for the regulation of the Panama Canal, which includes the provision exempting American ships engaged in the coastwise trade from the payment of tolls for the passage of ships through said Panama Canal; and

Whereas a protest has been filed by the Government of Great Britain against this provision upon the ground of the provision of the Hay-Pauncefote treaty, which reads: "The canal shall be free and open to the vessels of commerce and war of all nations observing these rules on terms of entire equality"; and

Whereas for the reason that ships flying a foreign flag have not been and are not now permitted by law to engage in the coastwise trade, and are therefore not affected by any concession which the United States Government may desire to extend to American vessels engaged in the coastwise trade, and such concession is not in contravention of the treaty; and

Whereas the river and harbors act of 1884, section 4, uses the following language:

"No tolls or operating charges whatever shall be levied upon or collected from any vessel, dredge, or other water craft for passing through any lock, canal, canalized river, or other work for the use and benefit of navigation now belonging to the United States or that may be hereafter acquired or constructed"; and

Whereas from the point of view of the membership of the Associated Chambers of Commerce of the Pacific Coast no tenable or reasonable ground can be found for the contention for the claim advanced by Great Britain: Therefore be it

*Resolved by the Associated Chambers of Commerce of the Pacific Coast*, That we disclaim any intention or desire to avoid in the slightest degree any treaty obligation of the United States; that we claim for the people of the United States and for those of the Pacific coast as sensitive a regard for treaty obligations, or obligations of any other sort, as those held by the citizens of any other country, and particularly those of Great Britain, to whom we concede a high regard for all such obligations. Nevertheless, in a matter of such great importance as that under consideration, in which we feel that the interests of all the people of the Pacific coast are deeply involved, we can not concede to any foreign Government the right to interpret a matter which we regard as being one entirely within the powers of the American Government, namely, that of prescribing the terms upon which American vessels may do business through an American-constructed canal with other American ports, in which business the vessels of no foreign country can or has engaged; be it further

*Resolved*, That the President and Congress are hereby urged, with all proper courtesy and respect to the Government of Great Britain, to stand firmly upon the principle herein set forth, and to refuse to have stricken from our statute books, or from actual enforcement, the law exempting from tolls through the Panama Canal of American ships engaged in the coastwise trade; be it further

*Resolved*, That certified copies of these resolutions be transmitted by the president and secretary of this Associated Chambers of Commerce of the Pacific Coast to the President of the United States, to the several members of his Cabinet, and to each of the Senators and Representatives in Congress, and to the Chamber of Commerce of the United States of America.

THE ASSOCIATED CHAMBERS OF COMMERCE OF THE PACIFIC COAST.
ARTHUR W. KINNEY, *President*.
C. W. BURKE, *Secretary*.

## CONDITIONS IN MEXICO.

**Mr. SHEPPARD.** Mr. President, I have here several telegrams that I have received in reference to the position I took on Monday upon the Mexican situation. I should like to have them read at the desk. I shall omit the personal portions of the telegrams.

**The VICE PRESIDENT.** Is there objection to reading the telegrams? The Chair hears none, and the Secretary will read them.

The telegrams were read, as follows:

[Telegram.]

BROWNSVILLE, TEX., *March 10, 1914*.

Hon. MORRIS SHEPPARD,
*Washington, D. C.:*

Ten good citizens who recently made a trip of 400 miles along the border, and hundreds of good citizens, will back your statements.

D. P. GAY.

[Telegram.]

HOUSTON, TEX., *March 10, 1914*.

Hon. MORRIS SHEPPARD,
*Washington, D. C.:*

Your defense of our great President's Mexican policy expresses the sentiments of not only myself but thousands of other patriotic peace-loving citizens of this great Commonwealth.

WM. N. LOWRY.

[Telegram.]

WICHITA FALLS, TEX., *March 10, 1914*.

Hon. MORRIS SHEPPARD,
*Washington, D. C.:*

Your speech yesterday was to the point. Texans are with you.

J. T. YOUNG.

[Telegram.]

AUSTIN, TEX., *March 10, 1914*.

Hon. MORRIS SHEPPARD,
*United States Senate, Washington, D. C.:*

Have just read your speech regarding the attitude of Texans generally as to intervention in Mexico. I wish to assure you that you have truthfully stated the feeling of the general public in Texas regarding the question.

E. B. YOUNG.

[Telegram.]

GREENVILLE, TEX., *March 10, 1914*.

Hon. MORRIS SHEPPARD,
*United States Senate, Washington, D. C.:*

You have voiced the sentiment of the overwhelming majority of the citizenship of Texas.

W. B. HAMILTON.
WM. PIERSON.
J. RILEY GREEN.
B. F. CORSBY.
GEO. B. HALL.
MORRIS HARRELL.
I. W. BRISCOE.
L. A. CLARK.
SAM D. STINSON.
A. E. EDWARDS.
C. E. CANTRELL.

[Telegram.]

HOUSTON, TEX., *March 10, 1914*.

Senator MORRIS SHEPPARD,
*Washington, D. C.:*

I believe that your speech of yesterday correctly expressed the attitude of this community.

HENRY J. DANNENBAUM.

[Telegram.]

HILLSBORO, TEX., *March 10, 1914*.

Hon. MORRIS SHEPPARD,
*Washington, D. C.:*

You are right on Mexican situation.

E. H. CRENSHAW.

## RESTRICTION OF IMMIGRATION.

**Mr. GRONNA.** Mr. President, I have here a letter which touches upon certain phases of the immigration bill that is now being considered by the Committee on Immigration, and which is a measure of very great importance to the country. I ask that the letter may be read.

**The VICE PRESIDENT.** Is there objection? The Chair hears none, and the Secretary will read as requested.

The letter was read and referred to the Committee on Immigration, as follows:

CHICAGO, *March 9, 1914*.

Hon. ASLE J. GRONNA,
*United States Senate, Washington, D. C.*

MY DEAR SENATOR: There is now pending in the United States Senate, for concurrence, a bill restricting immigration, known as the Burnett bill, recently passed by Congress. One of the clauses of the said bill requires the application of the literacy test to our immigrants as a condition precedent to landing. This clause is unfair, unjust, and unreasonable, and if adopted will work greater injury than good to this country.

My father came to this country in the early sixties. He came from Posen, that part of Poland taken by Germany. When he came here he did not know how to read or write. He worked on a farm, then in a factory, and later opened a little mercantile establishment which he conducted for 30 years. He learned not only how to write and read in his mother tongue but also the English language. He gave his children good education. He induced me to become a lawyer. I was admitted to the bar of my State, and through the courtesy of your late former colleague, Senator Cullom, I was admitted to practice in the United States Supreme Court.

Now, Senator, has this country lost anything in safety or dignity when it permitted him to land in the early sixties? Was it not rather a benefit to this country that he came, helped to develop and maintain it, and left posterity, who can still further aid this country in its development?

Senator, I am only one of the millions of sons of millions of immigrants who came to this country and who could neither read nor write, but who aided in the development of this country, and whose sons and daughters will carry on the work of their fathers still further.

You undoubtedly are apprised of the fact that certain Governments of Europe, either through deliberate neglect or design, cause and induce their subjects to remain illiterate. Shall these poor unfortunates find the gates of this country closed to them for the sins of their rulers? Will this country add to their already great sufferings by keeping them out of this land of liberty?

Will you say, Senator, that a healthy peasant, in whose veins flows pure blood, whose offspring is not tainted with any dreaded disease, and who is industrious and honest, though illiterate, is less desirable than a sickly, though educated, gentleman of the European centers? Would this country survive and be what it is to-day were the early settlers made of such sickly stock?

Senator, if you could come to Chicago I would show you in my office files of purchases of over $5,000,000 worth of real estate made by persons who signed their names by mark. I would take you to their homes. I assure you that never before have you seen a healthier lot of happy and contented, though poor, folks than they are. They are all law-abiding citizens. They are a little or no burden to the country. They pay their taxes promptly, and, if need be, Senator, they would shoulder the musket in the defense of the flag just as readily as a university professor. Is their presence a detriment to this country?

I therefore urgently request you to carefully consider the bill and vote so that the gates of this great land of liberty shall not be closed to the illiterate unfortunates.

Trusting, Senator, that you will vote against the bill, and thanking you for such step, I have the honor to remain,

Yours, very respectfully,

FRANK H. JANISZESKI.

## REPORTS OF COMMITTEES.

**Mr. SHIVELY**, from the Committee on Pensions, submitted a report (No. 322), accompanied by a bill (S. 4845) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, which was read twice by its title, the

bill being a substitute for the following pension bills heretofore referred to that committee:

S. 182. Lemuel White.
S. 186. Adaline Stoker.
S. 241. Robert A. Henderson.
S. 316. Katharina Britsch.
S. 329. Sarah L. Bentley.
S. 331. Elizabeth Fogg.
S. 332. Emily H. Bailey.
S. 336. Sarah McMunigal.
S. 353. Emma F. Dimmock.

S. 4605. Susanah S. Ramsey.
S. 4617. August Schnelle.
S. 4622. Daniel Prince.
S. 4659. Mary C. Grant.

Mr. NORRIS, from the Committee on Claims, to which was referred the bill (S. 1128) for the relief of Frederick J. Ernst, reported it with an amendment and submitted a report (No. 325) thereon.

He also, from the same committee, to which was referred the bill (S. 2304) for the relief of Chris Kuppler, reported it without amendment and submitted a report (No. 324) thereon.

Mr. HITCHCOCK, from the Committee on Military Affairs, to which was referred the bill (S. 1703) for the relief of George P. Chandler, reported it without amendment and submitted a report (No. 323) thereon.

HEARINGS BEFORE THE COMMITTEE ON FOREIGN RELATIONS.

Mr. SHIVELY, from the Committee on Foreign Relations, reported the following resolution (S. Res. 292), which was read and referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved*, That the Committee on Foreign Relations or any subcommittee thereof be, and the same is hereby, authorized to employ a stenographer from time to time, as may be necessary, to report such hearings as may be had on bills or other matters pending before said committee, and that said stenographer be paid as compensation not to exceed $1 per printed page out of the contingent fund of the Senate.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SMITH of Georgia:

A bill (S. 4846) granting an increase of pension to William P. Clark (with accompanying paper); to the Committee on Pensions.

(By request.) A bill (S. 4847) for the relief of the heirs of Anderson Mayfield, deceased (with accompanying papers);

(By request.) A bill (S. 4848) for the relief of the heirs of Blueford D. Smith, deceased (with accompanying papers); and

(By request.) A bill (S. 4849) for the relief of the heirs of Joseph Summerlin, deceased (with accompanying papers); to the Committee on Claims.

By Mr. SMITH of Maryland:

A bill (S. 4850) to amend an act entitled "An act to regulate the business of loaning money on security of any kind by persons, firms, and corporations other than national banks, licensed bankers, trust companies, savings banks, building and loan associations, and real estate brokers in the District of Columbia," approved February 4, 1913; to the Committee on the District of Columbia.

By Mr. THOMPSON:

A bill (S. 4851) granting an increase of pension to George F. Adamson (with accompanying papers); to the Committee on Pensions.

By Mr. LANE:

A bill (S. 4852) for the relief of Joe Davis; to the Committee on Claims.

A bill (S. 4853) for the relief of John J. Fisher; to the Committee on Military Affairs.

A bill (S. 4854) to authorize the establishment of fish-cultural stations on the Columbia River or its tributaries in the State of Oregon; to the Committee on Fisheries.

By Mr. McCUMBER:

A bill (S. 4855) to amend an act entitled "An act for the relief of the Colorado Cooperative Colony to permit second homesteads in certain cases, and for other purposes," approved June 5, 1900; to the Committee on Public Lands.

A bill (S. 4856) granting a pension to Elizabeth J. Mullin (with accompanying papers); to the Committee on Pensions.

By Mr. CLAPP:

A bill (S. 4857) for the relief of the St. Croix Chippewa Indians of Wisconsin (with accompanying papers); to the Committee on Indian Affairs.

By Mr. BORAH:

(By request.) A bill (S. 4858) to authorize the Secretary of the Interior to cancel and set aside segregations of public lands under the Carey Act, and to regulate the same; to the Committee on Public Lands.

A bill (S. 4859) granting a pension to Sarah E. Badley (with accompanying papers); to the Committee on Pensions.

By Mr. NELSON:

A bill (S. 4860) granting an increase of penson to John M. Broome; to the Committee on Pensions.

By Mr. KERN:

A bill (S. 4861) granting a pension to Caroline B. Sloan; to the Committee on Pensions.

A bill (S. 4862) for the relief of William E. Murray; to the Committee on Claims.

By Mr. SHIVELY:

A bill (S. 4863) granting an increase of pension to John N. Hutton; to the Committee on Pensions.

By Mr. TILLMAN:

A bill (S. 4864) to amend an act entitled "An act to promote the administration of justice in the Navy," to amend section 1624 of the Revised Statutes, and for other purposes; to the Committee on Naval Affairs.

By Mr. JONES:

A bill (S. 4865) granting a pension to George W. Smith, alias George Smith; to the Committee on Pensions.

By Mr. BRADLEY:

A bill (S. 4866) granting an increase of pension to James K. Wesley (with accompanying papers);

A bill (S. 4867) granting an increase of pension to Martha A. Rake (with accompanying papers); and

A bill (S. 4868) granting an increase of pension to Elizabeth Crawford (with accompanying papers); to the Committee on Pensions.

By Mr. FLETCHER:

A joint resolution (S. J. Res. 122) authorizing the Secretary of War to loan certain tents for the use of the Confederate Veterans' Reunion to be held at Jacksonville, Fla., in May, 1914; to the Committee on Military Affairs.

DONATION OF FLAG TO WILLIAM B. CUSHING CAMP.

Mr. KENYON. I introduce a joint resolution authorizing the Secretary of War to furnish a garrison flag, and when necessary to refurnish it, to William B. Cushing Camp, No. 30, Sons of Veterans, of Maryland, and I ask unanimous consent for its immediate consideration. It will take no time at all, I think.

The VICE PRESIDENT. The joint resolution will be read at length.

The joint resolution (S. J. Res. 121) authorizing the Secretary of War to furnish one United States garrison flag to William B. Cushing Camp, No. 30, Sons of Veterans, was read the first time by its title and the second time at length, as follows:

*Resolved, etc.*, That the Secretary of War be, and he is hereby, authorized and directed to furnish to the William B. Cushing Camp, No. 30, Sons of Veterans, Division of Maryland, and refurnish whenever he shall deem it necessary, one United States garrison flag, for the purpose of being displayed from one of the three flagstaffs on the Plaza in front of the Union Station, Washington, D. C.: *Provided*, That the raising and lowering of said flag shall be done without expense to the United States Government.

The VICE PRESIDENT. Is there objection to the present consideration of the joint resolution?

Mr. SMOOT. The joint resolution has not been referred to a committee?

Mr. KENYON. It has not.

Mr. SMOOT. I think a joint resolution ought to be referred to the appropriate committee and reported from the committee the same as a bill.

Mr. KENYON. If that is usual, I assume it must be done, but I do not see any need of referring it to a committee. This is a matter about which no one will raise a question.

Mr. SMOOT. That is not what I speak of. A joint resolution, like a bill, is always referred to the appropriate committee first, and then reported, and when the committee reports unanimous consent can then be asked for its immediate consideration.

Mr. KENYON. Of course the Senator is more familiar with the rules than I am. Is that a rule of the Senate, or merely a suggestion of the Senator?

Mr. SMOOT. I will not say that there is a rule on the subject.

Mr. KENYON. Then what is the use of referring it? Is there any objection?

Mr. CLAPP. It will merely take time to refer it.

Mr. McCUMBER. I understood that the Senator from Iowa asked unanimous consent for present consideration. That disposes of any rule, if it is granted.

Mr. OVERMAN. I will inquire whether there is an appropriation provided for in the joint resolution.

Mr. KENYON. There is none. There is not any expense involved to the Government except to furnish the flag. The Government has plenty of flags, I am informed, for this purpose.

Mr. WILLIAMS. To whom is it proposed to furnish the flag?

Mr. KENYON. To Camp No. 30 of the Sons of Veterans, to be displayed on one of the flagpoles in front of the Union Station. There will be no expense to the Government in any way.

There being no objection, the joint resolution was considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. THOMPSON submitted an amendment proposing to appropriate $40,000 for the erection of a gymnasium for the use of the pupils at the Indian school, Haskell Institute, Lawrence, Kans., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

Mr. CLAPP submitted an amendment authorizing the Secretary of the Interior to sell the merchantable timber on all unallotted lands within the Bad River Indian Reservation, Wis., etc., intended to be proposed by him to the Indian appropriation bill, which was ordered to be printed and, with the accompanying paper, referred to the Committee on Indian Affairs.

Mr. FLETCHER submitted an amendment intended to be proposed by him to the river and harbor appropriation bill, which was referred to the Committee on Commerce and ordered to be printed.

Mr. WEEKS submitted an amendment providing that any officer of the United States Navy who served creditably during the Civil War and whose name is now borne on the list of retired officers of the Navy shall have the benefit of all laws in the same manner and to the same extent as though such officer had been retired for disability, etc., intended to be proposed by him to the Naval appropriation bill, which was referred to the Committee on Naval Affairs and ordered to be printed.

OMNIBUS CLAIMS BILL.

Mr. SMITH of Georgia submitted three amendments intended to be proposed by him to the omnibus claims bill, which were ordered to be printed and, with the accompanying papers, referred to the Committee on Claims.

CONVICT-MADE GOODS (S. DOC. NO. 446).

Mr. BRANDEGEE. I have a copy of a hearing had before a subcommittee of the Senate Committee on the Judiciary in the second session of the Sixty-second Congress on the bill to regulate interstate commerce in convict-made goods. I ask that the hearing may be printed as a public document.

The VICE PRESIDENT. Without objection, it is so ordered.

PRESIDENTIAL PRIMARIES.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a previous day, which will be read.

The resolution (S. Res. 284) submitted by Mr. CUMMINS on the 5th instant was read, as follows:

*Resolved*, That the Committee on Privileges and Elections be discharged from the further consideration of Senate bill 773, being a bill to establish a primary election for the nomination by political parties of candidates for President and Vice President of the United States, and for other purposes.

The VICE PRESIDENT. The Chair understands the resolution is to lie over without prejudice.

PANAMA CANAL TOLLS.

Mr. SMITH of Maryland obtained the floor.

Mr. JONES. Is there not another resolution on the desk of the Vice President—Senate resolution 288—calling for information in reference to Panama Canal tolls?

The VICE PRESIDENT. That is a resolution submitted by the Senator from Washington and which he requested should lie on the table.

Mr. JONES. I simply asked the other day that the resolution be passed over until the next day; that is all. I am now merely going to make the request that it be passed over until tomorrow, in view of the desire of the Senator from Maryland [Mr. SMITH] to take up the District appropriation bill.

The VICE PRESIDENT. The resolution to which the Senator refers is on the Table Calendar.

Mr. JONES. I did not understand that it was to be placed on the Table Calendar. I thought the resolution was to be like other resolutions that go over from day to day, which are handed down by the Chair.

The VICE PRESIDENT. The Chair has no knowledge as to whether or not the RECORD is right, but the RECORD shows that the Senator from Washington requested that the resolution lie on the table.

DISTRICT OF COLUMBIA APPROPRIATION BILL.

Mr. SMITH of Maryland. I ask unanimous consent that the Senate proceed to the consideration of House bill 10523, the District of Columbia appropriation bill.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 10523) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1915, and for other purposes.

Mr. SMITH of Maryland. Mr. President, before proceeding with the reading of the bill, I wish to make a short statement in regard to the work of your committee. We have endeavored, in reporting this bill, to make it fair and just; we have given four weeks of hearings to those who desired to be heard upon the different matters concerning the District of Columbia; we have endeavored to gather all the facts and to get all the information possible, I might say, regarding almost every item in the bill; and we believe we have the facts. We believe the bill has been thoroughly digested by your committee, and we believe also that the items contained therein represent the interests of the District of Columbia. We hope the bill will be acceptable to this body.

The VICE PRESIDENT. The pending amendment will be stated.

The SECRETARY. The pending amendment is the amendment reported by the Committee on Appropriations, in line 5, page 2, to strike out "$5,000" and to insert "$6,000," so as to read:

Two commissioners, at $6,000 each.

Mr. SMOOT. Mr. President, I ask that the first two committee amendments to the bill be passed over without prejudice, to be recurred to after the other committee amendments have been considered.

Mr. THOMAS. Mr. President, I have not been able to examine this bill carefully, as I wish and expect to do before its final passage, but such examination as I have made discloses the fact that there is, generally speaking, a constant series of amendments proposed by the Senate committee which, almost without exception, increase the appropriations of the other House, already too large, in my judgment, and which aggregate an increase over the House bill of $1,709,105. The report of the committee also shows an increase in the aggregate amount of proposed appropriations over the law of 1914 of $1,753,017.49. A number of additional places also have been created—how many I have not yet estimated, but there are quite a number of them. Of course these involve salaries and are permanent in their character, for it may be stated almost as an axiom that an office once created is like Tennyson's Brook, "it goes on forever." It is easy enough, in other words, to create these extra positions, but it is extremely difficult to do away with them.

Mr. President, I shall not occupy the time of the Senate by interposing specific objections to each of these proposed amendments as they occur in the bill, and therefore I want, in a general way, as one Member of this body and as a Member of the majority, to record my protest against the constant tendency to increase appropriations in this body and to multiply the number of public officials.

The aggregate appropriations of the United States Government are appalling, and they are increasing by leaps and bounds. In fact, the tendency everywhere seems to be to make demands upon the Treasury of the United States, not only for public but for private purposes. The Treasury is regarded as a fountain of mercy, free to all, and reachable largely through the agency of the United States Senate. What the ultimate end of these conditions is to be no man can tell, but certain it is that the tendency grows by what it feeds upon. This condition has attracted public attention for a long time, and justly so; yet that public attention does not seem to have crystallized into an adverse public sentiment sufficiently strong to control or influence the action of the Congress of the United States in the direction of a sound economy.

At Baltimore year before last, Mr. President, the Democratic Party went on record against what it called "Republican extravagance." I want to read into the RECORD what we then said upon this subject:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

Mr. President, this is a terrific arraignment of our political opponents as to their administration of the financial end of the Government. We not only accused them, we denounced them for a—

profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations * * * which have kept taxes high and reduced the purchasing power of the people's toil.

That was either true, Mr. President, or it was false. If it was true, we certainly should not pay the Republican Party the compliment of servile imitation. If it was false, we should apologize to the Republican Party for this denunciation upon which we went to the people and asked for their votes.

Mr. SMOOT. Mr. President——

Mr. THOMAS. But we are imitating that policy by increasing all appropriations; in other words, to use a slang expression, we are "seeing the Republican Party and going them one better." I yield to the Senator from Utah.

Mr SMOOT. Mr. President, I merely wish to suggest to the Senator in that connection that perhaps it would be well to state that the appropriations this year will be at least $100,000,000 more than the appropriations for any one year in the history of this country.

Mr. OVERMAN. How does the Senator know that when the appropriation bills have not been passed?

Mr. SMOOT. I will say to the Senator that if after all the appropriation bills have been passed it turns out that I am mistaken, I would like him to call my attention and also the attention of the Senate to it.

Mr. OVERMAN. I will do so, and I think the Senator will need to make an apology then, because I do not think the appropriations will be anything like the amount he suggests.

Mr. THOMAS. If it should so turn out, I presume we will have to take refuge in Lord Clive's celebrated apology and "stand astonished at our own moderation."

Mr. McCUMBER. Mr. President——

Mr. THOMAS. I yield to the Senator.

Mr. McCUMBER. I will say to the Senator that the Republican Party is ready now to accept an apology from the other side for this wrongful accusation.

Mr. THOMAS. So far as I am concerned, I am not yet ready to extend it, but I will be among the first to extend it if the tendency, which is now so manifest upon this side of the Chamber, shall materialize, as now seems probable.

Mr. GALLINGER. Mr. President, a single observation. I trust that no political controversy may arise in the Senate over the question of economy when we are considering the District of Columbia appropriation bill. It is a small bill at best, and it is an absolutely necessary bill. The committee has been very moderate in the increases they have attached to the bill.

Mr. THOMAS. Oh, Mr. President, that is the explanation, if not the apology, that is made for every increase in public expenditure—"it is only a little thing; let it go." Why, Mr. President, the accomplishments of men are made up of little things. A nickel is a little thing, and yet the accumulated nickels of the public constitute the revenues of our great public utility transportation concerns, meet their fixed charges, and pay their dividends.

Mr. GALLINGER. That is undoubtedly true, and some of us count our nickels very closely; but we have a statute, not created by the District of Columbia but by the Federal Government, whereby we have promised to pay to support this Capital of ours an equal amount to the amount contributed by the District. The people of the District of Columbia have been taxed and an amount of money has been raised, and as the bill stands to-day, with the increases made by the Senate committee, there is a balance of $670,000 which will revert to the treasury of the District of Columbia or to the Treasury of the United States. So it seems to me that we ought not to be parsimonious in making our appropriations to meet the amount raised by taxation from the citizens of this great Capital.

Mr. THOMAS. Mr. President, if the argument of the Senator from Massachusetts amounts to anything—and I, of course, treat it with the utmost respect——

Mr. LODGE. Mr. President, the Senator from Massachusetts has said nothing.

Mr. THOMAS. I meant to have said "the Senator from New Hampshire."

Mr. GALLINGER. I am very much gratified to have the Senator make the mistake.

Mr. THOMAS. I think it is an honor to represent either of those great Commonwealths in this great body, consequently I do not think I should apologize to either Senator.

Mr. SMITH of Maryland. Mr. President, if the Senator——

Mr. THOMAS. I was simply going to say, if the Senator from Maryland will allow me, that if the logic of my distinguished friend from New Hampshire is cogent, then Congress must raise its appropriations for the District of Columbia under an existing statute as the assessments and levies are raised by the governing body of the District; in other words, the amount of our appropriations is determined, not so much by ourselves as by the action of the local authorities with reference to the local revenue. I do not think we can concede any such position. I yield to the Senator from Maryland.

Mr. SMITH of Maryland. Mr. President, I desire to say to the Senator that there has been no extravagance manifested on the part of the committee; on the contrary, we have appropriated for the purposes of the District government less by $1,346,358 than was estimated by the commissioners.

Mr. KERN. Less than they asked for?

Mr. SMITH of Maryland. Less than they have asked for. We have also appropriated less than would be justified under the estimated revenues of the District for 1915 on the half-and-half basis by $670,435.59. I think, if the Senator will take the pains to look at the items one by one for which the appropriations have been made, he will not feel that he is justified in censuring the committee for making the appropriations they have made.

Mr. THOMAS. Mr. President, I am not disposed to measure the wisdom or the unwisdom of a congressional appropriation by the standard of the estimates made by those who want and demand and who will expend the moneys when they are appropriated. In saying that I am not reflecting, or, at least, I am not purposely reflecting, upon the good faith or the integrity of the officials of the District of Columbia.

I want to say, too, partly in reply to the suggestions of the Senator from New Hampshire, that my position is not aimed at this particular bill. I was unable on account of illness to be in attendance here when the Post Office appropriation bill was the subject of consideration. If I had been here, I would have said then what I am saying now, my purpose being, so far as I am individually concerned, to record a protest against what seems to me to be a disregard, if not a violation, of one of the planks of the Baltimore paltform upon which the Democratic Party came into power. We either meant what we said then or we did not. If we meant what we said, let us try to live up to it; if we did not, the sooner we acknowledge the fact and confess that the Democratic Party was engaged in a campaign of deception in so far as public expenditures are concerned, the better it will be for us and for the country. I know the temptations, the influences, the pressure that are brought to bear upon Members of both Houses of Congress by those who absolutely need appropriations, as well as upon the part of those who think they need them; and I know how difficult it is, in individual instances, to resist such suggestion as the Senator from New Hampshire has advanced. It appears everywhere along the line. It is the chronic argument, "This particular thing amounts to but little; it cuts no figure," so to speak, "one way or the other," and as a consequence it is allowed either in whole or in part and seldom rejected. It is not peculiar to this committee. It permeates the atmosphere of financial legislation everywhere.

Of course I recognize the fact that there are some increased appropriations that we must make. For example, there are a great many public buildings provided for, and a great many sites provided for. They may not have been wisely provided for, in the first instance, but the fact still remains that the amount of appropriation for them is inadequate to the end desired. As to matters of that kind, of course, increases are expected and desired, and should be given. I venture the prediction, however, that not a single great appropriation bill will come to this body but that it will be reported out, in all probability, with increased instead of decreased appropriations. That seems to be the history of the Senate.

Mr. OVERMAN. Mr. President, may I interrupt the Senator for a moment?

Mr. THOMAS. Certainly.

Mr. OVERMAN. I agree with the Senator in everything he has said. I think we are running wild on appropriations. The way to stop these increases is to sit in your seat and watch every item. If Senators would stay here and watch and discuss these increases, as they ought to do, while appropriation bills are being considered, instead of going to the cloakrooms, they would be doing great good.

Mr. THOMAS. I agree to that, also; and yet we know that there are many things which distract the attention of individual Members of this body. We can not all be here constantly. It is a good thing in theory, but it is almost impossible in practice. Of course I am one of those who try to be here as much as possible.

Mr. OVERMAN. I am not criticizing the Senator. I said that on general principles.

Mr. THOMAS. I fully understand that, and I fully agree that there should be a greater attendance on both sides of the Chamber when appropriation bills are considered, whether they be great or whether they be small. I am not going to object to each individual item of increase, although I am against every one of them; but I simply wish now to record my protest once more against the inevitable and just consequences of disregard of our insistence to the people with reference to the subject of expenditures, with reference to the creation of useless positions, and with reference to the general subject of appropriations.

I desire to say before I take my seat, and I think it is no more than fair to say, that the Republican Party should not be

arraigned for profligate extravagance in the sense in which the people understand the expression, and possibly in the sense in which it was intended to be understood when that expression was incorporated into our platform. It is one of the usual practices, and a very commendable one, for the great political parties, as they alternate in power, to criticize and denounce vehemently their opponents' appropriations of the public funds. It is one of the good things in republican government, and, properly used, tends of course to economy and to a proper limitation of appropriations for governmental purposes.

The people of the United States, however, are very largely to blame for this condition. I am sorry to say there is not in the public mind the general desire and demand for the economical administration of public affairs that there should be, very largely because of the fact that each and every one seems anxious to secure something from the Public Treasury, irrespective of the fact that it can be replenished only by processes of taxation—by taking the money of the people, rich and poor, high and low, from them, ostensibly for public purposes.

I think, therefore, it would be better for us to take this bill as it came from the House and pass it without increasing one dollar of the amount appropriated. So far as the House is concerned, I believe it is just as subject to the reflections I am making as is this body, except in so far as the tendency of this body goes to increase appropriations.

Speaking specifically, I notice here one appropriation of $300,000 for a hospital which is something new. It is to be named after one of our most distinguished Members, a gentleman whom I have learned to respect and admire since I have been associated with him in this Chamber, and the use of whose name in connection with this hospital is a graceful and fitting recognition of his long and efficient service as a Member of this body. I wish to ask, however, independently of any question of sentiment, whether our revenues are such as to justify this very large added expenditure for the benefit of the District. In other words, do we need a $300,000 hospital at present, or can we get along without it, due consideration being had to the state of the Public Treasury?

I mention that item specifically because the chairman of the committee made direct reference to it yesterday at the time this bill took its place upon the calendar of unfinished business.

Mr. GALLINGER. Mr. President, will the Senator permit me just a word?

Mr. THOMAS. Certainly.

Mr. GALLINGER. Disclaiming responsibility for a few words that are in the amendment, and aside from the compliment that was paid me by the Committee on the District of Columbia, and especially by the distinguished chairman of the committee, and not caring whether they remain in the bill or not, I wish to say to the Senator from Colorado that there is a condition existing in the municipal hospital of this city that would not be tolerated in any large city of the Republic of Mexico, to say nothing of the United States, for a single year. If the Senator from Colorado should visit that institution, which is located down on the banks of the Eastern Branch of the Anacostia River, he would be horrified, and would at once say, as the committee said when I invited them to go there with me, I having visited it several times before, that the Congress could not too soon remedy the existing condition. It is a reproach to civilization and common decency.

The reason a municipal hospital was not constructed years ago, as I argued should be done, was that it was urged that we should build a $3,000,000 hospital on this site instead of a $300,000 hospital. I resisted that contention; and when we came to the point where we could agree to have a moderate hospital, a comparatively small hospital, that would relieve the condition that existed in the so-called Washington Asylum Hospital, the committee wisely inserted this provision.

Mr. President, we can not afford in the interest of economy to forget the interests of humanity. I personally appeal to the Senator from Colorado, whose heart we know is always responsive to the demands of the poor and the suffering, to visit the present institution and see if he does not think the committee acted wisely in putting this item in the bill.

Mr. THOMAS. I should like to ask the Senator how long the conditions have been such as he now describes?

Mr. GALLINGER. To my knowledge, for 25 years.

Mr. THOMAS. And during the past 25 years the Committees on the District of Columbia have not rectified this evil?

Mr. GALLINGER. There must come a time when an evil is corrected, and that time has now been reached. Constantly, year by year, the commissioners have recommended that something should be done, but we were confronted with a condition that had to be worked out. The contention was, on the part of certain gentlemen of influence, including the Board of Commissioners, that we should build a $3,000,000 hospital and destroy some of the other hospitals in the city, notably the Emergency Hospital and the Columbia Hospital, which have been doing splendid work. Those hospitals have now been taken care of, and the time has arrived when we can, by a moderate expenditure, relieve the deplorable condition that exists at the present time at the so-called municipal hospital which we now have.

As chairman of the Committee on the District of Columbia for 12 years, and a member of that committee for 22 years, I have had this matter in mind, and have been greatly disturbed over it, and have hoped that the time would come during my service in this body when this most desirable work should be accomplished. I again say to the Senator from Colorado that if he will visit that institution he will be astounded at the conditions, and will agree with some of the rest of us that we ought not to practice economy at the expense of the poor people who are suffering for proper attention, proper care, and proper housing in that wretched institution, which no other municipality in this country would tolerate for a single instant if it could raise enough money to relieve the situation.

Mr. THOMAS. Mr. President, I feel somewhat reluctant to visit the place, in view of what the Senator has said, because probably, as a result of my visit I might at least mentally censure the Senator himself for having permitted it to continue in that unfortunate condition during all the years he presided over this committee. I certainly should dislike to reach any such disagreeable conclusion.

Mr. GALLINGER. The Senator from New Hampshire is quite willing to be censured for any neglect of duty in this regard. He has done a great deal of work for the District, and has always tried to act wisely. Of course, he was governed by the committees to which he belonged. It is a fact that there are a great many evils existing in the city of Washington to-day that ought to be corrected that will cost money, but they can not all be corrected in one year.

Mr. THOMAS. Mr. President, I admit that as to every enterprise of this kind my sentiments, my impulses, and, I trust, my humane instincts are quite as active as those of any other Member of this body. If it should be absolutely necessary to make an appropriation for the purpose of doing away with an intolerable condition, especially when that condition affects the diseased and the helpless, no man would be more swift to respond than myself. My experience is that inmates of public hospitals, generally speaking, are those who can not obtain admission into other hospitals, for instance, those which are conducted by the Sisters of Charity in the section of the country from which I hail. They are always better and more economically managed than the public institutions, however well they may be endowed. I am inclined to think that the institutions here have perhaps been affected by the same influences and the same conditions during all the long period of time they have existed.

I find, however, that there are other hospitals here, among which is the Central Dispensary and Emergency Hospital, for which a new building is also provided by an amendment to this bill at an additional price of $50,000; that there is a Tuberculosis Hospital here, for which a total appropriation of something like $61,120, an increase of nearly $5,000 over the amount provided by the House, is carried in the bill.

I do not wish to be understood as making any factitious objection or any unreasonable objection or as constituting myself a mere obstructionist to any appropriation which is absolutely essential; but I realize the tendency and the direction of the Democratic majority. Unless we place some restriction upon our wholesale and indefinite appropriations—because some of these items are indefinite, as I may show hereafter—the people will very justly and very properly hold us to account, and our opponents will be able to draw a contrast between their own administration of public affairs and ours that will not in the slightest degree be favorable or flattering to us.

As one Member of this body, therefore, I do not propose quietly to permit these things to continue without recording my protest, even though I may be unable either to stop or to modify them.

Mr. LODGE obtained the floor.

Mr. GALLINGER. Mr. President, will the Senator from Massachusetts permit me for a second?

Mr. LODGE. Certainly.

Mr. GALLINGER. I think the Senator from Colorado suggested that the appropriation for the Tuberculosis Hospital was sixty-one odd thousand dollars. Did I correctly understand the Senator?

Mr. THOMAS. Sixty-one thousand dollars.

Mr. GALLINGER. Yes; $61,120.

Mr. THOMAS. I understand. I call attention to it simply because we find there the usual increase.

Mr. GALLINGER. There is an increase of $5,120 over the amount in the House bill.

Mr. THOMAS. There is the difference between $56,000 and $61,120.

Mr. GALLINGER. Yes; the Senator is correct.

Mr. SMITH of Maryland. I wish to say to the Senator, if he will pardon me——

Mr. LODGE. I have the floor, but I will yield to the Senator.

Mr. SMITH of Maryland. I merely wanted to say to the Senator that if he will visit that hospital he will find that it is managed in the most excellent way, and we feel, in comparison with other hospitals in the country, that it is managed as economically as any concerning which we have had information.

Mr. THOMAS. If it is managed in the most economical way, I should like to know why there is any necessity for increase.

Mr. SMITH of Maryland. Because the number of patients has increased.

Mr. THOMAS. We are having increases in some cases because places are not properly managed and the others because they are.

Mr. SMITH of Maryland. I will give the Senator the items. Three thousand dollars of it is for roads and sidewalks, and the other item is to furnish provision for the inmates, there being an increased number in the hospital.

Mr. LODGE. Mr. President, during some years of service here I have observed that the speeches in favor of economy in public expenditures are usually made by the minority, although I have never noticed that the votes of the minority differed much from those of the majority when it came to increasing an appropriation in which the minority was interested. Therefore I quite understand the resolution in the Democratic platform in favor of economy, and I should not be disposed to say anything in regard to inconsistency if, when the Democratic Party found itself charged with the Government, it was discovered that it was easier to treat economy as an irresponsible minority than when responsible for the conduct of public affairs. That is all natural; it is human nature that when we are not responsible for making appropriations we should be very zealous for economy. But when we come to make the appropriations, while we should be just as zealous for economy, we find it is necessary for the proper conduct of the Government to make sufficient expenditures. I sympathize with the Senator from Colorado in his desire to live up to the pledges of that platform which is at times so sacred and again so disregarded. I understand his desire, but I should feel greater sympathy in this ardor for economy, which I observe in both Houses, if it did not always find its greatest explosion over the District of Columbia. There seems to be the most intense desire for the most rigid economy at the expense of these helpless people in the District, who have no votes.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Colorado?

Mr. LODGE. Certainly.

Mr. THOMAS. I trust the Senator will acquit me of the imputation of being particularly opposed to this bill. I had intended to say what I have said, as I before stated, when the Post Office appropriation bill was up for discussion; but I was detained from the Chamber by illness, and this is the first opportunity I have had to speak upon the subject. I assure the Senator there is nothing in what I have said that is intended to be peculiarly applicable to this one appropriation bill or to the District of Columbia.

Mr. LODGE. I noticed the Senator said that. My remarks were not directed especially to him. They were directed to the ardor for general economies which seems to become so violent when the District appropriation bill is up, particularly in the other House.

Mr. THOMAS. I think the Senator's stricture is warranted, and I merely wished to set myself right in reference to it.

Mr. LODGE. I know the Senator said that he would, and I have no doubt that he will, criticize extravagance in every other bill, but the force of my remark I do not think is weakened as to the general readiness to be economical at the expense of the District.

Mr. OVERMAN. I agree with what the Senator says generally, but the taxpayers of the United States are interested to the tune of about $7,000,000 in this bill.

Mr. LODGE. I will come to that.

Mr. OVERMAN. I think the taxpayers ought to contribute their share to make this the greatest city on earth; and it will not do for the Senator to make the broad statement that this bill is made for people who have no votes, because the taxpayers of the country are interested in it.

Mr. LODGE. I did not say it was made for people who had no votes. I said that economy became particularly rampant when it dealt with people who have no votes.

One of the exceptions the Senator from Colorado himself made. He said there were certain things we must do. He mentioned public buildings. We must also make appropriations for rivers and harbors. Good roads are coming upon us. I think it will be noticed, if I may quote the old lines—

> 'Tis sweet to hear the watchdog's honest bark
> Bay deep-mouth'd welcome as we draw near home.

Some of the post-office buildings perhaps might wait and there would be no inhumanity to anybody, but it is said we must cut down the hospital for the District of Columbia and let post offices go over. In my judgment we are already making it general in both Houses to be very particular about the appropriations for the District, because the people here have no votes. If they had two Senators and two Representatives, you would not see that readiness which I have observed elsewhere to cut the appropriations, to undo the half-and-half act, to which this Government is as absolutely pledged as any Government can be to anything. It is a great pleasure to me to see that the Senate committee has unanimously set that proposition aside.

But, Mr. President, in a growing city it is absolutely necessary that there should be some increases from year to year. It can not possibly be avoided. I agree with the Senator from North Carolina [Mr. OVERMAN]. He wants to make the expenditures here reasonable and proper, but we ought also to see to it that they do not sin against the wisest economy by holding back an increase which is made more necessary from year to year. This is the city of the Nation. I think we ought always to pay at least half of the expenses, and I think the amount we can save by cutting down expenditures here is, at the outside, not very large. It is well to bear in mind, if I may repeat, that it is an impossibility to prevent some slight increases of expenditures from year to year in a growing city as this is.

Mr. THOMAS. Will the Senator permit another interruption?

Mr. LODGE. Certainly.

Mr. THOMAS. I wish to say what I intended to have said before taking my seat. I understand that the Government rent roll in the District of Columbia is enormous—something over $600,000. I believe with the Senator that true economy requires the erection of public buildings here to house the Government archives and the Government offices, and I would regard that not as extravagance but as real economy.

Mr. LODGE. Undoubtedly, it is real economy.

Mr. THOMAS. My remarks with reference to public buildings are as applicable to the District of Columbia as to any other section of the United States.

Mr. LODGE. I thought the Senator was referring to post-office buildings. I did not realize that he had in mind the public building for the Government in the District of Columbia.

Mr. THOMAS. The Senator is correct. I intended to make this addition to what I said before taking my seat, and I thank the Senator for giving me the opportunity now.

Mr. LODGE. Mr. President, I do not mean to detain the committee. I know they are anxious to go on with the bill. I only wanted to say this much and to express my firm belief that the committee of the Senate has made as small increases as were possible consistent with decent administration. I do not believe the members of the Committee on Appropriations are any more willing to be extravagant than any other Senators here, and before we condemn appropriations in this bill or any other as extravagant where increases have been made by the committee we ought, at least, to know all about the facts.

Mr. GALLINGER. Mr. President, just a word in connection with the contemplated appropriation for a hospital. I want to say to my good friend, the Senator from Colorado, that, differing from most of the States, including the little State from which I come, we have no institution in this great District for the feeble-minded. We have no inebriate asylum. We have no proper reformatory. All those were pressed upon the committee, but we did not feel like making appropriations this year for those much-needed institutions. The District of Columbia is infinitely worse off in those respects than are most of the other municipalities and the smaller States of the Union.

Mr. SMOOT. Mr. President, I wish to say to the Senator from Colorado that I have noticed for a number of years since I have been on the Appropriations Committee that there has been a tendency on the part of the House to leave out certain appropriations that will be taken care of in the Senate. I do not think the Senate ought to be criticized too severely for many of the increases that have been made in appropriation bills, because I could call attention to many items of a char-

acter that have been counted as increases in this body that should primarily have been placed in the bill in the House of Representatives.

Mr. OVERMAN. Along that line I will ask the Senator, he also being a member of the committee, if he does not know the fact that at certain times absolutely necessary appropriations have been left out by the House knowing that the Senate would put them in the bill?

Mr. SMOOT. I do not want to tell tales out of school, but if I did want to do it I could say, what the Senator well knows, that there have been not hundreds of thousands of dollars, but millions of dollars that we have been compelled to put in appropriation bills when everyone knew they should have been put in the appropriation bills in the House of Representatives.

Mr. THOMAS rose.

Mr. SMOOT. I simply call that matter to the attention of the Senator from Colorado.

Mr. THOMAS. I should like to ask the Senator from Utah if his experience is to the effect or leads to the conclusion that this action on the part of the House is designed to compel the Senate to take the opprobrium, if any there be, of the increased appropriations?

Mr. SMOOT. Of course I can not, nor do I want to, interpret the minds of the Members of the House.

Mr. THOMAS. I understand that.

Mr. SMOOT. But I say to the Senator that is the result, and it has been used in all parts of the United States.

Mr. THOMAS. I understand. It is one of the weaknesses of human nature to make somebody else take the blame. I have observed in the short time I have been here in public life that it is not corruption and dishonesty which lies at the bottom of congressional inaction or misaction, but it is political cowardice. We are afraid to do right because of the consequences.

Mr. SMOOT. Mr. President, I do not want to go into a discussion of the question of the hospital, but I want to plead to the Senator from Colorado that no point of order be made against that particular item. I should like to have the Senator go with me and visit that hospital to-day. I want to say that there is not a town in Colorado of a thousand people that would allow an institution to be crowded as are the inmates of that institution.

Mr. THOMAS. If the Senator will permit me, I can not understand why this intolerable condition has been permitted so long and why it is necessary for a Democratic administration to assume the burdens of the increased appropriations.

Mr. SMOOT. I can say to the Senator that every year I have been on the Appropriations Committee we have provided some sort of a public institution for taking care of the poor and the blind, but we could not provide for all. We did have a makeshift there, and it has been getting worse every year since I have been on the committee.

Mr. THOMAS. Yet the committee has not amended the conditions.

Mr. SMOOT. The reason is that we have had other items of the kind to take care of in the appropriation bill, and it was all we could do to get the House to agree to those items without going any further than we did.

Mr. THOMAS. Were those conditions worse than these?

Mr. SMOOT. Yes; in some cases yes, because we have had no institution whatever here to take care of certain unfortunate citizens in the District of Columbia and we had to provide for them. In those cases there had been no provision whatever made, and in this particular case there was at least a temporary provision made.

Mr. SMITH of Georgia. Mr. President, there is one change suggested by the Senate committee in the House bill to which I wish to call attention now, as the debate is becoming somewhat general, and I fear I may not be here when that part of the bill is reached. It is found on pages 24 and 25. The House provides for an assessment against adjacent property holders for street improvements, and the Senate committee strikes out that provision. I think, perhaps, the House bill goes a little too far with the assessment, and that it might well be modified so as to place the assessment of one-third against each of the adjacent property holders and one-third against the District.

I think property holders in the city of Washington ought to be treated just as they are treated in other cities, with, of course, the difference that this being the Capital, I believe the Government should liberally contribute toward making it a city worthy of our common country. But where improvements are made adjacent to property, the adjacent property holders receive the largest part of the benefit; and the result of the experience throughout the country, I think, has been that nearly every city in the United States assesses one-third of the improvements upon the streets to each of the adjacent property holders and one-third to the city treasury, upon the theory that the public at large receive one-third of the benefit and each of the adjacent property holders receives one-third of the benefit, and therefore an adjacent property holder should contribute directly toward an improvement which goes so largely to the improvement of his property. I think it is a mistake for the citizens of Washington to make an effort to free themselves in the matter of improvements from tax responsibilities that fall upon citizens of other cities of the United States.

I sympathize with their desire for liberal contribution from the National Government toward making this the most beautiful city in the land, but while that is being done they should be ready to pay taxes upon their property as citizens of other cities pay upon their property. You can go around the city and see improvements that are being made upon streets where the improvement is directly in the benefit of the property holders adjacent and yet the expense in the new additions falls upon the District treasury.

I think that the provision sent us by the House might perhaps well be modified to the extent of assessing the entire 40 feet half and half to the property owners. I think a part of it should come from the District treasury, as a part of the improvement goes to the general good of all the people of the District who drive over the streets, but a part of the improvement ought to be placed against the adjacent property holder upon the theory that he derives a benefit in excess of that which goes to the general public. It equalizes the distribution of these improvements. It also lessens the rush, the pull to get the improvements made in front of a particular property holder's property where a part of the cost goes to the adjacent property holder.

Mr. LODGE. May I ask the Senator a question? Does the Senator know any city where it is customary to charge the entire expense to the property holders?

Mr. SMITH of Georgia. I just suggested that I thought the entire charge was excessive.

Mr. LODGE. I did not hear the Senator.

Mr. KERN. I can state to the Senator that in a large number of cities of the country the entire expense of street and sidewalk improvements is charged to the adjacent property owners under what is known as the front-foot rule. Not only that, but the cost of improving all street intersections is charged by assessment against property owners.

Mr. LODGE. In the city of Boston they charge for betterments on every new street, but the whole expense is not put on the abutting property. It is felt that those who get the benefits of passage through the street, the general public, ought to pay some portion of it.

Mr. SMITH of Maryland. If the Senator will pardon me, I should like to make a suggestion as to this special matter. I wish to ask him whether he has taken into consideration the fact that the people who live on these narrow streets are poor people, and whether he has taken into consideration the further fact that those streets are not exclusively used by those people? Those streets are 40 feet wide. The custom of the past has been that these streets have been paid for on the half-and-half principle. In this case only streets 40 feet wide are concerned.

Mr. SMITH of Georgia. I will answer the Senator from Maryland at once. Mr. President, the Senator's statement is not entirely correct. It requires a half-and-half assessment for a 40-foot wide street, and it requires the payment for a 20-foot street by the adjacent property holders.

Mr. SMITH of Maryland. Yes; but if the Senator will pardon me, the man who lives on the street only 40 feet wide has to pay it all.

Mr. SMITH of Georgia. I have heard this plea before; it is a specious plea; but it is not a sound plea. These improvements are largely made before the houses are sold; the improvements and the street construction precede the sale of the houses to the poor property owner, and they inure largely to the benefit of the real-estate owner who builds the houses and speculates in them.

Mr. GALLINGER. That may be true in the fashionable northwest, but if the Senator will go to the northeast and the southeast he will find there are miles of modest houses built on streets that have not been improved; and while the people living in the wealthy part of the city have had their streets paid for by the Government and the District of Columbia, it is proposed to put this burden upon the poor people in the other sections of the city.

Mr. KENYON. Will the Senator from Georgia yield to me for a moment that I may ask the Senator from New Hampshire [Mr. GALLINGER] a question?

Mr. SMITH of Georgia. Certainly.

Mr. KENYON. Will the Senator from New Hampshire, who is very familiar with the question and knows so much about it, tell us has all the paving that has been done in the city of Washington been done at the expense of the United States Government or of the municipality?

Mr. GALLINGER. The abutting property owners paid one-half for the sidewalks, but the streets have been improved by the Government and the District of Columbia. When those streets have been opened there have been benefits assessed upon the abutting property owners, but when they have been paved or macadamized it has been done at public expense. That is the present system.

Mr. KENYON. I do not understand the Senator's statement that when the streets have been opened the expense of doing so has been assessed against the abutting property.

Mr. GALLINGER. When a new street is opened a certain percentage of the cost of doing so is assessed as benefits.

Mr. SMITH of Georgia. That is, the cost of paving, not the land to open the street.

Mr. GALLINGER. To open the street.

Mr. SMITH of Georgia. But really the adjacent property holders ought to give all the land to open the street, because they are the people who get the benefit of it.

Mr. GALLINGER. They do in a great many instances.

Mr. KENYON. It is true, is it not, that the cost of paving has been borne by the Government?

Mr. SMITH of Georgia. I think that has been largely true in the past, and it is that objectionable system which the House bill seeks to change.

Mr. GALLINGER. That is the present system; there is no question about that.

Mr. KENYON. I think it is objectionable.

Mr. SMITH of Georgia. What I wanted to say was that this last year the bill carried an appropriation for streets in the northeast. The Senator referred to other sections in the northeast. There were a number of streets that were paved at the Government expense—I went over them and looked at them—where the real benefit was to the adjacent property holder, and the benefit to the adjacent property holder was great; and I could but feel how unjust it was for the District as a whole to pay for those streets out of the treasury of the District when the benefit was practically all to the adjacent property holders and worth infinitely more to them than the cost of opening the street.

It is only because I have had the experience in the city where I live of paying for the development of the streets and the sidewalks, and for one-third charged against each adjacent property holder and one-third carried, I think, by the city at large, that I have felt that it was unjust to the treasury of the District to make these improvements in the interest of private property holders and not require them to contribute, as they contribute in other sections of the country, for benefits done their property by the improvements.

Mr. GALLINGER. What I meant to say, Mr. President, if the Senator will permit me, was that on all our great thoroughfares, our avenues, and our great streets the paving has been done out of the Treasury of the United States and the treasury of the District of Columbia. When you go into the suburbs—these rapidly developing suburbs—and into the northeast and southeast sections of the city, which have not grown as Washington expected they would, miles and miles of modest homes have been built for clerks and for the poorer people, and it is now proposed that this burden of paving the streets shall be imposed upon those people. It has not been imposed upon the people who live upon Connecticut Avenue, or Massachusetts Avenue, or New Hampshire Avenue, or Vermont Avenue, or any of the great avenues of the city; but at this late day it is proposed that this burden shall be transferred to the poor people who are building these little homes—they can not afford any better—and I think it is a great injustice. It may be that this matter can be compromised in some way, and that was the view the committee had in reporting to strike it out, so as to let it go into conference, there to be very carefully considered by wise men, to see if an adjustment could not be reached that would be fair. As it stands in the bill it is manifestly unfair.

Mr. KENYON. May I ask the Senator another question?

Mr. GALLINGER. Yes.

Mr. KENYON. In the case of the repair of some of the streets here, say the Avenue of the Presidents, for instance, where the paving must be done over, who pays for that?

Mr. GALLINGER. It is done at public expense.

Mr. KENYON. At public expense?

Mr. GALLINGER. Yes; that is the rule.

Mr. KENYON. So that on streets where the homes of people of great wealth are located in this city, if the paving becomes destroyed and must be replaced, it is done at the public expense?

Mr. GALLINGER. It is.

Mr. KENYON. And at no expense to the property holders?

Mr. GALLINGER. None at all.

Mr. KENYON. Does the Senator think that a fair proposition?

Mr. GALLINGER. I am not sure about that; I have not given it very careful consideration; but the man who occupies 25 feet front on a street may not use that street any more than does the man who lives 10 miles from that point.

Mr. SMITH of Georgia. But is not his property thereby increased in value?

Mr. GALLINGER. I doubt it very much. It is inconsequential.

Mr. WILLIAMS. If it is increased in value, the owner of the property has to pay increased taxes and assessments upon it.

Mr. LA FOLLETTE. Mr. President, I have come to the Senate this morning against the advice of my physician because I felt a very great interest in this bill. I have waited here in the hope that I might have an opportunity to raise the point of order against the amendment that appears on pages 10, 11, and 12. The debate, however, is proceeding, and we are not taking up the amendments in order and discussing them, but we are roaming through the bill. I am apprehensive that I may not be able to remain until the amendment to which I refer is reached, and I should like to give notice that I want to reserve the point of order against it. I hope to be able to be heard against it if it is open to debate.

Mr. GALLINGER. Mr. President, I concur in the suggestion of the Senator from Wisconsin that likely we had better proceed with the bill in order and discuss the amendments as they are reached, but the general debate was not precipitated by the committee; but members of the committee, of course, felt that they must make some defense of what they have done, so far as the bill is concerned.

Mr. REED obtained the floor.

Mr. GALLINGER. Mr. President, if the Senator from Missouri will permit me for just a moment——

Mr. REED. I thought the Senator was through. I yield to the Senator.

Mr. GALLINGER. I said that the abutting property owners pay one-half of the cost of the sidewalks. That is true; and, of course, they pay for the curbing; but the cost of paving, of asphalting, and macadamizing the streets is paid from the Public Treasury.

Mr. REED. Mr. President, the debate seems to have taken on the character of a rambling discussion of the entire appropriation bill. I had risen at the time the Senator from Wisconsin [Mr. LA FOLLETTE] rose to make an observation or two with reference to the very amendment to which he referred. I do not intend to go into any extended discussion of the proposition at the present time, but upon pages 10 and 11 of the bill appears an amendment which permits the Washington Gas Light Co. to acquire the stock of the Georgetown Gas Light Co. It is further provided that if any of the owners of the outstanding stock of the Georgetown Gas Light Co. do not sell at the price of $155 per share, proceedings can be had for the purpose of condemning that stock, not for the public benefit or for any public use but for the benefit of the Washington Gas Light Co.

Mr. President, I do not want to say anything that seems harsh about that provision or about the bill. I am so often accused of saying things with brutal frankness that I feel a special delicacy in discussing this matter lest I might impinge upon somebody's feelings. But this is the first time I have ever heard it solemnly proposed that the Government of the United States, under its power of eminent domain, could condemn the stock of a corporation not for its own benefit, not for the public benefit, but for the use of another private business corporation. This is the first time I have ever heard it hinted that the power of eminent domain can be employed to take private property from one citizen and turn it over to another citizen. The proposal is on its face absurd, unjust, and unconstitutional.

Mr. OVERMAN. Mr. President, I want to say to the Senator that I took the same position in the committee. I have looked into the matter, and it strikes me that it is wholly unconstitutional; that the Government has no right to do what it is here proposed shall be done. Regardless of the policy of it, I inquire what right has the Government under its power of eminent domain to take the action proposed?

Mr. REED. I simply can not understand how it happens that the amendment is here in its present form. Of course, the Government has no such power. It can not condemn my house for the purpose of turning it over to Mr. Jones or to Mr. Smith; my house can only be condemned when it is to be de-

voted to a public use. The Government can not force one citizen to transfer his property to another citizen.

But, aside from that, even if the consolidation of these two companies were desirable, I would respectfully call the attention of the committee to the fact that when we fix a value of $155 per share, and do it by law, if the consolidation were to be effected and we were thereafter to undertake to regulate rates, the owners of the company could insist that they were entitled to a return upon $155, although the actual value of the stock might be much less. I simply view the proposition put forward in the amendment with astonishment. I am disposed to feel that there must be some kind of explanation which does not appear on the face of the amendment.

Besides that, I am opposed on principle to the consolidation of public-service corporations, certainly unless in the act of consolidation there be carefully written all of the provisions necessary to secure to the public fair and equitable treatment.

There is no greater graft—a term that is often used and often misused, but I use it advisedly—no greater graft has ever been systematically imposed upon the people of this country than the artificial-gas graft.

The gas plants of the great majority of the larger American cities are controlled by companies which are locally organized, and which apparently are local concerns, but an examination will disclose the fact that the United Gas Improvement Co. owns a majority of the stock and exercises complete domination and control over these supposedly local companies. It regularly and systematically loots the local companies or local stockholders by means of regulations and rules, which generaly prevent the payment of fair dividends to the local stockholders.

One of the favorite devices is to compel the local company to acquire all of its supplies through a purchasing agent appointed by the United Gas Improvement Co.; and this gentleman fixes prices which are sufficient to make great profits for the United Gas Improvement Co., while the local company is correspondingly "milked." Another favorite device employed to keep the local stockholder from ever obtaining any return is to make all of the additions, or a large part of the additions, to the plant out of the earnings of the plant, so that the local stockholders stand for years and years frequently without even the shadow of a chance of a dividend; but in the meantime the value of the property has been enormously enhanced. After the local stockholders realize they are never to receive any dividend returns, they, of course, are ready to sell at any price offered.

I do not claim to be an expert upon the cost of manufacturing illuminating gas, but such investigations as I have made lead me to the conclusion that in the city of Washington, located as it is close to the great coal supplies, gas can be manufactured and sold at a profit for from 50 to 60 cents a thousand feet.

Mr. SMITH of Maryland. I will ask the Senator, if he will allow me, if that is not a matter entirely in the control of the Public Utilities Commission, and if they have not a right, upon investigation, to lower the prices in accordance with the prices at which gas can be furnished? I do not think the Senate is justified in fixing an arbitrary price, because we have no information on the subject; but, as I understand, the Utilities Commission was created for the sole purpose of making the companies, as they ought to be made, in my judgment, furnish gas at a price as low as possible, taking the stockholders into proper consideration. I ask the Senator if that is not the case—if the Public Utilities Commission are not in a position to make the companies furnish gas to the people here at a proper price?

Mr. REED. I can not answer the question "yes" or "no." An attempt has been made to confer power of that kind upon the Commissioners of the District of Columbia. Whether or not the power has ever been tested in the courts I am not informed. This much I do know, however, that if Congress permits the consolidation of these two companies, a proposition which is utterly foreign to an appropriation bill, if we permit the consolidation to be made upon the basis of $155 for each share of stock of the Georgetown Co., that will become a recognized element of value which the Public Utilities Commission of the city must recognize when they come to fix rates.

Mr. KERN. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Indiana?

Mr. REED. I do.

Mr. KERN. I should like to ask the Senator from Missouri whether he has been able to get any information as to how it happened that this extraordinary gas-merger proposition found its way into an appropriation bill?

Mr. REED. I have not tried to find out. I have been astonished to see it. I have every confidence in the members of the committee and respect for them, but I do not understand what it is here for.

Mr. SMITH of Maryland. I will say to the Senator that in my judgment the reason the committee put in this item was that they thought they were benefiting the people. The two companies are not now competing companies. There is no competition between them.

Mr. KERN. If the Senator will allow me, does he not think it would have been very much better to have brought this in as an independent proposition, so that it could have been discussed on its merits and all the facts laid before the public, rather than to embody it in an appropriation bill, where it can not be discussed and voted on except in connection with other matters?

Mr. SMITH of Maryland. It is being discussed now, and I presume it can be discussed; but I was going on to say that the reason the committee put it in was that the companies are not competing companies. The two companies—the Washington company and the Georgetown company—have specific territory in which they do business. The Georgetown company charge their gas consumers $1 per thousand cubic feet, and the Washington company charge their gas consumers 85 cents. There is no competition whatever. The committee thought that by merging the two companies the overhead charges and the various other charges would be less, and that the 25,000 inhabitants of Georgetown would have the benefit of 85-cent gas, or as much lower as the Public Utilities Commission might see fit to put the price.

Mr. SUTHERLAND. Mr. President, will the Senator from Missouri permit me to ask the Senator from Maryland a question?

Mr. REED. Certainly.

Mr. SUTHERLAND. Has the substance of this proposed amendment been introduced by anybody, either in the House or in the Senate, as a separate bill?

Mr. SMITH of Maryland. It was put in as an amendment.

Mr. SUTHERLAND. It never has been introduced as a separate bill?

Mr. SMITH of Maryland. Not to my knowledge.

Mr. SUTHERLAND. It originated before the Senate committee?

Mr. SMITH of Maryland. That is my understanding, sir—that it originated as an amendment.

Mr. SUTHERLAND. May I direct the attention of the Senator from Missouri to a feature of this matter which he may have discussed before I came in? To me this is rather a remarkable piece of legislation. It may be entirely justified.

Mr. MARTIN of Virginia. If the Senator will yield to me for just one second, as I understand, this measure was introduced in the Senate by the Senator from New Hampshire [Mr. GALLINGER] as an amendment to this appropriation bill, and it reached the Committee on Appropriations as an amendment referred to it by the Senate.

Mr. SUTHERLAND. As a proposed amendment?

Mr. MARTIN of Virginia. As a proposed amendment. It was brought up, in other words, in the regular way. We all understand, or at least I do, that this amendment is subject to a point of order, but it is so difficult to secure legislation that notwithstanding the rules we all know that a large proportion of the legislation enacted by Congress is enacted on appropriation bills. If it is not for the good of the public, if it is not for the benefit of the people, it can be easily eliminated. It ought not to stay here by the choice of anybody who thinks it is obnoxious to the welfare of the people of the District of Columbia. It is certainly subject to a point of order.

Mr. LA FOLLETTE. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Wisconsin?

Mr. LA FOLLETTE. I ask the Senator to yield to me that I may address an inquiry to the Chair.

Mr. REED. Very well.

Mr. LA FOLLETTE. I should like to inquire if a point of order against the provision under debate would be in order at this time?

The VICE PRESIDENT. The Chair is of the opinion that the bill is in charge of the Senator from Maryland, and that if he does not object, a point of order may be presented now.

Mr. LA FOLLETTE. I thought the paragraph had not yet been reached.

The VICE PRESIDENT. It has not yet been reached.

Mr. LA FOLLETTE. I was waiting for an opportunity to make the point of order.

Mr. SMITH of Maryland. I hardly think that would be fair to the bill. I think it ought to be taken up by the various items, and if there is any objection to any matter here that would go out on a point of order, the point should be made at the time when it comes up.

So far as this matter is concerned, the committee put it in thinking it was in the interest of the people. If anybody feels differently and wants to take it out on a point of order, of course we have nothing to say. We believed the people were being benefited by this amendment, and we had no other reason whatever for putting it in. If it is not for the benefit of the people and they do not want it, that is the end of it.

Mr. WILLIAMS. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Mississippi?

Mr. REED. I will yield to the Senator in order, Mr. President. The Senator from Utah [Mr. SUTHERLAND] had asked a question, and I had not concluded my answer to it. As soon as I can get around to the Senator from Mississippi I shall be glad to yield to him. I was not through with what I had to say.

Mr. WILLIAMS. I misunderstood the Senator.

Mr. SUTHERLAND. I will take but a moment. I wanted to suggest to the Senator from Missouri, if he has not already considered it, one provision of this proposed amendment that seems to me most remarkable, and that is the provision which authorizes the Washington Gas Light Co., if it can not obtain these shares by purchase, to condemn them.

Mr. REED. I have already discussed that subject.

Mr. SUTHERLAND. I have never heard of one corporation being authorized to condemn the property of another corporation in order to engage in the same sort of business.

Mr. REED. I have already referred to that, but I am glad to have the opinion of the very eminent lawyer who has just spoken concurring in what I had said.

Mr. GALLINGER. Mr. President, if the Senator will permit me, I rise simply to correct a statement that the Senator from Virginia [Mr. MARTIN] inadvertently made. I did offer an amendment relating to this matter, but not in the terms that are found in the bill. That amendment was laid aside and this amendment was subsequently submitted to the committee.

Just one word further, Mr. President. The committee had in view the belief that a merger of these companies would be greatly to the benefit of the public. Everybody, I think, concedes that. The committee perfectly understood, however, that the provision was subject to a point of order. The committee further expected that if the point of order was not made, the Senate would take up the amendment and perfect it.

I agree with the Senator from Missouri and the Senator from Utah—and I am not a lawyer—that the provision to which they have called attention is probably not a proper one, but of course it can be put in different form. The price of the shares could be left to the Public Utilities Commission, and that would solve that problem. There are but a few shares—a couple of thousand shares—anyway, so that the burden that would be imposed upon the public because of the excessive valuation of those shares, if it is excessive, would not be very great.

What I wanted to say, however, was that the committee understood the provision was subject to a point of order. The Senator from Wisconsin [Mr. LA FOLLETTE] says he is going to make the point of order, and of course, so far as the provision remaining in the bill is concerned, that will end the matter.

Mr. REED. Mr. President, the Senator from New Hampshire is in error, I think, in stating that as there are but a few shares of stock outstanding, and that even if they were taken at an excessive value it would amount to but little to the public, for this reason: If we were now, by act of Congress, to fix the value of the outstanding stock, even if there be not to exceed 100 shares, that would immediately establish, or at least strongly tend to establish, the value of all of the stock of the company. The valuation thus determined would thereafter, in any proceeding brought to fix rates, become a basis for the rates. Besides, I insist that Congress has no more power to fix the price of a share of this stock and no more right to compel its transfer than we have to pass a law providing that the Senator from New Hampshire shall turn over his watch to me for $25 or any other sum.

I was interrupted in what I was saying in regard to one matter, upon which I want to conclude. I was saying that the United Gas Improvement Co. owns a controlling interest in nearly all of the great gas plants of this country, or at least in a very large number. The result is that a comparison of gas rates of the different cities of the country furnishes us but little information. The fact that a dollar is charged for gas in one town or a dollar and a quarter in another does not tend to show that gas is worth a dollar per thousand, because in nearly all of these towns the price of gas is controlled by the same parent or controlling company.

A few years ago proceedings were instituted to reduce the price of gas in New York City. The contention was made that the rates prescribed were confiscatory. The court, in passing upon that case, allowed at least to some extent franchise value, because, as I recall now—it is some years since I have read the case—it took as one of the elements of value of the whole property a valuation that had been fixed in some sort of proceedings many years ago as to a considerable part of the property, so that there was really an allowance for more than actual value. Nevertheless, in the city of New York the price of gas is fixed at 80 cents. Everybody knows that it costs much more to make and distribute gas in a city like New York than it does in a city like Washington.

Mr. GALLINGER. Mr. President, will the Senator permit me there?

Mr. REED. Certainly.

Mr. GALLINGER. Does the Senator really mean to say that it costs more to distribute gas in a thickly populated city, like New York, than it does in this city of magnificent distances? Surely the Senator has not thought it out.

Mr. REED. I mean to say this, that the streets of New York underground are a complete network of wires, conduits, pipes, and sewers, and that to lay 100 feet of gas pipe in the city of New York probably costs more money than it would cost to lay a city block of it in the city of Washington.

The Senator smiles. I say that you can lay a gas pipe through the loose soil of a country district for probably one one-hundredth of the cost that is involved in laying it where you must cut through the expensive pavements of streets, and where you must lay your pipe with due regard for all the other conduits and pipes there are underground; and I affirm that it can be easily demonstrated, notwithstanding the larger population of the city of New York, notwithstanding the fact that it is more condensed, that it costs more to deliver a thousand cubic feet of gas in New York than it does in the city of Washington.

Mr. GALLINGER. Mr. President, I did not intend to smile at anything the Senator said, and I do not think this is a question over which we can afford to indulge in levity; but it does seem to me extraordinary that the Senator should argue that it costs less to produce gas here than in a city like New York, where there are more gas meters in an area of a quarter mile than there are in this entire District, 7 or 8 miles square. It seems to me that is not a very substantial argument.

The fact is that the sale of gas in New York City in a small area, or in Boston or in Chicago, is enormous compared to what it is in the city of Washington. When the gas companies extend their mains out here 6 or 7 or 8 miles in the country, with only a few customers, it is manifest that it costs more than it does to supply gas to Broadway or Fifth Avenue or any of the great cities of Boston or Chicago. It seems so to me, at least.

Mr. REED. The Senator's view is a view that one would naturally entertain who is taking a mere casual glance at the situation; but I say to the Senator that investigations on these questions have been had, and plenty of them, and that you can lay a gas main in a small city and deliver gas there cheaper than you can in a great city, provided your small city is large enough to maintain a plant sufficiently large so that the ordinary economies can be worked out in the plant, and coal is near at hand and as cheap as in the large city.

The VICE PRESIDENT. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The SECRETARY. Senate joint resolution No. 1, proposing an amendment to the Constitution of the United States extending the right of suffrage to woman.

Mr. SMOOT. I ask unanimous consent that the unfinished business may be temporarily laid aside.

The VICE PRESIDENT. Without objection, the unfinished business will be temporarily laid aside; and, without objection, House bill 10523 will be proceeded with.

Mr. NORRIS. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Nebraska?

Mr. REED. I should like to finish this sentence, and then I will yield.

I have seen pipes and conduits in many instances that had to be put as much as 10 or 12 feet underground in order to escape interference with other pipes and conduits already laid. That, together with the higher cost of labor, with the long delays that come in putting in pipes and conduits in the thickly congested streets of cities, and a thousand other considerations, enter into the problem of cost. The fact is that the price charged in one city furnishes no substantial evidence of what gas can be furnished for in another city, because the companies in nearly all these cities are under a common control.

We had a gas war in my city once, and I saw the price of gas reduced to 50 cents a thousand and kept there for some years;

I saw my city lose that benefit by a consolidation of the two rival companies.

Now, it is said these two Washington companies do not compete, and therefore that they might as well be permitted to consolidate, and that by consolidating them we can give to the people of Georgetown cheaper gas. We all would like to see the people of Georgetown get cheaper gas, but in order to secure that blessing must we assist in the creation of an absolute gas monopoly? If the Washington company proposes to scrap the Georgetown company and itself furnish gas to Georgetown for 85 cents, then it is perfectly plain to me that the Georgetown company can do it now for 85 cents.

Mr. GALLINGER. Will the Senator permit me?

Mr. REED. In a moment. We ought to be enacting legislation to reduce the price of gas instead of trying to increase the size of a monopoly. I yield to the Senator from New Hampshire.

Mr. GALLINGER. The Georgetown company tried the experiment a few years ago of reducing the price of gas to 85 cents, and lost so much money that everybody agreed that they could not afford to do it with the little plant they had.

Mr. REED. Mr. President, I do not know who agreed to such a proposition. I do not know who the Senator includes in the term "we." But I undertake to say that whoever did agree to it did not go into the question of the cost of producing gas at all, because I know that gas can be made for less than 85 cents. I know that much about the proposition.

Mr. NORRIS. Will the Senator yield to me?

Mr. REED. I yield to the Senator from Nebraska.

Mr. NORRIS. I think this has reference to the question propounded by the Senator from New Hampshire, and that is in controversy. I wanted to give the Senator the cost of making gas during the year 1913 by the Washington Gas Co. I have the figures from the statistician of the Public Utilities Commission of this District. The average cost of producing 1,000 cubic feet of gas during the year 1913 was 47.26 cents. It struck me that on the question which was being discussed between the two Senators this has a direct bearing.

Mr. GALLINGER. Mr. President, that is the cost of manufacturing, not including distribution.

Mr. NORRIS. This statistician says all expenses, including taxes.

Mr. GALLINGER. Yes; but not distribution.

Mr. NORRIS. I take it that includes distribution.

Mr. GALLINGER. The Senator from Missouri says that in any village gas can be produced more cheaply. I go to the little city in the State of Nebraska in which the Senator lives—McCook—where they charge gross $2, net $1.50 per thousand.

Mr. NORRIS. Yes. I have not made the claim that in a little city you could produce gas as cheaply as you could in a city like Washington.

Mr. GALLINGER. But the Senator from Missouri did.

Mr. NORRIS. But I have figures here, and I can produce them, as I expect to do in the discussion on the bill, which will show that the people of Washington from the year 1848 down to the present moment have paid an outrageously high price for gas, and that this company, the statistician tells me, has made gas during the last year at 47.26 cents per thousand cubic feet, and has been paying dividends up as high as 65 per cent; that it paid a dividend on its capital stock last year of 24 per cent, besides considerable of the indebtedness, and issued without any consideration whatever a great deal of stock.

Mr. GALLINGER. Is that Georgetown or Washington?

Mr. NORRIS. That is the Washington company.

Mr. REED. So the Washington company makes those enormous dividends at 85 cents, but the Georgetown company can not sell, according to the statement of the Senator from New Hampshire, at less than a dollar without losing money, and yet their stock which it is proposed to condemn is put in here at 155.

Mr. NORRIS. That stock, I will say to the Senator from Missouri, is at the par value of $25. It is not $100 a share.

Mr. REED. I thank the Senator. I have not gone into those phases of the question. I was proceeding on "the light of nature and common account." I observe that a closer investigation brings a more startling result. A $25 share of stock is put in at $155 and the company is to be consolidated with another company in the public interest at $155, and yet it is asserted that the company can not possibly reduce its rate below $1 and the public can get no relief unless we permit this consolidation.

Mr. President, I hope this will be the last time a measure will be presented in this form to consolidate the public-service corporations of the city of Washington. I am in favor of the Government taking over these public utilities in the city of Washington, every one, and giving the people a service for what it costs. I have no fear of the evil of public ownership.

Mr. NORRIS. Will the Senator yield to me? I made a mistake in the figures I gave. I said the capital stock was $25. I was thinking of the Georgetown company. That is $25.

Mr. REED. That is what I am speaking of.

Mr. NORRIS. In my other remarks I was referring to the Washington Gas Co. The capital stock there is of a par value of only $20.

Mr. REED. Mr. President, a good many years ago the cities of the United States secured their water from private companies. Those private companies were never as thoroughly consolidated as the gas companies are or as the telephone companies are. They were not interlocked and bound together so closely. Nevertheless there was some community of interest. The conditions grew to be so bad that a lot of extremists began to talk about the cities owning their own water-works plants. They were denounced as "anarchists," and "socialists," and "Populists," and every other kind of "ist"; but the movement started, and it has resulted in an immense reduction in the price of water to cities and an immense increase in the fire protection accorded the cities owning their own water-works plant.

The experience of my own city, where under a court decree we took over a plant at fully twice its actual value, furnishes a startling example. We increased the wages of the men; we reduced the price of water by 25 per cent; we practically doubled the size of the plant and paid for it out of the earnings. We made all those improvements and all those advancements from the earnings of the plant itself until a plant which cost us in round numbers $3,000,000 was actually earning interest upon over $12,000,000, and could have been sold for that sum.

There came a period in the rapid development and growth of that city when they could not quite keep up with the improvements out of the earnings, and some bonds were voted. But that plant can be sold to-day for three times the amount of money the people have in it. Besides, the price of water has been again reduced, so that we get our water for about 60 per cent of the prices formerly paid.

Mr. President, the experience of Kansas City is the experience of many American cities. The manufacture of gas is a simpler proposition than the securing of a supply of water, the purification of the water, and the distribution of it. There is no secret and no mystery any longer in the manufacture of gas.

Mr. MARTINE of New Jersey. Mr. President——

The PRESIDING OFFICER (Mr. ASHURST in the chair). Does the Senator from Missouri yield to the Senator from New Jersey?

Mr. REED. I do.

Mr. MARTINE of New Jersey. This controversy over the question of gas is by no means new. All through my part of the country it has been thrashed out for many years. Gas companies have been charging in many instances $2.50 and $2.25. I have here a volume that I have quoted a great many times. I am an advocate of municipal ownership of gas plants; and I say the only solution of this trouble will be the Government ownership of the gas plant of the city of Washington and in the District of Columbia. This was written some time ago. I read from Parsons's The City for the People:

> In 1885 the New York Senate investigated the gas companies in the city of New York and discovered that down to the year of the investigation the price to ordinary consumers had been for the most part $2.50 and $2.25 per thousand, and that more than half of such price was clear profit. In 1883 the average cost of gas to all the companies was 60 cents in the holder and $1 delivered to the burner, while the ordinary price was $2.25, and the receipts of all the companies averaged $2.16. In the year of the investigation the companies made a price of $1.75, and the following year it was reduced by State law to $1.25, which the companies were still charging in 1897, although 75 cents a thousand would then have yielded a good profit on the real investment, as was proved by the evidence brought out in another legislative investigation.
>
> In 1892 gas was being put in the holders in Boston at a cost of 33 cents per thousand; distribution cost 20 cents; allowing 7 cents for depreciation and 20 cents for interest on an allowance of $4 investment per thousand, which is more than fair, we find that 80 cents per thousand would yield an ample profit, yet the companies were charging $1.30 per thousand.
>
> In Chicago an excellent water gas—

And, by the way, the gas of cheapest manufacture to-day is water gas, costing practically nothing to manufacture. It is simply disintegrating the water, dripped or sprayed on a seething mass of brick or terra cotta, and the profit is enormous.

> In Chicago an excellent water gas is put into the holder at a cost of 20 cents per thousand—40 cents at the burner, including taxes, according to the statement of the two chief Chicago companies to the New York Stock Exchange in 1893.

This history can be repeated in almost every city in the country. The city of Alexandria, almost within the sound of our

voices, has for years maintained a municipal system of gas production and distribution as a benefit and a blessing to the community.

Mr. WILLIAMS. If the Senator will pardon me, he is talking about these things being new. I want to say that in Lynchburg, Alexandria, and several other cities in the old State of Virginia, long, long before the war they made and distributed their own gas.

Mr. MARTINE of New Jersey. Undoubtedly.

Mr. WILLIAMS. And furnished and distributed their own water. There is nothing new about it.

Mr. MARTINE of New Jersey. It will tend more to relieve municipalities and politics from corruption than any other one thing. The gas company and the water companies in my part of the world have been the dominating and controlling and corrupting influence in politics for the last 40 years. I want to stand sponsor for any effort that shall bring about the municipal ownership of these great benefits to the community.

Mr. REED. Mr. President, the statement in regard to the cost of the various public utility products, if I may use that term, by the Senator from New Jersey [Mr. MARTINE] is in no respect an exaggeration. Many years ago an improved process for the manufacture of gas was discovered. It is a well-known fact that gas can be produced to-day for a small fraction of what it cost when it was made by the old process from coal. This Congress sits here and allows the Capital City of the Nation to be looted—for I think that is the proper term to be used—by its public utilities.

Let me give you an example. I am informed that an unlimited telephone service in a business house in the city of Washington costs one hundred and sixty-odd dollars a year. If I am incorrect, I wish some Senator would correct me. The population of Washington and the population of the two Kansas Cities that are divided only by the red lines of the map is approximately the same. You can get an unlimited telephone service in a business house in the city of Kansas City for $54 a year, and the service is better than it is in the city of Washington. How did we get this low price? By consolidating corporations? No. We had the old Bell telephone monopoly there. They charged us $98 a year for a service that was probably the worst telephone service in the whole world. We appealed time and again to the management of the company for a decent service, and we did not quarrel so much about rates as we did about service. There was at the time I speak of not to exceed 50 miles of metallic circuits in the town, although every country village had metallic circuits years before. The reason was that we were in the hands of the Bell telephone monopoly. We brought in a competing company, and we got the rates along with good service.

I had occasion to investigate that beneficent institution known as the Bell Telephone Co. I have often wondered why it is that the arm of the Government has not been stretched out after it.

The plan of organization is this: There is a parent company. The parent company proceeds to divide the territory of the whole United States into various districts. It then organizes a company in that district. In that company it takes 51 per cent of the stock to itself. It sells 49 per cent of the stock, and out of the stock that is sold it builds the local plant. Of course, the parent company, owning 51 per cent of the stock, controls the policies of the local company and takes down 51 per cent of its profits. Then the right is granted to that local company to organize other companies in the specified district upon the same terms between those companies and the local or head company as exist between the head company and the parent Bell company, so that in the end the Bell Telephone Co. owns a controlling interest in the companies that own a controlling interest in every one of the small companies. Thus it maintains its control throughout the whole of the United States.

And, Mr. President, in order to make sure that it will sufficiently loot and pluck these local companies it compels them to enter into contracts to pay royalties upon telephone instruments. We found upon investigation of that matter some years ago, when I had something to do with it, that the local companies were paying on the telephone receivers in Kansas City an annual tribute to the Bell Telephone Co. direct for the blessed privilege of using receivers and transmitters $2.50 per year, although you could buy a superior transmitter brand new for less than $2.50. The patents had long since expired.

Moreover, I state the fact that it is well known to those who have had occasion to observe, every time an independent company has sought to enter the field and give relief they have met with this sort of opposition, namely, the Bell Co., having the long-distance service, will refuse to unite their wires with the wires of the independent company or to transmit its messages, and when the independent companies get together and propose to unit their wires and give a long-distance service the Bell Co. will buy a link out of their lines, so that they can not give satisfactory long-distance telephone service.

Mr. President, this has gone on throughout the country for years. Right here in the city of Washington the people are being compelled to pay for business phones fully $3 where they ought to pay $1. If the Government of the United States were to take over this telephone plant and property, all patents of any real value having now expired, I have not the slightest doubt that every business man in the city of Washington would get an unlimited service for $50 a year. I am not afraid to have the Government try that experiment.

The time has come when we ought to set an example to the rest of the country through the government of the city of Washington. It ought to be a model city. It ought first to be a model city in its government. Every advantage of beneficent and wise and independent and just government should be conferred upon the people of Washington.

Then I am willing to go further. I am willing out of the public revenue paid by all the people of the country to liberally contribute to make this, the Capital of the greatest nation on earth, the most beautiful and splendid capital of the world.

I should like to see the Committee on the District of Columbia get busy with the proposition of solving these questions of public service. I would like to see that committee represent the people of Washington, who have no one to directly represent them. Let us give Washington gas, telephones, and electric light at cost.

Mr. SMITH of Maryland. Mr. President, I understand that the Senator from Wisconsin [Mr. LA FOLLETTE] raised a point of order on this merger amendment, and I ask the Chair to rule upon the point of order.

Mr. NORRIS. We have not yet reached the amendment.

Mr. KENYON. The Senator from Wisconsin was compelled to leave the Chamber. He had reserved the point of order, as I understood him, and he asked me to make the point of order at the proper time.

Mr. SMITH of Maryland. It was asked whether the chairman of the District Committee is willing that the point of order should be made. I will say to the Senator that I am willing to have it made.

Mr. NORRIS. I think the Senator from Wisconsin left the Chamber on the theory that the Senator from Maryland was not willing to take it up now. I believe the Senator from Maryland made a statement to that effect.

Mr. SMITH of Maryland. I say now that the Senator from Maryland is willing to take it up, and he asks the Senator from Iowa to make the point of order.

Mr. NORRIS. In the meantime the Senator from Wisconsin has left the Chamber. I think he intended to come back by the time the amendment was reached in the bill.

Mr. KENYON. I suggest to the Senator from Maryland that under the circumstances it would be well for him to wait until the Senator from Wisconsin returns. I will make the point of order when the amendment is properly reached.

The PRESIDING OFFICER. The Senator from Maryland has the floor. Does he make the point of order now?

Mr. SMITH of Maryland. I will make the point of order myself if no one else does.

Mr. THOMAS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Colorado suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Gore | Martin, Va. | Shively |
| Brandegee | Gronna | Martine, N. J. | Smith, Ariz. |
| Bristow | Hitchcock | Nelson | Smith, Md. |
| Bryan | Hughes | Norris | Smoot |
| Burton | James | O'Gorman | Stephenson |
| Catron | Johnson | Oliver | Sutherland |
| Chamberlain | Jones | Overman | Swanson |
| Chilton | Kenyon | Page | Thomas |
| Clapp | Kern | Perkins | Thompson |
| Clark, Wyo. | La Follette | Pomerene | Thornton |
| Dillingham | Lane | Ransdell | Tillman |
| du Pont | Lea, Tenn. | Reed | Warren |
| Fall | Lee, Md. | Robinson | Weeks |
| Fletcher | Lodge | Saulsbury | Williams |
| Gallinger | McCumber | Sheppard | |

Mr. KENYON. I desire to announce that my colleague [Mr. CUMMINS] is detained from the Chamber on account of a meeting of the Interstate Commerce Committee, and may not be here this afternoon.

Mr. REED. My colleague [Mr. STONE] is absent on account of sickness. I make this announcement for the day.

Mr. OVERMAN. My colleague [Mr. SIMMONS] is also absent on account of sickness.

The PRESIDING OFFICER. Fifty-nine Senators have answered to their names. A quorum of the Senate is present.

Mr. LA FOLLETTE. Mr. President, if in order at this time, I wish to make the point of order against the amendment appearing on page 10, beginning in line 14, and ending on page 12, in line 21, that it is general legislation upon an appropriation bill, and therefore out of order.

Mr. SMITH of Maryland. As chairman of the committee, I will say that that is agreeable.

Mr. GALLINGER. Mr. President, as I suggested a few moments ago, the Committee on the District of Columbia perfectly understood that this amendment was subject to a point of order. I had intended to make some observations on this subject, if it was discussed, but I will refrain from doing so, as I am very anxious to have the consideration of this bill pressed as rapidly as possible. Some statements have been made that are very inaccurate, but I will let time repair the mistakes.

The PRESIDING OFFICER. The point of order is sustained. The Senator from Utah [Mr. SMOOT] has asked that the first two amendments reported by the committee may go over, as the Chair understands.

Mr. SMOOT. Yes; I have asked that the first two committee amendments may go over.

The PRESIDING OFFICER. In the absence of objection, it will be so ordered.

Mr. GALLINGER. Before the reading of the bill begins, I ask unanimous consent to put into the RECORD a very brief table showing the price of gas in the various cities of the country, according to the well-known publication entitled "Brown's Directory of American Gas Companies."

Mr. REED. I have no objection to the request of the Senator, but, if the Senator can do so, I wish he would tell us how many of those companies whose names are contained in the table are controlled by the U. G. I.?

Mr. GALLINGER. I know nothing about the U. G. I. I am not acquainted with that individual.

The PRESIDING OFFICER. There being no objection, the request of the Senator from New Hampshire will be granted.

The table referred to is as follows:

| City. | Population. | Price. | Candle-power. |
|---|---|---|---|
| Baltimore | 558,000 | $0.80 | 21 |
| Buffalo | 423,000 | 1.00 | 17.7 |
| Cleveland | 560,000 | .80 | 18 |
| Denver | 213,000 | .90 | 18 |
| Detroit | 465,000 | .75<br>.45 | |
| Indianapolis | 233,000 | .60 | 18 |
| Jersey City | 267,000 | 1.00 | |
| Los Angeles | 319,000 | .80 | 19.5 |
| Milwaukee | 373,000 | .50 | |
| Minneapolis | 301,000 | .85 | 18 |
| Newark, N. J | 347,000 | 1.00 | |
| New Orleans | 339,000 | 1.15<br>.75 | 22 |
| Pittsburgh | 533,000 | 1.00 | 20 |
| Providence | 224,000 | .90 | 19.5 |
| San Francisco | 416,000 | 1.50 | 22 |
| Seattle | 237,000 | 1.00 | 20 |
| Washington | 331,000 | .85 | 22.9 |
| Columbus | 181,000 | 1.00 | 17 |

NOTE.—The three cities where gas is furnished cheapest are Detroit, Milwaukee, and Indianapolis. In Detroit the Senet-Solway Co. manufacture coke and ammonia, and a portion of their surplus gas is sold at a low price to the gas company. In Milwaukee the Senet-Solway Co. also supplies their surplus gas to the gas company, thereby cheapening the price. Indianapolis formerly supplied the city with natural gas. When that failed they built coke ovens near the city. The old natural gas mains were allowed to remain in use, and the surplus gas from the coke ovens was furnished to the gas company at a low rate. In Washington the price of manufacturing gas is high, for the reason that only 10 per cent of the gas is made from coal, and for the remainder enormous quantities of oil are used, the estimate being that 12,000,000 gallons will be required, at the cost of $125,000, for the next year. The price of oil one year ago was 3.07 cents per gallon, while since last October it has been 4.15 cents.

Mr. KERN. I desire to ask with reference to the first amendment, which I understand is now under consideration——

The PRESIDING OFFICER. The amendment has gone over temporarily at the request of the Senator from Utah [Mr. SMOOT].

Mr. KERN. Very well; I was not aware of that.

Mr. NORRIS. Mr. President, I desire to say, in connection with what the Senator from New Hampshire [Mr. GALLINGER] has said, that I had an amendment prepared which I expected to offer to the committee amendment relating to the gas proposition, if it did not go out on a point of order. I shall offer one of the amendments which I had intended to propose to the committee amendment when it becomes in order after the committee amendments are disposed of, and I shall submit some remarks on the gas proposition at that time.

The reading of the bill was resumed. The next amendment of the Committee on Appropriations was, on page 2, line 8, after the word "one," to strike out "$1,500" and insert "$1,600"; and in line 11, after "$840," to strike out "one $720, one $900" and insert "two at $720 each"; so as to read:

Assistant secretaries to commissioners—one $1,600, one $1,200; clerks—one $1,600, one $1,500, one $1,400, two at $1,200 each, one (who shall be a stenographer and typewriter) $1,200, one $840, two at $720 each; messengers—two at $600 each; stenographer and typewriter, $840; two drivers, at $600 each.

The amendment was agreed to.

The next amendment was, on page 2, line 22, after the word "inspectors," to strike out "one $900, one $780," and insert "two at $900 each," so as to make the clause read:

Purchasing division: Purchasing officer, $3,000; deputy purchasing officer, $1,600; computer, $1,440; clerks—one $1,500, one $1,300, six at $1,200 each, three at $900 each, six at $720 each; inspector of fuel, $1,500; assistant inspector of fuel, $1,100; storekeeper, $1,000; messenger, $600; driver, $600; inspectors—two at $900 each; two laborers, at $600 each; two property-yard keepers, at $1,000 each; inspector of materials, $1,200; temporary labor, $150.

Mr. THOMAS. Mr. President, I move to disagree to the proposed amendment of the Senate committee.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the committee. [Putting the question.] The "ayes" appear to have it.

Mr. GALLINGER. I ask for the yeas and nays on that amendment and will make the simple observation that here are two inspectors performing valuable work, one of whom is paid $900 and the other $780 per annum. They are doing exactly the same kind of work, and the committee felt that $900 in these days of high prices was not an excessive salary for an inspector. For that reason they equalized the salaries, giving each inspector $900. I do not believe the Senate will think that is an unwise increase.

Mr. SMITH of Maryland. I will say to the Senator from New Hampshire that we are not giving what was asked. The commissioners asked that these salaries be made $1,000 each.

Mr. GALLINGER. As I understand, the Senator from Colorado [Mr. THOMAS] raised a question on that amendment——

Mr. MARTIN of Virginia. The amendment was adopted.

Mr. GALLINGER. Very well; if it is agreed to, that settles it; but I understood the amendment was in controversy.

The PRESIDING OFFICER. When the question was put the Chair ruled that the "ayes" appeared to have it. The "ayes" have it, and the amendment is agreed to.

Mr. MARTIN of Virginia. That was on the adoption of the committee amendment.

Mr. GALLINGER. That is all right.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 3, line 3, before the words "at $1,200 each," to strike out "eleven" and insert "twelve," so as to read:

Building inspection division: Inspector of buildings, $3,000; assistant inspectors of buildings—principal $1,800, 12 at $1,200 each.

Mr. THOMAS. I move that the Senate disagree to the proposed amendment of the Senate committee.

Mr. SMOOT. Perhaps the Senator from Maryland will make an explanation of this amendment. I call his attention to the facts in the case.

Mr. SMITH of Maryland. It is a saving of $300 over what was estimated by the commissioners in the form in which we have placed the appropriation.

Mr. SMOOT. The Senate committee increased the number of assistant inspectors of buildings at $1,200 each from 11 to 12, but the Senator will find that on line 5, in the same clause, we reduced the appropriation for temporary additional assistant inspectors from $3,000 to $1,500.

Mr. GALLINGER. It is a transfer from the per diem to the regular roll; that is all.

Mr. THOMAS. Was the amendment adopted?

The PRESIDING OFFICER. The question is on the amendment proposed by the committee.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 3, line 5, after the word "necessary," to strike out "$3,000" and insert "$1,500," so as to read:

Fire-escape inspector, $1,400; temporary employment of additional assistant inspectors for such time as their services may be necessary, $1,500.

The amendment was agreed to.

The next amendment was, on page 4, line 4, after the words "in all," to strike out "$115,670" and insert "$125,710," so as to read:

In all, $125,710.

Mr. SMITH of Maryland. I ask unanimous consent for the clerks to be allowed to correct all totals in the bill. There will be some corrections to be made.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Maryland? The Chair hears none, and that order will be entered. The question is on agreeing to the amendment proposed by the committee which has just been stated.

The amendment was agreed to.

The next amendment was, on page 7, after line 16, to insert:

Buildings for fish market: For constructing buildings for fish market on the water frontage of the Potomac River, lying south of Water Street, between Eleventh and Twelfth Streets SW., on the site designated as a municipal fish wharf and market in the District appropriation act for the fiscal year 1914, approved March 4, 1913, $125,800.

Mr. THOMAS. Mr. President, I desire to make the point of order against the amendment that it is not germane to the bill.

Mr. GALLINGER. Mr. President, that item was estimated for by the commissioners and hence is not subject to a point of order.

Mr. OVERMAN. Mr. President, I think it is in order; but it seems to me that $125,800 is a large amount for a fish house.

Mr. THOMAS. If the amendment is in order, then I move that the Senate disagree to the proposed amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. OVERMAN. Mr. President, I was about to move to strike out $125,800 and insert $100,000. I made that motion in the committee, and I repeat it here. I think $100,000 is enough money to build a fish house on the river front, and to build a very handsome one.

Mr. SMITH of Maryland. Mr. President, in regard to the amount of money necessary to build a fish market I will say that personally I know nothing about it whatever. It was represented to the committee that it was very important to have this building. A commission was appointed to investigate it. The matter was thoroughly investigated, and this was the amount of money that was reported to us as necessary to construct the building. I do not think any member of the committee knows whether or not the building can be constructed for less; but we have to depend upon somebody. This subject was put in the hands of experts, and, as I have said, the sum indicated was decided upon as necessary.

Mr. GALLINGER. I will suggest to the Senator that Col. Harding, the engineer commissioner, approves of it, and the municipal architect has prepared the plans and furnished the estimate.

Mr. OVERMAN. Mr. President, I think this is a time when we ought to cut our cloth according to the proper measure. If it were a matter of constructing a building on some great avenue here, a different question might be involved. I have always voted for fine buildings on such thoroughfares in order to beautify the city, but this is merely a proposal to build a fish house on the banks of the river, and it does seem to me, although I am not an architect, that the municipal architect ought to cut the cost down to $100,000. That sum, it seems to me, ought to build a pretty nice fish house on the banks of the Potomac.

Mr. WILLIAMS. It is not simply a fish house, it is a fish market; and it is one of the most-needed improvements in the District of Columbia. It is curious to me that the same body which will throw $40,000,000 into Alaska to build railroads for 35,000 white people there should hesitate about spending $125,000 for a fish market in the Capital of the country for the benefit of the entire people of the Capital, especially now in times of the high cost of living, and all that sort of thing. While building a fish market, it is desirable that it be made somewhat ornamental and that it should not be simply a barn. I express the hope that this provision may remain in the bill and may receive the indorsement of the Senate.

Mr. THOMAS. Mr. President, it is quite true that I recorded my vote in favor of the Alaska bill as it passed this body, which made provision for a bond issue of $40,000,000 for the purpose of relieving a situation in one of the great dependencies of this country; a provision for an emergency which is absolutely exigent. But I voted against the conference committee report, which makes that appropriation a direct charge upon the Treasury. I am prepared to vote for adequate appropriations whenever and wherever they seem to me indispensable; but I do not think that it is necessary that the proposed fish market should be constructed here at this time. They have gotten along for many years without it. I think we ought to make these general appropriations as small as possible. If I am guilty of any inconsistency, I can only say that in that particular I have a great deal of good company in this Chamber.

Mr. WILLIAMS. I would suggest that if the Senator would go down into that part of the city and look around and smell around a while he would be convinced of the fact that although we have gotten along with the present situation it is very advisable to cease getting along with it any further, on sanitary grounds as well as others.

Mr. THOMAS. Oh, Mr. President, every objection that I make to these various appropriations seems to be followed by the suggestion from somebody that I ought to go around and look around and smell around. The Committees on the District of Columbia have been looking around and feeling around and smelling around for a good many years, with the result that they permitted these conditions to continue; but this bill contains a great many things that are here because of the fact that certain things will not bear looking around, feeling around, or smelling around.

Why should these various items be saddled at once upon this administration? If these intolerable conditions have existed, we are not responsible for them; and if they do exist, it seems to me that we can tolerate them at least long enough to enable us to understand and to realize what the amount of our revenue is going to be under our new policies. We do not know what amount of money we are going to have at the end of the fiscal year, except as we can estimate it, and very naturally these may be very substantially erroneous.

Mr. WARREN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Wyoming?

Mr. THOMAS. I will yield in a moment. I was going to say that I think until by the actual operation of our new fiscal system we shall have ascertained what our revenues are to be we should not take these chances upon appropriations out of the general revenues, whether for building railroads in Alaska or for any other purpose. I yield to the Senator.

Mr. WARREN. Mr. President, I was about to say to the Senator that every year we have provided more or less for improvements, of which this would be only one among others.

Mr. THOMAS. This is going to provide more instead of less.

Mr. WARREN. As a general thing, more of similar improvements have been contained in appropriation bills of the past than in this bill. From what I heard as I came into the Chamber this morning, when the Senator from Colorado was speaking, he seemed quite solicitous about the Democratic Party and its platform, and I honor him for it. I think that is the proper course for the Senator to take, to abide somewhere in the neighborhood of the provisions of that platform; but, Mr. President, some three years ago the House of Representatives passed from Republican control to Democratic control, and the same announcements were made as to economy and what should be cut out, and so forth; but after the appropriation bills had been prepared in the House and sent to us, we found that they exceeded those of the year before; and, of course, they were not less after they had passed through the Senate and through conference. Yet in the next election instead of holding the Democratic House responsible because it expended larger amounts than had been appropriated theretofore the people—the voters of the country—swept the Republicans entirely off the deck and elected a Democratic President and a Democratic Congress in both branches.

I think the Senator is mistaken in thinking that this country wants to go wild on the economy side and leave these very necessary improvements uncared for because there is a change of administration.

Mr. THOMAS. Does the Senator think——

Mr. WARREN. If the Senator will allow me——

Mr. THOMAS. Certainly.

Mr. WARREN. I have served on the Appropriations Committee under the administration of Mr. Cleveland and the Presidents since, up to the present time; and I have heard very often on this floor and elsewhere that a change of administration would affect the expenditures. But it does not do so, because the country is a growing country, and you can not put the child's foot in a wooden shoe and keep it there at the same size always unless you wish to make a Chinaman out of him and stop his future growth.

I have said here on this floor before—and I say again—that it does not matter who controls the Government for a term of years. You may cut down in one year, but you will have to make it up in the next. It is going to take a good deal of money. The Senator was in favor of the Alaskan improvement;

we were all in favor of the canal improvement; but all this costs money. The country is growing, and the total of the appropriation bills, therefore, is bound to grow.

Mr. OVERMAN. Mr. President, will the Senator from Colorado yield to me?

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from North Carolina?

Mr. THOMAS. I yield to the Senator from North Carolina.

Mr. OVERMAN. I am afraid the prophecy made by the Senator from Utah [Mr. SMOOT] this morning is going to prove true. The estimates alone this year are $28,000,000 more than they were last year, and this bill carries $1,700,000 more than the last appropriaton bill for the District of Columbia. So I think we ought to economize, and in this instance I think we can put up a building for $100,000 that will answer every purpose. I have seen public buildings erected in my State costing $125,000, and a county would build a courthouse right alongside the Government building for $60,000 and secure just as good looking a building. The architects, it seems to me, are very extravagant in making up their plans. I say let the architect cut his cloth according to the appropriation, and not make estimates which are so wild and extravagant. If we go on in this way we will finally swamp the Treasury. I am willing to let them have a fish house here, but at the same time I wish to cut down this large appropriation.

Mr. THOMAS. Mr. President, the Senator from Wyoming has called my attention to the fact that the Democratic House of Representatives elected in 1910 in its appropriations was more extravagant than its predecessor.

Mr. WARREN. Mr. President, I do not wish to be quoted in that way. I do not believe I said it in that way. If so, I want to correct myself.

Mr. THOMAS. I do not pretend to give the Senator's exact language.

Mr. WARREN. I said the total appropriations amounted to more; I did not say they were extravagant; I presume they were necessary.

Mr. THOMAS. Well, I will put it in that way; I do not wish to misrepresent the Senator. It seems to me, however, that that is a legitimate inference; I will not make it, however.

The Senator also said that these larger appropriations received the sanction of the Senate, notwithstanding which the country went Democratic and both Houses passed under the control of that party. The logic of that statement would lead us to the conclusion that the Democratic Party came into power at both ends of the Capitol because they increased appropriations after they obtained control of one House. That may be so; and it is possible that, if we continue these increased appropriations, it may result in continuing us here indefinitely in power; I do not know.

The great leader of the Republican Party on the floor of this body a few years ago said—and I do not think the statement can be successfully challenged—that a proper business administration of national affairs would result in an annual saving of $300,000,000. I believe it, and I believe to that extent our financial administration is extravagant and that it is a failure. I know of no way in which that can be corrected except by questioning these extravagant appropriations as they come, and in doing that I do not intend to reflect upon the integrity or upon the good faith of the committees having charge of these bills.

Mr. WARREN. Will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Wyoming?

Mr. THOMAS. Certainly.

Mr. WARREN. The Senator speaks of extra appropriations. Is he satisfied that in the race for economy we shall accept as all right everything that we have had before and add nothing now? Would it not be as well, if you seek to economize, for the Senator to look into the annual and other expenditures that have been incurred heretofore and are continuing appropriations?

Mr. THOMAS. I think it would.

Mr. WARREN. Here is a proposed expenditure that reflects upon the sanitary conditions of this city. The amendment under discussion is a remedial measure. It tends toward the production of healthful food, for, as we know, fish food is healthful. Certainly if there ever has been a time when it was necessary to nourish our fish industry it is now, when meat food is so high. This city would become more and more insanitary as this industry or trade grows larger if these remedial measures should not be adopted.

Mr. THOMAS. Does the Senator believe the construction of this fish house would reduce the price of fish to the consumer in Washington? If he satisfies me on that point, it will go a long way toward securing my vote for this proposition.

Mr. MARTIN of Virginia. If the Senator will permit me, I will say that, whether it reduces the price of fish or not, it will improve the quality. If the Senator wants to make objection to these appropriations, it seems to me it is due the Senate that he should inform himself about the matters. If he is prepared to say that there is no need of this building, or that it can be built for less than this sum, let him demonstrate that.

Mr. THOMAS. I am simply prepared to say that the city has gotten along heretofore without these improvements, and I think the quality of the fish has been very fair; but I have not lived here as long as the Senator has.

Mr. MARTIN of Virginia. I have been to the fish wharves, and they are in very bad condition. In fact, they are a scandal. It is a disgrace that this part of the food supply of the city should have been furnished in any such place as it has been furnished.

Mr. THOMAS. I am satisfied, however, that the best way to cut down the aggregate is to make objections to the small increases in appropriations. If the Senate wants to increase these appropriations, if it is absolutely necessary, I am not going to make any factitious objections. I shall not stand in the way, alone, against the increases of appropriations on these great bills. I shall content myself by recording my protest.

This is but a small part of the numerous appropriations that are going to be made, with increases all along the line. I think a proper regard for the ultimate result, taken in connection with the fact, as I have stated, that our revenues are necessarily largely estimated on account of our change of fiscal policy, justifies the objections I am seeking to make.

Mr. DILLINGHAM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Vermont?

Mr. THOMAS. I do.

Mr. DILLINGHAM. I wish to call the attention of the Senator from Colorado to the actual figures given in the estimates made by the Commissioners of the District of Columbia. They call attention to the fact that this property was formerly claimed in private ownership, but that under a decision of the courts it came into the possession of the Government in 1903. Then it was leased for 10 years to private parties, and was taken by the Government last year, and has been operated by the District government for 12 months.

They say, in their estimates:

> By an item contained in the last District appropriation act this market was made a municipal market and was constituted the sole wharf for landing fish and oysters for sale in the District of Columbia and placed under the control of the commissioners for operation. It has been so operated since March 15, 1913, the date of the expiration of the lease, and the annual revenues, based on six months' operation, are estimated to be somewhat over $10,000 per annum. The buildings are not modern and the sanitary conditions are not what they should be. The present buildings should be torn down and replaced by a modern sanitary market, for which the above estimate is submitted.
>
> The details of the estimate are as follows:

| | |
|---|---|
| Main building, 460 feet long, 40 feet wide, 1 story high, with 2 stories and attic in central portion | $98,406.40 |
| 2 packing houses, 64 by 22 by 18 feet | 7,704.80 |
| Boiler and refrigerating house, 20 by 48 by 24 feet | 4,608.00 |
| Boiler | 1,000.00 |
| Refrigerating and heating | 4,350.00 |
| Smokehouse and tank | 3,000.00 |
| Shed over fish wharf, 40 by 60 feet | 2,200.00 |
| Counters, etc., in fish houses | 2,400.00 |
| Scales | 1,100.00 |
| Plans and specifications and inspection | 1,000.00 |
| | 125,769.20 |

Mr. OVERMAN. Is the Senator reading from the House hearings?

Mr. DILLINGHAM. I am reading from the estimates made by the Commissioners of the District of Columbia, showing what is required and what each item will cost.

Mr. OVERMAN. I thought the Senator was speaking of the House hearings.

Mr. DILLINGHAM. So it seems to me the suggestions made, that the amount should be reduced, can not be very well sustained, in view of the fact that the items are all given here, and the amount required for each. It is simply a question whether we need this fish house, and whether we need a modern structure of this character, with conveniences for refrigeration, curing, and all the other things that attend a modern fish house. If we do, I do not see how we can get along with an appropriation of less than the one that is called for. It seems to me evident that we do need it.

Mr. CLARK of Wyoming. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Wyoming?

Mr. THOMAS. I do.

Mr. CLARK of Wyoming. I wish to ask some member of the committee—the chairman or the former chairman of the committee—in what manner this market is supposed to be operated. Is it operated directly by the Commissioners of the District, or are stations in it leased out under the control of the District for a revenue or license or fee? If so, what revenue would be likely to be had from it?

Mr. GALLINGER. I will say to the Senator that formerly the space was leased, and there was an income of $1,400 a year from it. A short time ago we put it under the control of the commissioners, and they have operated it, I think, for six months. It is now estimated by the commissioners that if this new structure is built they will receive an income of from $10,000 to $12,000 a year, a very large revenue, from this expenditure.

The chairman of the Board of Commissioners says the conditions there are horrible, and I know that from personal inspection. Our feeling was that if by replacing with a modern structure these dilapidated buildings and the horrible conditions there, we could get a revenue of from $10,000 to $12,000 a year from the property, we certainly would be justified in erecting there decent, clean, and sanitary buildings.

The proposition is to make this a wholesale and retail fish market of an approved type; and I feel sure that any Senator who will visit the place, as I visit it occasionally for the purpose of buying fish, will be satisfied that this ought to be done.

I notice the Senator from North Carolina [Mr. OVERMAN] says we have made an increase in this respect. That is true. But we have reduced the appropriations carried by the bill $670,000 below the estimates; so that if the same percentage of decrease is made all through the bills that come here, I think the Senator will not have cause to complain. The Senator must remember also that this bill will have to run the gantlet of a conference committee, and beyond question it will be largely reduced, I regret to say, from what it is now.

Mr. OVERMAN. That is a point I have made in regard to the erection of these buildings—that these people always estimate from a million to ten million dollars more than we are going to give them, anyhow. Here they estimate $600,000 more than we have given them; and they ask for this building at $125,000, when I say that they can erect a building for $100,000 that will answer the purpose.

Look at this estimate. They propose to put up a building 460 feet long. I say they can put up a building 400 feet long for $100,000, instead of putting up a building 460 feet long for $125,000. The estimate which the Senator referred to is really an argument in favor of lowering this appropriation. The building is too long. It is too much of a building. Let us erect a building in keeping with a fish market and not a great extravagant building for $125,000.

Now, a point of order. I think the amendment I introduced before the motion of the Senator from Colorado to strike out is in order first.

The PRESIDING OFFICER. The Chair so considers.

Mr. THOMAS. Oh, I make no point about that. I am perfectly willing to have it so considered.

Mr. LEE of Maryland. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Maryland?

Mr. THOMAS. I do.

Mr. LEE of Maryland. Mr. President, it seems to me, with all due respect to this discussion, that the whole question is whether the unlimited sea-food supply of the waters of Carolina, Virginia, and Maryland can be availed of in the National Capital. There is no place in this country where the cost of food is higher than it is here in Washington, under the immediate supervision of the Senate of the United States and the House of Representatives. It is a notorious fact that the cost of food supplies here in the District of Columbia is higher than it is elsewhere.

Mr. THOMAS. Mr. President, I made an inquiry a moment ago, and I will repeat it. I will ask the Senator from Maryland whether he contends that the construction of this fish market will reduce the price to the consumer in Washington?

Mr. WILLIAMS. It will render the fish more accessible, anyhow.

Mr. LEE of Maryland. Mr. President, that is the whole question involved in the proposed construction of this building. If it will not reduce the price of sea food to the people of this District, it is not worth while to build it.

Mr. THOMAS. I am unable to perceive how the construction of a building is going to influence the price of food.

Mr. SMITH of Maryland. Mr. President, if the Senator will pardon me, I should think it might be argued that it would, because it will permit the use of improved refrigerating processes; and if you can keep your fish longer, and keep them in better shape, I should think they could reduce the price.

Mr. THOMAS. But we have all those conditions in the case of meat, and the price of meat is rising. We have all the modern refrigerating improvements, and still the price increases.

Mr. SMITH of Maryland. But I think the Senator will admit that in the case of a man who sells fish, the smaller the quantity he has to throw away, the better he can keep them, and the longer he can keep them the cheaper he can sell them.

Mr. THOMAS. Perhaps that would naturally follow, but our experience does not justify it.

Mr. SMITH of Maryland. That I do not know anything about.

Mr. LEE of Maryland. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado further yield to the Senator from Maryland?

Mr. THOMAS. I do.

Mr. LEE of Maryland. The question seems to be whether or not, under this municipal government, there shall be an effort made to apply refrigeration and cleanliness and storage and general good management from a municipal standpoint to this very vital and important question of reducing the price of food supplies.

Mr. THOMAS. Let me ask the Senator if these facilities do not obtain now—refrigeration, for example?

Mr. LEE of Maryland. As far as I am advised, they are altogether in the hands of middlemen and people of that type. This seems to be the first step in the direction of refrigeration and storage under the control of the municipal authorities. For that reason, in view of this enormous supply of cheap and nutritious food available from these sea sources it is almost criminal that Congress has so long neglected to supply the demand that exists here with a reasonable competition from these unlimited sources of nutriment.

Mr. THOMAS. Mr. President, I think I am perfectly safe in saying that we have fish markets here, extensive, clean, with all modern facilities for the preservation of fish and keeping them in good condition, and have had them for some time; but I shall not prolong the discussion. It seems to me that the logical result of it all is, viewed from a Democratic standpoint, that where the Republicans make an increased appropriation it is profligacy and where we make one it is necessity.

Mr. WILLIAMS. Mr. President, the Senator from Colorado is, of course, eminently right about one thing. It is true in connection with all the improvements that ever were made in the world that the world got along somehow or other before they were made. We got along without the Declaration of Independence until after we made it, and we have gotten along without everything that has been done up to the time we did it. The question is whether we are going to continue to get along without this improvement. The question is not whether it has been bad enough in the past and the fault of the Republican Party, but whether we are going to stand responsible for continuing it in a condition bad enough.

The Senator has talked about economy. I believe in economy. I am an old-fashioned fellow, not only in my legislative capacity but in my individual capacity; so old-fashioned that I never contract a debt beyond about 30 days for household expenses. You can not cure extravagance, however, by continuing to waste at the bung while you are trying to save at the spigot. You might just as well try to increase your bank account by doing without socks while you wear a fur overcoat. Gentlemen who want to spend four-fifths of the entire income tax of the country for one year to build railroads in Alaska ought not to be cheeseparing about $125,000 for a fish market in the city of Washington, especially when you reflect that the people of the city of Washington put up one-half of the money, so that you are not spending even $125,000, but only one-half of it.

Upon the question of extravagance generally the Senator from Colorado is eminently right again. This Government is not only ridiculously extravagant; it is criminally extravagant.

Mr. SHAFROTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Colorado?

Mr. SHAFROTH. Will the Senator yield for a correction of a statement he has made with respect to my colleague, who is not here?

Mr. WILLIAMS. Yes.

Mr. SHAFROTH. The Senator made a statement as to his voting in favor of the Alaskan railroad bill.

Mr. WILLIAMS. No; I did not do anything of the kind. I made no statement at all about how he voted.

Mr. SHAFROTH. I understood the Senator to state that my colleague voted in favor of the Alaskan railroad bill.

Mr. WILLIAMS. No; I did not.

Mr. SHAFROTH. All right.

Mr. WILLIAMS. I said I could not understand how gentlemen constituting a body which has just voted away four-fifths of the amount of the income tax for one year for transportation facilities for the 35,000 white people up in Alaska should be cheeseparing about $125,000 for a fish market in the Capital of the Nation.

Mr. President, I think this country is not only ridiculously but criminally extravagant. The Senate of the United States cost a few years ago, and I suppose it still continues to cost, though I have not looked it up in late years, ten times as much per annum as the House of Lords, a body which is the very type of "effete old Europe," as we call her, with all of her extravagant ways. The House of Representatives spends several times as much as the House of Commons. These great extravagances seem to have gone on to a point that, in my mind, constitutes a criminality, and yet the American people seem to be so constituted that you can not appeal to them in behalf of economy.

Now, for heaven's sake, let us have economy; let us go to work and keep our party pledges; but let us stop up the bung, and not fool altogether with the spigot. Whenever gentlemen want to economize they come to economize upon the District of Columbia. I can tell you the main reason why $40,000,000 is put out in Alaska and $125,000 is strained at here. It is because a great political influence was behind the Alaskan project, a great section of this country with votes, while behind a fish market in the District of Columbia or anything else there is nobody with a single vote; no sort of politics at all except the sort of political influence that may be exercised by gentlemen who quadrennially come up to national conventions with contesting delegations, and I do not suppose that amounts to much.

There is some sense in beautifying the great capital of the country. There is some sense in making its conditions, and especially its market conditions, sanitary. There is a beauty and a majesty of sovereignty resting about the National Capital. We have not spent too much money in Washington; we have spent too little. There ought to be a great hall of records here, for example. We ought to cease renting all of the buildings that we are renting for departmental purposes. Beautiful pillared and columned buildings ought to be there to take their places.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Colorado?

Mr. WILLIAMS. In one moment. If Senators want to economize, let them cast their eyes down toward the Pension Bureau; let them cast their eyes over the naval appropriations; let them come closer to the military appropriation bill; let them scan more particularly very many objectionable items which appear on river and harbor bills; let them scan with a little greater particularity very many still more objectionable items that appear upon public buildings bills—the expenditures that you and I are making for the purpose of retaining popularity in our districts.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Colorado?

Mr. WILLIAMS. I now yield to the Senator.

Mr. THOMAS. I do not know whether or not the Senator was here this morning when I stated that I believed the Government should erect more public buildings here in the District of Columbia, and among other things a hall of records. I believe the Government is paying more rent here, perhaps 75 per cent more in each instance, than is charged to local tenants for the same space; and I quite agree that it would be the highest sort of economy for the Government to house all of its officials and all of its records here in buildings of its own.

Mr. WILLIAMS. The Senator from Colorado is looking at what I am saying from a mistaken viewpoint. I am not debating with him. I am arguing this question. When I make these statements of my opinion, I am not criticizing him in any way, nor attempting to engage in a debate with him. I am visualizing the question itself.

When you come down to this proposition, I wish there were as good a basis behind most things we do as there is behind this. Here is a proposed expenditure of $125,000 in order to obtain a revenue of $12,000. Where did you ever get it for a public building in your district? It is nearly 10 per cent gross, probably 7½ to 8 per cent net. It is an investment, and such an investment as almost any property holder in the city of Washington would make.

I am glad the Senator from Colorado has sounded the tocsin upon one question. I do not believe in a nation being extravagant. I abhor waste, and I think a good deal of the trouble we are in now is not only the high cost of living, but the cost of high living. The individual American is wasteful and extravagant. The municipalities are so. The States are a little less so. The Federal Government is a little more so. There is no sort of business in the world that an American can go into without seeming to think it necessary to advertise himself by being wasteful and extravagant and ostentatious. It seems to be a national trait in our private life and in our public affairs. We love to do a thing because it is big and spectacular and expensive. We love to run in debt, individually and municipally and nationally. We ought to cut down expenses.

Somebody says this is a great and a rich Government. It is a great Government, but it is not a rich Government. Every Government that ever existed was, and every Government that now exists is, a pauper. It has not a dollar in the world that it does not get by putting its hands into somebody's pocket. It is a beggar, or else a robber, for every dollar it has. It is one or the other.

There never was such a thing as a rich Government. A Government is not a creator of wealth. It is not an owner of wealth. It is a mere gatherer-in and a distributor; and its money does not drop into the treasury like manna, the gift of God to the children of Israel. It is first taken out of somebody's pocket, and every dollar of it is subtracted from some other purpose.

There is not a dollar put into this Treasury and spent by this Government that is not subtracted from the comfort or the necessities of some individual, or else subtracted from public schooling or from church facilities or from road facilities or from some other useful purpose or economic facilities toward which that dollar might have been devoted in the States.

It is therefore our first duty as trustees for the people to use their money carefully and not wastefully. It is true, therefore, as in the case of any other trustee, that if we do use it extravagantly and wastefully we are using it dishonestly, because it is dishonest for a trustee to waste his fiduciary's money.

What is the spirit of the American Government here at this center? Are you and I and the Representatives at the other end of this Capitol engaged in the business of representing the people of the United States in saving money for them? No; you know we are not. What are we engaged in doing? Why, we are engaged generally in the business of trying to get out of the Treasury every dollar we can to put in our States or our districts. That is what is wrong with the American Government, and that is the reason why it is extravagant.

A member of the House of Commons does not feel that way about the English treasury, but our committee system and our representative system, where the man is always peculiarly a representative of a district, leads him to consider it a public duty to get out of the Treasury and get into his district every dollar that he can. Whose fault is it? Is it his? No; it is the fault of the people behind him, because they applaud him just in proportion as he gets money out of the Treasury and puts it in the district, and he knows that if he does not do it somebody will promise to do it and will be elected in his place.

We have to go to the root of this evil, if we have economy on the brain. We can not organize an economical government by objecting to necessary or advisable improvements anywhere, and least of all in this District, which is helpless and has no representative. It alone of all parts of the country has nobody paid and honored and admired because he gets money out of the Treasury and puts it at her service.

Mr. OVERMAN. Mr. President, I wish to say to the Senator from Mississippi that I voted with him on the Alaska appropriation. So the Senator can not charge me with voting $35,000,000 to build a railroad in Alaska, because I am simply trying to economize here. I wish to say that I have never failed to vote for appropriations that were plainly necessary.

Mr. WILLIAMS. I have not said that the Senator from North Carolina voted extravagantly about anything or that he voted for the Alaska appropriation, either. The Senator misunderstood me if he thinks I said anything of the sort. I was comparing the two votes. I was not criticizing the Senator as voting against it or voting for it.

Mr. OVERMAN. I think every Senator voted honestly on that question, and I was with the Senator on the proposition. I wish to say also that I have voted money to make this as far as possible one of the most beautiful cities in the country. I am in favor of voting everything that is necessary for the sanitation of the city as well as to beautify it. All I am trying to do is to economize as much as possible; and I think in making my motion to reduce the appropriation to $100,000 that that is a sufficient amount of money to put up a first-class fish market down on the Potomac River.

It is well to see the amounts that have been appropriated by Congress, say, in the District of Columbia appropriation acts

a few years back. The figures will show that the increase in this bill is much greater than in some of the other bills year after year. Of course as a city grows it has to have additional appropriations; but the appropriation for 1906 was $9,000,000 in round numbers; for 1907, $10,000,000; for 1908, $10,000,000; for 1909, $10,000,000; for 1910, $10,000,000; for 1911, $10,000,000; for 1912, $12,000,000; for 1913, $10,000,000; and for 1914, $11,000,000. This year the bill has gone about $2,000,000 above that of last year.

I am not criticizing the additions here, but I say there is too much money allowed for some of the public buildings. I think we spend too much money for public buildings, our court buildings and others, in the States. As to the estimate of the appropriation read here by the Senator from Vermont [Mr. DILLINGHAM], I will repeat that a building 460 feet long is too much of a building for a city of this size. Therefore I insist on my amendment to fix the appropriation at $100,000 instead of $125,000.

Mr. HUGHES. Mr. President, I agree with the Senator from Mississippi [Mr. WILLIAMS] in nearly everything he said in reference to appropriations for the District of Columbia. I am not one of those gentlemen who would take a delight in jumping on the District of Columbia. I rarely have taken a stand with reference to the District of Columbia appropriations, for the reason that I have never been a member of the District Committee of either branch of Congress, and I found myself unable to give time to the investigation necessary before a man should take a decided stand in reference to this city. The District of Columbia has been kicked around both branches of Congress, and gentlemen who vote for all sorts of extravagant appropriations square their consciences by attempting, always in good faith, to economize in the affairs of the District of Columbia.

But there is a necessity for economy, in my judgment, in every department of the Government. I think, perhaps, the enactment of the income-tax law, when its purpose and effect are understood, will have a deterrent effect upon some of the enthusiastic gentlemen who measure their right to come back to the Senate and the House by the sum total of the appropriations they have received for their respective States and districts. I propose, so far as I can see my way clear to do it, to vote against extravagant appropriations from all sources. I think that is the first duty of every Senator and of every Member of Congress, and particularly it is the first duty of Democratic Senators, because the Democratic Party is in control of the three branches of the Government, and I have it dinned into my ears by Democratic leaders and by men to whom the ordinary Democrats in the ranks look to furnish inspiration and leadership, that the prime and great evil of the tendency of the present times is extravagance in public affairs.

The only way to be economical is to be economical, and the only way to stop appropriations is to vote against them. Here is a proposition to expend $125,000 for a fish market along the wharves. I have examined both the House committee hearings and the Senate committee hearings and I can not find a line dealing with the subject. I do not say it is not in the hearings, but I failed to find it because of the fact that the hearings are not fully indexed.

Mr. SMITH of Maryland. I will say to the Senator that it appears in the hearings before both the House committee and the Senate committee.

Mr. HUGHES. I have turned to the House hearings, and I spoke to a Member of the other branch about it, and he could not find it.

Mr. DILLINGHAM. The Senator will find it on page 39.

Mr. HUGHES. Anyway I am informed that attempts were made to have this appropriation put in on the House side and that a subcommittee was appointed, or at least it was self-constituted, and an investigation was made, and it was decided not to put in the item.

I am more or less familiar with the conditions in that section of the city because I find it a very interesting locality. I like to see the boats lie at the wharves. Occasionally I pay a visit to that part of the city and talk with the men who bring up oysters and who ply to and fro between the oyster beds and the city of Washington. I have never, so far, discovered any necessity for an expensive fish market there. My observation has been that the traffic at that point consists almost entirely in the transportation and sale of oysters. There is a fish market in the general market, and nearly all the fish that come to the city of Washington come in by rail. Very little of the product comes up in those boats. Nearly all the boats ply between some point in Virginia near Norfolk——

Mr. OVERMAN. I wish to call the Senator's attention to the fact that the next item in the bill is an amendment making an appropriation of $50,000 to reconstruct wharves at that point.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from New Hampshire?

Mr. HUGHES. I do.

Mr. GALLINGER. Did the Senator ever visit our present fish market when shad were coming in common use by the people of the District and see those boats loaded with them?

Mr. HUGHES. I did not happen to do so. I have not made any study or investigation of those conditions. I go occasionally to the wharves. The shad season does not last long. A great many shad come up the Potomac River and there may be a time during the year when a great many fish are taken from that river and handled at that point, but, as a general proposition, they are not handled like oysters.

Mr. GALLINGER. There is one other point. The Senator says fish come in by rail.

Mr. HUGHES. Yes. Fish do not come in voluntarily by rail. [Laughter.]

Mr. GALLINGER. Is it not a part of the Senator's creed that water transportation lessens the cost of bringing products to market?

Mr. HUGHES. Yes; that is generally true.

Mr. GALLINGER. So if we had a fish market that would accommodate the fish consumed here they would come by water rather than by rail, would they not?

Mr. HUGHES. The Senator overlooks the fact that a high-class community like the city of Washington will pay the little charge that is necessary to get their fish fresh.

Mr. OVERMAN. The shad would not come by water entirely. Occasionally they come from North Carolina, but they would not come around the cape.

Mr. HUGHES. That is a different question. It may be a justification and a reason for the construction of this building that there are water facilities and steamboats plying between points where the fish are obtained and the points where they are brought for sale and consumption, but nothing like that appears here. It seems to me, Mr. President, that this is an item where we might very well start in and economize, not only for the sake of the General Treasury, but for the sake of the people of the District of Columbia.

Mr. GALLINGER. Now, one word more, and then I will not interrupt the Senator further.

Mr. HUGHES. I am pleased to yield to the Senator.

Mr. GALLINGER. The Senator is kind to me; he always is. Inasmuch as the commissioners have stated to Congress—to a committee, at least—that they can sell space in this market to the amount of $12,000 a year, does not the Senator think there must be a large traffic for this new fish market? Does not the Senator think that an investment of $100,000 or $120,000 which would produce $12,000 per annum is much better than we usually make?

Mr. HUGHES. As I said, I made an attempt to find out what the commissioners or what anybody had to say with reference to the merits of this proposition, but I was unable to find it.

Mr. GALLINGER. The Senator will find it in the House hearings, commencing on page 32 and extending over five or six pages.

Mr. HUGHES. I am going to examine it.

Mr. SMITH of Maryland. If the Senator will turn to page 33, he will see what the commissioners said on the subject.

Mr. GALLINGER. It commences on page 32.

Mr. SMITH of Maryland. Commissioner Siddons said, at page 33:

> The very last report made to me by the market master indicates that we may reasonably expect to have an income of $12,000 from it during the first year that we have taken charge of it.

Mr. HUGHES. The point I make is that the commissioners' estimates of cost are seldom exaggerated. I am firmly convinced——

Mr. GALLINGER. If the Senator will permit me just a word more, Commissioner Siddons says, on page 33 of the House hearings:

> Yes, sir; that has occurred to me, and there is something to be said in favor of that view. I can best answer it by saying that experience seems to reveal the fact that there is a great demand down there for space. We have a demand for the space and our income from the property has jumped from $1,400 per annum to what I conservatively estimate will be $12,000 per annum.

Mr. HUGHES. The commissioner is speaking of what place?

Mr. GALLINGER. The fish market.

Mr. HUGHES. The old fish market along the wharves?

Mr. GALLINGER. Yes. He says that they have received an income of $1,400 a year and that from this new fish market they have estimated an income of $12,000 a year.

Mr. HUGHES. I started to say that the commissioners' estimates of the cost of this fish market is, in all likelihood, for the actual construction and, in all probability, the estimate of the income does not exceed what will be actually received; but I believe it to be the situation now that nearly all the business that is done at the fish wharves is done by wholesalers and jobbers for hotels sending their buyers there to purchase oysters in great quantities and that there is very little real fish business done outside of the purchase and sale of oysters that is carried on there.

It is a very small fish market now; it can hardly be dignified with the name of market now; but it seems to answer all the requirements of the people of the District of Columbia. I never heard a man in the District of Columbia complain or criticize anybody because a more imposing fish market has not been built. I am informed by gentlemen who made the investigation, who are friendly enough to the proposition, if anything is to be said in its favor, that the fish are brought as cheaply here over the railroads and that the little additional cost is more than made up by the better condition in which the fish arrive by rail.

We are asked now to appropriate $125,000 at a time when everybody admits there is the greatest need for economy in the administration of public affairs. Imagine a community such as the majority of Senators reside in and the public interest that would be taken there over a proposed expenditure of $125,000. There would be a referendum and public meetings and debate without end. Yet this proposition is brought into this Chamber and everybody is supposed to graciously consent to it.

I think, Mr. President, there is no need for this additional public improvement; and surely in the interest of economy we can not expect men to support it who will vote against appropriations for improvements that are necessary. There are scores of public improvements which are necessary, but for which every Senator knows in his heart he can not conscientiously vote the money. Then are we going to vote money for public improvements that are admittedly not necessary?

Mr. MARTINE of New Jersey. If my colleague will allow me, I think he will agree that this little rent of $12,000 will pay a good deal better interest than many investments they make in the city of Paterson, N. J. I do not believe it is admitted that the improvement is not necessary. I believe there is a necessity for it there. I believe it is our bounden duty to do everything we can to facilitate transportation by water and to facilitate shipping. I believe, in regard to this fish market, the matter of $25,000 additional should be carefully considered before a reduction is made to $100,000. God knows I do not want to waste money, for I have been brought up too frugally all my life for that, having had to husband it; but I do believe in the construction of a great public improvement. The city of Paterson, N. J.; the city of Plainfield, N. J.; the city of Newark, N. J., would spend $100,000 and would not be narrow if after a reasonable investigation they felt that they would be justified in spending $125,000.

Mr. HUGHES. My colleague misunderstands me. I am trying to get the Senate to strike out the whole item. I will agree with the Senator if the item is to stay in. I do not propose to set myself up as a critic of the estimates of the commissioners. If upon sufficient investigation and statements satisfactory to me I were inclined to agree to the item I would not raise a question between $100,000 and $125,000, but I am against the proposition. I do not think it is necessary. I do not think it is fair to the people of the District of Columbia.

We have a magnificent market in the city now, and there is a fish market in connection with it. It never has been suggested in my hearing that there were any needed facilities that they did not have in that market or that there was any lack of facilities or lack of means for the proper handling of fish. But the District of Columbia is fated to have every sort of proposition thrust upon it where there is back of it the aid of a Senator or Representative.

If the Congress of the United States were appropriating the $125,000 out of the revenues of the United States Treasury for the purpose of putting up a model fish market as an example to the balance of the United States there would be some ground that might justify it, but the money which we appropriate must be paid by the people.

I am attempting to interpret the will and wish of the people of the District of Columbia as I would interpret the wish of the people of my home town. There is an agitation going on there now for a market and I am familiar with it. I am in favor of the project, but I do not believe there is any public sentiment in favor of this expenditure. I do not think there is sufficient need for it, and it is as plain and glaring an instance, in my judgment, of the carelessness with which Congress appropriates money as has come under my notice in a long time.

Mr. SMITH of Maryland. Mr. President, I will say in regard to the remarks of the Senator from New Jersey [Mr. HUGHES] that he himself admits that he never heard there was any effort on the part of the people of the District of Columbia, in the House or in the Senate, in behalf of this appropriation. Probably there are very few items in the bill that have been considered and urged more strongly than this one item, both in the House and in the Senate. As to the people of the District of Columbia not wanting it, to the contrary, every expression that we have is to the effect that they do want it and that they need it. There has been no objection on the part of anybody against the proposition, but, on the contrary, there has been great effort on the part of many to have this building constructed. The Senator himself admits that he had seen nothing in regard to it in the House and nothing in regard to it in the Senate, when there has been a very strong effort on the part of the District of Columbia Commissioners and others to secure the building.

Mr. JONES. Mr. President, I understood the subcommittee gave the question of the necessity for this fish market very careful consideration, and reached a conclusion that a fish market is very much needed here in the city of Washington. I accept their judgment with reference to the necessity of the fish market, although I thought that the amount recommended—$125,000—could very safely be reduced to $100,000.

I have always been told that fish food is much better, much more nutritious, than ordinary meats, and I think we ought to encourage the use of fish as much as possible, especially when we hear so much now about the high cost of living. If this would have a tendency to lead to the use of fish in the Potomac River more than at the present time, I think we would accomplish a great deal. While I am satisfied that the fish of the Potomac River are not so fine or so desirable or so nutritious as the fish on the Pacific coast, I believe that they come up to the general reputation, at least, of fish food.

I found a very interesting article this morning in the Washington Post showing the importance and the value of the Pacific coast salmon. I think it would have some bearing upon the necessity for this fish market and the importance of getting the people of Washington City to consume more fish than are found in the waters here. I ask to have it read by the Secretary for the information of the Senate.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary read as follows:

[From the Washington Post, March 11, 1914.]

EAT SALMON TO SAVE—"GIVES STRENGTH AT LESS COST THAN MEAT," SAYS DR. SMITH—OFFERS FIGURES AS PROOF—FEDERAL COMMISSIONER OF FISHERIES DECLARES, ANENT LOW PRICE OF PRODUCT, THAT GOOD GRADES OF CANNED SALMON ARE RICHER IN BODY-BUILDING ELEMENTS THAN MEATS, AND COMPARES PRICES.

"To reduce the cost of living eat more salmon, especially of the cheaper grades, and less meat." This is the advice of Dr. Hugh M. Smith, Federal Commissioner of Fisheries, in a statement made yesterday enumerating the important factors in favor of salmon as an article of food as compared with meats. He asserted that not only is salmon cheaper than meats, but will keep indefinitely if the can is unopened, while meats spoil quickly in the home.

COMPARES WASHINGTON PRICES.

To prove his assertion that salmon is cheaper than meats, Dr. Smith compared the average retail prices of these products in Washington on February 10 last. One pound of canned red salmon of the best quality will cost about 16 cents, he said, while the same quantity of bone, muscle, blood, and brain building material and body fuel in other foods would cost as follows: Eggs, strictly fresh (at 34 cents per dozen), 36 cents; steak, sirloin (at 27½ cents per pound), 32 cents; mutton, leg (at 19 cents per pound), 32 cents; chicken, average (at 25 cents per pound), 21½ cents; ham, smoked (at 18½ cents per pound), 13½ cents; and pink salmon, canned (at 9 cents per can), 12½ cents.

"RICHER IN NUTRITION," HE SAYS.

"The best grades of canned salmon," said Dr. Smith, "are richer than meats in body-building materials and contain about the same amount of fats. Pink salmon, which is of a cheaper grade than red, is better than meats for making flesh and bone, but has less fat than the red salmon. Either is as digestible as the best sirloin steak, there is no waste, and nothing has to be thrown away except the can."

In 1913 there were canned on the Pacific coast the equivalent of 387,045,456 1-pound cans, valued at $38,563,891. This, it is stated, would supply about 4 pounds of salmon to every man, woman, and child in the United States.

Mr. SHEPPARD. I wish to ask some member of the committee what proportion of the fish sent to Washington are brought here by rail?

Mr. SMITH of Maryland. I am unable, as far as I am concerned, to answer the Senator from Texas, but it is our opinion that if we have a good fish market here, a very much larger proportion will be brought by water than are now brought.

Mr. SHEPPARD. Is it proposed that it shall be a market for fish brought in by rail?

Mr. SMITH of Maryland. There will be facilities for keeping them there by refrigerating processes. If they were brought here by rail, those facilities could be utilized. I assume that a very much greater proportion of fish than now come to the market would come by water if they had better facilities than they have now. Not only that, but this is a good investment for the Government. It has been estimated that this property, costing $125,800, will produce a revenue to the Government of $12,000 a year, and give the people better fish, and I should think cheaper fish. For that reason they would be able to keep fish longer, and they would lose and waste less.

Mr. HUGHES. Mr. President, I have been reading these hearings, and it does not seem to me that there is anything in them that justifies the Senate in adding this item. Mr. Siddons, one of the Commissioners of the District of Columbia, while before the House committee, had this to say, on page 40 of the hearings:

May I, as suggested by this particular item, Mr. Chairman—

Which is the item under consideration—

recall a conversation we had with you? While we have endeavored to observe the caution you gave us not to introduce new legislation, at the same time we understood that we should put in here provisions calling for appropriations which we might hope to get through in a legislative measure, and, of course, we are not asking for this as legislation in an appropriation bill, but calling the matter to your attention in case the bill may go through.

And again I read from page 35 of the House hearings:

Mr. NEWMAN. I think it would. I think we ought to consider the entire matter as one proposition. I think what we ought to have is a system of municipal markets—

It is quite evident that these gentlemen are not at all agreed—

with one located as centrally as possible, instead of having these private markets. This fish market is not a municipal market; the only thing municipal about it is the title to the property. This third item you mention contemplates a municipally operated market.

In another part of the hearings one of the commissioners states that the expenditure of a much smaller sum is contemplated.

Mr. OVERMAN. Do I understand from what the Senator has read that this item was not estimated for?

Mr. HUGHES. I will read it again.

Mr. GALLINGER. It is estimated for.

Mr. HUGHES. I will read it again. Mr. Siddons, the commissioner, said:

May I, as suggested by this particular item, Mr. Chairman, recall a conversation we had with you?

They had been talking this item over.

While we have endeavored to observe the caution you gave us not to introduce new legislation, at the same time we understood that we should put in here provisions calling for appropriations which we might hope to get through in a legislative measure; and, of course, we are not asking for this as legislation in an appropriation bill, but calling the matter to your attention in case the bill may go through.

They have a bill pending, I presume, for a system of municipal markets. In view of that statement of Mr. Siddons, and in view of the condition of the Treasury, if the House had just knocked the project out without rhyme or reason, we might insert it again in the bill and all vote for this new expenditure of $125,000. But in another part of the hearing we see where a much smaller sum was to be devoted to this purpose. However, somebody went to Boston, New York, and Norfolk, Va., and saw the fish markets there, and decided if they were going to build a fish market they would come back and build that sort of a market and ask for an appropriation of $125,000. Will any Senator for a moment compare the city of Washington in importance as a fish market with the city of Boston?

Mr. OVERMAN. They say in the hearing that they asked for a much smaller amount and then they went to Norfolk——

Mr. SMITH of Maryland. We are not acting on what they did in Norfolk. I care nothing about that. The committee is acting upon estimates made and given to us, and that estimate calls for $125,000.

Mr. OVERMAN. I understand; from the hearings, it seems that they estimated first for a much smaller amount than $125,000; that then they went to Norfolk and other places, where they have fine buildings for the purpose, which cost $125,000, and then they estimated for $125,000. I want to know what was said about that, if the Senator recollects.

Mr. SMITH of Maryland. There was not anything said about it.

Mr. OVERMAN. It may have been in the House hearings.

Mr. HUGHES. It was in the House hearings.

Mr. SMITH of Maryland. I have no idea what impelled the gentlemen who came before the committee to ask for $125,800. I do know that in their estimates there is also a separate item which makes up the amount of $125,800, which is the sum proposed to be given.

Mr. HUGHES. Mr. President, in order to be absolutely accurate, I will read the statement from the House hearings in reference to it:

Mr. NEWMAN. Col. Harding, I think there were some rather complete estimates made, weren't there?

Col. HARDING. Yes. I should explain, Mr. Chairman, that when this item was first considered it was assumed that the building would cost somewhere around $100,000. Before the plans were drawn up a committee of our subordinates was appointed to visit Boston, New York, and Norfolk to look over the modern fish markets in those cities and make a study of the practices of handling fish, cleaning them, and disposing of the offal; and after their visit the plans were drawn by the municipal architect on the basis of providing similar facilities, with fireproof construction, to afford the space to cover existing needs and the probable growth.

That is the criticism I make against this item. The District of Columbia is going to be provided with an expensive fish market willy-nilly, whether it desires it or not, whether it wants to pay for it or not. The District of Columbia is not a fish center, and we would not be justified in providing an amount of money to construct such a big market as they have in Boston, which is one of the great fish ports of the world.

Mr. SMITH of Arizona. Does the Senator know how much that fish market cost?

Mr. HUGHES. It must have cost an immense sum; I have no especial knowledge in regard to it, and I do not know much about it; but I do say that such a fish market is not a necessity in Washington. The amount of fish to be handled at the fish wharves in Washington, outside of oysters, I am in a position to say, is infinitesimal; and, according to the hearings, the vast bulk of shipments which come to the fish wharves go to another market direct for distribution. The bulk of the business that is done at the fish wharves is wholesale business, and the expenditure of $125,000 is not going to confer any benefit upon the people who go there to purchase fish. As a matter of fact, very few people go to the wharves to purchase fish. I commend to Senators a visit to the wharves, and they will see there that the business is carried on practically between the fishermen and the hotels, the jobbers, and the wholesalers.

It may be that in course of time, and after proper study and consideration, it may be found necessary to make some alterations and to spend some money on the fish wharves, but I maintain that a case has not been made out before the Senate by the committee, and that $125,000 is too much money to appropriate lightly, in view of the condition of the revenues.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from North Carolina [Mr. OVERMAN], which will be stated.

The SECRETARY. On page 7, line 23, it is proposed to amend the committee amendment by striking out "$125,800" and inserting "$100,000."

Mr. SMITH of Maryland. Mr. President, I suppose that we are all very much in the same frame of mind as is the Senator from North Carolina. We want to get as cheaply as we can everything which the Government needs. I am sure there is not a member of the committee who is not as much in favor of economy and of practicing economy for the Government as is the Senator from North Carolina.

I am frank to say that I do not know what a fish market will cost; I know nothing about it. As I have heretofore said, a commission was appointed to investigate the matter, and it has estimated that $125,000 is necessary for this purpose. I assume that the Senator from North Carolina is not exactly in a position to determine how much a fish market would cost, and I think that probably we had better depend upon those who have made an estimate and have investigated the matter than upon any member of the committee. Therefore I hope the motion of the Senator from North Carolina will not prevail.

Mr. OVERMAN. Mr. President, I want to say, in reply to the Senator, that I think I guess pretty well when I assume that this work can be done for $25,000 less than the amount proposed to be appropriated, for the very engineers themselves say that the amount which they concluded to estimate for was for $100,000; but after they went to Boston, to New York, and to Norfolk and saw the fish markets there they concluded that they would increase it by $25,000, although, as I have stated, in the first instance they concluded that $100,000 would be sufficient. So I think I am a pretty good guesser.

Mr. SMITH of Maryland. I assume that in one case they guessed at it and in the other they came to the conclusion after they had obtained information.

Mr. OVERMAN. No; they just got a little more extravagant after seeing Boston and the other places.

Mr. HUGHES. Mr. President, a parliamentary inquiry. I desire to move to strike out the item, if that motion has not already been made.

The VICE PRESIDENT. That motion is not yet in order.

Mr. HUGHES. Mr. President, what is the parliamentary status? What is the pending motion?

The VICE PRESIDENT. The committee have the right to have the paragraph perfected before any motion to strike out is entertained. The purpose which the Senator has in view will be accomplished, the Chair will say, by rejecting the amendment reported by the committee.

Mr. OVERMAN. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Ashurst | Jones | Norris | Smith, Mich. |
| Brandegee | Kenyon | Overman | Smith, S. C. |
| Bristow | Kern | Page | Smoot |
| Burton | Lane | Ransdell | Sutherland |
| Catron | Lea, Tenn. | Reed | Swanson |
| Chamberlain | Lee, Md. | Robinson | Thomas |
| Chilton | Lewis | Saulsbury | Thompson |
| Clapp | Lodge | Shafroth | Townsend |
| Gallinger | McCumber | Sheppard | Warren |
| Hitchcock | Martin, Va. | Smith, Ariz. | Weeks |
| Hughes | Martine, N. J. | Smith, Ga. | West |
| James | Nelsen | Smith, Md. | Williams |

Mr. SHEPPARD. I wish to announce the necessary absence of my colleague [Mr. CULBERSON]. He is paired with the Senator from Delaware [Mr. DU PONT]. This announcement may stand for the day.

The VICE PRESIDENT. Forty-eight Senators have answered to the roll call. There is a quorum present. The question is on the amendment proposed by the Senator from North Carolina to the amendment of the committee.

Mr. HUGHES. Mr. President, if this item is to go in the bill at all, I should be glad to have the amount cut down by $25,000, but I contend that it should not go in the bill at all. I have read from the hearings. In the course of the debate some Senator called attention to the fact that there would be an income of $12,000 if we erected the proposed new fish market. It seems to me that the $12,000 which has been referred to as the probable income of the new building has nothing to do with the new building at all; but it is the income which is received under present conditions. I read the testimony of the commissioners to that effect:

Mr. SIDDONS. Let me answer that question. Until the act referred to here was passed that space was leased by the District to a private individual, who paid $1,400 a year, and that was the total revenue derived from it by the District. Since the enactment of that law and since it has been taken hold of by the District government as a market our income has risen so that we may fairly consider that in the current year we shall receive from that source not less than $10,000. The very last report made to me by the market master indicates that we may reasonably expect to have an income of $12,000 from it during the first year that we have taken charge of it.

Mr. PAGE. From the present equipment and present buildings?

Mr. SIDDONS. Yes, sir; from the present equipment and present buildings, which are really shacks. That is all they are. We have done this with the limited amount at our disposal, but of course they ought not to continue there at all. Personally I have a great deal of confidence in the outcome of that project.

Mr. SMOOT. Mr. President, I inquire of the Senator if any statement differing from that of the Senator has been made to the Senate?

Mr. HUGHES. I understood a statement was made to the effect that when the proposed project was completed we would then receive an income of $12,000. That statement was made by a Senator.

Mr. SMOOT. If the fish wharves are rebuilt and the new fish market constructed, I want to say to the Senator that we will receive a great deal more than $12,000 per annum from it. We have received $12,000 under present conditions.

Mr. HUGHES. We receive $12,000 now from a source from which we formerly received $1,400.

Mr. SMOOT. That is true.

Mr. HUGHES. But the point I am making, if the Senator will permit me, is that this matter ought to be gone into fully and thoroughly. It was gone into fully and thoroughly before another committee, when it was decided that there was no pressing necessity for doing anything, and particularly no pressing necessity for doing anything hurriedly at this time. The situation is very satisfactory now. An income of $1,400 has been changed to an income of $12,000 with the present equipment and the present old shacks, and nobody is in a position to say that there will be any more business done if a great big market is constructed than is done now with the present equipment; nobody is in a position to say that the extension of the business will be so great that the receipts will exceed $12,000 over and above the expense of conducting it and also pay a fair rate of interest upon the amount of capital that will necessarily be put into the new construction.

Mr. SMOOT. Mr. President, it is not altogether a question of interest upon the amount of capital. I agree with the Senator that, under present conditions, in spite of the shacks in which the business is carried on, in spite of the unclean and insanitary conditions that exist down there, with the wharf almost rotted out, there is a substantial showing of profit. There is a provision in the bill, as the Senator will remember, appropriating $50,000 to replace the present wharf, and I say that the present buildings should be removed because of their insanitary condition. The Senator no doubt has been down there and has witnessed the conditions under which business is done in the cramped quarters of the little shacks from which fish are distributed to the small dealers throughout this city. What is desired is to tear away all the present rotten wharves and buildings and have a new wharf there—a new wharf will have to be constructed in any event—and then erect a building there on a sanitary basis, according to the plans and specifications already drawn. From the rental of that new building there is not any question that we will get at least what we have been getting from private parties in the past, which is $12,000 a year; and the commissioners and all others interested in it have said that we will get more than $12,000 a year after the new market is constructed.

Mr. HUGHES. Mr. President, if the Senator will permit me, my theory as to the manner in which this proposition ought to be handled is that the commissioners ought to be given a fair allowance for repairs and replacements, and the matter should be taken up and carried forward in a systematic, logical, and orderly manner. There ought to be a complete agreement of the two committees on it; the commissioners ought to go before the committees and give them such information as they have to enable the committees to act; but the work should not be entered into hurriedly and hastily by a committee of this body alone.

Mr. SMOOT. Mr. President, I should like to say to the Senator that it seems to me the only question to decide here is whether we want the present buildings down there to remain as they are and have that business carried on under the present insanitary conditions. If that is what the Senate wants, then eliminate this entire appropriation.

Mr. HUGHES. I will say to the Senator that the proposition as it stands before the Senate now is to provide a market somewhat on the scale and after the fashion of the fish markets in Boston, Norfolk, and New York. Nobody has contended that any such market is necessary here.

Mr. OVERMAN. Mr. President, I will say that the Senator from Utah is mistaken about the plans being drawn, because the testimony in the House, as read by the Senator from New Jersey, shows that it was first estimated that $100,000 would be enough, but after the District officials in charge of the matter went to Boston and saw the arrangements there they concluded they would increase the estimate to $125,000 in order that a fish market might be constructed at Washington something on the order of the fish market at Boston.

Mr. SMOOT. All I wish to say is that I inquired whether the estimate which had been made was for a particular building at a particular place, and I was assured that the estimate had been made and that the building would cost $125,800.

Mr. LANE. Mr. President, I should like to inquire of the Senator from Utah if there is any system of inspection at this time provided at the fish market in Washington? I understood the Senator to say that the fish were handled in an uncleanly and insanitary manner. Is there any provision made for proper inspection or has there been any inspection in the past?

Mr. SMOOT. Of course, there is nothing of that character provided in this bill. I will say to the Senator, nor would there be such a provision here.

Mr. LANE. Is there any inspection provided for?

Mr. SMOOT. I think there are inspection laws in the District of Columbia. I will say to the Senator that this market is the only place in the District for landing fish; it is the only place where the wholesaler distributes the fish. They are doing the best they can under the circumstances, and I believe that everything is perhaps as cleanly as possible under the conditions of the building. If the Senator will go there, he will see that the buildings are rotten, that they are ready to tumble down, and that the wharf is already gone. If it is not going to cost $125,000 to make this improvement, I am perfectly willing to vote for a less amount; but I believe that a new building for the fish market ought to be constructed.

Mr. LANE. I desire to ask another question for information. Is or is it not a fact that the fish market constructed there would increase the accommodation of the householders, or is it merely to be a market for the dealers? Will the people in the city of Washington go there and purchase their supply of fish or is it too far out of the way?

Mr. SMOOT. It is too far out of the way, although there may be some individual householders who will go there to purchase fish. I want to say to the Senator that the proprietors of the

little stores in all parts of the city go there when the fish arrive and secure supplies of fish, which they distribute from their stores; but it is true that there are some individual householders who go there and buy fish. The Senator or anyone else can buy fish at that market. It is really for both purposes.

Mr. HUGHES. Mr. President, I want to say, in reply to the question asked by the Senator from Oregon [Mr. LANE], that there is absolutely no evidence to show, if we were going to establish a municipal fish market, that this would be the proper place at which to establish it. In fact, I am absolutely convinced that if we desire to establish a proper fish market in the District of Columbia we ought not to go to that place. It is simply a distributing point for such fish and oysters as come up the Potomac River; but the great bulk of the fish that come to the city to be distributed to the people of the city as individuals go to another market and will continue to go to another market. This provision will simply put an ornate municipal fish market where it is not needed or desired.

Mr. SMOOT. Mr. President, it seems to me that there is a misunderstanding in relation to the purpose for which this fish market is to be built. This fish market is to be built to receive fish as they come up the Potomac River, as the Senator says. It is not to be an ornate retail market.

Mr. HUGHES. Mr. President, if the Senator will permit me, I have just read from the committee hearings that it is proposed to build a market on the model of the Boston market or the New York market or the Norfolk market, all of which are retail municipal markets, as I understand. I think the Senator and I do not disagree at all; I think we both want to get at the same object. I believe there ought to be a proper place for receiving and handling fish; the wharves ought to be repaired; the present buildings, to a greater or lesser extent, should be repaired, and proper facilities should be furnished for handling such fish as are brought there. There is not a great quantity of fish handled there. Oysters, of course, are handled there now, and I can not see how the facilities for handling oysters can be very well improved. They are brought up in the holds of vessels, which tie up at the wharves, and the oysters remain in the vessels until a purchaser carries them off in wholesale quantities. With the exception of the fact that the wharves are decayed, I can not see how the facilities for handling oysters can be very well improved.

Some of the Senators present seem to be of the opinion that this is to be a municipal fish market, or, at least, a retail fish market for the convenience of the people of the District of Columbia, although 90 per cent of the fish that are brought into the District of Columbia will, after passing through this market, go to another market for individual distribution.

Mr. SMOOT. I am quite aware that 90 per cent will, and I believe that a larger quantity than 90 per cent to-day go to the consumer through other markets in this city.

I understand that this provision is for the purpose of building a fish market for the receipt of fish which come up the Potomac River and which from there are distributed to the merchants in the different parts of the city, who distribute them to their customers.

Mr. MARTIN of Virginia. Mr. President, I will detain the Senate only a very few moments. It was the duty of the committee to investigate this matter and report to the Senate its conclusions. This matter means nothing to the committee more than to other Senators. It did, however, become our duty to investigate it. The Senator from New Jersey [Mr. HUGHES] has undertaken to investigate it during the discussion. He started in, as I understood him, by practically admitting that he knew nothing about it, and he has borne out that conclusion very fully during the discussion. I think he has justified the statement he started out with, that he did not even know that there had been a hearing, and knew absolutely nothing about the subject.

As I have said, it became our duty, Mr. President, to investigate this matter as well as we could and to report our conclusions to the Senate. Having done that, it is of no consequence to us any more than to any other Senator what disposition is made of it by the Senate. We have proceeded on the idea that the people of the city of Washington and the people who visit the city of Washington have a right to have their food supply furnished to them in a proper way under sanitary conditions.

The Senator talks about the estimate having been changed after a visit by the District officials to Norfolk, Boston, and New York. Well, Mr. President, I feel that the people of Norfolk have a right to as good a fish market as have any other people in the world; and if they have established a good fish market down there, and modern and approved methods have been adopted by them, I think the people of Washington did well when they sent down there to investigate the methods in use there; and if Norfolk has a modern and up-to-date market, as I believe it has, they will do well if they model a fish market here after the one in Norfolk. Nobody, however, has contended or suggested that we propose to have as large a fish market here as they have in Boston, but I think we ought to have as good a fish market here as they have in Boston—one with as good facilities for handling the fish in a sanitary, cleanly, and convenient way.

We have not gone about this matter in a careless or a reckless manner, as the Senator from New Jersey has charged. It has been carefully investigated by the Commissioners of the District; their experts have examined the conditions existing here and the methods and processes established in other cities, and after that examination and study they have made an estimate of the cost of constructing a proper fish market at this place. They report that the old building ought to be pulled down; that it is insanitary, unsatisfactory, and insufficient, and they recommend that it be removed. I think they are better judges of that than I am. I have been to the place, and I say that it is absolutely insufficient and not what it ought to be; but I am not going into the details, nor am I capable of doing so. The Commissioners of the District of Columbia, however, have gone into the details, have made a laborious investigation of the subject, have reported the result of the investigation, and submitted the estimate. They report that the old buildings ought to be pulled down, as they are insanitary and untfit; that new buildings should be constructed; and they have estimated the cost of a new building at $125,800. I say that the city of Washington is entitled to just such a building as the commissioners have estimated for, and I think Congress ought to appropriate that amount of money to provide proper facilities here. I believe the people of Washington and those who come here are entitled to as good service as are the people of any other city in the world. The Treasury is not empty. Neither the Government of the United States nor the government of the District of Columbia is in an impoverished condition. We are able to furnish whatever is necessary; and, so far as I am concerned, I am in favor of furnishing the very best equipment for all the services and all the utilities that the people of Washington need.

I see no occasion for this great talk about economy. I want economy wherever an expenditure is unnecessary or wasteful; but I am prepared to vote for large appropriations to furnish the people the service they need and the service to which they are entitled. The people are not stickling about useless economy. All this talk about cutting down expenses is not easily absorbed by the public mind of America.

The American people want good service, and they are willing to pay for it. The people of Washington want good service, and the taxpayers are able to pay for it. The committee have reported their conclusions. They think a good fish market should be built, and a good wharf should be constructed. A fish market adequate to the necessities here will cost $125,000.

The people who want to receive their fish in an insanitary condition and an inconvenient manner may get along with this old building. It is their privilege to vote for it, and it is their privilege to enjoy the inadequate and insanitary service that is being furnished them now if they desire. It is nothing in the world to the committee. We only desire to report to the Senate our conclusions.

We believe the Senate ought to approve this amendment, and vote the $125,000 for this purpose.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from North Carolina [Mr. OVERMAN] to the amendment of the committee. [Putting the question.] By the sound the "noes" seem to have it.

Mr. OVERMAN. I call for a division. I do not ask for a yea-and-nay vote, but I should like a division.

Mr. CATRON. Mr. President, what is the pending question?

The VICE PRESIDENT. The Secretary will state the question.

The SECRETARY. In the committee amendment, on page 7, line 23, "Buildings for fish market," it is proposed to strike out "$125,800," as recommended by the committee, and to insert in lieu thereof, "$100,000."

Mr. OVERMAN. I will state that I am paired with the Senator from Virginia [Mr. SWANSON] and can not vote on this matter.

There were, on a division, ayes 14, noes 18.

Mr. THOMAS. No quorum has voted.

The VICE PRESIDENT. No quorum has voted.

Mr. WILLIAMS. I wish to say, in explanation of my vote, that I am paired with the Senator from Pennsylvania [Mr. PENROSE], but I have been informed that if present he would

vote as I would. Therefore I took the liberty of standing up and voting.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Bankhead | Hollis | Martine, N. J. | Smith, Md. |
| Bradley | Hughes | Nelson | Smith, Mich. |
| Brady | James | Norris | Smith, S. C. |
| Brandegee | Jones | Oliver | Smoot |
| Bristow | Kenyon | Overman | Sutherland |
| Burton | Kern | Page | Thomas |
| Catron | Lane | Pomerene | Thompson |
| Chamberlain | Lea, Tenn. | Ransdell | Tillman |
| Chilton | Lee, Md. | Robinson | Warren |
| Clapp | Lewis | Saulsbury | Weeks |
| Dillingham | Lodge | Sheppard | West |
| Gallinger | McCumber | Smith, Ariz. | Williams |
| Hitchcock | Martin, Va. | Smith, Ga. | Works |

Mr. SMITH of Michigan. My colleague [Mr. TOWNSEND] is unavoidably detained from the Senate on account of official business.

Mr. KERN. I desire to announce the unavoidable absence of my colleague [Mr. SHIVELY.]

Mr. OVERMAN. I wish to announce the unavoidable absence of my colleague [Mr. SIMMONS] on account of sickness.

Mr. BRANDEGEE. I wish to state that the members of the subcommittee of the Interstate Commerce Committee are in session under orders of the Senate, which accounts for their absence.

The VICE PRESIDENT. Fifty-one Senators have answered to the roll call. A quorum of the Senate is present.

Mr. THOMAS. I call for the yeas and nays upon the amendment of the Senator from North Carolina to the amendment of the committee.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHILTON (when his name was called). I have a general pair with the senior Senator from New Mexico [Mr. FALL], who is unavoidably absent from the sessions of the Senate. Not knowing how he would vote upon this question, I withhold my vote. If permitted to vote, I should vote "nay."

Mr. CLAPP (when his name was called). I have a general pair with the senior Senator from North Carolina [Mr. SIMMONS], who is absent. Not knowing how he would vote if present, I withhold my vote.

Mr. GALLINGER (when his name was called). I have a general pair with the junior Senator from New York [Mr. O'GORMAN], which I transfer to the junior Senator from Maine [Mr. BURLEIGH] and will vote. I vote "nay."

Mr. LEA of Tennessee (when his name was called). I transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the senior Senator from Oklahoma [Mr. OWEN] and will vote. I vote "nay."

Mr. OVERMAN (when his name was called). I have a pair on this vote with the junior Senator from Virginia [Mr. SWANSON]. If he were present he would vote "nay," and I would vote "yea."

Mr. SUTHERLAND (when his name was called). I have a general pair with the senior Senator from Arkansas [Mr. CLARKE]. I transfer that pair to the junior Senator from Wisconsin [Mr. STEPHENSON], and will vote. I vote "nay."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from New York [Mr. ROOT], who is absent from the Chamber, and I therefore withhold my vote. If I were at liberty to vote, I should vote "yea."

Mr. WARREN (when his name was called). I have a general pair with the senior Senator from Florida [Mr. FLETCHER]. I transfer that pair to the senior Senator from Illinois [Mr. SHERMAN] and will vote. I vote "nay."

Mr. WILLIAMS (when his name was called). I have a general pair with the senior Senator from Pennsylvania [Mr. PENROSE], but I am informed that if present he would vote "nay" upon this question. Making that announcement, I also vote "nay."

The roll call was concluded.

Mr. BANKHEAD. I have a pair with the junior Senator from West Virginia [Mr. GOFF]. I transfer that pair to the junior Senator from Mississippi [Mr. VARDAMAN] and will vote. I vote "nay."

Mr. CHILTON. I transfer my pair, announced a few moments ago, to the senior Senator from Indiana [Mr. SHIVELY] and will vote. I vote "nay."

The result was announced—yeas 17, nays 32, as follows:

YEAS—17.

| | | | |
|---|---|---|---|
| Bristow | Jones | Shafroth | West |
| Gore | Kenyon | Sheppard | Works |
| Hitchcock | Kern | Smith, S. C. | |
| Hollis | Lane | Thompson | |
| Hughes | Norris | Tillman | |

NAYS—32.

| | | | |
|---|---|---|---|
| Ashurst | Chilton | Martin, Va. | Smith, Ariz. |
| Bankhead | Dillingham | Martine, N. J. | Smith, Md. |
| Bradley | Gallinger | Nelson | Smith, Mich. |
| Brady | James | Oliver | Smoot |
| Brandegee | Lea, Tenn. | Page | Sutherland |
| Burton | Lee, Md. | Pomerene | Warren |
| Catron | Lodge | Ransdell | Weeks |
| Chamberlain | McCumber | Reed | Williams |

NOT VOTING—46.

| | | | |
|---|---|---|---|
| Borah | Fletcher | Owen | Smith, Ga. |
| Bryan | Goff | Penrose | Stephenson |
| Burleigh | Gronna | Perkins | Sterling |
| Clapp | Johnson | Pittman | Stone |
| Clark, Wyo. | La Follette | Poindexter | Swanson |
| Clarke, Ark. | Lewis | Robinson | Thomas |
| Colt | Lippitt | Root | Thornton |
| Crawford | McLean | Saulsbury | Townsend |
| Culberson | Myers | Sherman | Vardaman |
| Cummins | Newlands | Shields | Walsh |
| du Pont | O'Gorman | Shively | |
| Fall | Overman | Simmons | |

So Mr. OVERMAN's amendment to the amendment of the committee was rejected.

The VICE PRESIDENT. The question is on the amendment proposed by the committee.

Mr. THOMAS. On that I call for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHILTON (when his name was called). I make the same announcement as to my pair and its transfer, and vote "yea."

Mr. CLAPP (when his name was called). I make the same announcement, and for the same reason withhold my vote.

Mr. GALLINGER (when his name was called). Making the same transfer as announced on the previous roll call, I vote "yea."

Mr. LEA of Tennessee (when his name was called). Again announcing the transfer of my pair to the senior Senator from Oklahoma [Mr. OWEN], I vote "yea."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from California [Mr. PERKINS]. As he is absent, I withhold my vote.

Mr. SUTHERLAND (when his name was called). I again announce my pair, make the same transfer as on the previous roll call, and vote "yea."

Mr. THOMAS. I transfer my pair with the senior Senator from New York [Mr. ROOT] to the junior Senator from Nevada [Mr. PITTMAN] and will vote. I vote "nay."

Mr. WARREN. Making the same announcement of pairs, whereby the senior Senator from Florida [Mr. FLETCHER] may stand paired with the senior Senator from Illinois [Mr. SHERMAN], I vote "yea."

Mr. WILLIAMS (when his name was called). Repeating the announcement made upon the last roll call as to the position of the senior Senator from Pennsylvania [Mr. PENROSE], with whom I am paired, I vote "yea."

The roll call having been concluded, the result was announced—yeas 34, nays 16, as follows:

YEAS—34.

| | | | |
|---|---|---|---|
| Ashurst | Dillingham | Martin, Va. | Smith, Mich. |
| Bankhead | Gallinger | Martine, N. J. | Smoot |
| Bradley | James | Nelson | Sutherland |
| Brady | Jones | Oliver | Townsend |
| Brandegee | Lea, Tenn. | Page | Warren |
| Burton | Lee, Md. | Ransdell | West |
| Catron | Lewis | Robinson | Williams |
| Chamberlain | Lodge | Smith, Ariz. | |
| Chilton | McCumber | Smith, Md. | |

NAYS—16.

| | | | |
|---|---|---|---|
| Bristow | Kenyon | Reed | Thomas |
| Gore | Kern | Shafroth | Thompson |
| Hollis | Lane | Sheppard | Tillman |
| Hughes | Norris | Smith, S. C. | Works |

NOT VOTING—45.

| | | | |
|---|---|---|---|
| Borah | Fletcher | Owen | Smith, Ga. |
| Bryan | Goff | Penrose | Stephenson |
| Burleigh | Gronna | Perkins | Sterling |
| Clapp | Hitchcock | Pittman | Stone |
| Clark, Wyo. | Johnson | Poindexter | Swanson |
| Clarke, Ark. | La Follette | Pomerene | Thornton |
| Colt | Lippitt | Root | Vardaman |
| Crawford | McLean | Saulsbury | Walsh |
| Culberson | Myers | Sherman | Weeks |
| Cummins | Newlands | Shields | |
| du Pont | O'Gorman | Shively | |
| Fall | Overman | Simmons | |

So the amendment of the committee was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 7, after line 24, to insert:

Wharves for fish market: For reconstructing wharves at municipal fish wharf and market, including preparation of plans and specifications and personal services, $50,000, or so much thereof as may be necessary.

The VICE PRESIDENT. The question is on agreeing to the amendment.

Mr. THOMAS. On that I call for the yeas and nays.

The yeas and nays were not ordered.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, in the item of appropriation for the maintenance of the engineer commissioner's office, on page 9, line 11, after the words "one $1,800," to strike out "three, at $1,500 each" and insert "one at $1,600, two at $1,500 each," and in line 21, after the words "in all," to strike out "$175,010" and insert "$175,110," so as to read:

Index clerk and typewriter, $900; clerks—1 $1,800, 1 at $1,600, 2 at $1,500 each, 2 at $1,400 each, 5 at $1,200 each, 2 at $1,000 each, 1 $900, 1 $840, 2 at $750 each, 1 $600; messengers—1 $600, 6 at $540 each; skilled laborers—1 $625, 2 at $600 each; janitor, $720; principal steam engineer, $1,800; 3 steam engineers, at $1,200 each; 3 assistant steam engineers, at $1,050 each; 6 oilers, at $600 each; 6 firemen, at $875 each; inspector, $1,400; storekeeper, $900; superintendent of stables, $1,500; blacksmith, $975; 2 watchmen, at $630 each; 2 drivers, at $630 each; in all, $175,110.

The amendment was agreed to.

The next amendment was, on page 14, after line 5, to insert:

Employment of females: To carry out the provisions of the act approved February 24, 1914, entitled "An act to regulate the hours of employment and safeguard the health of females employed in the District of Columbia," as follows: For 3 inspectors, 2 of whom shall be women, at the rate of $1,200 per annum, $3,600.

Mr. KENYON. Mr. President, I think according to the proper parliamentary procedure the amendment I desire to offer would be an amendment to the amendment suggested by the committee to perfect it. I therefore offer the amendment I send to the desk as an amendment to the amendment of the committee. I am not offering it in behalf of the committee, of course.

Mr. SMITH of Maryland. I understand that by unanimous consent it was agreed that amendments of the committee should be first considered.

The VICE PRESIDENT. The amendment will be read, so that the Senate may see what it is.

The SECRETARY. On page 14, line 12, strike out "$3,600" and insert:

Also one stenographer or clerk at the rate of $500 per annum, and, further, the sum of $1,000 for contingent expenses, $5,500.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Iowa to the amendment of the committee.

Mr. SMOOT. May I ask the Senator from Iowa has there been an estimate for it?

Mr. KENYON. I will say to the Senator from Utah that the purpose of my amendment is to carry out the suggestion of the commissioners when they were before the committee respecting the 8-hour law in the District of Columbia, in relation to the employment of females. The law provides for three inspectors. The people who were instrumental in securing the passage of the law are anxious that it shall have a fair test and trial. There is no provision for any contingent fund to pay the expenses of the inspectors, and unless provision is made the result will be to cripple the 8-hour law in the District of Columbia. I do not like to suggest any increase in any way in the bill, but the people who are deeply interested in the law and in the welfare of women in the District of Columbia are anxious that there shall be a sufficient force and a sufficient contingent fund to carry it out, and not the mere naked proposition of inspectors provided by the law.

Mr. SMITH of Maryland. I will say to the Senator from Iowa that the commissioners came before the committee in regard to this matter and it was discussed by the committee, and the committee came to the conclusion that for the present it would be better if we could get along with the three inspectors, and the commissioners tacitly agreed that they would undertake it and wait awhile longer. There is no estimate made for it, I will say to the Senator.

Mr. KENYON. It is true that under the law the inspectors are compelled to make inspections and keep records and make reports daily. There is no provision for office furniture, there is no provision for books, no provision for stationery, no provision for car fare, and there is no way in which the expenses of the inspectors can be covered.

Mr. SMITH of Maryland. I will say to the Senator that there is a contingent fund of $36,000 from which the necessary money can be drawn.

Mr. KENYON. That would cover stationery, but not the other items.

Mr. SMITH of Maryland. It will cover stationery and I presume such matters as they may want in addition. In addition to that, we thought that in the beginning probably the three inspectors would not be employed all the time, and one of them could remain in the office and the three could fill the bill. We understood that that was practically agreed to by the commissioners who were before us.

Mr. KENYON. I wish to take the item of car fare. The inspectors can not do their work without traveling over the city, and if they are constantly engaged in inspection the item of car fare will be a considerable one.

Mr. SMITH of Maryland. That is already provided for. There is an appropriation in the bill of $5,000 for car tickets for employees.

Mr. KENYON. That will cover that item?

Mr. SMITH of Maryland. It will cover it.

Mr. KENYON. Take the item of furniture, office desks, and chairs. Is there any fund from which that can be drawn? I understand that there is none.

Mr. GALLINGER. I suppose they can be placed in one of the rooms in the Municipal Building, concerning which I should think there would be no difficulty whatever.

Mr. KENYON. I do not want to give it as authentic, but I have been informed by the ladies who have been investigating this legislation that there is no fund available.

Mr. SMITH of Maryland. The committee took up those matters and went through with them thoroughly, and we felt that they were provided for and that the law would be carried out by these three inspectors.

Mr. KENYON. While I am in favor of the suggestions made by the Senator from Colorado [Mr. THOMAS] for economy, I think if we can vote $125,000 for a fish market, we can vote a sufficient fund to give a fair test to the law limiting the hours of labor for women in the District of Columbia. It requires an appropriation of only $1,900 more. As the matter now stands, we have three inspectors, and there is no way for them to be provided with offices. There may be stationery. I see that one of the commissioners states that they can be provided with stationery; but there is no provision for typewriters, no provision for books, no provision as to how the accounts may be kept, no provision as to printing, or the other matters that will be covered by the contingent fund. If that is the case, the law is simply crippled in its operation and does not have a fair chance.

Mr. SMOOT. I will say to the Senator that, as far as the printing is concerned, there is a lump appropriation for the department, and the head of the department can take care of whatever printing is desired.

I also wish to say that one thing which led me to believe that the amendment as offered by the committee is sufficient was the statement made by Commissioner Newman in answer to the chairman of the subcommittee. The Senator from Maryland [Mr. SMITH] said——

Mr. KENYON. Where is the Senator reading?

Mr. SMOOT. From page 45.

Senator SMITH of Maryland. Do you not think it would be better, Mr. Commissioner, in the beginning, to delegate one of these inspectors, at $1,200 a year, to act as clerk until you find out just what there is to be done?

Commissioner NEWMAN. To be perfectly frank, Senator, of course we do not know very much about it.

I thought if the commissioner appearing in behalf of this particular appropriation did not know very much about the necessities of the three inspectors provided for in the law it was not necessary for the committee to report any more than just simply what was asked for by the commissioners.

Mr. KENYON. But the commissioners did ask, I will say to the Senator from Utah, for a stenographer or clerk, and a contingent fund.

Mr. SMOOT. Yes; but the commissioner says "to be perfectly frank, of course we do not know very much about it"; that is, whether it is necessary or not.

Mr. KENYON. Of course, there are a good many who do not know about the law and who want the law to be a failure. If the inspectors are not equipped with sufficient funds and a sufficient force to do this work, the law will be a failure, and that will be very satisfactory to a great many people.

Mr. SMOOT. I want to say if the Senator refers to me——

Mr. KENYON. I have no reference to the Senator at all.

Mr. SMOOT. That is not true as far as I am concerned. I will say frankly if the chairman of the committee will accept it and let it go into conference we will find out more about it then; and, of course, it can be thrashed over in conference.

Mr. KENYON. Here is a law enacted for the District of Columbia that is in the nature of an experiment as to the hours of service for women. Grave questions are going to arise

with reference to its enforcement. The law provided for three inspectors, but it certainly contemplated that there should be some office force and some way in which they could carry out their work as the law prescribes they must do, namely, to make this inspection and to keep these records.

I will say that the Senator from Wisconsin [Mr. LA FOLLETTE], who introduced the law and has fought for it, is not here to-day, and I have brought the matter up in his absence.

Mr. SMITH of Maryland. I will say to the Senator from Iowa that he is not any more desirous of furnishing sufficient force and equipment for carrying out the law than I believe was the committee. The difference is that when we discussed the matter with the Commissioners of the District of Columbia they felt that it probably could be carried out with the force provided for in the law.

So far as I am individually concerned, and I think I can speak for the committee also, if this matter had been recommended by the commissioners we would have granted it, but there was no recommendation whatever for it. On the contrary, in talking the matter over they were of the opinion that the law could be carried out, especially in the start, with the three inspectors, one acting, probably, as a clerk, and they would find out what was necessary later on.

I personally have no objection whatever to a provision giving a clerk. So far as the money for stationery is concerned, that is already provided for in the deficiency bill. Thirty-six thousand dollars is provided for printing, stationery, and items of that character. So far as an office is concerned, an office can be found in the Municipal Building. I am willing to say that if the Senator from Iowa, respecting his judgment in the matter, feels that we should provide a clerk, as chairman of the subcommittee I have no objection to that being provided for.

Mr. KENYON. I perhaps should not have said what I did, but anyone reading the newspapers may observe that there is a well-defined purpose apparently to discredit the law already, and I am only insisting that the instrumentalities be furnished so that the law may have fair operation. Commissioner Newman said, on page 44 of the hearings:

> In addition to the $3,600 we want to recommend a clerk at $900 and a fund of $1,000 for contingent and miscellaneous expenses. We have conferred with some of the women who have been instrumental and interested in getting the bill through, and their opinion is, judging by the work of such inspectors in other places, that such an office will require a clerk to be in the office all the time to keep their records, and the estimate of $1,000 is for books of reference, equipment, etc., and temporary services.

Mr. SMITH of Maryland. The Senator will find in another part of the report that the commissioners said they perhaps could do with what they have, but if the Senator desires to provide for a clerk I will not object to it.

Mr. KENYON. I will change my amendment, then, and divide it so as to apply only to the clerk.

The VICE PRESIDENT. The amendment will be stated as modified.

The SECRETARY. On page 14, line 12, it is proposed to strike out "$3,600" and add "one clerk or stenographer at the rate of $900 per annum, $4,500."

Mr. GALLINGER. I will ask the Senator to make it read "stenographer and clerk," using "and" in place of "or."

Mr. KENYON. Yes; let it read "stenographer and clerk."

The VICE PRESIDENT. The amendment to the amendment will be stated as modified.

The SECRETARY. Strike out "$3,600" and insert "one stenographer and clerk, at the rate of $900 per annum, $4,500."

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. KERN. Mr. President——

Mr. SMITH of Maryland. I should like to give notice that the bill will be called up immediately after the routine morning business to-morrow.

### EXECUTIVE SESSION.

Mr. KERN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 15 minutes spent in executive session the doors were reopened, and (at 5 o'clock and 30 minutes p. m.) the Senate adjourned until to-morrow, Thursday, March 12, 1914, at 12 o'clock meridian.

## NOMINATIONS.

*Executive nominations received by the Senate March 11, 1914.*

### ASSISTANT SECRETARY OF THE TREASURY.

William P. Malburn, of Denver, Colo., to be Assistant Secretary of the Treasury in place of John Skelton Williams, appointed Comptroller of the Currency.

### UNITED STATES MARSHAL.

Thomas W. Taubman, of Plankington, S. Dak., to be United States marshal, district of South Dakota, vice Seth Bullock, whose term has expired.

### PROMOTIONS IN THE ARMY.

#### CAVALRY ARM.

Capt. Charles W. Fenton, Second Cavalry, to be major from March 8, 1914, vice Maj. James B. Hughes, First Cavalry, retired from active service March 7, 1914.

First Lieut. John E. Hemphill, Cavalry, unassigned, to be captain from March 8, 1914, vice Capt. Charles W. Fenton, Second Cavalry, promoted.

Second Lieut. William L. Moose, jr., Fifteenth Cavalry, to be first lieutenant from March 8, 1914, vice First Lieut. Beauford R. Camp, Ninth Cavalry, retired from active service March 7, 1914.

Second Lieut. Charles D. Rogers, Eleventh Cavalry, to be first lieutenant from March 9, 1914, vice First Lieut. Douglas H. Jacobs, Twelfth Cavalry, detached from his proper command.

#### COAST ARTILLERY CORPS.

Second Lieut. Philip M. Ljungstedt, Coast Artillery Corps, to be first lieutenant from March 8, 1914, vice First Lieut. Wyatt O. Selkirk, resigned March 7, 1914.

## CONFIRMATIONS.

*Executive nominations confirmed by the Senate March 11, 1914.*

### ASSOCIATE JUSTICE OF THE SUPREME COURT OF HAWAII.

Edward Minor Watson, Hawaii, to be associate justice of the Supreme Court of Hawaii.

### REGISTERS OF THE LAND OFFICE.

John L. Burnside to be register of the land office at Las Cruces, N. Mex.

Rome P. Donohoo to be register of the land office at Tucumcari, N. Mex.

Emmett Patton to be register of the land office at Roswell, N. Mex.

### RECEIVERS OF PUBLIC MONEYS.

S. P. Ascarate to be receiver of public moneys at Las Cruces, N. Mex.

Felipe Sanchez y Baca to be receiver of public moneys at Tucumcari, N. Mex.

W. G. Cowan to be receiver of public moneys at Roswell, N. Mex.

### SURVEYOR GENERAL.

Lucius Dills to be surveyor general of New Mexico.

### POSTMASTERS.

#### CALIFORNIA.

Margaret Messick, Victorville.

#### ILLINOIS.

Henry Stahlle, Plano.
R. A. Thompson, Thompsonville.

#### IOWA.

Clarence E. Brooks, Brooklyn.
Issac Fouch, Monroe.
Lee S. Edwards, Dunlap.
L. H. Flood, Carson.
George H. Helscher, Keota.
H. F. A. Hilmer, New Hampton.
William H. Keough, Lehigh.
Elmer A. McIlree, West Union.
E. P. McManus, Keokuk.
Thomas A. Massie, Logan.
Martin C. Nelson, Spirit Lake.
John R. Strickland, Parkersburg.
Frank Thompson, Cambridge.

#### KENTUCKY.

Mary McR. Bruce, Stanford.
Harry H. Grobmyer, Carrollton.
Spalding Trafton, Henderson.
R. K. McCarney, Paris.

#### LOUISIANA.

J. M. Cook, Oakdale.

#### MICHIGAN.

John Brogan, Stockbridge.
John F. Hum, Grayling.

#### MINNESOTA.

Edward A. Buckley, East Grand Forks.

NEBRASKA.

Byron Busby, Wakefield.
John Canfield, Tekamah.
Patrick H. Green, Creighton.

NORTH DAKOTA.

Frank Renning, Velva.
J. W. Stambaugh, Carrington.

NEW MEXICO.

Ervin E. Brunk, Dexter.
John M. Clark, Dawson.
Henry C. Roehl, Albuquerque.
Leopoldo Sanchez, Santa Rosa.

NEW YORK.

J. F. Lantry, Massena.

NEW JERSEY.

James A. Mahaney, Roebling.

NORTH CAROLINA.

Lula F. Bland, Pittsboro.
William C. Blanton, Forest City.
Samuel Y. Bryson, Hendersonville.
Luther B. Carr, Wallace.
John K. Cline, Lincolnton.
Hamilton Erwin, Morganton.
W. D. Templeton, Mooresville.
E. S. Yarbrough, Duke.
Vernon G. Pleasants, Rowland.

OKLAHOMA.

Mathias Schiefelbusch, Yale.

TENNESSEE.

M. B. Capps, Livingston.
I. S. Davidson, Petersburg.
W. H. Howard, Milan.

TEXAS.

B. M. Richardson, Athens.

WASHINGTON.

George B. Day, Walla Walla.
R. A. Turner, Ellensburg.

## HOUSE OF REPRESENTATIVES.

### WEDNESDAY, *March 11, 1914.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Thou who art infinite in the things wherein we are finite, help us to fix our thoughts on the things that are worthy, and bend every effort to their accomplishment, assured that Thou art with us to strengthen when we are weak, to enlighten when we are ignorant, to encourage when we falter, to make us courageous when we are timid. Thus may Thy sympathy inspire us, Thy hand lead us, and Thy love bring us on our way to victory in Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

QUESTION OF PRIVILEGE.

Mr. KELLY of Pennsylvania. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. KELLY of Pennsylvania. I rise to a question of privilege, Mr. Speaker.

The SPEAKER. The gentleman from Pennsylvania will state it.

Mr. KELLY of Pennsylvania. The question of privilege which I desire to bring up has been heralded in the public press for the last week, and is a matter which contains an implication on the integrity and an imputation on the veracity of every Member of this House. One dispatch sent out recently, and which has been used in almost every newspaper in this country, uses the following language:

WASHINGTON, *March 9.*

Are there liars in the House of Representatives; and if so, who are they?

These are questions which have been brought to the fore by the latest developments in the controversy started by Charles Zueblin, formerly of the University of Chicago.

Prof. Zueblin said Speaker CLARK had counted only 23 of the 50 Members who, on a rising vote, demanded a roll call on the reference of the lobby report and resolutions to the Judiciary Committee. Speaker CLARK branded this assertion as a slander. Representatives MANN, MADDEN, MURDOCK, and others testified they saw no more than 23 Members rise.

Mr. Speaker, as I say, that statement is a reflection upon every Member of this House, and especially on the Speaker, whom I personally regard as one of the fairest officers who ever presided in a legislative body in America. [Applause.] And knowing that fact, and because I had some little part on the occasion in question myself, having made a point of order which was overruled, I felt it my right and duty to have the real facts in the case brought before the House of Representatives. I wrote to the National Voters' League in this city, which had given out the statement that 55 Members of this House had written that they voted in favor of the roll call, when the RECORD shows that the announced total was but 23. My letter was as follows:

MARCH 10, 1914.

Mr. LYNN HAINES,
*Executive Secretary the National Voters' League,*
*Woodward Building, City.*

DEAR SIR: I request that you furnish me, at your earliest convenience, a list of the names of the Members of the House of Representatives whom you have publicly stated advised you that they rose to favor the demand for a roll call on December 9, 1913, on the question of referring the Mulhall lobby reports to the Judiciary Committee. I desire also that you explain the purpose and method of your league in compiling this list. Thanking you in advance, I am,

Yours, sincerely,

M. CLYDE KELLY.

I received the following letter in reply:

THE NATIONAL VOTERS' LEAGUE,
829–831 WOODWARD BUILDING,
*Washington, D. C., March 11, 1914.*

Hon. M. CLYDE KELLY,
*House of Representatives,*
*Washington, D. C.*

MY DEAR SIR: I have your letter of yesterday asking for the names of Members of the House who wrote to the National Voters' League stating that they joined in the demand for a roll call on the question of referring Mr. MACDONALD'S lobby resolutions to the Judiciary Committee, December 9, 1913. You wish to know also how the league secured this list of names. Please permit me to reply first to your second inquiry.

The National Voters' League is a permanent, nonpartisan organization, which seeks to give to the public accurate and timely information about Congress. In the course of its routine work an attempt was made to obtain an authentic list of the Members who had demanded the roll call in question, for the reason that the issues then under consideration were of vital importance. There were involved the integrity of the House itself and the whole question of the "invisible government" at Washington as disclosed in the Mulhall investigation. Yet in this, the very crisis of the controversy growing out of the Mulhall exposé, the House organization was evidently sidetracking these gravely important issues without either discussion or a roll call.

That is why an effort was made, in the only way open to us, to obtain a correct list of those Congressmen who had, by joining in the demand for a roll call, opposed the seemingly obvious "program" on that occasion. As one Member who joined in the demand for a roll call stated in his letter of reply:

"I think the resolutions were improperly referred to the Judiciary Committee, for I suspected that they would sleep the sleep of death there."

Below is quoted the league letter sent to all Members of the House. We expected that this letter would be answered with the same honesty with which the inquiry was made. Our only object was to be able to publish an accurate list of those who were in favor of a record vote.

In writing this letter I was careful so to phrase it as to preclude all possibility of a misunderstanding as to its purpose. By dating and describing the specific proceeding about which information was desired, it was made impossible for Members to confuse that proceeding with any other. I made it plain also that the names were wanted for publication.

The letter was as follows:

"DEAR CONGRESSMAN: The National Voters' League desires to secure for publication a list of those Members who joined in the demand for a roll call on the question of referring the lobby reports and Mr. MACDONALD'S resolutions to the Judiciary Committee when that issue came up in the House December 9.

"Will you aid us in this by answering these questions:

"1. Were you present in the House on that occasion?

"2. Did you rise and join in the demand for a roll call on the above-mentioned motion?

"We will appreciate an early answer.

"Very truly,

"_____ _____."

In response to this letter the National Voters' League has on file the statements of 47 Members of the House that on December 9, 1913, they rose and joined in the demand for the roll call in question. In addition to the 47, 8 Members were not certain, but the majority of these replied to the league's query in such a way as to imply that they also had supported the demand for the roll call. One Member telephoned to this office that he had voted for the roll call; 16 returned more or less evasive answers; 56, many of whom said they would have favored the roll call had they been present, replied that they were not in the House on that occasion. Two stated that they took no part in the proceedings because their names were involved in the Mulhall charges. Only 5 out of the 135 who replied stated that they were against the roll call.

The 47 who replied definitely that they joined in the demand for the roll call are as follows: Sydney Anderson, William A. Ashbrook, Silas R. Barton, Ellsworth R. Bathrick, Charles W. Bell, Stanley E. Bowdle, M. E. Burke, Philip P. Campbell, Ira C. Copley, Louis C. Cramton, Charles H. Dillon, Jeremiah Donovan, John J. Esch, John R. Farr, H. Robert Fowler, George E. Gorman, Courtney W. Hamlin, W. H. Hinebaugh, Willis J. Hulings, Albert Johnson, Edward Keating, M. Clyde Kelly, Thomas F. Konop, William L. La Follette, Fred E. Lewis, W. J. MacDonald, James Manahan, Andrew J. Montague, Victor Murdock, William F. Murray, George A. Neeley, John I. Nolan, P. D. Norton, Denis O'Leary, Percy E. Quin, John E. Raker, Arthur R. Rupley, Dorsey W. Shackleford, R. B. Stevens, Tom Stout, Howard Suther-

land, H. W. Temple, Charles M. Thomson, J. B. Thompson, Anderson H. Walters, Otis Wingo, and Roy O. Woodruff.

The eight Members who were in doubt, but the majority of whom replied to the league's query in such a way as to imply that they also demanded the roll call, are as follows: Robert Crosser, John J. Eagan, W. B. Green, E. L. Hamilton, Walter I. McCoy, N. J. Sinnott, Luther W. Mott, and John H. Small.

The Member who telephoned this office that he stood up to ask for the roll call is H. T. Helgesen.

Very truly,

LYNN HAINES.

Mr. Speaker, that is the exact status of the controversy which has been causing considerable comment in the press of the country. I maintain that it is not wholly a question of veracity on the part of the Members of the House, although that is involved. There is a deeper and more vital question than that. It touches the integrity of the processes of the House, and seems to indicate either that a number here, greater than the rules declare necessary to get a roll call, are not able to secure a roll call, or else Members are desirous of appearing in a different guise, when the light of publicity is turned upon them, than in a rising vote when they are not counted as a matter of public record.

There is the point at issue. It is a question as to the value and reliability of the proceedings of this House in expressing the public will, and I submit to you that that is worthy of the most serious attention of the Speaker and of the House of Representatives. Either we have a system where we can not secure a roll call when it is desired by a large number, or a system of misrepresentation, where Members do not vote in a rising vote as they would where their votes are a matter of public record. I contend that either situation is serious, and that a system which permits either must be changed. Here is a case where 33 Members were sufficient to secure a roll call and 55 Members declare that they voted for a roll call. I was present on that occasion, and I personally believe that the Speaker counted with exact accuracy, and that 23 Members voted on that occasion. [Applause.] But admitting that, it remains true that legislation may be killed or may be passed according to the manipulation of legislative machinery, whose cogs and wheels and pulleys can not be seen by the American people.

The particular matter at issue in this case concerns every man, woman, and child in America, because this was the lobby investigation. It was the investigation of charges which, if true, meant a combination on the part of dishonest "big business" and corrupt politics to rob the entire citizenship of the United States. It was far too important for the muzzle or whitewash brush, and yet we have had nothing in the way of definite action. I believe that this whole matter concerns most vitally the integrity of the House, and being firm in the belief that every Member should feel a direct and personal interest in it, I put these facts in the RECORD. I desire that they shall be known to every Member of the House and that the people of this Nation may have full knowledge of the dangers of secrecy in connection with the instrumentalities of legislation. The system which makes this situation under discussion possible is incompatible with and contradictory to the best elements and highest ideals of the Republic. It takes all actuality from our boasted government of the people, for the people, and by the people and leaves only a figure of speech. It gives foundation to the charges that there is an invisible government behind our visible government, and that it poisons the very springs of national integrity.

As sunlight is the best disinfectant and electric light the best policeman, so publicity of legislative processes is the best cure of such an evil as this. The people have the right to know the attitude of Representatives on every question, and the parliamentary machinery must be such that they can secure that knowledge from the public record, which will never show twice as many votes for a proposition as Members who voted for it.

## MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had agreed to the amendments of the House of Representatives to the bill (S. 3742) to authorize the Hudson River Connecting Railroad Corporation to construct a bridge across the Hudson River in the State of New York.

The message also announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House of Representatives to the bill (S. 48) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

## ENROLLED BILLS SIGNED.

The SPEAKER announced his signature to enrolled bills of the following titles:

S. 3742. An act to authorize the Hudson River Connecting Railroad Corporation to construct a bridge across the Hudson River in the State of New York; and

S. 48. An act to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

## CALENDAR WEDNESDAY—BUREAU OF LABOR SAFETY.

The SPEAKER. This is Calendar Wednesday, and the unfinished business is House bill 10785, to create a Bureau of Labor Safety in the Department of Labor, and the House resolves itself automatically——

Mr. MANN. Mr. Speaker, before the House resolves itself automatically into the Committee of the Whole House on the state of the Union, will not the gentleman from Maryland [Mr. LEWIS] make some effort to fix a time for closing general debate on the bill?

Mr. LEWIS of Maryland. Mr. Speaker, I ask unanimous consent that general debate on this bill be confined to one hour and a half.

The SPEAKER. How is it to be divided?

Mr. LEWIS of Maryland. If there is anybody here who is in opposition to any feature of the bill, I shall be glad to hear from him.

Mr. STAFFORD. I am in opposition to the second section of the bill, I will say to the gentleman from Maryland. I am in favor of the first section very heartily.

Mr. SHERLEY. Mr Speaker, as the bill is now drawn, I shall desire either to support amendments to it or to offer amendments to it, because I think it invades the jurisdiction which belongs to the United States Public-Health Service, and I want to be heard on that phase of it.

Mr. LEWIS of Maryland. Will the gentleman from Kentucky [Mr. SHERLEY] and the gentleman from Wisconsin [Mr. STAFFORD] agree to take half of the hour and a half of time?

Mr. STAFFORD. That will be entirely satisfactory to me.

Mr. MANN. I suggest that the gentleman ask for at least two hours.

Mr. LEWIS of Maryland. Then I modify my request, Mr. Speaker, and desire to make it two hours instead of one hour and a half; one-half to be controlled by the gentleman from Wisconsin and the gentleman from Kentucky and the balance to be controlled by myself.

Mr. BUCHANAN of Illinois. Mr. Speaker, I desire one hour for myself. I shall object to any unanimous-consent agreement unless I can have one hour of time on this question.

The SPEAKER. The gentleman from Illinois [Mr. BUCHANAN] says he will object to any unanimous consent unless it provides an hour for him.

Mr. SHERLEY. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. SHERLEY. Is the debate limited to the subject matter of the bill?

Mr. MANN. It is not to anyone who gets the floor.

Mr. SHERLEY. Can we get an agreement to limit the debate to the subject matter of the bill? I have no desire to unduly delay the matter. With its main purposes I am in accord.

Mr. BUCHANAN of Illinois. I have no desire to delay the matter, Mr. Speaker, but I do not often ask for time, and anything that I have got to say will be indirectly on the bill. I have got some things to say that are not directly connected with the bill.

Mr. MANN. Can not the gentleman get along with half an hour?

Mr. BUCHANAN of Illinois. I can not. Unless I have more than half an hour I do not care to discuss the question.

Mr. MANN. The gentleman understands that the Committee on Labor has a bill on the calendar preventing the importation of convict-made goods, which, if not called up to-day, will not be called up at all, because the committee will have occupied its second day.

Mr. BUCHANAN of Illinois. If you take three hours, that will leave enough time.

Mr. MANN. The gentleman might get some more time under the five-minute rule; but it may be impossible to proceed unless there is a quorum.

Mr. LEWIS of Maryland. Mr. Speaker, I move that general debate on this bill close in two hours.

Mr. BUCHANAN of Illinois. Mr. Speaker, I would like to say that I do not usually make remarks of this kind, but unless I get the time I ask for you will need a quorum here to confine it to two hours.

Mr. LEWIS of Maryland. Very well.

Mr. BUCHANAN of Illinois. Gentlemen do not want to be unfair, and they will be if they shut me out. The time taken up in getting a quorum would amount to as much as the time I want.

Mr. SHERLEY. Mr. Speaker, if the gentleman will permit a suggestion, it ought to be easy for the gentleman from Illinois to get his time on the second bill, and, as I understand, his remarks do not pertain especially to this bill.

Mr. BUCHANAN of Illinois. I have prepared my speech to a part of this bill.

Mr. SHERLEY. I understood the gentleman to say that his remarks applied only indirectly to this bill.

Mr. BUCHANAN of Illinois. Some of them apply directly to it.

Mr. UNDERWOOD. Mr. Speaker, it is evident that it will take three-quarters of an hour to call the roll. I will ask the gentleman from Illinois [Mr. BUCHANAN] if three-quarters of an hour will not be satisfactory to him?

Mr. BUCHANAN of Illinois. I shall get through with my remarks in three-quarters of an hour if I can, but I do not know that I can say all I want to say in that time.

Mr. LEWIS of Maryland. Now, Mr. Speaker, in an effort to save time and get through, I will withdraw my motion and ask for unanimous consent.

Mr. MADDEN. Well, Mr. Speaker, I shall object unless I can get an hour.

Mr. LEWIS of Maryland. Very well. I renew the motion, Mr. Speaker, that all general debate close in two hours.

The SPEAKER. The gentleman from Maryland [Mr. LEWIS] moves that general debate on this bill close in two hours, one half of the time to be controlled by himself and the other half——

Mr. MANN. That was not in the motion, Mr. Speaker.

The SPEAKER. The gentleman moves that general debate on this bill be limited to two hours.

Mr. BUCHANAN of Illinois. I move an amendment—that it be made four hours.

Mr. LAFFERTY. Make it three.

Mr. BUCHANAN of Illinois. Very well.

The SPEAKER. The gentleman from Illinois [Mr. BUCHANAN] moves as an amendment to the motion that the general debate on this bill be limited to three hours. The question is on agreeing to the amendment.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. BUCHANAN of Illinois. I ask for a division, Mr. Speaker. No; I do not want it if the ayes seem to have it.

Mr. MADDEN. I ask for a division, Mr. Speaker.

The SPEAKER. The gentleman from Illinois [Mr. MADDEN] asks for a division. Those in favor of the three-hour amendment will rise and stand until they are counted. [After counting.] Sixty-six gentlemen have arisen in the affirmative. Those opposed to the three-hour amendment will rise and stand until they are counted. [After counting.] Five gentlemen have arisen in the negative. On this vote the ayes are 66 and the noes are 5, and the three-hour amendment is agreed to. The question is on the motion of the gentleman from Maryland [Mr. LEWIS] as amended by the amendment of the gentleman from Illinois [Mr. BUCHANAN].

The motion as amended was agreed to.

The SPEAKER. The House automatically resolves itself into Committee of the Whole House on the state of the Union, with the gentleman from Missouri [Mr. RUCKER] in the chair.

Thereupon the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 10735, with Mr. RUCKER in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 10735, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor.

The CHAIRMAN. Does the gentleman from Maryland [Mr. LEWIS] desire recognition?

Mr. LEWIS of Maryland. I do. I desire to ask the gentleman from Illinois [Mr. BUCHANAN] if he is ready to employ his hour?

Mr. BUCHANAN of Illinois. Yes.

The CHAIRMAN. The gentleman from Illinois [Mr. BUCHANAN] is recognized.

Mr. BUCHANAN of Illinois. Mr. Chairman, the remarks that I have to make to-day may interest the gentleman from New York [Mr. FITZGERALD], the gentleman from Mississippi [Mr. SISSON], the gentleman from Texas [Mr. DIES], and the other members of the Appropriations Committee.

While taking the floor in support of this important measure I can not refrain from making some reply to the erroneous statements made on the floor of this House by the chairman of the Appropriations Committee and others on February 24. Their attitude at that time would indicate that they were under the impression that I was prompted to make the effort I did to secure an appropriation for the continuation of research work for industrial diseases and accidents by the Secretary of Labor or the heads of the bureaus of that department. In order that no one will be under a misapprehension, I wish to state that my effort in regard to that matter was actuated by my desire to have such work done without delay in an efficient and proper manner; but it seems that my effort drew an attack upon the Department of Labor and its bureaus, and the erroneous charges were made that they were operating in conflict with the law, or without authorization of law. The chairman of the Appropriations Committee, Mr. FITZGERALD, of New York, said that we were favoring these amendments for narrow, selfish purposes, and also stated that my colleague, Mr. MANN, the leader of the other side of the House, was endeavoring to secure increased appropriations for political purposes, to which charge Mr. MANN offered no defense. I would say to the gentleman that if the Republicans will exercise their influence to secure bureaus of safety and provide money for investigations of industrial diseases and accidents they will be playing politics in an effective manner that will bring to them consideration and favor.

Of course the gentleman from New York arrogantly made this statement for the purpose of reflecting that I and others who were endeavoring to secure increased appropriations for these purposes were working in conflict with the best interest of the Democratic Party, as will be seen from his remarks February 24, as follows:

Mr. FITZGERALD. Mr. Chairman, I remarked earlier in the day, in the course of some remarks, that it would cost much more to conduct the Government under a Democratic administration if the gentleman from Illinois [Mr. MANN] continued to deliver votes on that side of the House to aid some gentlemen on this side of the House who, regardless of the pledges that have been made by the Democratic Party, looking only in a narrow and selfish way at the things they were interested in, are endeavoring to override the recommendations of the Committee on Appropriations in these matters. Later in the session a different song will be sung. I hope it will not be one that will disappoint the country and disappoint the party; but I do know that if we are to accept the statements of the heads of departments, regardless of their politics, as to their needs and the amount that should be expended in the conduct of every branch of the public service, then all promises of economy will be broken and the record that will be made by this House will not be to the credit, but will be to the everlasting damnation of the Democratic Party.

The chairman of the Appropriations Committee, aided by the gentlemen from Mississippi [Mr. SISSON] indulged in a subtle and insidious argument, stating that the Secretary of Labor, the Labor Department, and its bureaus were operating in conflict with law, or acting without authorization of law. These gentlemen seem to take the position that they are the powers that be, and that those who dare to express opinions in conflict with theirs are objects of contempt and scorn.

The gentleman from Mississippi [Mr. SISSON], when I saw fit to exercise my right under the rules to object to an extension of his time, used the following words:

If the gentleman objects, he is going to have a little more trouble about getting his own time extended in the future. We have been more than indulgent with him. I am a member of the subcommittee, and have taken but little time on this bill.

Clearly taking the attitude that my privileges on the floor of this House were not equal to his, and that I was exercising a great deal of nerve in daring to interrupt him and in expressing opinions in conflict with those of these great dictators of the financial policies of this Congress.

I tried to be liberal with these gentlemen when I stated that, due to the fact that they were lawyers and never having had the experience that workingmen have had, they do not understand the terrible widespread results of these industrial accidents and diseases and the destruction that it brings to the life and health of humanity. I will again be liberal by saying that I believe that they can not appreciate how one feels that has had the wide experience that I have had as a workman and as one trying to uplift the conditions of the working people of our country. They probably have no way of knowing the number of lives that have been lost through preventable diseases and preventable accidents in the industries of our country. Much too little effort has been made by our National Government to secure remedies and preventives for these diseases and accidents.

For about 15 years of my life I worked at one of the most hazardous trades there is, namely, bridge and structural iron work. During this time I would estimate that 100 men were killed on the structures upon which I worked, a large percentage of which could have been prevented by the proper scaffolding and other safeguards. When a single man is killed, having no one dependent upon him, that usually ends the matter, excepting

the grief and sorrow of his friends; but when the victim is a married man with a family and others dependent upon him for their support it usually results not only in grief and sorrow but in destitution. As an example I have in mind one man in particular out of many others who lost their lives in Chicago. He was a fine big fellow, with a happy family of a wife and six children, and as is usual with the workingmen with families, he had little left of his earnings for their support. After he was killed it became necessary for the widow to work for a mere pittance in order that her children might have a bare, scant living. The children were forced to take positions in the factory and mill at an early age, thereby stunting them physically and depriving them of a proper education. If a married man with a family contracts a disease at his work, which could have been prevented, say, for instance, tuberculosis, he is usually unable to work for at least six months before he passes from this life. The expenses of the family are necessarily increased by his illness and what little might have been saved is soon consumed, and almost without exception the family is left destitute. Not only have they lost their loved one, but this means that the widow is often condemned to the washtub and the children to destitute poverty. According to the best information that I have there are about 15,000 widows and 45,000 children left in this condition annually, due to industrial accidents and diseases. I sincerely believe, therefore, that any man with human instincts, who really understands industrial conditions in regard to these matters, would not withhold his consent from an appropriation of $29,000 to continue research work to ascertain remedies for these conditions that will at least lessen the misery and suffering of the workers.

If these gentlemen had not stooped to the argument that the Labor Department and its bureaus had been violating the law, and that I, by asking for these additional appropriations, was thereby encouraging the violation of the law, and that these statements have made excellent material for the headlines of the newspapers of the country that serve the National Manufacturers' Association and other big business enemies of the labor people, I would not have mentioned this subject again. The Manufacturers' Association, whose influence has been directed against the rights and interests of any organization, Government bureau, or other institution that might tend to protect the interests of the workers, will grab at such statements as made by the gentleman from New York [Mr. FITZGERALD] as very good material to use against the Labor Department in its splendid efforts to secure better conditions in the industries of our country.

The gentleman from New York very craftily inferred that I was in accord with lawlessness when he made the following statement:

> I know, Mr. Chairman, the gentleman from Illinois does not represent either the Department of Labor or organized labor or men who have the interest of organized labor at heart when he speaks in a slighting and trivial manner of the violation of the law by anybody. One of the things that has brought the labor movement in this country into contempt and under suspicion in the minds of a great many men has been a tendency to lawlessness upon the part of a few men, who took advantage of the power which they obtained in labor organizations.

In this regard I might say to the Congress, that there is nothing in the history of my life that would justify such a statement. While I do not care to take up the time of this committee, giving my history as a workman or as an official in the trade-union movement, I will say that those who know me and my record know that I was opposed to the vicious, dishonest, criminal element in the labor movement, and therefore the statement of the gentleman from New York, from which one might infer that I am in sympathy with violations of the law, is without foundation of fact. However, you now have it officially that I did not represent the labor organizations or the Labor Department in my effort to secure these increased appropriations, because it has so been stated by the chairman of the Appropriations Committee, whose word must not be doubted as being final.

Mr. FITZGERALD. Will the gentleman yield?

Mr. BUCHANAN of Illinois. I have not the time.

Mr. FITZGERALD. We will see that the gentleman gets the time.

Mr. BUCHANAN of Illinois. After I get through with my speech I will gladly yield to the gentleman.

Mr. FITZGERALD. When the gentleman makes statements concerning myself he ought not to decline to yield.

Mr. BUCHANAN of Illinois. The gentleman from New York made these statements with such force and influence that even the chairman of the Labor Committee was dazed for a time. However, he very ably defended the Committee on Labor from having anything to do with securing these amendments in the following words:

> Mr. LEWIS of Maryland. Mr. Chairman, I should not claim the attention of the committee now were it not for the declaration made by the gentleman from Mississippi [Mr. SISSON]. I do not at this moment know how I shall vote on this amendment, because I must admit that the statements made by the committee in charge of the bill have produced grave doubts in my mind, and perhaps would have produced a state of certainty with regard to the amendment had it not been for the declaration of which I complain. * * * The fact is that the Committee on Labor, as such, has never had anything to do with these amendments, has never discussed them, has never had before it the subject of appropriations to the Department of Labor. I want to say, so far as I personally am concerned, although it may not be my portion to be charged with the particular responsibility on these matters, as the gentleman from Mississippi is now, that I give way to no man in this House in my purpose to enforce strictly administrative laws and to economize the resources of the people. And the Labor Department presents no exception to that rule, in my mind. If the Labor Department or a preceding bureau has violated the law and has expended money in a manner unwarranted by law, it, of course, can not ask for special privilege, and I am not here to defend it. But I am here, sir, to defend the Committee on Labor in this matter. The characterization it has received is absolutely unfounded and unjustified.

However, he failed to say one word in defense of the Secretary of Labor from the erroneous charges made against him. We have had an opportunity to associate with this man and to know him. He was one of the rank and file of the working people, who struggled up from poverty under extreme disadvantages. He has always had a high regard for law and order, and as a Member of this House established for himself an unquestionable record for honesty and integrity, and he was always loyal and attendant to his duties. As a member of the Cabinet he has conducted himself in a manner that commands the respect and confidence of all who know him, and to no man could the following words of Abraham Lincoln be more appropriately applied: "No men living are more worthy to be trusted than those who toil up from poverty."

Due to this misleading argument several other Members refused to vote for this appropriation for the continuation of research work into industrial diseases and accidents and put this House in the absurd position of refusing to appropriate $29,000 for these purposes, when just a few days before it appropriated $600,000 for investigations into the causes and prevention of hog cholera. Therefore this House goes on record as giving the animal greater consideration than it does the human beings who are at the mercy of industrial diseases and accidents that are destroying them by the thousands and tens of thousands. If the gentleman from New York thinks this is an enviable position to put the Democratic Party in, he will find that it would meet with the disapproval and protest of the American workingmen.

I want to state to this Congress that when the gentleman from New York or any other member of the Appropriations Committee, or any Member of this House, opposes appropriating necessary funds for the efficient operation of any Government department or bureau which is making investigations and gathering information which will be of inestimable value to the wageworkers he does not truly represent the Democratic Party, and when the Democratic Party is controlled by such influences it will cease to be a party of the people and will be unable to maintain the confidence and support of the American workmen. Such an attitude will not be sustained by the American voter, and it is a reflection upon the Democratic Party to say that such methods are in accordance with its policies or the fundamental principles of Democracy. This Democratic House has passed legislation for the protection of the working people that was denied them by the Republican Party for years and it deserves the credit and support of the wageworkers for what it has done; but its pledges are not all fulfilled, and it is our duty to carry out the letter and spirit of the promises we have made and enact legislation in accordance with the fundamental principles of Democracy, thereby giving labor greater freedom of opportunity and protection to human life.

Mr. McKENZIE. Will the gentleman yield?

Mr. BUCHANAN of Illinois. I have not time. If I have time when I have finished my remarks, I will yield.

The gentleman from Texas [Mr. DIES] seems to be another who was affected by the remarks of the gentleman from New York, that this department was operating in conflict with the law, and on February 27, with folded arms and uplifted face, with the expression of sanctification upon his brow, he made the following statement:

> I want to invite the attention of the committee to a statement made by the chairman of one of the great committees of this House the other day. If that statement had been made by some irresponsible person, I doubt if I would have called attention to it; but having been made by the chairman of the Committee on Appropriations, the great supply committee of the House, I feel that it is worthy of more than passing attention. Mr. FITZGERALD stated on the 24th of February as follows:
>
> "At that time a request was made by the Department of Labor to authorize the Secretary of Labor to purchase three automobiles—a seven-passenger touring car for himself, at $4,500; an electric runabout for the use of himself and others, for $2,500; and an automobile truck. The committee declined to include that authority in the bill, based upon the fact authority had never been given to any of the

departments to purchase automobiles for the Secretary or others connected with the department. In some way or other the information got noised abroad that such a request had been made, and innumerable Members of this House served notice upon the committee that they would not tolerate such a situation. The authority was not given, and yet it appears that during this session of Congress an automobile has been purchased for the personal use of the Secretary of Labor."

I would be ashamed of myself if I called the attention of this committee to the attempted raid upon the Treasury of $8,000 by a poor 70-year-old soldier out in Minnesota if I did not call their attention to the abstraction of $7,000 from the contingent fund of one of the departments of the Government in violation of the laws of this country by a Cabinet minister.

Thereby reiterating what the gentleman from New York had said, which will do the Democratic Party more harm and which will furnish the Republican Party with more campaign material than my colleague, Mr. MANN, the leader of the Republican side, has or can gather in the whole Congress.

When erroneous criticism of this character is made against one of the Cabinet officers it is an attack upon the administration, and the gentlemen who made these statements surely did not have the interests of the Democratic Party at heart when they took such a position.

This committee, whose chairman made an erroneous argument to keep the Department of Labor from getting an appropriation for research work of industrial diseases and accidents, gave their consent to the following appropriations for other departments:

| | |
|---|---|
| **NAVY DEPARTMENT.** | |
| Hydrographic Office, for contingent and miscellaneous expenses | $12,500.00 |
| Bureau of Navigation | 57,931.53 |
| Bureau of Ordnance | 12,345.60 |
| **DEPARTMENT OF THE INTERIOR.** | |
| Geological Survey, for investigation of mineral resources in Alaska | 100,000.00 |
| **DEPARTMENT OF JUSTICE.** | |
| An additional clerk | 400.00 |
| (But denies the Labor Department even an employee to run the elevator.) | |
| **UNITED STATES COURTS.** | |
| For salaries, fees, and expenses of United States marshals | 60,000.00 |
| And a number of items under miscellaneous expenses amounting to | 61,292.76 |
| Bureau of Census | 2,500.00 |

I do not desire to complain of these items, but only mention them to show that other departments have been doing their business in a manner that when so done by the Department of Labor it is construed as being a violation of the law. These assumed watchdogs of the Treasury raised no objections to these appropriations being made to other departments.

In order that Members of this House shall not remain under the wrong impression in regard to the conduct of the Department of Labor, I desire to make the following statements of facts, which will show that the charges made by the gentleman from New York and the gentleman from Mississippi are without foundations of fact.

The various departments of the Government are equipped with the following conveyances:

State: 1 delivery truck, 2 carriages, 3 horses.
Treasury: 3 motor trucks, 5 carriage horses, 3 carriages.
War: 4 carriage horses, 4 carriages, 4 delivery-wagon horses, 4 delivery wagons.
Justice: 3 horses, 4 carriages, 2 delivery wagons, 2 horses.
Post Office: 1 electric truck, 4 carriage horses, 2 carriages.
Navy: 4 carriage horses, 4 carriages, 2 delivery wagons, 1 delivery horse.
Interior: 6 horses, 3 carriages, 4 motor trucks.
Agriculture: 5 carriage horses, 4 carriages, 4 draft horses, 1 motor truck.
Commerce: 4 draft horses, 5 carriage horse, 3 mail wagons, 2 trucks, 5 carriages, 1 motor truck (ordered).
Government Printing Office: 8 motor trucks, 2 automobiles (passenger).
Labor: 1 second-hand automobile and no limousines.

In addition to the equipment itemized above, many of the subordinate branches of the other departments have also been provided with motor or horse-drawn vehicles, but the one machine mentioned under the Department of Labor represents its entire equipment.

If anyone thinks it possible to conduct the business of one of the great executive departments of this Government without a vehicle or conveyance of some description, it is only because he has not taken the trouble to inform himself of the details and ramifications of this business. Nevertheless, during the first eight months of its existence, the Department of Labor was without either the service of any vehicle whatsoever or the means of procuring the same. In the latter part of October the Department of Commerce donated to it three old carriages and a team of aged horses, both of which had practically outlived their usefulness, and one of which broke down completely shortly thereafter. These vehicles were available for all character of official use. They conveyed the disbursing clerk and his assistants from place to place in the performance of their duties, were used for the transportation of large quantities of publications, and so forth, and served the Secretary in the fulfillment of such duties as devolved upon him by virtue of his official position, and which, were it not for his official position, he would not be called upon to perform.

The experience through which the Department of Labor went in the maintenance of horses and carriages served to convince it that one automobile would render better service and could be much more economically operated. The situation was brought to a head when one of the two horses became totally incapacitated, as the result of a general breakdown, and the other gave indications of shortly doing likewise. Veterinary bills were rapidly accumulating on behalf of the horse that was disabled, and a considerable expense was incurred in hiring another in its stead. The purchase of a new team would involve an outlay of some $600 or $700 and, in addition, the department would have been put to a monthly expense of upward of $100 for maintenance. It was then that the purchase of the automobile, which costs, not $7,000 but $1,600, was decided upon. It was procured only after the determination, based upon careful inquiry, had been reached that it could be maintained for about one-half what it would cost to continue the operation of horses and carriages.

Mr. FOWLER. And that automobile was swapped for.

Mr. BUCHANAN of Illinois. Yes; that was traded for—a bargain.

The authority for the exchange of these horse-drawn vehicles and the purchase in their stead of an automobile is found in that portion of the act of March 4, 1913, appropriating contingent expenses for the Department of Commerce and Labor, which authorized "the purchase, exchange, and care of horses and vehicles," and the urgent deficiency bill of October 22, 1913, which carried an appropriation for the Department of Labor "to be available for the objects named in the appropriation for contingent expenses for the Department of Commerce and Labor." Section 4 of the Revised Statutes declares:

> The word "vehicle" includes every description of carriage or other artificial contrivance used, or capable of being used, as a means of transportation on land.

In harmony with that construction the Comptroller of the Treasury has twice ruled that if an administrative officer deems motor vehicles more efficient and economical than horses and carriages he is authorized, under an appropriation providing for the purchase of "horses and vehicles," to procure them.

So that it will be readily apparent to anyone who takes the trouble to acquaint himself with the facts in this matter that the Department of Labor had not only ample legal authority for the purchase of the automobile in question, but that it was simply conforming to a policy which has long been pursued by other departments of the Government. Instead of being unjustly criticized for an alleged violation of law, where none has occurred, it should be commended for its action in the premises, which was dictated by a wholesome regard for conservation of the public funds and a desire to carry on its work in a businesslike way.

This bill as reported from the Committee on Labor places the proposed bureau of safety in the Department of Labor. On general principles there can be little doubt that this bureau, if it is to be established at all, should be established in that department. But in the light of the events of the last few days, one is compelled to harbor an unpleasant question. It is this: Is it the intention to create a bureau of safety, place it in the Department of Labor, and then cripple it and render it ineffective by the same tactics and methods which have been applied to the Department of Labor and its bureaus since the creation of that department?

The Bureau of Labor Statistics, now in the Department of Labor, has for a number of years been doing some pioneer work in the very field which this bureau of safety is expected to occupy. But the Bureau of Labor Statistics has been crippled at every turn for want of appropriations. Not only that, but its appropriations have been hampered by restrictions which do not apply to other bureaus, and interpretations have been placed upon the language of even these meager appropriations which have not been applied to similar appropriations for other bureaus. It was stated on the floor of the House on February 24 that the Bureau of Labor Statistics had been violating the law in that it carried certain employees on a lump-sum pay roll, which lump sum, it was stated, had been appropriated exclusively for paying temporary assistants and experts and for paying the per diem and expenses of the field force employed by that bureau. The exact language of this section which appro-

priates this lump sum to the Bureau of Labor Statistics for the current fiscal year is as follows:

For per diem, in lieu of subsistence, of special agents and employees while traveling on duty away from their homes and outside of the District of Columbia, at a rate not to exceed $3 per day, and for their transportation, and for employment of experts and temporary assistants, to be paid at the rate of not exceeding $8 per day, and for traveling expenses of officers and employees, and for the purchase of reports and materials for the reports and bulletins of the Bureau of Labor, and for subvention to "International Association for Labor Legislation," and necessary expenses connected with representation of the United States Government, $64,090.

The Appropriation Committee discovered that a number of permanent employees—19, I believe they say, in all—are carried upon this roll; that 8 of these are never assigned to field work. This alleged fact was made the basis of a violent attack upon the Bureau of Labor Statistics for the purpose of preventing that bureau from getting a reasonable deficiency appropriation. The inference, if not the direct statement, was that this alleged violation of the law, which, however, I will show was not a violation, had been inaugurated by those at present in charge of the Bureau of Labor Statistics. As a matter of fact, the practice complained of by the chairman of the Committee on Appropriations has been going on in the Bureau of Labor Statistics for 23 years and has been going on in other bureaus of the Government ever since their establishment.

The statutory roll of the Bureau of Labor Statistics consists of the following: Commissioner, $5,000; chief statistician, who shall also perform the duties of chief clerk, $3,000; 4 statistical experts, at $2,000 each; clerks—5 of class 4, 5 of class 3, 6 of class 2, 12 of class 1, 9 at $1,000 each; 2 copyists; 2 assistant messengers; 2 laborers; special agents—4 at $1,800 each, 6 at $1,600 each, 8 at $1,400 each, 4 at $1,200 each; in all, $102,160, or 70 people. This is essentially the same number and the same salaries provided for in the bill reorganizing the present bureau, passed in 1888. There have been practically no increases in salaries or in force.

Now the language of the lump-sum appropriation does not specify that the people paid from that roll shall be field agents or employed in the field, and the carrying of the names of people employed in the office on that roll is neither a violation of the letter nor of the spirit of the lump-sum appropriation clause. There is no charge, and there can be no charge sustained, that the 19 people carried on that lump-sum roll to-day are supernumeraries or that they are being paid unreasonably large salaries. Ten per cent of the employees of the Bureau of Labor Statistics resigned during the year 1913 to accept higher salaries elsewhere, and if there have been a few cases of transfer from the statutory roll to the lump-sum roll in order to hold the people needed it was made necessary by the niggardliness of Congress in holding the statutory roll to the exact level of 1888, regardless of the increase in salaries elsewhere and the growing demands of the bureau for higher grades of employees.

But what is this law which it is claimed has been violated? It was wedged into an appropriation bill in 1882 and is as follows:

That no civil officer, clerk, draftsman, copyist, messenger, assistant messenger, mechanic, watchman, laborer, or other employee shall, after the 1st day of October next, be employed in any of the executive departments or subordinate bureaus or offices thereof at the seat of Government except only at such rates and in such numbers, respectively, as may be specifically appropriated for by Congress for such clerical and other personal services for each fiscal year; and no civil officer, clerk, draftsman, copyist, messenger, assistant messenger, mechanic, watchman, laborer, or other employee shall hereafter be employed at the seat of Government in any executive department or subordinate bureau or office thereof or be paid from any appropriation made for contingent expenses or for any specific or general purpose unless such employment is authorized and payment therefor specifically provided in the law granting the appropriation, and then only for services actually rendered in connection with and for the purposes of the appropriation from which payment is made, and at the rate of compensation usual and proper for such services.

In 1912 an affirmation of this law of 1882 was again jammed into an appropriation bill, as follows:

That any person violating section 4 of the legislative, executive, and judicial appropriation act approved August 5, 1882, shall be summarily removed from office, and may also, upon conviction thereof, be punished by a fine of not more than $1,000 or by imprisonment for not more than one year.

The thing to be objected to here is not so much these clauses that have been injected into appropriation bills as the fact that they are sprung now on the Bureau of Labor Statistics to make it appear that it has all of a sudden begun to violate the law, whereas the same condition exists in bureaus that have been created since the passage of that law and appropriated for in such a way that they could not possibly avoid doing what the chairman of the Appropriations Committee is unwilling that the Bureau of Labor Statistics should do. For instance, the appropriation of the Bureau of Mines is entirely a lump sum. Under the law of 1882, reaffirmed in 1912, the Bureau of Mines could not employ anybody, as it has no statutory roll. The appropriation for the Bureau of Mines reads as follows:

For the general expenses of the Bureau of Mines, including the pay of the director and the necessary assistants, clerks, and other employees in the office at Washington, D. C., and in the field, and for every other expense requisite for and incident to the general work of the Bureau of Mines in Washington, D. C., and in the field, to be expended under the direction of the Secretary of the Interior, $66,100.

For the investigation as to the causes of mine explosions, methods of mining, especially in relation to the safety of miners, the appliances best adapted to prevent accidents, the possible improvement of conditions under which mining operations are carried on, the use of explosives and electricity, the prevention of accidents, and other inquiries and technologic investigations pertinent to the mining industry, $320,000.

For the analyzing and testing of the coals, lignites, ores, and other mineral fuel substances belonging to or for the use of the United States, including personal services in the Bureau of Mines at Washington, D. C., not in excess of the number and total compensation of those so employed during the fiscal year 1912, $135,000.

For inquiries and investigations into the mining and treatment of ores and other mineral substances, with special reference to safety and waste, $50,000: *Provided*, That no part thereof may be used for investigation in behalf of any private party, nor shall any part thereof be used for work authorized or required by law to be done by any other branch of the public service.

For one mine inspector for duty in Alaska, $3,000.

For per diem, subject to such rules and regulations as the Secretary of the Interior may prescribe, in lieu of subsistence, at a rate not exceeding $5 per day when absent on official business from his designated headquarters, and for actual necessary traveling expenses of said inspector, including necessary sleeping-car fares, $3,500.

For technical and scientific books and publications and books of reference, $1,500.

For the purchase or lease of the necessary land, where and under such conditions as the Secretary of the Interior may direct, for the headquarters of five mine-rescue cars and for the construction of the necessary railway sidings on the same, $4,000: *Provided*, That the Secretary of the Interior is hereby authorized to accept any suitable land or lands that may be donated for said purpose.

In all for the Bureau of Mines, $583,100 (p. 458, 62d Cong., 2d sess., C. 355, 1912). And this appropriation bill was passed in 1912, the very year in which the law of 1882, upon which is based this alleged criminality on the part of the Bureau of Labor Statistics, was reaffirmed. It may be said that the appropriation for the Bureau of Mines is not carried in the legislative, executive, and judicial bill, and that, therefore, the restrictions do not apply. But that is precisely the point I want to make. You penalize practices in one bureau of the Government which you make a virtue of in others. You criticize a Labor Bureau for what you not only do not criticise the Bureau of Corporations and the Bureau of the Census and the Bureau of Foreign and Domestic Commerce for doing, but you go further and make it impossible for the Bureau of Mines to do any other way than the way which you say is criminal when done by the Bureau of Labor Statistics.

Moreover, the Bureau of Corporations, in addition to its statutory roll, has a lump-sum appropriation of $175,000, and the clause appropriating it is couched in the following language:

For compensation and per diem, to be fixed by the Secretary of Commerce and Labor, of special attorneys, special examiners, and special agents, for the purpose of carrying on the work of said bureau, as provided by the act approved February 14, 1903, entitled "An act to establish the Department of Commerce and Labor," the per diem to be, subject to such rules and regulations as the Secretary of Commerce and Labor may prescribe, in lieu of subsistence, at a rate not exceeding $4 per day to each of said special attorneys, special examiners, and special agents, and also of other officers and employees in the Bureau of Corporations while absent from their homes on duty outside of the District of Columbia, including necessary sleeping-car fares; in all, $175,000.

And again the Bureau of the Census has a lump-sum appropriation in addition to its statutory roll calling for $354,000 and couched in the following language:

For securing information for census reports, provided for by law, semimonthly reports of cotton production, and periodical reports of stocks of baled cotton in the United States, and of the domestic and foreign consumption of cotton; per diem compensation of special agents and expenses of the same and of the detailed employees, whether employed in Washington, D. C., or elsewhere; the cost of transcribing State, municipal, and other records; the temporary rental of quarters outside of the District of Columbia; for supervising agents, and the employment by them of such temporary service as may be necessary in collecting the statistics required by law: *Provided*, That the compensation of not to exceed five special agents provided for in this paragraph may be fixed at an amount not to exceed $8 per day, $354,000.

In connection with the lump appropriation for the Bureau of Corporations in the Department of Commerce, I want first to call attention to that bureau's statutory roll, which is as follows:

Commissioner of Corporations, $5,000; deputy commissioner, $3,500; chief clerk, $2,500; clerk to commissioner, $1,800; clerks—4 of class 4, 4 of class 3, 6 of class 2, 10 of class 1, 15 at $1,000 each; 15 copyists; messenger; assistant messenger; 3 messenger boys, at $480 each; in all, $78,300.

Then I want to call attention to a statement of promotions given out by the Bureau of Corporations and published in the Evening Star Wednesday, February 25, 1914. These promotions

must have been made from the lump roll, as certainly there is no provision for any special examiners at $3,480 a year in the statutory roll. The announcement of the Bureau of Corporations, as published, is as follows:

MOVE UP IN SERVICE—PROMOTIONS IN THE BUREAU OF CORPORATIONS ARE ANNOUNCED.

In the Bureau of Corporations the following promotions have been made:

Special examiners, Thomas M. Robertson to $3,480, Charles E. Edgerton to $2,580, Walter Y. Durand to $2,460, and David L. Wing to $2,340; Charles H. McDonald, special attorney, to $3,000; special agents, Harry C. McCarty, De Lorma A. Morrow, and Ernest S. Bradford to $2,400; T. A Carroll to $2,340; C. E. La Vigne to $2,100; E. O. Merchant, John M. Gries, Robert E. Belt, and William H. England to $2,040; Walter B. Wooden and Adrien F. Busick to $1,920; Clarence C. Farwell and William B. Horne to $1,860; Morton Q. Macdonald to $1,800; John W. Addison to $1,740; Leroy C. Floyd, Martin J. Dunsworth, Samuel S. Kalisher, Herbert L. Anderson, and John Knox Arnold to $1,680; James B. Peat to $1,620; Ishmael Burton and Waldemar R. Bendz to $1,500; Anderson H. Tackett to $1,440; Thomas A. Thibodeau, John F. Hauck, William W. Childs, and Walter P. Fickett to $1,380; Arthur E. Hyde and J. Paul Oren to $1,320; and Walter D. Waugh to $1,260; from clerk to special agent, Charles T. Windle to $1,620; William W. Bays to $1,320; Alvin R. Peterson to $1,200; clerks, Francis X. Patterson to $1,600; Otto E. Woerner to $1,400; Joseph W. Scheffer to $1,200; and Andrew N. Ross, Jason B. Caugin, and John S. Coombs to $1,000.

Now, there is not the slightest objection either to these promotions or these salaries in the Bureau of Corporations. Doubtless the promotions were all earned and the men were all qualified, but certainly these people paid from this miscellaneous lump-sum roll are not all experts. They are all permanent and by far the greater proportion of them are employed in the office in Washington all of the time. In other words, the Bureau of Corporations, the Bureau of Mines, and the Bureau of the Census are doing precisely the same thing that, when done by the Bureau of Labor Statistics, is denounced upon this floor as being criminal or as being in violation of the law, and I would suggest that if the bureau of safety which as proposed by this bill is put in the Department of Labor for the purpose of being hamstrung, that maybe it had better be put in the Department of Commerce along with the Bureau of Corporations, or in the Department of the Interior along with the Bureau of Mines, where it will have some opportunity for development or some chance at least for a fair show.

The Bureau of Labor Statistics has placed the same interpretation on the word "expert" that is commonly placed upon it in other bureaus; it has followed the common practice of governmental bureaus in its administration of the lump-sum roll. There is not a word in its appropriation law which limits the employment of experts as to time; the words "temporary assistants" do not apply to experts, nor does the term "expert" apply to a field force only. In short, I deny in toto that there is any violation of the intent or letter of this law.

In contrast with the Bureau of Corporations in the recent promotions just quoted, I want to place before the House the exact number of people carried on this miscellaneous expense roll in the Bureau of Labor Statistics. There is one at $2,760, as against the promotion to $3,480 made in the Bureau of Corporations on February 24—which, by the way, was the very day that the attack was made on the Bureau of Labor Statistics on this floor. To repeat, there is one at $2,760, one at $2,520, three at $2,280, six at $1,600, six at $1,400, two at $1,200. No very extravagant salaries these, and with the 19 people carried on this lump-sum roll the Bureau of Labor Statistics has in all but 89 employees, and pays the lowest salaries of any bureau in the Federal Government doing work of technical or scientific character, and does more work with fewer people than any other bureau in the Government, and does better work, and as a reward was refused money to print its reports and money to catch up with its arrearages in work, and for the reason, as some of us verily believe, that it has the misfortune to direct its activities along the lines of labor statistics. Whatever opinion may be held as to the good judgment exercised by those in control of the Bureau of Labor Statistics for the past 25 years, the fact remains that the use made of its working fund was made necessary by the fact that Congress made no allowance for expansion in its statutory roll, and last year positively refused to do so. The remedy was to have given the Bureau of Labor Statistics the increase it asked for for the year 1914. Having refused to do that, to have given it something in the deficiency bill to enable it to get abreast of its work. This also was refused, and the question of the advisability of putting this Bureau of Safety under the Department of Labor resolves itself into this one query: Is it being put there for the purpose of chloroforming it along with all the other activities along the lines of interest to the laboring people?

With the suspicion, which it is impossible to escape, that the present Appropriation Committee of this House is laboring under a mental inability to be entirely fair to the Department of Labor, the Bureau of Labor Statistics, or anything that even squints toward labor, the question forces itself upon me whether or not that committee ought not to be instructed by the whole body of this House as to what it ought to do in labor matters; or, better still, whether the appropriations for the Department of Labor and its bureaus ought not to be considered by a separate committee, as is now being done in the case of the Agricultural Department, Navy Department, and others.

In making the effort I did to secure these increased appropriations for the Department of Labor and its bureaus so that they could efficiently do their work, I acted upon my own initiative, and if the gentlemen who so strongly opposed these needed appropriations are under the impression that I was prompted to do so because of the request of the Secretary of the Department of Labor or the head of any of the bureaus of that department, they are laboring under a misapprehension. Neither had I been asked to take this position by any organization of labor, but I was inspired to make the effort because I desire protection for the wage workers who are at the mercy of these destructive conditions in our industries. And if any gentlemen who may be actuated by a spirit of revenge desire to make an attack upon some one because of what I have said here to-day, let them direct their shafts at me, because I alone am responsible.

In his inaugural address President Wilson had the following to say regarding the preservation of the health and the protection of the wage workers:

Nor have we studied and perfected the means by which government may be put at the service of humanity in safeguarding the health of the Nation, the health of its men and its women and its children, as well as their rights in the struggle for existence. This is no sentimental duty. The firm basis of government is justice, not pity. These matters are of justice There can be no equality of opportunity, the first essential of justice in the body politic, if men and women and children be not shielded in their lives, their very vitality, from the consequences of great industrial and social processes which they can not alter, control, or singly cope with. Society itself must see to it that it does not itself crush or weaken or damage its own constituent parts. The first duty of law is to keep sound the society it serves. Sanitary laws, pure-food laws, and laws determining conditions of labor which individuals are powerless to determine for themselves are intimate parts of the very business of justice and legal efficiency.

The American people applauded this statement, and the American Congress, if it is true to its promises, will provide ways and means to carry it out.

The Democratic House, under the great leadership of CHAMP CLARK, the Speaker, and OSCAR UNDERWOOD, the floor leader, will not only fulfill the pledges of the Democratic Party, but will respond to the needs of the American working people. The great Founder of Christianity proclaimed that He came "that the children of earth might have a more abundant life." Let us respond to our social and religious duty in part by enacting this legislation and seeing that sufficient money is appropriated for its efficient operation. [Applause.]

Now I will yield to the gentleman from New York [Mr. FITZGERALD] if I have any time left.

Mr. FITZGERALD. I simply wished to ask the gentleman a pertinent question at one point in his statement when he said that I had charged certain things.

Mr. BUCHANAN of Illinois. I read the official record.

Mr. FITZGERALD. The gentleman did not read any record which justified his statement at the time I wished to interrogate him.

Mr. BUCHANAN of Illinois. What was the statement?

Mr. FITZGERALD. I can not recall it now. I will take the time to answer it after I have had the opportunity to read the gentleman's speech.

Mr. BUCHANAN of Illinois. Now I will yield to my colleague [Mr. MCKENZIE].

Mr. MCKENZIE. I simply wished to ask my colleague if it was his purpose to assert seriously on the floor of this House that the Committee on Appropriations of this House deliberately and willfully discriminated against the interests of labor in this country?

Mr. BUCHANAN of Illinois. I stated the facts in regard to that. I do not know whether they have done it deliberately or not; but I will say, gentlemen, that this is not the first time. There was an agreement made last year by the Government, practically, to give the navy-yard employees an increase of wages, beginning the 1st of January. It was impossible to get this Committee on Appropriations to permit that money to be appropriated. That was practically violating an agreement. We have a condition on the Panama Canal now that, if it was not for the fact that it is labor and that labor can not be given proper consideration, you would hear from people who are howling this down. They would be unfolding the flag and waving it to the breeze in their splendid speeches if it was a matter concerning some vested right. The laboring men on the canal were

promised certain overtime and longevity pay by the agents of this Government, and this House has refused to appropriate the money. I say it is dishonest; that it is not complying with the agreement, no matter whether it is done in this House or where it may be done. This has been going on, mind you, since about 1909, under the Republican administration as well as under the present administration. I am going to keep battling for what I think is justice for labor. It does not matter to me whether labor supports me or not. I make no pretense of being the only representative of labor in this House.

Mr. McKENZIE. Will the gentleman yield?

Mr. BUCHANAN of Illinois. Yes.

Mr. McKENZIE. I take it for granted that my colleague is sincere. I am satisfied he is.

Mr. BUCHANAN of Illinois. I have tried to be liberal in my statement concerning the Appropriations Committee. I have said that they did not understand these things. If they do understand them, then I say it is deliberate——

Mr. McKENZIE. I want to say that the statement made by my colleague is an astounding and almost unbelievable statement, when he says that a committee of this House deliberately discriminates against the unfortunate of this country.

Mr. BUCHANAN of Illinois. That concludes my remarks, Mr. Chairman, unless some one else desires to ask a question.

Mr. FITZGERALD. Mr. Chairman, I should like to have five minutes.

The CHAIRMAN. The gentleman from Wisconsin [Mr. STAFFORD] has the floor.

Mr. STAFFORD. I yield five minutes to the gentleman from New York, and reserve the remainder of my time.

Mr. FITZGERALD. Mr. Chairman, before this session is ended, and when my work will permit me to take this speech of the gentleman from Illinois [Mr. BUCHANAN] and analyze it, I shall take occasion to occupy the floor of the House sufficiently long to demonstrate how utterly worthless are the criticisms and statements made by him. His statement to-day is so full of misinformation, and he apparently is so innocent of what has been transpiring or what the real facts are, that I should not pay any attention whatever to his statements if it were not for the fact that many persons frequently credit everything they either hear or read. I shall not attempt to defend myself against any of the ridiculous and preposterous charges the gentleman from Illinois has attempted to bring against me. I shall put my record for the fearless discharge of my official duties in this House against that of the gentleman from Illinois, and I shall be willing to submit it not only to this House but to any constituency that he may select. I simply wish to add, Mr. Chairman, that every statement and every criticism that I made of the Department of Labor or of any other department of this Government during the conduct of the urgent deficiency bill in this House was thoroughly justified, and I do not retract in a single iota anything I said about them. [Applause.] More than that, I shall place in the RECORD the official statement and admissions of those in control of the various services criticized by me, and thus show that I was justified in what I said. If the gentleman from Illinois, or any other gentleman so disposed as he seems to be, imagines that he can frighten or coerce me from the proper discharge of my duty, he will ascertain in a very brief period that he is greatly mistaken.

I make this reply at this time so that no one may misunderstand that because I do not analyze and reply to the statements now that I have acquiesced in any of them. The gentleman's speech is full of misinformation, and perhaps he will regret when the full record is placed before the House that he was ever so foolhardy as to indulge in the remarks that he has submitted to the House. I yield back the balance of my time. [Applause.]

Mr. STAFFORD. Mr. Chairman, I yield three minutes to the gentleman from Mississippi [Mr. SISSON].

Mr. SISSON. Mr. Chairman, in the short time that has been allotted to me I can not undertake to make a speech; but as my name was mentioned by the gentleman from Illinois [Mr. BUCHANAN] in connection with the gentleman from New York, chairman of the Committee on Appropriations, I feel that I ought to make a brief statement. I have always endeavored, as far as I could, to be absolutely fair, absolutely just, absolutely honest, with all the departments. Nor do I believe that a Member of the House puts himself always in the best attitude before his fellows or of the country when he questions the motives that actuate the Members of this House, as the gentleman from Illinois has just done. Is it because he has misgivings in his own heart as to his own motives and so imagines that other people do wrong? I do not know. I attribute to him perfectly honest motives, but a mind full of misinformation, because in the consideration of these matters before the committee they were given a very patient hearing, and many of the items that were denied were not deficiencies, and these matters came before a deficiency committee. In a few days the legislative bill will be reported to the House, a bill which takes care of the Labor Department for the coming year. I do not believe that the gentleman from Illinois speaks for the Labor Department. I do not think he will advance rapidly the cause of that department by accusing his party Democrats of wrongdoing and in that character of speech. On the contrary, we will be fair with the Labor Department, and the people throughout the country, in spite of such speeches as the gentleman from Illinois has just made. I yield back the balance of my time.

Mr. STAFFORD. This measure represents the most progressive thought of modern industrialism. Since the establishment of the factory system under which the individual had to look out for his own protection, there have grown up abuses in industrial life which weigh heavily on the men of labor.

Only in the last decade or two has there been an awakening to the needs of protection of labor by the employer. Representing a large industrial center, I am keenly interested in everything that tends to the protection of labor. In Milwaukee, noted for its iron and steel industry, and also for leather and all other kinds of industrial employment, long before there was placed on the statute book any workman's compensation act, the leading industries of that city took precautions to protect the welfare of their employees by the installation of labor-protecting devices.

The Milwaukee Harvester Works, which I have had the pleasure of visiting in conjunction with other large establishments, is a model in arrangement for the protection of laborers and artisans. Machinery which might jeopardize the health and security of the workman is equipped with safety devices to minimize the instances of accident. I could cite similar protective devices installed in our boot and shoe, glove, leather, machinery, and other establishments, both large and small. This protective system accounts for the small percentage of industrial accidents in our industries, and also for contentment among the workmen as to shop conditions.

The report of the Secretary of Labor shows that in the iron and steel industry greater advance has been made for the security and protection of employees than in any other branch of employment; that the risk in that industry has been reduced by reason of the installation of labor-protecting devices more than 67 per cent; and that the deaths have been reduced more than 30 per cent as the result of these improvements.

The first section of the bill, and there are only two sections, is substantially the creative thought of the brilliant leader of the minority, Mr. MANN, as embodied in the bill H. R. 7083, which he introduced as far back as July, 1913, with the exception only of having added a provision for the investigation of vocational diseases. We all favor that extension, and favor also the original provision for the study, investigation, and report as to labor-safety devices. This humanitarian movement to conserve the life and health and welfare of the laborer has been largely selfish on the part of the employer. They have seen that it was better for the morale of their establishments to provide them with up-to-date arrangements for their health and protection, than to leave undone those things that should have been done, and incur financial loss in reparation for injuries sustained; but we can not deprive them of the credit that they were also impelled in many instances by humanitarian purposes to conserve the lives and health of their own employees. Lately, by reason of the enactment of the workman compensation acts, which have taken away the defenses which have been recognized these many years under the common law of contributory negligence, fellow-servant liability, and the doctrine of assumed risk of the employment, reluctant employers have been driven to establish modern methods, which serve to protect the welfare and security of their employees. The insurable risk is lighter with improved self-protecting machinery, and insurance companies and also State legislatures require the proper safeguarding of exposed machinery.

The National Government by this provision is seeking to collate all this valuable information as to labor-safety devices in use in well-equipped plants and distribute it broadcast, so that it will have a value to the industries of the country generally.

But as to the next section, and it is the only other of the bill, which provides for a museum of sufficient size and capacity and with grounds annexed for these approved devices and for putting them in operation on exhibition, I respectfully contend that it is out of place in this bill. If any gentleman knows anything about these safety devices, like ventilating fans and other arrangements, they know that there would not be room enough on the Mall to provide a building for the exhibition of all these protective devices. And more than that,

Washington is not an industrial center; it is not intended to be, and we do not want it to be.

To have on display in operation, as this bill provides, these devices, without any limit as to cost and expenditure, would be but an idle waste of money that could much more readily be utilized in the dissemination throughout the country of the information that these labor experts will obtain, rather than by the erection of a large building which would rarely be utilized. I notice the gentleman from Ohio [Mr. WILLIS] rises in his place, and his doing so brings to my mind something to which he called attention the other day, and that is that there are thousands of models at the Patent Office that are never investigated, and this would be another instance of neglected inspection of exhibited devices. Another abuse that would arise would be this: The department would be obliged to play favorites in singling out and passing upon the several devices that would be tendered for display.

Mr. WILLIS. Mr. Chairman, will the gentleman yield?

Mr. STAFFORD. I yield for a question.

Mr. WILLIS. Does the gentleman know whether any of the foreign governments, especially those of great industrial nations, maintain museums such as is contemplated in the second section of this bill?

Mr. STAFFORD. The report of the Secretary of Labor is very vague upon that subject.

Mr. WILLIS. I have read that portion of the report.

Mr. STAFFORD. He states that it is understood there have been some such museums maintained at public expense, but his statement is not definite. I take it these museums may receive some support from the local government, but that the museum is primarily an industrial museum in connection with some industry or with various industries.

Mr. WILLIS. Mr. Chairman, will the gentleman yield for another question?

Mr. STAFFORD. I regret to say that I can not. All of my time has been taken, and I will ask the gentleman from Ohio to pardon me.

I now yield 15 minutes to the gentleman from Kentucky [Mr. SHERLEY] and reserve the balance of my time.

Mr. SHERLEY. Mr. Chairman, I take it that no one can be found who is not in thorough sympathy with the purposes that underlie this bill. Certainly it is difficult to conceive of anyone so hardened as not to feel sympathetic with any movement looking to alleviate the conditions of many of the industrial workers of the world. My purpose in speaking to-day, therefore, is not to advocate the need of this study, for I take it, as I have said, that on that there will be no division, but to bring to the attention of the committee the question of how most efficiently to carry on that study. Those of us who have had experience in legislative matters know that it is frequently difficult to prevent oneself from being misunderstood as to motives when one undertakes to criticize the methods adopted in a particular measure for carrying out some good purpose. But, as I shall vote for the bill, I am sure my criticisms will be considered as offered with the hope of perfecting the bill.

We have to-day one of the most efficient bureaus in the entire Government, a bureau with an ancient history, a history that it can well afford to be proud of, and because of which it has secured the respect of the entire country, and whatever it undertakes or whatever conclusions it reaches meet with practically general acceptation by the people of America, and that is the bureau now known as the Public Health Service, formerly the Marine-Hospital Service. That service is to-day engaged in the study of vocational diseases, and it is not only occupying that field in some respects fully, but it proposes to continue its energies not only along the lines heretofore followed, but to broaden out so as to embrace all vocational diseases and their causes. And it is because of that fact that I feel that we would make a mistake if we undertook to create a separate bureau to invade the field now properly occupied by the Public Health Service.

If you create a special corps to examine into the subject of vocational diseases, only one of two things must happen. Either that corps in its examination will of necessity not go fully into the subject, and therefore make a report that will not have the general acceptance that it should have in order to be of value, or it will go into the domain of general hygiene, that will carry it inevitably into the field that peculiarly belongs to that of the Public Health Service. In the study of vocational diseases you must consider not simply the questions that pertain to the industry under study, but you must consider general health conditions. For instance, in the consideration of fatigue and its effect upon the human system you must not only consider the fatigue that is induced by the labor at which the particular man studied is employed, but you must consider in connection with that the question of his food, how far the food that he is able to procure and does procure is such as to provide him with energy sufficient to offset the natural fatigue that comes from any and all labor. You have to consider questions of housing and of general sanitation. In other words, you have to consider not simply the conditions that surround a particular worker while at work at his trade, but you must consider the health of the community in which he lives and forms a part. It is perfectly apparent that for any special corps to enter into that field means to usurp the functions that belong to the Health Bureau. I have here, and I shall put it into the RECORD, because it is too long to now read, a statement prepared by the Public Health Service in connection with its hearings before the Committee on Appropriations as to its present activities. There seems to be an impression that they are not now engaged in the study of vocational diseases, but in point of fact, as I just stated, they have already done much along that line and are proposing to do much more. The Public Health Service not only looks after the health of all of the American seamen and gives to those who are sick free hospital attention, but it examines as to the physical healthfulness of all immigrants that come into the United States. It has made investigations of women and child labor in the United States. It has made investigations in regard to trachoma and the sanitary conditions of certain workers in the iron ranges in Minnesota. It has recently made an investigation as to the employees in the Youngstown Sheet & Tube Co., in Ohio, and it has made investigations of the mining industry and of the danger of and tendency to tuberculosis among such miners. It is now doing work in St. Louis along similar lines. In connection with the acts that we passed touching the manufacture of matches it is making a special investigation.

It made investigation of the rag industry in one State and made recommendations to the authorities for the control of the insanitary conditions there, and in doing that went into the subject of the method of the transmission of woolsorters' disease by means of biting flies. Inspection has been made of model factories with a view of obtaining information in respect to the methods of sanitation in such establishments. Laboratory experiments and tests have been made in regard to the use of poison and habit-forming drugs and the effect of fumes and the effect of fatigue upon workers; in point of fact, I could stand here, if I had the time, for an hour and enumerate various industries in this department which have pertained directly upon the subject of vocational diseases. Now, what I believe ought to be done——

Mr. WILLIS. Will the gentleman yield?

Mr. SHERLEY. Briefly.

Mr. WILLIS. I understand the gentleman from Kentucky to be objecting to this bill on the ground that the passage of it would encroach upon the field of the Public Health Service work?

Mr. SHERLEY. Partially that is true. I am not opposing the bill, but I oppose the present form of it.

Mr. WILLIS. I want to invite the attention of the gentleman to the fact the main purpose is to study safety appliances and devices rather than vocational diseases. I agree with the gentleman that it is not desirable to cripple the Health Service at all.

Mr. SHERLEY. I understand the motive is not to cripple the Health Service at all, and I stated the motive of the bill was one with which I was in thorough accord, but unfortunately there is a great difference between motives of men and the results of men's actions. Many a man's action from a good motive causes unfortunately bad results. As the bill is drawn, in my judgment it is so broad it will authorize the creation in the Department of Labor of a medical corps for the study of vocational diseases, and to that extent it ought to be amended, and I was about to come, when the gentleman interrupted me with his inquiry, to that very point, What should be done is to strike out of the bill the language on page 2, line 2, "All phases of the subject of vocational diseases," and make it read in substance like this: "Also the study of devices and methods for the prevention of vocational diseases."

And then there should be an item inserted in the bill requiring the medical bureau to give to the department all proper aid in its study of vocational diseases, and I suggest an amendment in this form, after the word "time," in line 5, to insert:

It shall be the duty of the Public Health Service, in its investigation of vocational diseases and their causes, to cooperate with such bureau upon the request of the Secretary of Labor.

Now, I make the language that way in order that it may clearly appear that the study of vocational diseases, as such, is the province of the Public Health Service, and is not to be the province of any corps created by this bill. The reason for it,

I desire to repeat, is that you can not have a proper study of a disease, as such, without considering not only the facts in connection with the particular industry but general questions of hygiene, questions that the Public Health Service are more peculiarly fitted successfully to go into than any corps that can now be created.

Mr. MANN. Will the gentleman yield?

Mr. SHERLEY. Certainly.

Mr. MANN. The amendment which the gentleman suggested was to come at the end of the sentence, line 5?

Mr. SHERLEY. Yes, sir.

Mr. MANN. Does that involve any other change in the preceding language other than the change which the gentleman in charge of the bill will probably propose?

Mr. SHERLEY. It may, but it does not occur to me at the time. It seems to me if this was made to read—

It shall be the province and duty of such bureau, under the direction of the Secretary of Labor, to make general and specific investigation and examination of labor safety plans and devices of all kinds and the needs therefor, general and specific, and also the study of devices and methods for the prevention of vocational diseases—

that would limit it to the field that properly belongs to it, and one that I want it to enter and fully occupy. Then by providing that the Public Health Service should cooperate with it, giving aid by means of its work in the study of vocational diseases as such, you would have covered the whole field.

Mr. MANN. I understand the amendment which the gentleman has read is almost the same amendment which I understand the gentleman from Maryland intended to offer?

Mr. SHERLEY. I think that is true, but it is different in one particular. I understand the gentleman from Maryland was to propose an amendment after the end of the sentence in line 5, as follows:

It shall be the duty of the Public Health Service to cooperate with such bureau upon the subject of vocational diseases upon the request of the Secretary of Labor.

Now, the reason I made my suggestion in this language:

It shall be the duty of the Public Health Service in its investigation of vocational diseases and their causes to cooperate with such bureau upon the request of the Secretary of Labor—

was to have it clearly appear, as I believe it ought to appear, that the study of vocational diseases as such is now within the field of the Public Health Service and should remain there, but to provide for a cooperation that would bring about a proper efficiency.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SHERLEY. May I have two minutes more?

Mr. STAFFORD. Mr. Chairman, I yield two minutes more to the gentleman.

Mr. SHERLEY. The language of the amendment of the gentleman from Maryland [Mr. LEWIS] might leave it open at some subsequent time to be claimed that this bureau here to be created should go into the field that I think lies properly with the Public Health Service, and not with it. This is what I desired to bring to the attention of the committee. Unfortunately I shall not be able to print for the committee's perusal before a vote shall come upon this the statement that was made before the Committee on Appropriations, but I want to repeat that the Public Health Service is now actively in this field, that the appropriations it receives and asks for are very large, running considerably over $1,000,000 annually. And speaking for myself, and I have no doubt voicing the belief of all the members of that committee, it will be the desire of the Committee on Appropriations in providing funds for this new bureau to provide ample funds, and also to take care of all the proper activities of the health bureau, including the study of vocational diseases.

And in this connection I desire to say but one further word about the Committee on Appropriations. I have had the pleasure of serving on that committee for six or seven years. It is the duty, the high, sacred duty, of that committee to scrutinize with care all estimates that are submitted. If that committee does not by its zeal undertake to protect the Treasury against demands that should not be granted, there can be no hope of such protection anywhere else. And it is unfair to it and to the Members who perform as arduous, if not more arduous, service than membership upon other committees entails, to assume that in their attitude of scrutiny of estimates they are actuated by any other motive than that high and proper legislative one of protection of the Treasury of the Government that the burdens which the raising of the revenues of the Government place on the people may not be increased. [Applause.]

For myself, I deny any feeling of hostility toward any bureau of this Government. [Applause.]

Under the leave to extend my remarks I submit the following statement from the current hearings had by the Committee on Appropriations:

THE RELATION OF THE PUBLIC HEALTH SERVICE UNDER EXISTING LAWS TO OCCUPATIONAL DISEASES AND ITS FACILITIES TO INVESTIGATE SAME AND TO PROMOTE THE SANITATION OF INDUSTRIES.

Under existing laws the Public Health Service is charged, among other things, with the investigations of diseases of man. Section 1 of an act approved August 14, 1912, provides as follows:

"The Public Health Service may study and investigate the diseases of man and conditions influencing the propagation and spread thereof, including sanitation and sewage and the pollution, directly or indirectly, of the navigable streams and lakes of the United States, and it may from time to time issue information in the form of publications for the use of the public."

Not only may the Public Health Service make investigations of diseases of man and distribute information in relation thereto, but it is charged with the collection of reports of the occurrence of vocational and infectious diseases, the control of communicable diseases in interstate traffic, and the care and protection of the health of American seamen.

THE PUBLIC HEALTH SERVICE HAS BEEN DEVELOPED INTO A NATIONAL HEALTH AGENCY IN CONFORMITY WITH LAWS ENACTED FROM TIME TO TIME BY CONGRESS.

Congress has established, developed, and maintained the Public Health Service as a national health agency by virtue of the following acts:

Act of July 16, 1798, creating a Marine-Hospital Service.
Act of January 25, 1799, first quarantine law.
Act of July 13, 1832, an act to enforce quarantine regulations.
Act of May 26, 1866, an act to enforce quarantine laws.
Act of June 29, 1870, to reorganize the Marine-Hospital Service.
Act of March 3, 1875, an act to promote economy and efficiency in the Marine-Hospital Service.
Act of April 29, 1878, an act to prevent the introduction of contagious and infectious diseases into the United States.
Act of March 3, 1879, an act to appropriate for the publication of the weekly public health reports.
Act of March 3, 1881, epidemic fund provided in sundry civil act. Continued from time to time since that date.
Act of September 6, 1888, epidemic fund may be used to suppress infection in interstate traffic.
Act of January 4, 1889, to regulate appointment in the Marine-Hospital Service.
Act of March 27, 1890, to prevent the introduction of contagious diseases from one State into another.
Act of March 3, 1891, medical examination of arriving aliens; shall be made by officers of the Marine-Hospital Service.
Act of February 15, 1893, granting additional quarantine powers and imposing additional duties upon the Marine-Hospital Service.
Act of March 3, 1901, hygienic laboratory building provided in sundry civil appropriation act for investigations of "matters pertaining to the public health."
Act of July 1, 1902, to increase the efficiency and change the name of the Marine-Hospital Service to the United States Public Health and Marine-Hospital Service.
Act of July 1, 1902, an act to regulate the sale of viruses, serums, toxins, and analogous products in the District of Columbia and interstate traffic.
Act of March 3, 1905, to provide for the investigation of leprosy.
Act of June 19, 1906, to further protect the public health and make more erective the national quarantine.
Act of February 20, 1907, providing that the physical examinations of aliens be made by officers of the Public Health and Marine-Hospital Service.
Act of August 14, 1912, to change the name of the Public Health and Marine-Hospital Service to the Public Health Service, and for other purposes.

It is evident from the above laws that it was the manifest intention of Congress to create and develop a national health agency competent to investigate all unhygienic conditions reacting adversely upon the health of man, to disseminate the information acquired, and to formulate the necessary measures for control.

In accordance with these laws, the Public Health Bureau has been organized on broad lines and is eminently fitted to prosecute investigations of vocational diseases and sanitation of industries. Diffusion of this authority among several departments and bureaus of the Government would result in duplication of work, lack of coordination of effort, and useless expense.

PRESENT FACILITIES OF THE PUBLIC HEALTH SERVICE FOR INVESTIGATIONS OF VOCATIONAL DISEASES.

The Public Health Service now has 487 officers located at different points throughout the United States and in foreign countries. On account of the mobility of the corps, not only do these officers keep in touch with matters relating to the protection of health in communities in which they are located, but they may be concentrated and transferred to any point or points wherein insanitary conditions require investigations and control.

The movements of officers and the policy followed in respect to investigations are directed by the Public Health Bureau in Washington, which consists of six well-organized divisions so constituted that they can be readily enlarged without the necessity for developing new agencies for special investigations of particular hygienic subjects which would entail additional overhead expenses.

ACTIVITIES OF THE PUBLIC HEALTH SERVICE IN RELATION TO VOCATIONAL DISEASES.

1. For many years the Public Health Service has treated and protected the health of American seamen, who constitute an important group of industrial workers.

2. It has examined mentally and physically millions of aliens, who form an increasing army of recruits to the industries. This latter duty is performed under law in cooperation with the Department of Labor.

3. The Public Health Service cooperated with the Bureau of Labor in an investigation of women and child labor in the United States.

4. In cooperation with other departments, three officers of the Public Health Service have investigated sanitary conditions in mines in Alabama, Colorado, Pennsylvania, and West Virginia.

5. Another officer investigated the sanitary conditions on the Mesabi and Vermilion iron ranges in Minnesota with special reference to trachoma.

6. In like manner an investigation was recently made on behalf of the employees in the Youngstown Sheet & Tube Co., physical examinations being made of them, as well as their environment in the mills and homes being studied.

7. As a part of the investigations of the mining industry one officer spent almost a year in special studies of tuberculosis and miner's phthisis among metal miners.

8. In connection with his other duties, an officer of the service acted as medical director of the Anti-Tuberculosis Society at St. Louis, and directed studies of housing conditions of the industrial population of that city. He also occupied the chair of hygiene in the St. Louis University Medical School and taught industrial sanitation in this capacity.

9. In connection with their regular duties, other officers of the service have given or are now giving regular courses of lectures as professors in universities and medical schools on hygiene and industrial sanitation in Boston, Mass.; Baltimore, Md.; Mobile, Ala.; New Orleans, La.; and San Francisco, Cal; special emphasis being laid on housing and environment.

10. An investigation was made by an officer of the service of different systems of lighting, with special reference to their adaptability for places of employment, laboratory tests and systematic physical examinations of employees having been made.

11. Under an Executive order of February 28, 1906, sanitary inspections of Government buildings in Washington have been systematically carried on, and for the protection of other workers those suspected to be afflicted with disease are specially examined. In addition, the physical fitness of employees for certain duties has been the subject of special studies.

12. As a part of this work special researches have also been made of the effects of fumes of cyanide of potash in case-hardening processes, and special attention has been given to the injurious effects of certain pigments used in printing processes.

13. An extensive series of experiments has been made as to the presence of poisonous gases in certain railway tunnels and their injurious effects upon employees.

14. An investigation of the rag industry in one State was conducted and recommendations made to the authorities for the control of insanitary conditions. In addition, another officer of the service, while temporarily absent on other duty, demonstrated the method of transmission of wool sorter's disease (anthrax) by means of biting flies.

15. Inspections have been made of certain model factories with a view to issuing information in respect to the improvement of sanitation in other industrial establishments.

15a. In a publication just now out of press, namely, Public Health Bulletin No. 62, all the laws in regard to factory sanitation, with special reference to the prevention of communicable diseases, have been studied and analyzed.

16. Systematic studies have been carried on relative to the provisions of the several States for the control of the use of poisons and habit-forming drugs, and a detailed analysis of all State and territorial laws and regulations relating thereto has been issued in bulletin form.

17. A model law for the collection of morbidity reports has been drafted and recommended to the several States and Territories for adoption. Among the diseases the reporting of which is contemplated in this law are the following vocational diseases and injuries:

Arsenic poisoning, brass poisoning, carbon monoxide poisoning, lead poisoning, mercury poisoning, natural-gas poisoning, phosphorus poisoning, wood alcohol poisoning, naphtha poisoning, bisulphide of carbon poisoning, dinitrobenzine poisoning, caisson disease (compressed-air illness); any other disease or disability contracted as result of the nature of the person's employment.

18. Under authority of the act approved April 9, 1912, entitled "An act to provide for a tax upon white phosphorus matches, and for other purposes," the following regulations have been issued by the Secretary of the Treasury in respect to examinations of materials of which matches are made and the sanitary inspections of establishments in which they are manufactured:

"ART. 3. For the purposes of determining which manufacturers of matches are subject to the provisions of this act, every manufacturer of matches will be required to file with the collector of the district in which his factory is located a statement, under oath, setting forth the names of materials used in the matches produced by him and to furnish samples of the materials named and of the finished product to this office and to the Surgeon General of the Public Health Service for examination. This shall be done whenever deemed necessary by the Commissioner of Internal Revenue and whenever a manufacturer may make a change in his process of manufacture.

"ART. 4. The Surgeon General of the Public Health Service shall cause to be examined in the Hygienic Laboratory from time to time samples of matches bought upon the open market, to determine whether they contain poisonous white or yellow phosphorus, and he shall report the result of such examinations to the Commissioner of Internal Revenue.

"ART. 5. If white or yellow phosphorus in any of its forms is used in the production of matches by the manufacturer, the Surgeon General of the Public Health Service shall cause to be made a thorough examination of the factory and materials entering into the production of matches, and a physical examination of the persons employed in such establishment, and he shall report his findings in the matter to the Commissioner of Internal Revenue.

"For the purpose of this investigation and examination any duly authorized officer of the Public Health Service shall have access to any match factory while in operation.

"ART. 6. Upon report of the findings of the Surgeon General, the collector of the district wherein the factory is located will be notified whether the manufacturer is exempt from the operations of the law, and, if not, the manufacturer will be required to register, file notice, bond, etc., as hereinafter provided.

"Section 2 provides:

"'That every manufacturer of white phosphorus matches shall register with the collector of internal revenue of the district his name or style, place of manufactory, and the place where such business is to be carried on; and a failure to register as herein provided and required shall subject such person to a penalty of not more than $500. Every manufacturer of white phosphorus matches shall file with the collector of internal revenue of the district in which his manufactory is located such notices, inventories, and bonds, shall keep such books and render such returns in relation to the business, shall put such signs and affix such number to his factory and conduct his business under such surveillance of officers and agents as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may by regulation require. The bond required of such manufacturer shall be with sureties satisfactory to the collector of internal revenue and in the penal sum of not less than $1,000; and the sum of said bond may be increased from time to time and additional sureties required at the discretion of the collector, or under instructions of the Commissioner of Internal Revenue.'"

19. In accordance with the law and regulations cited, systematic examinations of a large number of samples have been made and new tests devised for these examinations.

20. Under the act of July 1, 1902, regulating the propagation and sale in interstate traffic of viruses, serums, toxins, and analogous products, regular inspections are made of establishments where such products are made.

21. Particular attention has been paid to the sanitation of rural populations. It was an officer of the Public Health Service who demonstrated the presence of hookworm disease and its relation to industrial efficiency, and it was practically wholly on account of his efforts that the present widespread campaign for the eradication of this disease was undertaken. Likewise the insanitary conditions in rural communities giving rise to typhoid fever have been investigated by officers of the service, as a result of which extensive preventive measures have been put in operation and the incidence of the disease markedly reduced.

The control of insanitary conditions giving rise to the continuance of typhoid fever and malaria represents, in fact, what is classed as rural hygiene. This work affects favorably not only agricultural workers but all other persons who depend on their efforts for food and other agricultural products. It should be stated that the activities mentioned have not solely consisted in the issue of bulletins, but for the most part have consisted in active field work in cooperation with State and municipal health authorities and in general educational campaigns for the prevention of diseases and the betterment of insanitary conditions.

THE RELATION OF INDUSTRIAL HYGIENE TO GENERAL SANITATION.

In providing ways and means for the improvement of sanitation among industrial workers every insanitary condition must be inquired into. The investigator is thus quickly led from a relatively narrow zone of inquiry into the broad field of general sanitation. For instance, in studies of the high death rates from tuberculosis among workers in certain occupations inquiries as to fatigue, dust, etc., in factories must be supplemented by studies of public-health conditions in the home and in the community.

Investigations of industrial diseases, therefore, can not logically or practically be carried on independent of investigations of general sanitation. The field must be approached from a broad standpoint, and the officers performing the work must have both technical and general training in public-health matters and public-health administration.

INVESTIGATIONS OF INDUSTRIAL HYGIENE NOW IN PROGRESS.

In conformity with this principle a number of important investigations are now being made and others planned. These investigations are as follows:

1. A comprehensive investigation of the industries in relation to tuberculosis is being carried on in Cincinnati, Ohio, and vicinity at the present time under the direction of an officer of the service.

2. Field surveys are under way in a number of States to determine the extent of the migration of tuberculous persons from one section to another and its effects on employees of common carriers and the persons in communities to which they resort.

3. Investigations are being made of malaria in relation to its prevalence and its effects on the efficiency of individuals.

4. On request of the Indiana industrial commission, an investigation is being undertaken of the hygienic conditions of the employment of women and children in industries in the State.

5. Arrangements are being completed for a thorough inspection of the sanitation of the match industry in the United States.

6. On request of the National Council of Industrial Safety, two officers of the service are cooperating with a view to a sweeping investigation of insanitary conditions affecting different industries in the United States. One of these officers is also acting as sanitary adviser to the United States Commission on Industrial Relations.

7. Laboratory studies are being made as to the presence of deleterious substances in india-rubber manufactures.

8. In cooperation with the New York ventilation commission, an officer of the service, who is also a member of this commission, is making scientific investigations into the effects of temperature and humidity and circulation of air upon the human organism under working and resting conditions.

9. In connection with investigations of water supplies, extensive studies are being made of industrial wastes and their relation to the health of communities.

10. Intensive studies of rural hygiene are now being carried on in several communities, all factors, including housing, water supplies, etc., being given attention.

ADDITIONAL DUTIES IN RELATION TO INDUSTRIAL HYGIENE WHICH SHOULD BE IMMEDIATELY UNDERTAKEN BY THE PUBLIC HEALTH SERVICE.

Several additional broad lines of investigation in relation to industrial hygiene should be undertaken by the Public Health Service and funds for that purpose provided. These are as follows:

1. Investigation of industries with a view to devising minimum standards of hygienic requirements.

2. Intensive studies of disease among industrial workers with a view to determining the underlying effect of industries upon public welfare.

3. Technical studies in service laboratories on lighting, heating, ventilation, and the effects of poisonous fumes and gases, fatigue, monotony, and the like on the average individual.

4. Collection of data in relation to the occurrence of occupational and other diseases and the causes giving rise to their continuance.

With additional personnel and funds the above lines of work can be continued or undertaken by the Public Health Service, and it is this agency which should be looked to for this work. There is urgent demand for such activities, as evidenced by bills now pending, but some of these bills would invest in other departments the authority which the Public Health Service already has been granted by Congress.

In so far as investigations of vocational diseases and making public the results are concerned, the necessary authority should continue to be lodged in the Public Health Service, because matters of industrial hygiene are not to be considered separately, and because this service is already organized to perform general sanitation.

In letters of February 2, 1914, addressed to the chairman of the Committee on Labor in the House of Representatives and the chairman of the Committee on Education and Labor in the Senate the Secretary of the Treasury presented the views of the department on this subject, as follows:

THE CHAIRMAN COMMITTEE ON LABOR,
*United States House of Representatives.*

SIR: By direction of the Secretary I have the honor to invite attention to certain provisions contained in bill H. R. 10735, having for its object the creation of a bureau of labor safety in the Department of Labor, and to state that these provisions, if enacted into law, would really be a duplication of existing legislation and would lead to the creation of a bureau which would, in effect, be another public health service under the Government, which would seem to be inadvisable from the standpoint of economy and efficiency.

The above-mentioned bill provides, among other things, for:

1. The study of vocational diseases and the dissemination of the results of such studies.

2. The gathering, compiling, publishing, and supplying of useful information concerning occupational diseases in the industries in the United States and elsewhere.

3. The erection of a museum in which shall be exhibited, among other things, approved devices for the lessening of dangerous conditions which may exist in industrial enterprises, and the method of lessening, preventing, and control of industrial diseases.

4. The establishment of a laboratory wherein may be examined and tested the relative efficiency of types of devices for the protection of machinery calculated to safeguard the employee or the general public from injury or industrial disease.

The above provisions in respect to the investigation and prevention of occupational diseases are very broad, and if enacted into law and vigorously enforced would lead naturally to the establishment of what in effect would amount to a public health service, a museum of hygiene, and a hygienic laboratory in the Department of Labor.

There is now in the Treasury Department a Public Health Service, which is specifically authorized by act of Congress approved August 14, 1912, to "study and investigate the diseases of man and conditions influencing the propagation and spread thereof, including sanitation and sewage," and, furthermore, "from time to time issue information in the form of publications for the use of the public."

The extent to which the existing Public Health Service can study and investigate industrial diseases and correlated subjects is limited only by congressional appropriation and administrative policy. A number of field laboratories are now maintained for investigations of public-health matters, including the Hygienic Laboratory at Washington, which is recognized internationally as one of the great research institutions of the world.

Exhibits of hygienic devices have been prepared from time to time by the Public Health Service, and steps are now being taken to add materially to them for use at the Panama Pacific Exposition. They have been extensively drawn on for educational purposes in different parts of the country, and if collected in one place and added to would form the nucleus of a creditable museum of hygiene.

In addition the Public Health Service has a large corps of officers trained in the investigation and control of preventable diseases, and some of these officers are now engaged in special studies of industrial diseases, one also being assigned to exclusive duty with the United States Commission on Industrial Relations. The number of officers and special experts who may be engaged in this duty in the Public Health Service is limited only by the extent of appropriations, since the act of August 14, 1912, provides "that there may be employed in the Public Health Service such help as may be provided from time to time by Congress."

Any comprehensive plan for investigations of industrial diseases would necessarily involve studies of ventilation, temperature, humidity, cleanliness, and other conditions which influence the prevalence of preventable diseases generally. Such investigations would quickly lead into the broad field of general sanitation, since the prevention of industrial diseases is a part and is indisputably interwoven with the general public-health problem. To have the force attacking this great problem divided among several different departments and uncorrelated would cause administrative difficulties and duplication of work.

The loss in human health, in human life, and in economic resources which results every year in the United States from insanitary conditions in the home, the field, or the factory is enormous. Every effort should be made to check this loss, and it would appear that this can best be done, in so far as the Federal Government is concerned, by the development of an adequate homogeneous organization which shall render the fullest cooperation possible to the several departments in matters pertaining to public health.

In view of the above facts, I have to request that careful consideration be given to the matter, to the end that investigations of industrial diseases, compilation and dissemination of information concerning occupational diseases, and the establishment of a museum of hygiene, and the development of laboratory studies of vocational diseases shall continue to devolve on the Public Health Service.

It will be understood that these remarks do not relate to the provisions of the bill dealing with safety and safety devices.

Respectfully,

BYRON R. NEWTON,
*Assistant Secretary.*

In view of the foregoing statements, it is respectfully urged that the estimates for additional officers and funds be allowed, and that the development of this and other important phases of the work of the Public Health Service be continued.

Mr. STAFFORD. Mr. Chairman, I reserve the balance of my time and give way to the gentleman from Maryland [Mr. LEWIS] for the time being.

Mr. LEWIS of Maryland. Mr. Chairman, in the right I suppose I enjoy now of recognition for an hour, I want to yield five minutes to the gentleman from Montana [Mr. EVANS], and reserve the balance of my time.

The CHAIRMAN. The gentleman from Montana [Mr. EVANS] is recognized for five minutes.

Mr. EVANS. Mr. Chairman, the few remarks I desire to make I wish to say, frankly, do not pertain to this bill. I want to say to the membership of the House that as one of the committee to investigate the strike in Colorado we have just returned from there, and I hold in my hand a message which I think the Members of this House and the people of the country should have. The committee has not yet made a report, nor is it ready to make one, and I hope I shall not transgress the rules when I mention the fact that that committee has been there and found such condition of affairs as this telegram will reveal. It is as follows:

DENVER, COLO., *March 10, 1914.*

Hon. J. M. EVANS,
*House of Representatives, Washington, D. C.:*

Twenty-three militiamen, under orders of Adjt. Gen. John Chase, this morning demolished strikers' tent colony at Forbes, Colo. Men, women, and children made homeless in blinding snowstorm. Inhabitants of upper tent colony ordered by militia to leave their homes within 48 hours or be deported.

JOHN R. LAWSON,
*International Board Member, U. M. W. A.*
JOHN MCLENNAN,
*President District 15, U. M. W. A.*
E. L. DOYLE,
*Secretary-Treasurer District 15, U. M. W. A.*

I read this telegram for the purpose of getting it into the RECORD and before the country, with the hope that an enlightened public sentiment may stay the hand of strife and a ruthless militia in the State of Colorado, in order that further bloodshed in that unfortunate State may cease.

I thank you, and I yield back the balance of my time.

The CHAIRMAN. The gentleman yields back two and one-half minutes.

Mr. LEWIS of Maryland. Mr. Chairman, I now yield to the gentleman from Pennsylvania [Mr. LOGUE] 15 minutes.

Mr. LOGUE. Mr. Chairman, the subject of this bill, giving to the Labor Bureau the right of investigation in the line suggested, is one that should commend itself to everyone. To become statistical as regards the loss of life or limb from industrial or other accidents would mean but the pure waste of time. It is manifest that each of us in our everyday occupations observe or otherwise are acquainted with the misfortunes that are ordinarily the incident of everyday industrial work. We may just as well recognize that there is the necessity for that humbler class of occupations to be maintained and kept up in order that all may have the material and necessary enjoyment and comforts of life. We can not each occupy the same position, but in our different positions we relatively contribute to the success of our community and of all the people.

We must appreciate the progress that has been made in recent years, the advanced steps that have been taken. While government is fundamentally for the protection of people in their rights of property and person, we may have perhaps in the past considered too much the question of property and not sufficiently the question of the person. It is a pleasure to observe that those trite principles which in the past excluded and eliminated the right of recovery upon the part of the employee in the case of injury, or his family for compensation in the event of his death, while engaged in industrial work have been set aside. No longer is the old-time theory of risk in employment, negligence of coemployee, to be set up to preclude the right of recovery. The advanced thought of to-day has tended to make us realize that the individual is part of the great machinery of the industry, greater and more forcible and more important than the aid that comes from mechanical means. We have concluded that there should be a just return in time of accident to compensate for the losses sustained to the family in case of death to compensate it in the loss of the wage-earning member thereof. But there is no standard, there is no degree, there is no method of compensation that can restore to one the loss of a member of the family, or which can make one the valuable working force in the future that he was in the past after having been seriously injured in his occupation. There can be no compensation that can go into the home and bring back the light or pay sufficiently for the light that has gone out. There is no compensation that can restore the care of a father or the watchfulness of a mother or the ambition of a growing boy to return in part to his parents by his labor the kindness that they have bestowed upon him. Compensation is the best that the law and the machinery of the administration of the law will afford for the injury that has been visited upon a person.

We can not help but observe in the different States of our Union the care that has been taken with regard to the protection of property—insurance departments, banking departments are of long standing; to investigate them and consider whether deposit or indemnity companies seeking to safeguard deposits or to compensate people at times for loss of particular things are able to make good.

We have grown apace with that, and have considered the individual. We have established our health bureaus. We have established other bureaus that seek to eliminate where possible

those ills that are incident to human life; and while we are to-day measuring and valuing the property of great transportation companies, with the purpose and the object of seeing whether or not the investor is secure in the money that is put in, it is well for us to give thought and consideration to the circumstances and the conditions that surround the wage-earner and the laborer, and see whether he is safe in his employment, and see if we can not bring about a higher grade of security than he has had in the past and avoid as much as possible those risks which are ordinarily incident to the hazardous employment in which he is engaged.

I believe, Mr. Chairman, that legislation of this character will be very beneficial. It is along the economic line, and it is on the line of prevention. In our day the employer is compelled and obligated to compensate, under the laws of various States, for the injury that befalls the employee. The employee should be guarded as well as possible, and to my mind, no matter what State regulations there may be, the establishment in a great bureau of our Federal Government of a department such as this will furnish the means by which the light will go out into many working quarters, and as the result of the education as to the management of machinery incident to the industries, there will be prevention of loss of life and of the loss of limb, and as well a prevention of disease. I care not to which department it is relegated or in what form it is established, but those two subjects are subjects on which the National Government should educate and enlighten the public and spread the information that can be gathered in connection therewith.

We go further in a measure like this than merely, as I stated, compensation. There is no greater work than to preserve the individual; no greater work than to realize the commonality of persons of all who engage in industry in this great country of ours; no greater work than to recognize the risks incident to employment. If those risks can be lessened, we contribute by that work to the relief of all the citizenship of our Republic. The hazardous occupation, the menial occupation, the dangerous occupation, whether from machinery or disease, is a necessary occupation, and if we can reach over and lessen the dangers it is not class good, but it is universal good. It is not directed solely for the benefit of particular people, but for the benefit of all. It is for the protection of the economic standard of the one who would employ labor, and it is, as well, the preservation of the laborer himself, who in his limitations may perhaps not be able to go much beyond complying with the divine mandate of earning his bread by the sweat of his brow.

But we will give to him, at least, security and aid and the means of avoiding danger, and we will seek to drive away from him disease and seek to preserve him for the best that is in him in his particular calling for the general good of our country and his special community. We will preserve him as well as a real man, as a helpful man, as a whole man, for the benefit of the family that is dependent on him for their necessities and maintenance. [Applause.]

Mr. SHERLEY. Mr. Chairman, I desire to ask unanimous consent to extend my remarks in the RECORD by incorporating certain data from the hearings of the Public Health Service.

The CHAIRMAN (Mr. WATKINS). The gentleman from Kentucky asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEWIS of Maryland. How much time did the gentleman from Pennsylvania [Mr. LOGUE] consume?

The CHAIRMAN. The gentleman yielded back five minutes.

Mr. BORLAND. Mr. Chairman, this is one of the most humane measures that ever came before Congress. The powers of the Federal Government over the subject of safety to industrial workers is not very large. Most of the jurisdiction over industrial accidents and diseases is in the State governments, but to the full extent to which the Federal Government can exercise its power to save the life, limbs, and health of the American toiler it should be done.

I believe in all forms of conservation of national resources, but more especially I believe in the conservation of men. Men are the greatest national resource. Skilled, intelligent, and self-reliant workers are the greatest asset a nation can have. It is more important for our Government to protect this asset than all the other national resources combined. We educate our citizens at the public expense, we encourage them to learn useful trades to make themselves of value to themselves and to the community, we bring them to the point where they are a benefit and a blessing to their families and to all their fellow citizens, and then we allow them to be mangled and crippled at their work, their usefulness destroyed, their families left helpless and perhaps a charge upon the community. We interpose no barriers between them and the rapacity of greed or the brutality of indifference.

When a skilled young man of good character and honest ambition reaches a position of usefulness in his trade, no one can estimate in money his value to the State and to the community in which he lives. He may grow into the greatest blessing in the work he can do and the opportunities he can give his family. Many a young wife has filled her husband's dinner pail in the morning and kissed him good-by and sent him to his work a strong, active, useful man, and before night has found herself a widow, facing a darkening world with helpless little ones clinging to her skirts. Many a man has left home in the morning with high ambition in his heart, and bearing with him the skill and energy which is the hope of the Republic, and before night has found himself a mangled cripple doomed to drag himself through life a burden to those he hoped to help.

Dry statistics show that more men are killed and mangled every year in the industrial warfare than ever fell upon the bloodiest field of battle. How much of this is preventable? Let us find out, for every day we delay more workers are stricken down and more homes are desolated. Let us find out the causes and prevent all preventable dangers and industrial diseases. Each man's life is precious to him and to those who love him. Let us give him a chance and not put the fearful odds of the industrial combat and the fearful cost of industrial progress all on the worker and the worker's family.

Mr. LEWIS of Maryland. Mr. Chairman, I now yield 10 minutes to the gentleman from Wisconsin [Mr. BROWNE].

The CHAIRMAN. The gentleman from Wisconsin [Mr. BROWNE] is recognized for 10 minutes.

Mr. BROWNE of Wisconsin. Mr. Chairman, the bill under discussion, to create a bureau of labor safety in the Department of Labor, I believe will appeal to every Member of this body as a meritorious measure.

A HUMANE MEASURE.

The object of this legislation is to surround the industrial workers of this country with as many safeguards as possible. It is a conservation movement, to conserve the health and lives of 34,000,000 of industrial workers—men, women, and children who are toiling to produce enough for the rest of mankind to live on, and who are simply asking for a sufficient share of the products they produce to live and support their families.

The United States has not given this subject in the past the attention that its importance merited. In fact, it has not given it the attention that several European countries have, where the laboring man has practically no voice in the government.

INDUSTRIAL WORKERS ENTITLED TO SOCIAL JUSTICE.

There is to-day, however, a nation-wide movement which recognizes that the industrial workers of this country are entitled to social justice, one phase of which significant expression means that they are entitled to be protected in life and limb and surrounded by the most healthful environment and safeguarded by every device that will make their employment as free from hazard as it possibly can be made.

PUBLIC SENTIMENT HAS FOUND EXPRESSION IN BENEFICENT STATE LAWS.

This public sentiment has found expression in various State laws. Within the last two years 21 States have placed on their statute books workmen's compensation laws; 27 States have eight-hour laws for public works, declaring that longer workdays tend to prevent the worker from acquiring the intelligence necessary to make him a useful citizen.

Thirty-one States have passed laws within the last two years affecting child labor, shortening the hours of labor, and requiring a higher minimum age, and prohibiting children from being employed at night work.

Many States have passed laws requiring one day of rest in seven and eight hours' work a day for women.

Eight States—California, Colorado, Minnesota, Nebraska, Oregon, Washington, Wisconsin, and Utah—have followed the example of Massachusetts in passing minimum-wage laws.

Never in the history of this country have so many States adopted laws on any one subject within so short a time.

THE VOICE OF LABOR IS BEGINNING TO GET A HEARING.

At Detroit, Mich., the Ford Motor Co. began the new year by distributing $10,000,000 among its workmen. It is a profit-sharing company. Starting January, 1914, no man in the employment of the Ford Co. who is over 21 years of age will receive less than $5 per day. This means that the minimum wage for 90 per cent of the 21,000 employees of the Ford Co. will be $5 per day, whether he be floor sweeper, janitor, or mechanical helper. James Couzens, secretary and treasurer of this company, speaking for the seven Ford Co. stockholders, when

asked the motive that led them to divide one-half of their profits with their employees, says:

We believe that social justice begins at home. We want those who have helped us to produce this great institution and are helping to maintain it to share our prosperity. We want them to have present profits and future prospects. Thrift, good service, and sobriety will be encouraged and recognized. It is our hope to do still better by our employees in the future. We want them to be in reality partners in our enterprise. We don't agree with those employers who declare that the movement toward the bettering of society must be universal.

Henry Ford said:

We believe in making 20,000 men prosperous and contented rather than follow the plan of making a few slave drivers in our establishment multimillionaires.

If the exploiters of our great natural resources, such as coal, steel, oil, and copper, upon whom the moral obligation to share their exorbitant profits with their workmen was so much more obligatory, had divided their earnings with their workmen, what a great good they could have accomplished.

A copper-mining industry which, on an investment of $1,250,000, in 42 years has taken out $121,000,000, yet this same company treats its employees as serfs.

ESTABLISHMENT OF A DEPARTMENT OF LABOR.

Another practical demonstration of the nation-wide sentiment to improve the condition of labor was the passage of a law by the Sixty-second Congress creating the Department of Labor, and to-day the incumbent of that portfolio, William B. Wilson, is a demonstration that labor has in its ranks men who are capable of measuring up to the high duties demanded in such a position, and it is a tribute to our great institutions that a man beginning life as a boy working in the mines, getting his education in the college of experience, should be called as an advisor of the President of this Nation to fill a most important Cabinet position.

INDUSTRIAL ACCIDENTS PREVENTABLE.

It is claimed by high authority that over 50 per cent of the industrial accidents are preventable. According to Labor Bulletin No. 78, page 458, in the industries there are 35,000 accidental deaths and 2,000,000 injuries annually, which means a death every 16 minutes and a person injured every 16 seconds.

Contrary to the general understanding, only one-tenth of the fatalities and one-sixteenth of the injuries were railroad employees, the balance being persons engaged in other industries.

The continuous toll of shops and mills, mines, and railroads in maimed and dying exceeds each year the total blood cost of the Civil War. If these many accidents happened in one place at one time, humanity would be appalled and the combined intellect of the world would study causes and everything that the ingenuity of men could devise to prevent a repetition of its recurrence would be done.

Because these accidents are scattered they make a slight impression upon the general public, who look upon it as a necessary happening and incidental to the occupations in which the accident occurs.

GREAT ECONOMIC LOSS.

A large percentage of this army of injured workers have been unable to save anything from their wages for a rainy day and become a burden on their families or on charity.

It is estimated that from four hundred to five hundred millions of dollars are annually paid by public and private charities to support those injured in industrial accidents.

But the greater loss is the loss in manhood and womanhood, which is beyond computation.

The net annual economic gain of an average workman is estimated by insurance experts at $400 per annum. If a worker at the age of 30 years is killed by an accident, if he could have lived 25 years longer, his future economic value would have been about $10,000.

Any movement which will bring about even a small reduction of the accidents will be welcomed by employer and employee and the public at large.

WOULD REDUCE ACCIDENTS.

I believe if this bill becomes a law it will accomplish the purpose of its framers, and it will result in the installation of the latest and most approved labor safety devices in manufacturing establishments throughout the United States, and will materially lessen the number of industrial accidents; that by means of bulletins containing photographs and explanations it will be a great educational force in pointing out dangers and inculcating caution in employees and surrounding the laborer with a healthy environment.

WHAT AUTHORITIES ON THIS SUBJECT SAY.

Mr. Fred C. Schwedtman, an authority upon this subject, writes:

I am confident that half of the economic loss and half the suffering due to work accidents in the United States is preventable.

Mr. Young, of the Illinois Steel Co., which for a number of years has inaugurated a campaign for the safety of its employees, writes that the company's campaign has reduced the loss of time accidents at all its plants from 50 to 56⅔ per cent.

Mr. C. F. Close, of the committee of safety of the United States Steel Corporation, writes that his company's serious and fatal accidents in 1910 were 43.8 per cent less than in 1906, when their campaign for safety of their employees was commenced. These figures cover all operations and are based on the normal pay roll of 200,000 men.

These figures mean that over 2,300 men were saved from serious or fatal injuries who would have been injured under conditions existing in 1906 in one company and one industry.

The Chicago & North Western Railroad Co. a few years ago inaugurated an aggressive, systematic campaign to prevent industrial accidents. A committee on safety and sanitation was formed as a result. During the first 12 months ending December 31, 1911, as compared with the same period in the year 1910, there was a decrease in the number of accidents in the different departments averaging from 40 to 60 per cent.

The Pfister & Vogel Leather Co., of Milwaukee, Wis., inaugurated a similar campaign. Mr. John W. Maple, at the head of the safety committee of that company, writes as follows:

During the year 1912 our present system of accident prevention was in full swing. An average of the records in the preceding year show that 48 per cent of our total accidents were machine accidents, a reduction during this period of 50 per cent.

Mr. Maple further says:

Systematic inspection of the plants were made by our committee, and during the first year and a half of its work about 6,000 recommendations for guards, changes, alterations, repairs, etc., were recommended and put into effect. The committee took up the matter of safeguarding machinery, lighting, sanitation, and all matters relating to the welfare of the workmen.

The Chicago & North Western Railroad Co., among other precautions, are inaugurating a system of education, having meetings of their employees, and are placing "posters" or "reminders" in conspicuous places in their yards and shops. Some of these are as follows:

In 12 months 153 men were injured by stepping on nails projecting from boards and cleats taken from cars and thrown on the ground close to the track. Why not pile boards and cleats 6 feet from the rails and save injuries? If you do not do this you may be the next victim.

During the last 12 months 4 employees were killed and 113 injured by falling over obstructions left too near the rail. Why not pile all material 6 feet from the rail?

It is better to be careful than to be crippled.

I herewith give two tables showing the decrease in the number of people killed and injured while working for the North Western Railroad Co.:

We also show the following reduction in accidents for the year ending June 30, 1912, as compared with the year ending June 30, 1910, the latter year being the last year before the safety organization was started:

| | Per cent. |
|---|---|
| 17 fewer trainmen killed, a decrease of | 44.7 |
| 1,562 fewer trainmen injured, a decrease of | 47 |
| 9 fewer switchmen killed, a decrease of | 50 |
| 111 fewer switchmen injured, a decrease of | 17 |
| 3 fewer station men killed, a decrease of | 50 |
| 134 fewer station men injured a decrease of | 18.3 |
| 7 fewer trackmen killed, a decrease of | 25 |
| 700 fewer trackmen injured a decrease of | 40.1 |
| 2 fewer bridgemen killed, a decrease of | 66.6 |
| 87 fewer bridgemen injured, a decrease of | 27.7 |
| 1 fewer shop and roundhouse man killed, a decrease of | 25 |
| 190 fewer shop and roundhouse men injured, a decrease of | 15 |

But an increase of 1 car repairer killed in 1912; 31 car repairers injured in 1912; 1 unclassified employee killed in 1912; and 31 unclassified employees injured in 1912.

Mr. Richards, of the North Western Railway Co., furnishes the following statement:

Statement of things accomplished by the work of the safety committees during 12 months ending December 31, 1911, as compared with the same period in the year 1910.

| | Per cent. |
|---|---|
| 15 fewer trainmen killed in 1911 than in 1910, a decrease of | 51.4 |
| 1,315 fewer trainmen injured in 1911 than in 1910, a decrease of | 41.2 |
| 5 fewer switchmen killed in 1911 than in 1910, a decrease of | 33.3 |
| 118 fewer switchmen injured in 1911 than in 1910, a decrease of | 19.2 |
| 2 fewer station men killed in 1911 than in 1910, a decrease of | 50 |
| 76 fewer station men injured in 1911 than in 1910, a decrease of | 11.7 |
| 596 fewer trackmen injured in 1911 than in 1910, a decrease of | 33.6 |
| 106 fewer bridge men injured in 1911 than in 1910, a decrease of | 31.9 |
| 6 fewer car repairers killed in 1911 than in 1910, a decrease of | 85.7 |
| 11 fewer car repairers injured in 1911 than in 1910, a decrease of | 3.8 |
| 165 fewer shop and roundhouse men injured in 1911 than in 1910, a decrease of | 12.8 |
| 1 fewer other employees killed in 1911 than in 1910, a decrease of | 11.1 |
| 11 fewer passengers killed in 1911 than in 1910, a decrease of | 61.9 |
| 23 fewer passengers injured in 1911 than in 1910, a decrease of | 2.9 |
| 11 fewer other persons killed in 1911 than in 1910, a decrease of | 5.3 |

But unfortunately an increase of 9 trackmen killed in 1911; 2 bridge men killed in 1911; 8 other employees injured in 1911; and 22 other persons injured in 1911.

PROPER SUBJECT FOR FEDERAL LEGISLATION.

I believe that the Federal Government should be the leader in the great humanitarian movement for the betterment of a large class of its citizens, a class upon whose sturdy shoulders the burdens of this Government rest in times of peace and a class that has always fought its battles in times of war.

The Federal Government, on labor legislation, is far behind many of our States. In the District of Columbia there is no workmen's compensation law, and many of the Government departments that employ a large number of employees are far behind some of our manufacturers in affording safe, sanitary, and healthy places for employees. I am glad to be able to say that we have an eight-hour law for women in the District of Columbia.

In matters of legislation take, for instance, the workmen's compensation acts which have been enacted by 21 States and which I hope this Congress will enact. Compare the humane principle of this law with the injustice of the common law and statutes that have been enacted.

All know how an injured employee is confronted in court, when he seeks to recover for his injuries, with those hard and ever present defenses: First, negligence of fellow servant; second, contributary negligence; third, assumption of risk.

The reports of the appellate courts in every State are filled with decisions reversing the judgment of juries and trial courts whose sympathies and sense of justice would not allow them to enforce the law on the subject of personal injury.

HUMANE PRINCIPLE OF THE WORKMEN'S COMPENSATION ACTS.

Workmen's compensation laws are simply the embodiment of the principle that the costs of industrial accidents shall be a charge upon the industry, to be placed in the cost of the product and not fall entirely upon the workmen. In other words, that the battered, smashed, and worn-out human machines should stand at least an even show with the battered, smashed, worn-out mechanical machines and should be a charge upon the cost of the product.

The enactment of the workmen's compensation law is a recognition that society and the State have at last awakened to the fact that injury and injustice to any part of our people must eventually carry its punishment and curse to the whole, and that for the well-being of the whole all must bear the burden so long placed upon the shoulders of those least able to bear it.

BENEFICENT EFFECT OF COMPENSATION LAW IN WISCONSIN.

A recent report of the chairman of the Wisconsin Industrial Commission, Mr. Crownhart, states that only one man out of seven who was injured in industrial accidents in Wisconsin received any indemnity prior to the workmen's compensation law. In the last month in Wisconsin 96 per cent of all the accidents came under the workmen's compensation act, and they all received a fair indemnity without the intervention of courts or lawyers and without one cent expense to themselves and no friction with their employers. In the month of December just passed 686 claims were settled and fully disposed of and $42,550 paid in the State of Wisconsin under the compensation law. The Wisconsin workmen's compensation act at the end of its two year operation shows 6,894 claims settled and $594,532.04 paid on those claims. Nearly all the employers of labor are coming in under this law, and the chairman estimates that at least $700,000 annually will be received by injured employees, while in Wisconsin prior to the enactment of this law less than $200,000 was annually paid workmen through court decisions, and that amount only after half of it had been paid for expenses of litigation.

The work that the labor departments of the States can do is necessarily more local and limited than that of the Federal Government.

The work of standardizing labor protecting devices and investigating accidents and studying vocational diseases is peculiarly a function of the Federal Government, which can summon the most learned experts at its command to investigate every labor-safety device invented here or abroad; and when found valuable, the stamp of approval of this great Government upon it would mean its universal adoption.

Already moving-picture films are a medium of instruction along this line; some films have been sent to the 7,500 moving-picture theaters in the United States.

Museums, such as the one contemplated by this bill, have already been established in Berlin, Paris, Amsterdam, Zurich, Munich, and Budapest, Hungary.

The field of usefulness of a "Government bureau" in the study of labor safety plans and devices and occupational diseases would be wider and more extensive than anyone can now contemplate. The bill has the indorsement of the Secretary of Labor, the employers of labor, and organized labor, and I believe the necessity of such legislation will appeal to every Representative that gives it a thorough consideration. [Applause.]

I have prepared a brief on the law on the question of how far the Federal Government can go in compelling the use of labor safety devices, which is not involved in the bill, but which may be in future legislation along the line, but which is pertinent on legislation affecting the shipment of convict-made goods and other bills which will be before this House, which I submit as a part of my remarks.

LAW ON THE QUESTION OF HOW FAR THE FEDERAL GOVERNMENT CAN COMPEL THE USE OF LABOR SAFETY DEVICES OUTSIDE OF THE DISTRICT OF COLUMBIA.

It is a fundamental proposition that Congress has no general legislative powers and can legislate only within the powers granted by the Constitution.

"If the subject of regulation excludes transportation between points within a given State, a fortiori, does it exclude other transactions carried on wholly within the State, such as sale and manufacture?" Nor does it make any difference that such sale or manufacture is of an article intended for transportation to a point outside of the State. (Cook on Com. Clause, p. 48; Capital City Dairy Co. *v.* Ohio, 183 U. S., 238; Budd *v.* New York, 143 U. S., 517; Northern Securities Co. *v.* United States, 193 U. S., 197, 33; Kidd *v.* Pearson, 128 U. S., 1; United States *v.* Boyer, 85 Fed., 425 (slaughtering and packing); Hopkins *v.* United States, 171 U. S. (operating stockyards).)

A regulation, therefore, to be valid must be enacted under the commerce clause of the Constitution.

The word "commerce" is not limited to buying and selling or to the interchange of commodities, but comprehends navigation and all intercourse. (Champion *v.* Ames, 188 U. S., 321; Gibbon *v.* Ogden, 9 Wheat., 1.)

Under the commerce clause a Federal statute is invalid unless its operation is expressly limited to commerce among the States, with foreign nations, and with Indian tribes. (United States *v.* Steffins, 100 U. S., 82; Employers' Liability Case, 207 U. S., 463; Trade-mark Case, 100 U. S., 82, 96.)

NO CONTROL OF LOCAL MATTERS OR INTRASTATE COMMERCE.

Congress can not enact regulations pertaining to matters purely local nor to matters of intrastate commerce. It has been argued that anyone who engages in interstate commerce thereby submits all his business concerns to the regulation of Congress. This view has been overruled, the court in Employers' Liability Cases, 207 United States, 463, saying:

To state the proposition is to refute it. It assumes that because one engages in interstate commerce, he thereby endows Congress with power not delegated to it by the Constitution; in other words, with the right to legislate concerning matters of purely State concern. It rests upon the conception that the Constitution destroyed that freedom of commerce which it was the purpose to preserve, since it treats the right to engage in interstate commerce as a privilege which can not be availed of except upon such conditions as Congress may prescribe, even although the conditions would be otherwise beyond the power of Congress. It is apparent that if the contention were well founded, it would extend the power of Congress to every conceivable subject however inherently local, would obliterate all the limitations of power imposed by the Constitution, and would destroy the authority of the State as to all conceivable matters which from the beginning have been, and must continue to be, under their control so long as the Constitution endures.

In Kidd *v.* Pearson (128 U. S., 1) the court said:

No distinction is more popular to the common mind, or more clearly expressed in economic and political literature, than that between manufacture and commerce. Manufacture is transformation—the fashioning of raw materials into a change of form for use. The functions of commerce are different. The buying and selling and the transportation incidental thereto constitute commerce, and the regulation of commerce in the constitutional sense embraces the regulation at least of such transportation. If it be held that the term includes the regulation of all such manufactures as are intended to be the subject of commercial transaction in the future, it is impossible to deny that it would also include all productive industries that contemplate the same thing. The result would be that Congress would be invested, to the exclusion of the States, with the power to regulate not only manufactures, but also agriculture, horticulture, stock raising, domestic fisheries, mining; in short, every branch of human industry. For is there one of them that does not contemplate, more or less clearly, an interstate or foreign market? Does not the wheat grower of the Northwest or the cotton planter of the South plant, cultivate, and harvest his crop with an eye on the prices at Liverpool, New York, and Chicago? The power being vested in Congress and denied the States, it would follow as an inevitable result that the duty would devolve on Congress to regulate all of these delicate, multiform, and vital interests—interests which in their nature are and must be local in all the details of their successful management.

In Veazie *v.* Moore (14 How., 574) the court said:

The phrase "to regulate commerce" can never be applied to transactions wholly internal, between citizens of the same community, or to a policy and laws whose ends and purposes and operations are restricted to the territory and soil and jurisdiction of such community. Nor can it be properly concluded that because the products of domestic enterprise in agriculture or manufactures, or in the arts, may ultimately become the subject of foreign commerce, that the control of the means or the encouragement by which enterprise is fostered and protected is legitimately within the import of the phrase "foreign commerce," or fairly implied in any investiture of the power to regulate such commerce. A pretension as far-reaching as this would extend to contracts between citizen and citizen of the same State, would control the pursuits of the planter, the grazier, the manufacturer, the

mechanic, the immense operations of the colliers and mines and furnaces of the country, for there is not one of these avocations the results of which may not become the subjects of foreign commerce, and be borne, either by turnpikes, canals, or railroads, from point to point within the several States toward an ultimate destination, like the one above mentioned.

In the Trade-Mark case (100 U. S., 82, 96) the court said:

When, therefore, Congress undertakes to enact a law which can only be valid as a regulation of commerce, it is reasonable to expect to find on the face of the law, or from its essential nature, that it is a regulation of commerce with foreign nations, or among the several States, or with the Indian tribes. If not so limited, it is in excess of the power of Congress. If its main purpose be to establish a regulation applicable to all trade, to commerce at all points, especially if it be apparent that it is designed to govern the commerce wholly between citizens of the same State, it is obviously the exercise of a power not confided to Congress.

POWER TO PROHIBIT COMMERCE.

The power to prescribe the rules by which commerce is to be governed, vested in Congress, is complete in itself and acknowledges no limitations except those in the Constitution. Congress may employ such means as it chooses to accomplish those which are within its power. But the end to be accomplished must be within the enumerated powers granted by the Constitution.

The power to regulate involves the power to prohibit interstate commerce altogether. No authority can be found sustaining an arbitrary prohibition of any article or commodity from commerce. Under the guise of commercial regulation Congress can not legislate with respect to any matter not within its enumerated powers, nor to any matter within any power reserved by the States. Chief Justice Marshall said, in McCulloch v. Maryland (4 Wheat., 316):

Should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects not intrusted to the Government, it would become the painful duty of this tribunal, should a case requiring such a decision come to it, to say that such an act was not the law of the land.

But the court has repeatedly held that Congress may prohibit commerce when articles of commerce are noxious or dangerous in themselves, when commerce endangers the health, safety, or morals of the people, or when such prohibition has for its purpose the facilitation, safety, or protection of commercial intercourse or any part thereof. (Cooke on Commerce, clause 70; commerce clause 37, American Law Review, 503; 7 Cys., 436; Gibbon v. Ogden, 9 Wheat., 1; Kiff v. Pearson, 128 U. S., 1; Veazie v. Moore, 14 How., 574; Champion v. Ames, 188 U. S., 321; Dooly v. U. S., 183 U. S., 171; Northern Securities Co. v. U. S., 193 U. S., 197, 335; McDermott v. Wisconsin, 228 U. S., 128. See article by Philander C. Knox, 17 Yale Law Journal, 135.)

In McDermott against Wisconsin the court said:

Congress has the right not only to pass laws which shall regulate legitimate commerce among the States and with foreign nations, but has full power to keep the channels of such commerce free from the transportation of illicit or harmful articles, to make such as are injurious to the public health outlaws of such commerce, and to bar them from the facilities and privileges thereof.

In Champion against Ames the court said:

* * * No clause in the Constitution could be cited which in any degree countenances the suggestion that the exercise of the power granted to regulate is limited, or that a citizen may have the right to carry from one State to another that which will do harm to his morals. In order to illustrate that regulation may properly assume the form of prohibition, the case of diseased cattle transported from one State to another was referred to, and also the Sherman Antitrust Act, also the Rahrer case with reference to interstate transportation of liquor.

Important consequences may flow from this decision. For example, it would seem to result that Congress may prohibit the transportation between States of goods manufactured in violation of the antitrust laws.

(Alfred Russel's comment on Lottery case, 37 Am. L. R., 503, 507.)

CONGRESSIONAL REGULATIONS WHICH ARE CONSTITUTIONAL.

1. Articles preventing conception (U. S. v. Popper, 98 Fed., 423).
2. Lottery tickets (Champion v. Ames, 188 U. S., 321).
3. Intoxicating liquors (In re Rahrer, 140 U. S., 545).
4. Telegraph and telephone (Western Union Telephone Co. v. Texas, 105 U. S., 460).
5. Warehouse and grain elevators (Mum. v. Ill., 94 U. S., 113).
6. Pollution of waters (Ausbro v. U. S., 159 U. S., 695).
7. Health inspection of personal property (Patapsco Guano Co. v. N. C. Bd. of Agr., 171 U. S., 345).
8. Quarantine laws (7 Cyc., 469; Train v. Boston Disinf. Co., 144 Mass., 423; St. Louis v. McCoy, 18 Mo., 238).
9. Oleomargarine (Schollenberger v. Penn., 171 U. S., 1).
10. Pure food (McDermott v. Wis., 228 U. S., 128).
11. Safety-appliance acts (Southern Ry. Co. v. U. S., 164 Fed., 343; Employers' liability cases, 207 U. S., 463).
12. Meat inspection.
13. Obscene literature.
14. False labeling.
15. Insect pests.
16. Opium.
17. Counterfeit coins.
18. New York statute requiring goods made by convict labor in another State to be labeled as such when exposed for sale in New York is repugnant to the interstate-commerce clause of the Federal Constitution (People v. Hawkins, 10 Misc. Rep., 65).

INSPECTION.

It seems that it is likewise within the power of Congress to provide for the inspection of articles that are subjects of interstate commerce in order to determine whether it may properly be prohibited.

(Cooke on Commerce Clause, p. 78, and cases and acts there cited.)

CONCLUSIONS.

In view of the foregoing it can be positively stated that any regulations as to safety devices and appliances must, if valid, be sustained under the commerce clause of the Constitution. Under that clause any regulation as to the manufacture of such machinery, as to intrastate commerce with respect thereto, or as to sale thereof after delivery in interstate commerce, except as such sale might be a part of interstate commerce, would be unconstitutional. It would also seem that properly guarded machinery is a proper subject of Federal legislation to the extent of barring such innocuous or harmful articles from the channels of commerce and also of requiring a previous inspection to determine whether such article is harmful.

No case or precedent can be found for the proposition that Congress may, for example, bar from the channels of interstate commerce the products of an improperly guarded machine, when the product is not noxious or harmful in itself. This would be true especially when such machine was not itself the subject of interstate commerce. This view seems to be supported by the employers' liability cases, Kidd v. Pearson, and other cases previously referred to. On this point see the able article of Philander C. Knox, in 17 Yale Law Journal, 135.

In conclusion, quoting the language from Philander C. Knox, 17 Yale Law Journal, 135:

For the purpose of promoting and protecting commerce Congress may close its channels to those who are injuriously effecting it, but for the purpose of enforcing its views of public policy in respect to matters not within the jurisdiction of Congress, it has no such power.

Congress may employ such means as it chooses to accomplish that which is within its power, but the end to be accomplished must be within the scope of its constitutional powers. The legislative discretion extends to the means and not to the ends to be accomplished by use of the means.

The CHAIRMAN (Mr. RUCKER). The time of the gentleman from Wisconsin has expired.

Mr. BROWNE of Wisconsin. I ask unanimous consent, Mr. Chairman, to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Wisconsin [Mr. BROWNE] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. STAFFORD. Mr. Chairman, will you kindly inform me how much time has been consumed out of the hour at my command?

The CHAIRMAN. The gentleman has 27 minutes remaining.

Mr. STAFFORD. I yield 10 minutes to the gentleman from Illinois [Mr. MADDEN].

The CHAIRMAN. The gentleman from Illinois [Mr. MADDEN] is recognized for 10 minutes.

Mr. MADDEN. Mr. Chairman, I have always believed that a human being ought to have as much consideration as a piece of machinery, and that when he is damaged he ought to be given the same repairs as a piece of machinery would be given if it were damaged. As an employer of labor, it has always been my policy and the policy of those associated with me to treat the men as well as we knew how to treat them and to prevent every accident that it was possible to prevent by the introduction of machinery that would be likely to prevent accidents. When the State of Illinois enacted its compensation law, I think I was the first employer of labor that came under its provisions voluntarily.

The time has come when the people all over the country feel that men who are obliged to work at hazardous employments ought to be given every protection that the law can afford, and that where an accident happens the man injured or his family ought to be given such compensation as will enable them to live in comfort while he is disabled, and, in case of his death, that such an amount should be paid to the surviving members of the family as will enable them to live in a reasonable degree of comfort. It has come to pass that the business men of the country feel that the cost of protecting the life and limb of the men who toil should be figured as a part of the manufacturing cost of the commodity which they are engaged in making, and I feel that it is well to supplement what the States are doing by granting authority to the officials of the United States to

investigate and advise as to what life-saving appliances may best be adopted in the different employments throughout the country.

In so far as this bill does that I am heartily in sympathy with it and enthusiastic in favor of its enactment; but I can not bring myself to believe that section 2 of the bill ought to be enacted into law. This section provides that there shall be erected a museum of sufficient size and capacity, with grounds connected therewith, in and upon which shall be exhibited approved devices for the safeguarding of machinery and the protection of employes, and so forth.

This section of the bill does not indicate what the size of this museum shall be or what it shall cost. It proposes to enact a law without any well-defined idea on the part of anybody as to what we are going to do under the law. No hearings have been had on the question of the advisability of the establishment of such a museum. No investigation has been gone into as to what it will cost or what it will accomplish after it is established.

My own judgment is that such a museum would perhaps result in advertising, at the expense of the Government, the wares of people who have devices of various kinds for sale, and it does not look to me as if the Government of the United States ought to engage in the management of an exposition for the sale of commodities of any kind without expense to the men who have those commodities for sale. It is totally foreign to the subject of investigating and ascertaining what can be done to prevent vocational diseases and to make public the results of such investigations. It is totally foreign to the authority sought to be granted in the first section of the bill, which authorizes the Department of Labor to issue pamphlets apprising the business public and the people of the country what, in the judgment of the department, is best to be done to prevent accidents and disease. It seems to me that a museum such as is contemplated in the second section of this bill is not a thing that ought to be erected or conducted under the auspices of the Federal Government. I can not get away from the thought that if we engage in that line of endeavor we are simply placing the Government of the United States in the attitude of advertising somebody's goods without cost to the man who has them for sale. Whether that be true or not, it is true that we have made no investigation as to what this building will cost, either to erect or to maintain and operate, and it does not seem to me that the Congress of the United States ought to indulge in legislation on a question of this kind without having some intelligent conception of what it is going to lead to. If a man on the floor of this House wanted a post-office building erected in his district, he would at least come into the House with the information as to the revenue of the post office in the district, how manly people are to be accommodated as the result of the construction of the building, and what the building would cost to construct, and what it will cost to operate and maintain it. But here we have no such information. The chairman of the Committee on Labor, presenting this bill, says, in reply to a question, that no such investigation has been made.

It seems to me that there is no connection whatever between the authority sought to be granted in section 1 of the bill and the erection of a museum sought to be authorized under section 2 of the bill, and that if section 1 of the bill becomes the law of the land it will accomplish everything that is essential to have accomplished for the prevention of accidents and disease among the men who toil throughout the land, and that the erection of the museum will have no effect except to take money out of the Public Treasury without serving any good purpose. It can well be left out of the bill, in my judgment, without destroying the effect of the bill. On the other hand, I believe that the bill will be much better without it than with it, and when the question comes up for consideration under the five-minute rule I propose to offer to strike that section from the bill.

Mr. WILLIS. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. WILLIS. I propounded this inquiry a little while ago to another gentleman who had the floor, but was not able to get the information. Perhaps the gentleman from Illinois can give it. Does the gentleman know whether the Governments of any other countries maintain museums such as the one proposed here?

Mr. MADDEN. I do not know. It is said by some that they do. But our Government is in a totally different situation from the other Governments of the world. The central governments of all the other nations of the world have complete jurisdiction over those countries. In this country the States have complete governments in themselves and do the very things within the States that this bill proposes to do in the United States, and more, because the States themselves not only investigate but apply the remedy and require the payment of damages for injuries and death, while this bill can only authorize somebody to investigate and ascertain facts which may be disseminated for the information of the States, in order that the States may put that information into legislative form, and thus make more efficient the laws of the States than they are to-day. And while other nations may have museums, there can be no reason whatever why this Nation should have one. If we are to have museums, let the States avail themselves of the opportunity to establish them. I think this is a State function and ought to be under the jurisdiction of the States.

Mr. STAFFORD. I yield five minutes to the gentleman from Illinois [Mr. FOSTER].

Mr. FOSTER. Mr. Chairman, I am very much in favor of safety appliances so far as we are able by law to provide them, and any experiments that go to show a better way to conserve life and limb in factories and mines and other places where men are employed ought to be carried on, and I think it is our duty to pass such legislation as will best carry out this good work. In the last 25 years the country has made great progress in this line of work, and many new inventions have been the means of saving the lives and limbs of workers. We are all glad to do what we can to bring about better conditions in the factories and in the mines. But there is one particular section of this bill which, from the first time I read it, has seemed to me to be objectionable. That is in reference to providing for a medical service in this bureau. With my colleague from Illinois [Mr. MANN] I have taken some pride in being able to broaden the scope and activities of the Public Health Service, because of all the departments certainly that which has to do with the conserving of the life and health of the individual is one of the greatest. So when this deparment was changed nearly two years ago so as to enable it to issue bulletins to go to the people for their benefit instead of scientific articles written only for the medical profession, we made a great stride forward. In this bill it is proposed to set up another investigating department of medicine that is to study the subject of vocational diseases. In the public health department which we have now established there are efficient workers who are able to go into any department, better equipped, better fitted in every way to do this work than by establishing a new department in some new bureau to be established.

We have seen in the Indian Department a lot of physicians who have no connection with the Public Health Service not able to cope with diseases that are affecting that class of our population until, in my judgment, all the activities in reference to health ought to be placed in the Public Health Service.

So I would like to see that part of the department placed in the Public Health Service, as it ought to be. To go ahead and create another one in this department is, I think, the wrong thing to do.

As to the museum that might be erected in connection with this department, that is another part of the bill that ought not, in my judgment, to be put into operation. We ought to pass this bill, making it purely a bill to look out for the safety and study the condition and methods of creating safety for those who work. I think if we were to do that and put it in operation we would find in the course of a few years that it would be of great advantage in preventing accidents to those who labor. I am heartily in favor of the bill with these parts stricken out, and thus let it go strictly as a measure to study the necessary means of safety for the protection of workmen.

Mr. LEWIS of Maryland. Mr. Chairman, I yield to the gentleman from Oregon [Mr. LAFFERTY].

Mr. LAFFERTY. Mr. Chairman, I take advantage of this opportunity to present to Congress the reasons which have convinced me during the past three years that the American people should nationalize their railways.

In thus declaring outright for Government ownership of railroads, which, of course, would mean also the ownership of the telegraphs and telephones and the superseding of the express companies through the extension of the parcel post, I have not reached a hasty decision. Indeed, the facts in favor of Government ownership, developed by my investigations and my personal observation of Government-owned railroads in other countries, seemed overwhelming before I reached my present conclusion. I gave most careful consideration to every objection that has been urged against Government ownership.

It is my opinion that if this Congress should pass a law for the taking over at their actual physical value all the American railways, no one would be injured thereby, and that the American people would be saved billions for the future which otherwise would go to special-privilege corporations. Yet these corporations would not be hurt by such a law, because they would be paid the present value of their property. They would have no right to the speculative profits of the future.

The first objection urged against the nationalization of our railways is that it would create "an army of employees" who would dominate the politics of the country. None of the other 50 countries having government ownership of railroads has had that experience, so let us look into the facts and see if there is any ground to believe that we would be "dominated by an army of employees." We now have 100,000,000 people, and we have 500,000 Government employees, or 1 person in 200. If we nationalize the railways we will at once make civil servants of the 1,500,000 employees now working for the railroads. That would bring the total number of Government employees up to 2,000,000, or 2 persons in 100. The total number of telephone employees in the United States does not exceed 100,000, and the total number of telegraph and express company employees will not aggregate more than 100,000. So if we nationalize the railway, telephone, telegraph, and express companies and take all the employees of those concerns into the civil service, the then total of our employees will not exceed 2.2 persons in 100. Therefore the cry that an "army of employees" would dominate our politics is the merest bugaboo. We now have 300,000 postal employees. They vote independently; they are found in all parties. The same would be true if we should have railway, telegraph, and telephone employees. Besides there would be 97.8 persons in private life to only 2.2 persons on the Government pay roll, and any Congressman or Senator who favored the Government employees to the detriment of the private citizens would certainly be left at home at the next election.

The next principal objection to Government ownership of railways is that it is "socialistic." The world is not socialistic, yet 50 out of the 54 countries of the world have government ownership of railroads, the only four exceptions being the United States, Turkey, Spain, and Great Britain. Not all of the 50 countries owning and operating railroads own all of their lines, but they own and operate a substantial part thereof, and not a single one of those 50 countries has found government ownership and operation of railroads a failure. On the other hand, they have found it a great success, and not one of them would take a step backward toward private ownership.

The following table gives approximately the private and government mileage of the world by countries, excepting the United States, Turkey, Spain, and Great Britain:

| Countries. | Private mileage. | Government mileage. |
|---|---|---|
| Alsace-Lorraine | 17 | 1,079 |
| Argentina | 10,000 | 2,500 |
| Austria-Hungary | 6,931 | 19,694 |
| Baden | 134 | 1,053 |
| Bavaria | 605 | 3,772 |
| Belgium | 330 | 2,500 |
| Brazil | 6,265 | 4,939 |
| Brunswick | 119 | 274 |
| Bulgaria | 19,956 | 1,562 |
| Cape of Good Hope | 608 | 2,064 |
| Ceylon | | 579 |
| Chile | 1,453 | 2,201 |
| China | 2,870 | 470 |
| Colombia | 210 | 220 |
| Denmark | 855 | 1,131 |
| Dutch East Indies | 300 | 1,156 |
| Ecuador | 125 | 80 |
| Finland | 151 | 1,885 |
| France | | 24,849 |
| Germany | 1,248 | 31,000 |
| Greece | 700 | (1) |
| Guatemala | 400 | (1) |
| India | 3,973 | 25,321 |
| Indo-China (France) | | 1,430 |
| Italy | 1,240 | 8,520 |
| Japan | 489 | 4,399 |
| Mexico | 6,319 | 5,890 |
| Natal | | 776 |
| Netherlands | 822 | 985 |
| New South Wales | | 3,390 |
| New Zealand | 113 | 2,391 |
| Nicaragua | 20 | 160 |
| Norway | 219 | 1,329 |
| Orange River Colony | | 1,500 |
| Queensland | | 3,092 |
| Roumania | | 2,295 |
| Peru | 302 | 884 |
| Portugal | 952 | 531 |
| Russia | 11,450 | 27,691 |
| Servia | 14 | 360 |
| Siam | 25 | 350 |
| Africa (except as above) | 1,000 | 5,000 |
| South Australia | | 1,805 |
| Sweden | 5,072 | 2,559 |
| Switzerland | 582 | 1,524 |
| Tasmania | 168 | 462 |
| Venezuela | | 3,529 |
| Victoria | | 3,398 |
| West Australia | 695 | 1,568 |
| Total | 86,894 | 218,358 |

(1) Small.

The fact that 50 out of the 54 countries of the world have substantially adopted Government ownership and operation of railways as their national policy ought to be a complete refutation of the claim that it is socialistic.

I am opposed to socialism, tooth and nail. That is to say, I am opposed to Government interference where there is natural competition. I am opposed to "community ownership." Such ownership would deprive me of my choice and my initiative in seeking my home and my happiness.

But I do favor a "commonwealth," which word means the holding of certain powers and property in common for the benefit of all the people. I favor the adding of the transportation monopoly of America to the American commonwealth, just as the postal monopoly has already been made an asset of the commonwealth. That is not socialism. That would be but exercising a just and proper function of Government, a function which 50 out of the 54 countries of the world are already exercising. The people of this country of all political parties are progressive, but Congress does not, according to my view, respond to the country's desire for sweeping progressive laws. In dealing with the question of monopoly Congress has not as yet "scratched the bark on the outside of the tree." I am in favor of Congress going ahead with the strides of a giant in order that the American people shall come into their own now, and not 50 or 100 years from now.

The total wealth of the United States is at present approximately $120,000,000,000. The total capitalization of the American railways is $20,000,000,000, or one-sixth of our total wealth. If the railroads be nationalized, an act of Congress will direct the Government to take possession of the railroads on a given date, and the same act will necessarily provide that the stockholders shall be paid for their property at its actual physical value at the date taken over by the Government. In case of disagreement between any railway company and the Government commission having jurisdiction in the premises, a Federal court, with the aid of a jury, would hear the evidence and fix the fair value to be paid by the Government. That is perfectly constitutional. The public may always take private property for a public use upon making just compensation. No owner of railroad stock would be hurt. He would receive in cash the full value of his property.

But the cry is also made that "it would bankrupt the Government" to buy the railroads. Let us see about that. Suppose we had to pay for the railroads the full $20,000,000,000 which they are capitalized for. We could borrow that money at 3 per cent annual interest. And last year, 1913, according to the figures given the Interstate Commerce Commission by the railroads themselves, they made 5 per cent profit on their $20,000,000,000 capitalization. Therefore the Government would make a profit of 2 per cent per annum from the start, or a profit of $400,000,000 per year. That would be $4 per head profit per year to our people from our railroads, and would help some. But all this is upon the supposition that we would pay the railroads all they ask for their property, all they claim themselves it is worth, which, of course, we would not do.

The railroads of this country are capitalized for at least twice their actual value. That is quite generally conceded by all except the railroads themselves. Therefore when we take over the railroads at their actual cash value, to be ascertained by a proper commission, we shall probably not be required to pay more than $10,000,000,000 for them. As our annual interest charge on that sum at 3 per cent will be only $300,000,000, and as the net operating revenues are now $1,000,000,000 per annum, we shall make an annual profit from the start of approximately $700,000,000, or $7 per head of our population. That will be the saving on rail transportation alone. The saving to each individual who uses a telephone will be about half the amount he now pays. The saving on telegrams and express will be about the same as on telephones or a little more.

The gross revenues of the American railways for 1913, according to their own figures, amounted to $3,057,163,762.78. In other words, each individual in the United States contributes to the railways each year the sum of $30.57. That shows how closely the railroads come to the people. Each family of five contributes to the railroads each year the sum of $152.85. The most of this is paid indirectly in freights. The consumer does not pay the railroad direct, but the merchant does, and the consumer pays the merchant. Seventy per cent of the total revenues of the railroads is for freight.

The savings to the people that I have thus far shown are incontrovertible. They are based upon cold mathematical calculation. There are other savings to the people which would come from Government ownership, but which are not capable of being reduced to exact amounts at this time. For example, the railroads are now claiming operating expenses of $2,118,585,896.52 per year. This gigantic sum, which the railroads

deduct before they begin to count profits, amounts to $21 per head of our population. How much of it goes to actual legitimate expenses of the railroads there is no way of telling. But we do know that much of it goes to "educate the public" and to "create public sentiment" in favor of private ownership of railroads. All of this would be saved under honest, economical Government administration. Besides, the Government would not pay princely salaries to railroad presidents on account of their ability to foist on the public watered stock. At the same time conductors and other trainmen, shopmen, and mechanics would receive better pay and shorter hours.

To show that the railroads of this country are still engaged in wholesale bribery in order to mislead the people and maintain their hold on their present gigantic monopoly I will cite a few recent facts.

On page 609 of the report of the Interstate Commerce Commission of June 20, 1913, the commission says:

> It is worthy of remark that the general counsel of the New Haven Co. testified that, while the Legislature of Connecticut did finally vote unanimously in favor of the New Haven ownership of trolley lines, sentiment was at the outset the other way, and it was only after $100,000 had been expended in "molding" the opinion of the legislature that the final result was attained.

Another instance of the constant endeavor of the railroads to warp public opinion contrary to the truth is that which was recently brought to light in Harvard University. A recent investigation by the public-utilities commission of Massachusetts disclosed the fact that the New York, New Haven & Hartford Railroad was secretly carrying on its pay roll Prof. Bruce Wyman, instructor in law at Harvard, paying him the sum of $833 per month, during which time Prof. Wyman lectured over the State on proposed legislation in which the railroad was interested. When the facts were made known, about three months ago, Prof. Wyman resigned. The same investigation by the Massachusetts Public Utilities Commission disclosed that both W. A. Murphy, legislative reporter on the Boston Globe, and H. W. Kendall, legislative reporter for the Springfield Republican, were in the secret pay of the same railroad. These are only a few cases recently made public. We do not know how many more university instructors, editors, and writers are on the secret pay rolls of the railroad companies for the purpose of "molding public opinion."

A very able book was written in 1910 by Hon. Anthony Van Wagenen, of Sioux City, Iowa, favoring Government ownership of railroads. It was published by G. P. Putnam's Sons. Mr. Van Wagenen wrote me recently that within a year after his book was published the libraries of this country were flooded with anti-Government ownership books written by inspired pens.

Mr. GOOD. Mr. Chairman, will the gentleman from Oregon yield for a question?

Mr. LAFFERTY. Certainly.

Mr. GOOD. Will the gentleman inform the committee if that is the same man who was recently removed from the office of district attorney for the northern district of Iowa by President Wilson?

Mr. LAFFERTY. Yes. Mr. Van Wagenen was last spring appointed United States district attorney for the northern district of Iowa by President Wilson. In December following he was asked to resign by Attorney General McReynolds on the ground of incompetency. Mr. Van Wagenen appealed to the President, and was removed by wire. I do not believe Mr. Van Wagenen was incompetent. I would vote for a resolution to-morrow to investigate the circumstances of his removal if I had the opportunity.

Mr. Chairman, I wrote to Mr. Van Wagenen and asked him for his version of the affair, and have his letters here, and if there is no objection I shall print them in the RECORD. I shall not insist on printing them if there is objection. Mr. Van Wagenen writes that he appealed from the decision of the Attorney General to the President, and that the President ignored his appeal and removed him by wire. This is the man who had contributed the best volume in favor of Government ownership of American railroads that was ever printed in this country.

Mr. Van Wagenen's letters follow:

SIOUX CITY, IOWA, *February 17, 1914.*

Hon. A. W. LAFFERTY, *Washington, D. C.*

DEAR SIR: I have no way of telling for sure that the railroads were back of my removal. I have no doubt that they were. When I published my book they flooded the country with news items and pamphlets for nearly a year, all undertaking to show that Government ownership was a dismal failure in Europe. Attorney General McReynolds is against Government ownership, and, I think, was no doubt encouraged in his opposition by men like Judge Wade, Wilbur Marsh, W. W. Whitmer, and all of what we call the old-liners.

The Attorney General is either a reactionary or what I think is more likely, he is not sound enough a thinker to be a progressive. He, furthermore, attaches a little too much importance to what Bagbot in his essay on the English constitution refers to as the "dignified element of government." I think it was a general line-up in Iowa of all the reactionary influences. They seem to have the entire control of things in Iowa. No progressive, unless he has a little tendency to surrender, need waste his time while things remain as they are in Iowa now.

It is about 39 years that I have fought the straight progressive fight. I got knocked down many times by the reactionaries, but never thought anything of it. This matter looks entirely different and a little more serious to me.

Most respectfully, yours,

A. VAN WAGENEN.

SIOUX CITY, IOWA, *February 23, 1914.*

Hon. A. W. LAFFERTY,
*Washington, D. C.*

MY DEAR SIR: I have yours of the 20th. I was appointed about the middle of April, I think the 17th, 1913, and removed on December 20. I doubt if the correspondence would show the real animus of the proceeding. I think that would largely lie in personal interviews. Here in Iowa I have been known for 35 years as an uncompromising progressive. When I was appointed to the bench 22 years ago by my friend Gov. Boise, every judge, so far as I know, rode upon railroad passes.

I was appointed on the 15th of April, 1892, and I was told by a railroad lawyer that I would not be offered a pass until the first of the following year, the regular time for distributing the same. That made no difference to me, so I said nothing. On about the 10th of June, I think, the railroads commenced to get a little nervous about it, and for some reason, whether prearranged or not, Col. Swan, a most estimable old man, attorney for the S. C. St. Paul & Omaha Railroad line, came into the little room occupied privately by the judges, and, in the presence of two of the judges handed me an envelope containing a pass, with a short note containing the compliments of Trusdale, general passenger agent for that line. I was in a position where I could say nothing. I knew that both of the judges carried passes on all of the roads, and so I took the pass and put it in my pocket and the colonel went immediately out of the room. I kept the pass about four or five days, then I returned it, assuring the officials that I did not have any particular object in doing so, except that I would feel a little better paying my own way. I assured them that the railroad would receive just as fair treatment, if not fairer, because I would thus place myself in an independent position. I sent it from a town about 75 miles from here, where I was visiting my old home. Two days later, when I came to Sioux City, there were two or three railroad officials here, all particularly good Democratic friends of mine, who urged upon me that such an unusual course would give the impression that I was a Populist and unreasonably opposed to railroads. They put up the usual story about how innocently they regarded the giving of passes, but I very firmly refused to accept transportation.

About that time my brother died at Cherokee, and the Illinois Central furnished a special engine and passenger car to take his remains from Cherokee to Rock Rapids, where the burial was to occur. I do not know whether his wife asked this favor, but I had nothing to do with it. I did not make any fuss about it, but it leaked out, and most everyone in this country knew that I was refusing to ride on passes.

For over 30 years the reactionary influence in the Democratic Party has always been against me for membership on the committee on resolutions in conventions or anything else I wanted.

When I took this position under President Wilson, of course I carried the same ideas as to my public duties. When the marshal told me to subpœna a man from Dubuque to Sioux City for the purpose of a visit, I had not the faintest idea that I would not be sustained in refusing. I would not have done differently if I had been confronted with removal at that minute. When the marshal told me that if I would not do this they would get my scalp I regarded it as ridiculous. The people of this State know that I have been uncompromising in matters of even the slightest graft, and I think every corporate interest has been for 35 years aware of the fact that I could not be reached in any manner. I am on the best of terms personally with all of these men, but during all these years I could always feel and know that they were terribly anxious to see me out of politics.

The principal trouble, as near as I can locate it, is over my prosecution of the Master Plumbers' Trust here in Sioux City. All plumbers' contracts here in Sioux City are assigned by the local trust on Monday evening. When a contract is assigned to a plumber, every other master plumber in Sioux City is under a solemn oath to bid at least 10 per cent more. To cut a long story short, I reported this and other similar outrageous conditions to the department. They wrote me that they were investigating the trusts in a national way and any prosecution that I might start here would frustrate their attempts to secure evidence. That part of the matter appeared to me to be reasonable, but there was a further statement that they were sending a special agent here to assist me. If I was to do nothing, I could see no necessity for sending an assistant here.

I suspected at once that they were so anxious to have me called off that this assistant was sent for that purpose. Three or four days later he came and tried to convince me that I would have to stop any prosecution here for about a year. He claimed that he had to go to Denver and investigate that national office, and he could not do that until June, 1914. After urging him, he finally said it was possible that he might get to Denver in November. This was on September 15. In the letter they sent me, and which had been unanswered pending the arrival of the assistant, they asked me to tell what, if any, reasons existed for immediate prosecution. After the assistant left my office, I immediately wrote the department, telling them that the three plumbing firms which were outside the trust were unable to fill contracts because they could not purchase goods. I had letters to this effect. In that letter I made use of the language that I thought that the weakness of these prosecutions was too much "dignified delay." I meant, of course, to refer to our experience during the last 20 years. Immediately the Attorney General sent for me. He called my attention to this letter. I explained to him that a reasonable view of that letter would not make it apply to his administration, because he had not been in long enough. That appeared to have perfectly satisfied him.

He then turned me over to Mr. Todd. When I went into Todd's room I had no idea of continuing the prosecution. The first thing Mr. Todd told me was that this special agent, Betjeman, who had explained to me that he could not go to Denver until next June, had been there three weeks. As he was in my office on September 15, and I was talking to Todd on the 17th of October, it disclosed to me, of course, that the

special agent had gone directly from my office to Denver, and I feel satisfied now that he came from Denver. I explained to Todd that my idea was that these dissolution suits were wholly ineffective and that prosecutions should be of acts in violation of the law of competition. I frankly told him that I had doubts of the efficiency of the Sherman law or either of its remedies. I called his attention to the fact that at the time we adopted our Sherman law, the overwhelming weight of authority on political economy was against Ricardo's idea of the effectiveness of competition as a natural law to regulate our industrial life. I told him that I thought that the Sherman law ought to be made effective at once or dropped. He was thoroughly convinced of the soundness of my views and insisted on my going ahead. I did not promise to do so, but I told him how I intended to proceed. I told him that I did not intend to make any investigation of the trust's offices at the State office at Des Moines or the local office at Sioux City, but I intended to go unexpectedly into their offices and take all their papers and records. I particularly explained to him that that would give the two secretaries immunity, but I thought it necessary to get the records.

On my way home I wrote the Attorney General from Chicago that I was feeling inclined to go ahead, and if there was any objection to my subpœnaing these two officers to let me know Monday. I heard nothing from him. On Tuesday I took out subpœnas, and that afternoon took every scrap of paper out of the local office of the trust and the following morning did the same at the State headquarters at Des Moines. I then got a telegram that I did not evidently understand the law and was giving immunity to the worst defendants. They ordered me to stop the proceedings until they sent a special attorney here. The special attorney, Mr. Gregg, came here, prolonged the hearing, but induced the grand jury to adjourn without making any report. They were told that they would be called back inside of two weeks, but they have not been called back yet. The Attorney General, in his tirade trying to justify my removal, stated that this prosecution would be pushed and had only been dropped because of my weakness in prosecution.

Now, here is where the shoe pinches. To follow up the theory which I had advocated for the enforcement of the law would have materially changed his program. I would not have done that except that Todd insisted on my doing so. The Attorney General, the last time he called me in, said that Todd denies this. I do not believe he does.

Just about that time he was making that deal with the Bell Telephone Co., by which they were getting complete immunity by simply transferring their Western Union stock. To have followed out the more efficient course that I was pursuing would have necessitated going after the Bell Telephone Co. (A. T. & T. Co.) not for a pantomime trivial dissolution, but for their many overt acts destructive of competition. Also for their robbery of the American people through the instrumentalities of their subsidiary companies. The Iowa company, for instance, can make a showing before the legislature that they are not making over 4 to 5 per cent on their investment. This is because they get only a trifle for long-distance tolls, State or interstate, and they pay immense royalties on expired patents and other tribute, which swells the dividends and augments the values of American Telegraph & Telephone stock.

You can have easily understood, I think, from this how necessary it was to get a man with these advanced ideas out of the department. Furthermore, there were several political schemes in Iowa, involving a lot of crooked machine politics, which were about to be pulled off, are now being put through, and with which they knew I would have no sympathy.

I was one of the first Wilson men in the country. I spent a lot of time and money trying to carry Iowa for him, and stumped the State of South Dakota for him at my own expense. The men who now control Iowa politics got their political positions by debauching the State with Wall Street money, which culminated in the celebrated Burlington convention. In my ward, a respectable residence district, they packed the caucus with over 200 illiterate foreigners, men who could not speak the English language. We carried the caucus, however, by defeating a resolution for a ballot, and these foreigners could not understand the English language and therefore could not vote viva voce. I don't think a dozen of them were naturalized citizens. There was not efficient management to handle the other caucuses and they carried the State against Wilson. Now these men, who are known to represent corporations and liquor interests, have absolute control in Iowa.

So far as the office is concerned I am not able to spend any money to fight it and do not want it, anyway. I am not familiar enough with the proceedings to know what could be accomplished by calling for the correspondence or an investigation. I demanded an investigation from the President and he never even replied. He can't send a sensible experienced lawyer here who will sustain the Attorney General in any respect. I practiced law here for 37 years, and Senators KENYON and CUMMINS, who have tried cases against me, I am sure will say that I am a fairly competent lawyer.

I know about every prominent lawyer in the State of Iowa, and I think you will get about the same opinion from every one of them. As I have not defended a criminal for 26 years I should think I might be perhaps a little weak in the prosecution if it were not for the fact that shortly before I was appointed I was hired by a county in central Nebraska to prosecute some bank robbers. There was with me on the case a local attorney, prominent and influential in the county and one of the best criminal lawyers of the State. Naturally you would expect him to take the lead in the prosecution, and he did for one day, and during the balance of the three weeks I took the lead in the prosecution.

Of course, it is barely possible that the real cause is that the Attorney General took a particular dislike to me. It is true that I am not cut out so I can "crook the pregnant hinges of the knee, that thrift may follow fawning," but I did nothing more than simply talk to him—possibly too much—as an equal. If I had been impressed with the idea that he was a sound statesman and knew more than I did, I would have undoubtedly been able to do a little better in this respect; but he uses so much profanity and gets so nervous and excited that I could not possibly stir up any enthusiasm as to his honesty or his intelligence.

In this I may have done him a great injustice, but I am willing to risk all I have in the affair by maintaining a profound belief that he is not my kind of a Democrat. I do not intend to keep quiet about it if things do not go right, and I know they will not. Whether anything could be accomplished by a method you mention I am not sufficiently informed to judge. I thank you, however, very deeply for your interest in the matter, and I hope we may meet some time and I may get better acquainted with you.

I trust I have not imposed upon your time by inflicting this long letter upon you.

Very truly, yours. A. VAN WAGENEN.

I think these letters show clearly that Mr. Van Wagenen has not been treated right. His whole life has been one of honest service to his fellow men. Suppose he is not the ablest lawyer in the country. Admit, for the sake of argument, that he ought not to have been appointed to the difficult position of United States district attorney on account of lack of experience in the trial of criminal cases. Still, I say the manner of his removal and degradation was cruel and ought not to go unnoticed by the American Congress.

From Mr. Van Wagenen's simple narration of the facts, which no one will doubt, it appears that he was jockeyed with by a special agent of the Department of Justice. It appears that he was lied to.

It appears that the American people are not getting home rule and just enforcement of the laws through local officials, but that local courts and local United States attorneys are being dominated absolutely from Washington through bureaucratic rule. It appears that local United States attorneys dare not enforce the laws this Congress has passed lest they incur the displeasure of Washington. It appears that local officers are communicated with through the medium of secret agents, having no regard for truth or facts, and that they are coerced in this disreputable manner. I say that the case of Anthony Van Wagenen and his removal for alleged incompetency is one that ought to be investigated by this Congress.

A few days ago a Member of this House pulled from his pocket in my presence and in the presence of a Senator of the United States an envelope containing an annual pass for 1914 over one of the railroads of this country and a check for a retainer of the Member as attorney for the company for the coming year. So it will be seen that while we have passed a law preventing free passes to Members of Congress the railroads still issue them to Members as part of the consideration for "services." I will give the name of the Member I have mentioned if anyone desires. In justice to him, however, I will state the he said he was going to return the pass and the check to the railroad company.

Mr. HENSLEY. Mr. Chairman, will the gentleman yield for a question?

Mr. LAFFERTY. Certainly.

Mr. HENSLEY. Does not the gentleman think it would be a good thing to put a law on the statute books forbidding that kind of thing and making it a felony?

Mr. LAFFERTY. I certainly do. No Member of Congress has any right to draw pay as attorney for a railroad company.

Mr. MANN. Or anybody else, timberman or otherwise?

Mr. LAFFERTY. Yes; or anybody else, timberman or otherwise; and if any man can show where I have accepted a red penny since I have been a Member of this House I will resign before the sun goes down. I challenge anybody, especially the gentleman from Illinois, if he means me, to show any such thing.

We have no means of knowing, nor does the country have any means of knowing, how many Members of this House are now under the pay of railroads or affiliated special-privilege corporations. We have passed a law requiring that campaign contributions in aid of the election of Members of the House and Senate be made public, and we should now pass a law making it unlawful for any Member of this House or a Senator to accept compensation from any outside source, or at least a law requiring the Members and Senators to make annual reports to the Clerks of the House and Senate, under oath, giving an itemized public statement of all compensation received by them from sources other than their official salaries. I have a bill pending making it unlawful for any Member of Congress or Senator to accept any compensation for personal services from any source other than his salary and allowances from the Government and another bill which would require the statement I have mentioned to be made annually under oath by each Congressman and Senator, so long as it shall remain lawful for them to receive outside pay, so that the public may know what remuneration they are receiving, if any, in addition to their official salaries.

Another argument advanced against Government ownership is that rates are higher in those countries where Government ownership now obtains. That statement has been made all over this country, and it is absolutely false. Twice during the past year I have traveled through countries owning their own railroads in Europe, first last June and July and again during the three weeks' Christmas adjournment, and I find rates cheaper than in the United States, the time schedules faster, accidents

less, and service better, although the roads are much shorter, owing to the smallness of European countries, and might, therefore, be excused if they did charge higher rates.

Mr. STAFFORD. Mr. Chairman, will the gentleman from Oregon yield for a question?

Mr. LAFFERTY. I shall be glad to yield to the gentleman.

Mr. STAFFORD. Will the gentleman inform the committee how the freight rates in Germany compare with the freight rates in the United States?

Mr. LAFFERTY. In Germany, where the Government owns and operates the railways, the freight rates are only about one-half what they are in England, where they are privately owned. If the German railroads were operating in the United States, where they would have the benefit of the "long haul," it is safe to say the rates would be not more than half what we are now paying. The rates in Germany now are much cheaper, on the average, than they are in the United States.

There are certain things which the Government can do better and cheaper than any private corporation can do them, and building and operating railroads is one of those things. Private capital will not invest in expensive and hazardous undertakings unless assured of immense profits.

The Government of the United States does now and for several years last past has owned the Panama Railroad Co., which operates also a line of ships. While that company is owned by the Government, it is operated on the same plan as a private railroad company, having a complete set of officers, a board of directors, and it has capital stock, all owned by the Government. Col. Goethals is president of the company. Its accounting system is the same as that of any private company. This company has from the start paid an annual dividend of over 6 per cent profit to the Government, and before declaring a dividend it charges off all depreciation, the same as any other company. The 1913 dividend of the Panama Railroad was 10.23 per cent. Yet it hauls cement from New York to Colon at $1.25 per ton. The water rate from Seattle or Portland to Alaska, a shorter distance, is from $12 to $20 per ton. This, perhaps, is an extreme illustration, but it emphasizes the advantage of Government over private ownership when it comes to the matter of common carriers, either on land or water.

Therefore I favor not only the nationalization of our railways, but I likewise favor the building and operation of ships by the Government. One line of these ships should ply between Alaska and the States. Others should carry our mails to foreign ports, at the same time carrying passengers and freight. We now pay $3,000,000 a year to foreign ships for carrying our mail. That sum would pay the interest on $100,000,000 of bonds with which to build ships of our own. And when built and put into commission the ships would pay for themselves. These ships could also be made auxiliary to our Navy. They could be so built as to be convertible into cruisers in time of war. We are now spending $20,000,000 a year for two battleships, each battleship costing $10,000,000, and they bring no returns whatever. There is no reason why we should not have a merchant marine composed of much cheaper ships, but at the same time suitable to augment our Navy in time of war. These auxiliary ships would not be a burden to the public but would actually pay their way, and, in addition, give a profit to the United States. I want to see the time come when citizens of America can go to any port in the world in an American ship, flying the American flag, and manned by American officers and an American crew.

By water we export annually $2,000,000,000 worth of merchandise, upon which we pay the ocean steamship trust freights estimated at an average of 10 per cent of the value of the goods transported, or $200,000,000. By water we import annually goods to the value of $1,500,000,000 and pay ocean freights thereon of approximately $150,000,000, making approximately $350,000,000 that we pay each year for transporting merchandise to and from the United States upon the high seas. This Congress could well afford to provide for the building of Government ships to be operated by our Government. A fleet of 200 great ocean liners would be a good beginning. We would get at least half the traffic to and from the United States with such a fleet, and our annual freight revenues alone would be, as has been seen, one-half of $350,000,00, or $175,000,000. The passenger and mail revenues would by themselves pay the operating expenses of our ships, leaving our cargo revenues net profit, less depreciation and repairs on the ships in commission. The depreciation and repairs annually on 200 ships of the value of $800,000,000 would not be over 10 per cent, or $80,000,000, leaving a clear profit from cargo revenues of $95,000,000 to be applied annually toward reduction of interest and principal of bonded indebtedness incurred in the building of a fleet of 200 ships at a cost of $4,000,000 each. The annual interest on the cost of the ships at 3 per cent would be $24,000,000. Subtracting this sum from the clear profit of $95,000,000 would leave the sum of $71,000,000 to be applied annually to the extinguishment of the bonded indebtedness of $800,000,000, so that in less than 12 years the fleet of 200 steamships would be paid for. An American merchant marine such as this, consisting of a fleet of 200 new ships, would be the proudest possession of any country in the world. Such a fleet would drive the shipping trust from the high seas and would be a godsend to the entire world. The United States is yet but a sleeping giant, lying stretched out from the Atlantic to the Pacific, embodying the strength of the richest country in the world. I predict that this giant is soon going to awaken to a full realization of his great powers and opportunities. And then these powers will be exercised for the benefit of humanity, liberty, and progress.

In the summer of 1911 I received many petitions from Portland, Oreg., asking Congress to provide for the mining of Alaska coal and to provide rail and water transportation therefor to the States. As a result, I introduced on December 4, 1911, House bill 14080, which was the first bill ever offered in the House of Representatives for the building of a Government railroad in Alaska. The bill also provided for the operation of a line of ships from Controller Bay to Seattle, Tacoma, Portland, and other Pacific coast cities, and for the mining of Alaska coal by the Government, and for its sale at cost to the people of the United States.

The people of the entire Pacific coast are very much gratified that Senate bill 48, introduced on April 7, 1913, by the senior Senator from Oregon [Mr. CHAMBERLAIN] has passed both the Senate and House and is soon to become a law. The bill appropriates $35,000,000 for the building or acquiring of not to exceed 1,000 miles of railroad in Alaska. I regret that the bill does not also provide for a line of Government ships from Alaska to the States, and I also regret that it does not provide for the mining of Alaska coal by the Government. I stand ready to work and vote both for the ships and for the Government mining of coal whenever opportunity may offer in the future. I shall offer separate bills for both of these purposes.

The argument is also made that the Government would not be as prompt and efficient in furnishing transportation service to the public as are private corporations. Experience shows the exact contrary. A few days ago I had a package of express and a parcel-post package of the same size sent me on the same day from Portland, Oreg. The parcel-post package arrived just four days ahead of the express package. The private corporations have so much checking against the supposed dishonesty of the sender and receiver of the package, as well as that of their own employees, that it takes as much time and expense to do this checking as it does to transport the package. The same is true of freight and of long-distance telephone and telegraph messages. I found personally that telegraph rates are less than half in Europe what they are in America, and the service much simpler and quicker and more satisfactory in every way.

The railroads have not failed to take advantage of conditions in the South to attempt to prejudice that section against Government ownership. The railroad interests would have the southern people believe that Government ownership and operation of railroads in the Southern States would interfere with present local police regulations prohibiting the intermingling of the white and colored races. That is the exact opposite of the truth. A single sentence in the law taking over the railroads, providing that they should be operated subject to all local police regulations of the States, would cover the case.

These few remarks give my views touching the subject of transportation by land and water. I regard it as a proper governmental function, and one which, when left to private corporations, results in exorbitant rates, unnecessary dangers to life and limb, and a strangulation of individual opportunity. If continued in office, I shall work and vote for Government ownership of transportation facilities whenever the opportunity offers itself.

The utter folly of hoping for results from attempted "regulation" ought to be shown by the fact that in 27 years the Interstate Commerce Commission has accomplished nothing in this regard. This commission has within the last few days announced a probable increase in freight rates, effective July 1, 1914, although the commission's own report for 1913, page 46, shows that the profits of the railroads are on the increase under existing rates. This report of the commission shows that the profits of the railroads for 1913 were nearly $100,000,000 greater than in 1912. What is the occasion for authorizing an increase

in rates under such circumstances? The following is the report of the commission for 1913:

*Summary of monthly reports of revenues and expenses of steam roads reporting total annual operating revenues in excess of $1,000,000.*

| Item. | Year ended June 30— | | Average per mile of road operated. | |
|---|---|---|---|---|
| | 1913 | 1912 | 1913 | 1912 |
| Average number of miles of road operated | 221,748.58 | 219,666.45 | | |
| Operating revenues: | | | | |
| Freight | $2,134,533,675.86 | $1,902,742,853.03 | $9,626.14 | $8,661.96 |
| Passenger | 678,487,867.25 | 641,594,147.09 | 3,059.72 | 2,920.77 |
| Other transportation | 210,804,502.14 | 195,837,469.81 | 950.65 | 891.52 |
| Nontransportation | 33,287,717.53 | 28,789,383.52 | 150.11 | 131.06 |
| Total | 3,057,163,762.78 | 2,768,963,853.45 | 13,786.62 | 12,605.31 |
| Operating expenses: | | | | |
| Maintenance of way and structures | 407,171,756.34 | 351,583,429.82 | 1,836.19 | 1,600.53 |
| Maintenance of equipment | 501,671,011.01 | 439,997,245.83 | 2,262.34 | 2,003.02 |
| Traffic | 61,391,495.37 | 59,203,342.86 | 276.85 | 269.52 |
| Transportation | 1,074,943,310.41 | 994,986,281.09 | 4,847.58 | 4,529.53 |
| General | 73,408,323.39 | 69,190,051.24 | 331.04 | 314.98 |
| Total | 2,118,585,896.52 | 1,914,960,350.85 | 9,554.00 | 8,717.58 |
| Net operating revenue: | | | | |
| Rail operations | 938,577,865.23 | 854,003,502.60 | 4,232.62 | 3,887.73 |
| Outside operations | 1,379,130.21 | 475,163.99 | 6.22 | 2.16 |
| Total net operating revenue | 939,956,996.47 | 854,478,666.50 | 4,238.84 | 3,889.89 |
| Taxes | 124,356,024.17 | 116,419,026.43 | 560.80 | 529.98 |
| Operating income | 815,600,972.30 | 738,059,640.07 | 3,678.04 | 3,359.91 |

When first elected to Congress three years ago I did not favor Government ownership. I then favored "Government regulation." But I have investigated the matter carefully, found the facts set forth in these remarks, and have reached the conclusion that Government ownership is the only complete remedy.

A child born in America is certainly entitled to have an interest in something besides poorhouses and jails; but at the present time the Commonwealth includes but little more than these. The total wealth of this country, as before stated, is approximately $120,000,000,000. That sum is equal to $1,200 per head of our population. I do not say that each child should be born with that much property to its credit already earned. I think some premium should be placed upon the industry and good management of parents, who are under obligations to provide for their children. But I do say that each child born into this world should have an equal opportunity to earn his proportionate share of the world's wealth, and if one-sixth or one-fourth of it is already in the hands of corporate monopoly the child has no such chance. With Government ownership of railroads in America each child born in this country will find to its credit an interest in the National Commonwealth of a property value of $200. That common property would serve him all his life. It would aid him and help to give him an equal chance to earn his share of that portion of the national wealth which shall remain private property. It is merely a question as to whether the one-sixth of our national wealth represented by our railroads shall remain a permanent handicap to private effort or whether these railroads shall in addition to their great value as public carriers be made a strong arm of the Government to extend a helping hand to each one of our citizens who is engaged in private business. I am opposed to socialism. I am likewise opposed to monopoly. But I favor the happy medium where that portion of the property of the Nation which is monopolistic shall be placed to the credit of the Commonwealth and where the remainder shall be always subject to private ownership.

I certainly think that municipalities should own and operate their own public monopolies, such as street railways, gas, electric light, and waterworks, but the value of all of those when added to the value of the railroads, telephones, telegraphs, and Government-owned coal mines will not exceed one-fourth of the total national wealth, thus leaving three-fourths of the property of the United States permanently in private ownership as a reward to individual genius, industry, and frugality.

Mr. LEWIS of Maryland. Mr. Chairman, I yield 15 minutes to the gentleman from Illinois [Mr. MANN].

Mr. STAFFORD. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. Eleven minutes.

Mr. STAFFORD. Mr. Chairman, in addition to the 15 minutes yielded by the gentleman from Maryland to the gentleman from Illinois, I yield 7 minutes to him of the 11 that I have remaining.

The CHAIRMAN. The gentleman from Illinois is recognized for 22 minutes.

Mr. MANN. Mr. Chairman, I hope I shall not use all the time allotted to me, although I think I may. I served in this House for a good many years on the Committee on Interstate and Foreign Commerce, which had to deal with questions of labor safety devices on the railroads. I think the first time I offered any distinctive proposition coming from myself on such subjects was to provide for a medal for those who saved lives on railroads similar to the medal authorized to be given to those who saved lives on the seas or from drowning. A few years ago I introduced, and it was passed, a resolution authorizing the Interstate Commerce Commission to make investigation of devices to control the automatic stopping of railroad trains and block-signal devices, where those devices were presented without cost to the Government, and subsequently, following along the same line of thought, secured an extension of that authority to any safety devices which were applicable to railways.

The question of compensation for injury has been up—came up legislatively, really a good while after I became a Member of this House. We passed a law designed to permit railway employees to bring suits against railroads where the railroads did not equip their trains with the required safety devices. Then we passed a law providing for compensation to Government employees who were injured in certain hazardous employments. In the Panama Canal bill we went a little further and authorized the President to make regulations and a schedule under which compensation might be made for those who were injured in employment on the Panama Canal and the Panama Railroad Co., there being no limitation in the law as to the amounts, while the existing law for compensation to Government employees in hazardous employment is one year's salary. The growth and tendency of the times has been, first, to endeavor to conserve the life and limb of the employee, and second, to put upon the business the cost of operation and production, including damages to life and limb. That would not be always applicable to a small employer who might be ruined or could have been ruined before the day of accident insurance; but the tendency is along both of these lines, and there is to-day no establishment, or very few, of large proportions where you can not find posted up all through it the sign "safety first." It is true that the employees do not always obey the rules that are laid down, because, like the rest of us, they have their human weaknesses.

I sometimes think that a little fad of mine, which is gardening, gives me the best opportunity that I obtain for reflection and determination of judgment. Last summer while the House was in session I took a little vacation and went home to the garden in June, and while working in the garden one day it occurred to me that there ought to be a bureau of labor safety in the Department of Labor, and I have a companion bill which I hope some day will be reported. I sat down and drew the bill which I introduced, which is practically the first section of the bill now pending before the House, except as to the subject of vocational diseases. When I came back to Washington I introduced that bill and appeared before the Committee on Labor and made a short argument in favor of it.

It naturally and properly met with a good reception from that committee, and I desire to congratulate the Committee on Labor and thank them for what they have done with reference to the bill now pending. I took the matter up with the Bureau of Labor Statistics and with the Secretary of Labor. Mr. Bremner, our late colleague, whose loss we all deplore, and who obtained the love, the respect, and the confidence of those Members who came to know him as I did, had also been giving consideration to this subject, and he introduced a bill. I suspect that, not because I knew more but because I had more experience in drafting bills for Congress, the Secretary of Labor thought the bill that I had drawn was in more perfect language to accomplish the purpose than Mr. Bremner's bill, and the bill now before the House in the first section is practically the bill which I had drawn and the second section is a section taken out of the bill which Mr. Bremner had drawn. I think we ought to do more than merely gather and publish information in the way of written or printed publications. We are engaged now in what is called farm-demonstration work, and the Agricultural bill under consideration carries a total of nearly $800,000 for that purpose. The House some time ago

passed the Lever bill, which is now in conference and which will shortly cost several million dollars a year under the terms of the bill, and likely more than that, to go to the farmers with experts and show them how to do.

Now, it is not necessary in the United States Steel Co. for the Government to send an expert to show them about labor-saving devices, because they are amply able to pay and probably do pay larger salaries for that purpose than governmental salaries amount to. But all over the country are the smaller manufacturing establishments, factories of all kinds, where the employer will be glad to conserve the life, health, and limb of the employee. What is suitable in one building may not always be suitable in the same manner in another building. I would have grow up in this bureau some people who become experts in the way of devising methods of saving life and conserving the health of employees employed in manufacturing and in factories and have someone who can go into the establishment and show them even how, with a slight change and with little expense, perhaps something can be done which will make the employees safer, both in life and health.

Mr. McKENZIE. Will my colleague yield?

Mr. MANN. Certainly.

Mr. McKENZIE. Does the gentleman from Illinois apprehend there will be any conflict between the State inspector and the inspector appointed under a law of this character, or would they work together for the best interest of all?

Mr. MANN. The Government inspector, of course, could not go into any establishment except upon request. We have not the authority to send them there compulsorily. Take the Forest Service as an illustration. We now send expert foresters at the expense of the private owner to view a private forest and advise the owner of the forest. It does not cost the Government, but it is of great value to the owner of the forest. The same thing is done in various other lines of development of work in the country. Of course the gathering of statistics is to be desired, but it takes something more than the gathering of statistics to accomplish the purpose we wish to accomplish. The States, many of them, have very efficient and capable labor bureaus, but it is a duplication, and an unnecessary duplication, of work for each of the State bureaus to do the thing in the way of ascertaining the facts which can be done by a greater and more efficient bureau of the General Government; and that information, either statistical or in the fact, best can be furnished to the labor bureaus of the States. Of course the General Government can not invade the province of the State——

Mr. ADAMSON. Will the gentleman yield for a question?

Mr. MANN. I will.

Mr. ADAMSON. Does not the gentleman believe that such suggestions would be welcomed rather than resented?

Mr. MANN. I have no doubt of that at all; and welcomed not only by the State authorities but I think, in the main, welcomed by the people engaged in the business. When it comes to legislation, if it shall be developed that legislation is required, that will be for the State legislatures to act upon, because we will not have authority, and it will rest with the local people of the different States.

Mr. Chairman, with some apologies, but as an illustration of defects, I am going to say something half seriously and half facetiously. The great trouble with labor safety is to get the employees to obey the rules, and we have got to find methods by which they automatically obey the rules. The Interstate Commerce Commission, in its report which was submitted to Congress on the 15th of December last, and bears that date, says, on page 67:

> The commission again is compelled to acknowledge the exceedingly large proportion of train accidents due to derelictions of duty on the part of employees. Fifty-six of the accidents investigated during the year, or nearly 75 per cent of the whole number, were directly caused by mistakes of employees, etc.

And the commission calls attention to the fact that people are prone not to obey orders or regulations because they think in that particular instance it is not necessary.

No man who crosses a street always exercises due care. He sometimes takes chances. I am somewhat amused by this report of the Interstate Commerce Commission about people not obeying the regulations, for the reason that they think it makes no difference, from the fact that ever since the Interstate Commerce Commission was created it has been violating a distinct law of Congress, because the commission does not think it makes any difference. Section 21 of the act to regulate commerce provides that "the commission shall, on or before the 1st day of December in each year, make a report which shall be transmitted to Congress." Now, of course, you and I can reason that it does not make any difference whether the commission reports on or before the 1st day of December, or on the 15th day of December, just as some railroad employee reasons that in a particular case it does not make any difference whether they send the brakeman or the flagman a certain distance behind, or whether they do this thing or that thing, it will not make any difference this time. The Interstate Commerce Commission, I think, never has made its report on or before the 1st day of December in any year. I think the reports are always dated the 15th of December. I know the last one is, because I have it in my hand.

Mr. SHERLEY. If the gentleman will permit, not only that body but other bodies fail to make their reports on time, and the result is our committee has to conduct hearings without the benefit of their reports.

Mr. MANN. I am not doing this for the purpose of criticizing that commission. As I said, I made it half facetiously. But I do it for the purpose of showing that the great majority of people when they come to deal with a rule, or a law, or a regulation think it is a very good law, or a rule, or a regulation for somebody else to obey, or perhaps they would obey it at some other time, but on this particular occasion it is not necessary.

Now, if we can install labor safety devices and methods which do not depend wholly upon the volition of the employee as to whether he obeys a rule or regulation, we will to that extent add to his safety. I think we can obtain these devices.

Now, this bill provides, as it reads, "for the study of vocational diseases in all of their phases by this bureau." The Public Health Service takes exception to that. A couple of years ago we passed a bill giving the Public Health Service authority to study practically the diseases of man in all of their relations. I told one of the public-health officers the other day that I thought he was a little hoggish on the subject. Having obtained a general authority which would authorize him to do almost anything, he was objecting to anyone having authority to do a part of the things he was authorized to do.

Mr. ADAMSON. Will the gentleman yield a moment?

Mr. MANN. Certainly.

Mr. ADAMSON. The gentleman remembers that several years ago a great pressure and sentiment in the country brought to reduce the number of what was called the health activities of the Government and consolidate them into one, so that the matter could receive better attention at less expense. I understand the gentleman did not have in the bill he drafted this provision for the duplication of the work of that investigation?

Mr. MANN. No. I thought it was covered to the extent it needed to be covered by the other language in the bill.

Mr. ADAMSON. Does not the gentleman think it would be perfectly practicable to allow that part of the work to the Public Health Service which he and I have taken so much interest and pride in building up?

Mr. MANN. Well, I have not time to discuss that to any extent.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. ADAMSON. I am sorry I interrupted the gentleman. I did not know that he was limited.

Mr. MANN. This is a practical question. I think it can be so arranged that it will be satisfactory to everybody. [Applause.]

Under leave to extend my remarks in the RECORD, I insert copy of the bill which I introduced last July and also report of the Committee on Labor on the pending bill, giving information obtained by me and the Department of Labor concerning the bill which I prepared.

A bill (H. R. 7083) to create a bureau of labor safety in the Department of Labor.

*Be it enacted, etc.*, That there is hereby created in the Department of Labor a bureau of labor safety. There shall be a commissioner of labor safety, who shall be the head of said bureau, to be appointed by the President, and who shall receive a salary of $4,500 per annum. There shall also be in the said bureau a chief clerk and such experts, special agents, clerks, and other employees as may be authorized from time to time by law. It shall be the province and duty of such bureau, under the direction of the Secretary of Labor, to make general and special investigation and examination of labor safety plans and devices of all kinds, and the need therefor, generally and specially, and to make public the results of such investigation and examination from time to time. It shall also be the province and duty of such bureau, under the direction of the Secretary of Labor, to gather, compile, publish, and supply useful information concerning the use of labor safety plans and devices in the industries of the United States and elsewhere.

[House of Representatives, 63d Cong., 2d. sess., Rept. No. 167.]

BUREAU OF LABOR SAFETY.

Mr. LEWIS of Maryland, from the Committee on Labor, submitted the following report, to accompany H. R. 10735:

The Committee on Labor, to which was referred the bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor, submits the following report and recommends that the said bill do pass without amendment.

The bill is as follows:

"A bill to create a bureau of labor safety in the Department of Labor.

"*Be it enacted, etc.*, That there is hereby created in the Department of Labor a bureau of labor safety. There shall be a commissioner of labor safety, who shall be the head of said bureau, to be appointed by the President, and who shall receive a salary of $5,000 per annum. There shall also be in the said bureau a chief clerk and such experts, special agents, clerks, and other employees as may be authorized from time to time by law. It shall be the province and duty of such bureau, under the direction of the Secretary of Labor, to make general and special investigation and examination of labor-safety plans and devices of all kinds, and the need therefor, generally and specially, and also the study of all phases of the subject of vocational diseases, and to make public the results of such investigation, examination, and study from time to time. It shall also be the province and duty of such bureau, under the direction of the Secretary of Labor, to gather, compile, publish, and supply useful information concerning the use of labor-safety plans and devices and vocational diseases in the industries of the United States and elsewhere.

"SEC. 2. That there shall be erected a museum of sufficient size and capacity, with grounds thereto annexed, in and upon which shall be exhibited approved devices for the safeguarding of machinery, the protection of employees from injury, the lessening of dangerous conditions which may exist in any industrial enterprise, and the methods of lessening, preventing, and controlling industrial diseases. All such appliances, devices, and arrangements may be exhibited at rest or in motion as may best serve the purposes of such exhibit. That in addition to the museum hereinbefore referred to and in connection therewith there shall be established a laboratory, wherein may be examined and tested the relative efficiency of types of guards or other devices for the protection of machinery calculated to safeguard the employee or the general public from injury or industrial disease."

On the 23d day of July, 1913, there was referred to the Committee on Labor the House bill No. 7083, introduced by Mr. MANN, of Illinois; and later, on the 17th day of October, 1913, there was also referred to the same committee H. R. 8948, introduced by Mr. Bremner, of New Jersey; both bills dealing with the subject of safety devices and proposing the establishment of a function in the Department of Labor promotive of their usage to diminish accidents. In the course of its investigation the committee was favored with the helpful counsel of the authors of both bills, and at length determined upon a composite measure comprising the principal features of each bill. The committee then instructed its chairman to reintroduce the measure as agreed upon in committee, and it is upon this bill which this favorable report is now made.

It seems unnecessary to add substantially to the views and data on the subject which have been submitted by the Secretary of Labor. One circumstance, however, may be stated briefly. Hitherto a measure such as this would have been surely amply supported by those considerations of humanity which look to saving the workers' lives or limbs. But within a very few years it is certain accident compensation laws will have been enacted by all the States entailing an economic charge of many millions of dollars annually upon the industries of the country to pay for the losses suffered by the victims of industrial accident. There will thus be supplied, if not the strongest, at least a very strong motive for the prevention of accidents by the employment of the most efficacious safety devices. And in the promotion of the general welfare it seems to be of the greatest humane and economical importance that ample and reliable information should be made accessible as to the latest and best devices for the prevention of accidents.

The report of the Secretary of Labor, which is exhaustive and highly informative, follows, together with a memorandum prepared by the Bureau of Statistics and a brief submitted by Congressman Bremner, all of which are referred to for a comparative discussion of the subject matter of the bill.

—

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
*Washington, August 28, 1913.*

Hon. DAVID J. LEWIS, M. C.,
*House of Representatives, Washington, D. C.*

MY DEAR CONGRESSMAN: I am in receipt of your communication inclosing copy of H. R. 7083, "A bill to create a bureau of labor safety," and asking for an expression of my views relative to the proposed measure. I have the honor to submit the following:

The bill (H. R. 7083) proposes to create in the Department of Labor a bureau of labor safety, with a commissioner at the head thereof, to be appointed by the President, and who shall receive a salary of $4,500 per annum. In addition to the commissioner "there shall also be in the said bureau a chief clerk and such experts, special agents, clerks, and other employees as may be authorized from time to time by law." The function of the bureau shall be "to make general and special investigation and examination of labor safety plans and devices of all kinds, and to make public the results of such investigation and examination from time to time"; also "to gather, compile, publish, and supply useful information concerning the use of labor safety plans and devices in the industries of the United States and elsewhere."

It seems to me that much useful work could be performed by a bureau such as is proposed.

The study of systems of accident compensation has for a long time been one of the lines of work carried on by the Bureau of Labor Statistics, and numerous reports and bulletins have resulted. The study of accidents in various industries has for several years been carried on in a limited way, and in recent years the bureau has published several studies in this field, one in the cotton textile industry, a second in the metal trades, and a third and more elaborate study in the iron and steel industry. This latter study covered not only the collection of accident statistics and the study of causes of accidents, but also the study of methods of safeguarding and preventing the accidents. This volume should serve to indicate the usefulness of such studies, showing, as it does, the successful methods of safeguarding and accident prevention which are in use and which may readily be adopted in many other plants.

The following reports of the Bureau of Labor Statistics relate wholly or in part to accidents and accident prevention:

Fourth Special Report: Compulsory insurance in Germany, 1898.
Twenty-third Annual Report: Workmen's insurance and benefit funds in the United States, 1908.
Twenty-fourth Annual Report: Workmen's insurance and compensation systems in Europe, 1909.
Bulletin No. 8: Railway relief departments, 1897.
Bulletin No. 17: Brotherhood relief and insurance of railway employees, 1898.
Bulletin No. 19: Mutual relief and benefit associations of the printing trade, 1898.
Bulletin No. 22: Benefit features of American trade-unions, 1899.
Bulletin No. 31: Present status of employers' liability in the United States, 1900.
Bulletin No. 32: Accidents to labor as regulated by law in the United States, 1901. British workmen's compensation act and its operation.
Bulletin No. 57: State cooperative accident insurance fund of Maryland, 1905.
Bulletin No. 58: New Russian workmen's compensation act, 1905.
Bulletin No. 64: Benefit features of British trade-unions, 1906.
Bulletin No. 70: British workmen's insurance acts, 1907.
Bulletin No. 74: Workmen's compensation acts of foreign countries, 1908.
Bulletin No. 78: Industrial accidents, 1908.
Bulletin No. 84: Accidents to railroad employees in New Jersey, 1888 to 1907. 1909. The Minnesota iron ranges (includes accidents to miners).
Bulletin No. 90: Fatal accidents in coal mining, 1910.
Recent action concerning accident compensation in the United States.
Foreign workmen's compensation acts.
Cost of industrial accident insurance.
Bulletin No. 92: Industrial accidents and loss of earning power, German experience.
Workmen's compensation insurance laws and bill of 1911. 1911.
Bulletin No. 96: Workmen's insurance code of July 19, 1911, of Germany, 1911.
Bulletin No. 101: Care of tuberculous wage earners in Germany, 1912.
Bulletin No. 102: British national insurance act, 1912.
Bulletin No. 103: Sickness and accident insurance law of Switzerland, 1912.
Bulletin No. 107: Law relating to insurance of salaried employees of Germany.
Strike at Bethlehem Steel Works, South Bethlehem, Pa. (printed as S. Doc. No. 521, 61st Cong., 2d sess.), 1910.
Report on Condition of Woman and Child Wage Earners in the United States (printed as S. Doc. No. 645, 61st Cong., 2d sess.), 1910–1912.
Vol. I. Cotton Textile Industry.
Vol. XI. Employment of Women in Metal Trades.
Vol. XIX. Labor Laws and Factory Conditions.
Report on Conditions of Employment in the Iron and Steel Industry in the United States (printed as S. Doc. No. 110, 62d Cong., 1st sess.), 1912.
Vol. IV. Accidents and Accident Prevention.

Numerous articles dealing with occupational diseases, some of which in European countries are classified as accidents, are not included in the above list.

The study of the subject is being continued in the iron and steel industry, and a similar study is also being made in plants engaged in machine building. In such work emphasis would naturally be placed more and more upon those safety devices and methods of safety work which are found to secure definite results in the prevention of accidents.

The work here referred to could profitably be expanded by taking up a larger number of industries, by completing and publishing the results of studies more rapidly, and by giving greater attention to the study of safety devices in detail. Great advances have been made within a very short time in the development of safety devices, both in this country and abroad, and the fullest information should be available in regard to these matters.

For many kinds of accidents devices will be found in successful use in some plants of the better class, and the experience there available will be ready at hand to show other employers and their workmen entirely practicable means of preventing many accidents and of gradually reducing the accident loss.

In the important European countries much attention has been given to accident prevention both by factory-inspection departments and also by associations of employers. In museums of safety devices the causes of accidents and the methods of accident prevention have been studied and illustrated, and are regarded as of the greatest practical use. A partial list of the European museums for safety is given herewith. It is understood that most of these are of an official character, but precise information is not available to show just which ones are official and which, if any, are supported by other than official agencies:

Paris, France: Musee de la Prevention des Accidents du Travail et d'Hygiene Industrielle. (Museum for the Prevention of Industrial Accidents and of Industrial Hygiene.)

Amsterdam, Holland: Museum van Voorwerken Ter Voorkoming van Ongelukken en Ziekten in Fabrieken en Werkplaatsen. (Museum for the Prevention of Industrial Accidents, and Disease in Factories and Work Places.)

Munich, Bavaria: Museum fur Arbeiter-Wohlfahrtseinrichtungen. (Museum of Welfare Work for Workingmen.)

Bremen, Germany: Burgerlicher Volksverein Soziales Museum. (Social Museum of the City People's Society.)

Amsterdam, Holland: Centraal Bureau voor Sociale Adviezen. (Central Bureau for Social Advice.)

Copenhagen, Denmark: Det Sociale Sekretariat og Bibliotek. (The Social Secretariat and Library.)

Zurich, Switzerland: Polytechnic Institute. (Polytechnic Institute.)

Charlottenburg, Germany: Gewerbehygienisches Museum. (Museum of Industrial Hygiene.)

Stockholm, Sweden: Centralforbundet for Socialt Arbete. (Central Union for Social Welfare Work.)

Frankfort on the Main, Germany: Institute fur Gewerbehygiene. (Institute of Industrial Hygiene.)

Many other countries have recognized the necessity of placing the promotion of safety and the use of safety devices under the control of some department of the Government.

Great Britain: There appears to be no such institution provided for by English law, though the centralization of power in that country makes it possible for a central supervision to be exercised through the inspectors of factories, etc., appointed by the secretary of state, whose annual reports are laid before Parliament, and who are charged with the enforcement throughout Great Britain of the factory-inspection laws. The special power conferred upon the secretary of state in this connection appears in section 79 of the factory and workshop act of 1901, which reads as follows:

"79. Where the secretary of state is satisfied that any manufacture, machinery, plant, process, or description of manual labor, used in factories or workshops, is dangerous or injurious to health or dangerous

to life and limb, either generally or in the case of women, children, or any other class of persons, he may certify that manufacture, machinery, plant, process, or description of manual labor to be dangerous; and thereupon the secretary of state may, subject to the provisions of this act, make such regulations as appear to be reasonably practicable, and to meet the necessity of the case."

Austria: By decree of January 6, 1899, the Emperor has sanctioned the creation of a commission for the prevention of accidents (Unfallverhutungskommission). The regulations governing this commission were published by the minister of commerce under date of May 13, 1900 (R. G. Bl. No. 86).

This commission consists of the central industrial inspector and not more than 20 nor less than 16 members, who are appointed for three years and are selected from experts on mechanics and hygiene, representatives of the workmen's accident insurance institutions, and employers as well as employees of establishments subject to accident insurance; there are also appointed 10 substitute members who must reside in Vienna. The commission is under the direction of the minister of commerce, who appoints its regular and substitute members, the former in conjunction with the ministers of the various departments interested in accident insurance. The ministers of commerce, public worship and instruction, interior, finance, railroads and agriculture may delegate to each meeting of the commission or one of its committee representatives who shall act in an advisory capacity. The minister of commerce is an addition authorized to call in special experts to these meetings, if he is requested to do so. The commission is authorized to form committees for the preliminary discussion of special topics. The commission convenes according to need on invitation of the minister of commerce.

The commission for the prevention of accidents is the advisory and consultory agency of the Government in all matters relating to the protection of life and health of workmen employed in establishments subject to accident insurance. The chief function of the commission is the rendering of opinions for the purpose of issuing general regulations or regulations for special industries relating to the safety of operation. It may also, of its own initiative, make proposals in relation to matters within its sphere of action.

Belgium: In Belgium there is an office known as the permanent deputation of the provincial council, which has local control over private industry, while the minister of agriculture, industry, and public works exercises authority with reference to enterprises established or operated by the State. Agents appointed by the minister of the interior have a supervisory power of inspection generally. The Government has authority to prescribe safety regulations and the adoption of devices suitable to the conditions in industrial and commercial establishments.

France: In France there is a body known as the consulting committee on arts and manufactures, which advises as to the general measures relating to the protection and health of employees either generally or with reference to certain occupations or methods of operation. Within certain spheres the committee on hygiene is called into consultation.

Germany: The workmen's insurance code of 1911 provides for accident associations with authority to issue the necessary regulations concerning the prevention of accidents in establishments of the members of such associations. These associations are very effective and go far in the direction of the establishment of safety museums as well as in encouraging remedial action in cases where employees have suffered from accident, providing artificial limbs, etc., and seeing that employment suitable for maimed persons is secured.

Italy: In Italy as in Germany the subject of the prevention of accidents is included in the accident insurance or compensation law of that country. The law authorizes the minister of agriculture, industry, and commerce, after consultation with the appropriate technical government council (mining, public works, railroads, etc.), to formulate regulations governing the particular industries, and requiring the adoption of suitable safety devices either generally or for special establishments. By consultation with the technical councils it is possible to secure expert advice appropriate to particular conditions.

Denmark: The minister of interior at the instance of the council of labor has power to issue specific regulations for safety in establishments covered by the factory act. This gives large initiative power in the matter of safety provisions.

Norway: The inspector of factories is given initiative power with reference to the provision of safety devices.

Spain: The compensation act of Spain provides specifically for the prevention of accidents through a technical commission consisting of one architect and three engineers. This commission was directed to furnish to the minister of interior a list of apparatus and measures for the prevention of accidents, and the Government was instructed after consulting with this commission to issue regulations for the introduction of measures and for the prevention of accidents and the protection of life, safety, and the health of the employees. It was also provided that the commission should establish a museum to preserve models of safety appliances and for testing new devices.

Our form of government would not permit of the establishment of a Federal bureau having police powers to regulate the use of safety devices, except in those classes of industry which come under Federal jurisdiction, such as interstate commerce. For years Congress has exercised jurisdiction in the regulation of safety devices to be used by interstate transportation companies. The greatest value which would accrue from the establishment of a Federal bureau of safety would be that it would act as a clearing house for all of the information available in the various States and in foreign countries. Performing this function, it would be of immense value, not only to the wage workers but to the country in general. I therefore have the honor to recommend that the bill be passed.

Sincerely, yours,

W. B. WILSON, *Secretary.*

---

UNITED STATES DEPARTMENT OF LABOR,
BUREAU OF LABOR STATISTICS,
*Washington, December 5, 1913.*

Hon. JAMES R. MANN,
*House of Representatives, Washington, D. C.*

MY DEAR MR. MANN: I am inclosing herewith the memorandum which you asked me to prepare, giving some information in regard to industrial accidents in the United States and foreign countries, and the means which foreign countries are using for the prevention of accidents.

I am, very truly, yours,

ROYAL MEEKER,
*Commissioner of Labor Statistics.*

MEMORANDUM IN REGARD TO INDUSTRIAL ACCIDENTS IN THE UNITED STATES.

In the United States statistics do not exist from which the number of industrial accidents can be accurately determined, nor from which an estimate at all satisfactory can be computed.

Save for accidents in mines and in transportation we have in the United States few records to show the extent of the hazard of industry. In these two great industries and in the small amount of imperfect data which we have of other employments, we know enough to confirm the general impression that American industry pays an awful toll in death and suffering for the accidents of employment. That a considerable percentage of these accidents are preventable has often been shown.

In 1908 Frederick L. Hoffman, the well-known statistician, showed in Bulletin 78 of the United States Bureau of Labor Statistics that the annual fatal accident rate of employees of coal mines in the United States for the 10-year period ending in 1906 was 3.10 per 1,000, as compared with 1.29 in Great Britain, 1.35 in Austria, 1.81 in France, and 2.13 in Prussia during the same period. A reduction of the rate in the United States from 3.10 to the level of Great Britain, 1.29, would, it was estimated, result in an annual saving of 915 lives. Since that date the situation has not changed for the better, for the American record of 1909, 1910, 1911, and 1912 showed rates of 4, 3.92, 3.73, and 3.27, while the British rate has risen slightly to 1.36 per 1,000 in the 5-year period 1908 to 1912. Approximately 2,500 lives are annually lost by accidents in the coal mines of the United States.

Even higher than the rate among the coal-mine employees is that among employees of the metal mines. Thus, in the calendar year 1911 in the metal mines of the United States 695 men were killed, representing a rate of 4.19 per 1,000 men employed. The fatality rates due to accidents in metal mines in a number of foreign countries were as follows: Germany, 1.39; Great Britain, 1.64; Spain, 2.25; France, 3.16; Transvaal, 4.29.

The fatal accident rate in quarries in the United States is much lower than that in either coal or metal mines. In the calendar year 1911, 188 men were killed in quarry accidents, the death rate being 1.69 per 1,000 men employed. In Great Britain the death rate among quarry workmen was 1.08 per 1,000; in Germany, in 1911, 1.48 per 1,000.

Fully as striking is the excessive fatal accident rate among employees of American railways. Thus, the American rate for the 10-year period 1897 to 1906 was 2.50 per 1,000, against a rate of 0.98 per 1,000 among employees of German railways. In 1912, 3,635 American railway employees lost their lives in the accidents of their employment, and the American fatal accident rate was 3.02 per 1,000, while the British rate for the 5-year period 1908 to 1912 was 0.65 per 1,000 and the German rate for the 5-year period 1907 to 1911 was 1.13 per 1,000. Even these figures certainly understate the real situation among railway employees, for according to the American practice only accidents to persons resulting in immediate death or death within 24 hours from the time of the accident are regarded as fatally injured, while the foreign practice takes account of the outcome of the injury.

In other American industries records of industrial accidents, even approximately complete, are lacking, but it is generally accepted as true that in most industries, except where organized safety work has already been done, the accident rate is considerably in excess of accident rates in corresponding employments in European countries.

In the bulletin of the Bureau of Labor Statistics already referred to an attempt has been made to estimate the annual loss of life in American industry. Upon the basis of the census reports within the registration area of the United States it was estimated that for the entire country the actual number of fatal accidents annually was between 30,000 and 35,000, one-half of which were the immediate result of employment. The nonfatal accidents of industry are, of course, far more numerous than the fatalities, and while many are not serious in permanent effect, even the minor ones impose a heavy burden of suffering, and many of the more serious ones involve permanent disability and loss of earning power, with frequently absolute dependency. Corresponding with the estimate of fatal accidents above given, it was estimated that there were annually 2,000,000 nonfatal accidents in the country.

There may be question whether even this estimate is high enough adequately to represent the full number of accidents in the United States. If we accept such evidence as we have that the fatality rate in this country is higher than in European countries, then it must follow that any estimate of 15,000 to 17,500 fatal accidents is much too low. In Great Britain, according to the official statistics, the annual fatality rate for the five-year period 1908 to 1912 was 0.65, agreeing exactly with the rate for an earlier five-year period, 1904 to 1908. In German industries figures for the five-year period 1907 to 1911 show a rate of 0.71, and in Austria for the period 1906 to 1910 the rate was 0.63. If we may then assume as a moderate estimate of the fatality rate in this country 0.80 per 1,000, this upon the basis of 28,000,000 males 15 years of age and over occupied as wage earners, the number of deaths each year from industrial accidents appears to be 22,400. The number of nonfatal accidents is necessarily dependent upon the definition of such an accident, and the practice varies widely between the different countries. In Austria, where the available statistics of accidents are limited to those involving a disability of over three days, approximately 1 per cent of the total accidents are fatal. In Germany, because the figures for the minor accidents are less complete, the percentage of fatal accidents is higher. Without attempting to select a figure which shall express the proper relation between fatal and nonfatal accidents, it is probable that 2,000,000 is a conservative figure of the number of industrial accidents involving disability and some loss of time.

The possibility of substantial reductions in the accident rates and great saving in life and suffering by organized safety work is beyond question. In the iron and steel industry in the United States, where organized safety work has perhaps reached its best development, the Bureau of Labor Statistics found, in comparing the accident records of a group of plants in which safety work had been fully developed with a group in which such work had not been done, a rate of 167.1 per 1,000 300-day workers for the former group and 307.9 for the latter group, a reduction of 67.1 per cent, or of 2 accidents out of every 3. The greatest part of this accident reduction appeared in the accidents resulting in temporary disabilities, but a reduction of 21.5 per cent in the permanent disability rate and of 30.2 per cent in the fatal-accident rate indicated that the saving extended to accidents of practically every class.

There are many reasons for believing that what has been accomplished in the manufacturing plants of a single industry can be accom-

lished by similar methods in most other industries with a high accident rate. Such results have been brought about by careful study of the causes of accident, organization of systems of inspection, educational work, and the introduction of direct safety appliances. Even with the passage of well-considered laws calling for all reasonable safeguards, such laws can not come into general effect or produce the full measure of the results which should be expected without careful study of the conditions and causes of accident occurrence. Accurate statistics and the careful study which should accompany them can alone furnish a reasonable basis for improvement. The great possibilities of successful accident prevention have been clearly demonstrated in the experience of many industries abroad and in the case of some in this country. No more striking example of these possibilities is anywhere found than in the study of accidents and accident prevention in the iron and steel industry, published by the United States Bureau of Labor Statistics and refererd to above.

In most European countries which are industrially important industrial inspectors are charged with important duties with the view of securing the enforcement of the safety provisions of law and of advising and instructing employers in regard to the fencing and guarding of machinery and the use of safety appliances. The powers of industrial inspectors vary greatly in the different countries, but in the more important States they are called upon to give much attention to the study of accident prevention. Because they are charged with this duty, among others, thorough technical training is usually insisted upon as an essential qualification.

Museums of safety devices have been established in a number of European countries for the study and illustration of the causes of accidents and the methods of accident prevention, and are regarded as of great practical use. A partial list of the European museums of safety is given herewith. It is understood that most of these are of an official character, but precise information is not available to show just which ones are official and which, if any, are supported by other than official agencies. In addition to the museums here named, it is understood that a museum of safety appliances is to be established in London under the control of the Home Office.

Bremen, Germany: Burgerlicher Volksverein Soziales Museum. (Social Museum of the City People's Society.)

Charlottenburg: Gewerbehygienisches Museum. (Museum of Industrial Hygiene.)

Frankfort on the Main, Germany: Institute für Gewerbehygiene. (Institute of Industrial Hygiene.)

Nuremburg, Germany.

Munich, Bavaria: Museum für Arbeiter-Wohlfahrtseiturichtungen. (Museum of Welfare Work for Workingmen.)

Graz, Austria.

Paris, France: Musée de la Prevention des Accidents du Travail et d'Hygiène Industrielle. (Museum for the Prevention of Industrial Accidents and of Industrial Hygiene.)

Zurich, Switzerland: Polytechnic Institute. (Polytechnic Institute.)

Amsterdam, Holland: Museum van Voorwerken Ter Voorkoming van Ongelukken en Ziekten in Fabrieken en Workplaatsen. (Museum for the Prevention of Industrial Accidents and Disease in Factories and Workplaces.)

Copenhagen, Denmark: Det Sociale Sekretariat Bibliotek. (The Social Secretariat and Library.)

Stockholm, Sweden: Centralförbundet for Socialt Arbete. (Central Union for Social Welfare Work.)

Barcelona, Spain.

Bucharest, Roumania.

Outside of the work which is done by factory inspectors, there are many unofficial organizations and agencies for the study of accidents and accident prevention. An international technical congress for industrial hygiene and the prevention of industrial accidents has been organized, and the first meeting was held in Milan in May of 1912. The congress was devoted to the many technical problems involved in the introduction of safety precautions for industrial workers. It was mainly initiated by the private associations for the prevention of industrial accidents which have existed for a number of years in France, Belgium, and Italy. Many of the large manufacturing firms in these countries are members of such associations and their factories are regularly inspected by technical inspectors, qualified to advise as to the precautionary measures for health and safety. The congress was held under the auspices of the Italian Government, and a large number of official delegates attended and took part in the proceedings. The special object of the congress, as explained by its president, was to bring together in an informal manner manufacturers and representatives of accident associations, insurance companies, factory inspectors, and sanitary experts for exchange of views in a friendly way, and thus secure some agreement as to introduction of reforms valuable both to the employer and the worker without attempting burdensome or premature industrial legislation.

Some particulars in regard to the accident situation and the means employed to protect the safety and health of workers in the individual countries are given in the pages which follow:

GREAT BRITAIN.

In Great Britain the question of frequency of accidents and the best methods of prevention have been given much study, extending over a long period. In 1911 this subject was the occasion of an elaborate report of a departmental committee, submitted after an investigation and study covering a period of more than two years.

In Great Britain, as in practically all other countries, the statistical information is not available to show the total number of accidents in industry. To only a limited extent are reports required for accidents resulting in short-term disabilities. The most satisfactory figures are those which are collected under the workmen's compensation act. These reports, covering seven great groups of industries, namely, factories, mines, quarries, railways, docks, construction work, and shipping, and including in 1912, 7,411,005 employees, 5,125,000 of whom were in factories, showed 424,406 cases of disablement and 5,046 deaths from accident. These reports, however, are far from complete for those accidents resulting in disabilities of less than two weeks. According to these figures the rate per 1,000 employees for all accidents was 57.3, and for fatal accidents 0.63, the rate for fatal accidents being the same as the average of the five-year period 1908 to 1912.

The fatal-accident rates for the five-year period 1908 to 1912 for Great Britain were as follows:

| | |
|---|---|
| Seamen | 5.04 |
| Miners | 1.36 |
| Quarrymen | 1.06 |
| Railway employees | .65 |
| Nontextile factory employees | .22 |
| Textile employees | .07 |
| Average | .63 |

The prevention of accidents, except in so far as the matter is dealt with by specific provision of law, is in the hands of the chief inspector of factories, under the direction of the home secretary. The factory-inspection system in Great Britain is the oldest of its kind in any country, dating back to 1833. The number of inspectors, according to the chief inspector's report for 1912, is 205, not including mine inspectors.

In certain industries the home secretary has large powers of making regulations for factories or workshops, according to the circumstances of the case. The factory and workshop act of 1901, section 79, reads as follows:

"Where the secretary of state is satisfied that any manufacture, machinery, plant, process, or description of manual labor used in factories or workshops is dangerous or injurious to health or dangerous to life and limb, either generally or in the case of women, children, or any other class of persons, he may certify that manufacture, machinery, plant, process, or description of manual labor to be dangerous; and thereupon the secretary of state may, subject to the provisions of this act, make such regulations as appear to him to be reasonably practicable, and to meet the necessity of the case."

The departmental committee, in the report on accidents above referred to, reached the conclusion that the accident risk was higher than it need be and recommended a number of measures for improving the existing provisions for the prevention of accidents. The recommendations of the committee were that all possible steps must be taken to secure (1) that the employers shall cooperate with the inspectors, (2) that a knowledge of the risks of new machines and the best ways of fencing and guarding shall be diffused widely and quickly, and (3) that the best methods of fencing and guarding shall be enforced with speed and uniformity.

The committee also submitted certain proposals with the view of bringing about the desired reforms. These proposals called for conferences between inspectors and employers and employees; special reports by inspectors on industrial dangers; uniformity of requirements among inspectors; specification by the authority of dangerous parts of machines; guarding of machinery by makers; maintenance of guards; safety appliances other than fences and guards; methods of avoiding crowding of machinery; methods of remedying defective and slippery floors, stairs, etc.; proper lighting; regulation of the lifting and carrying of weights; regulation or prohibition of cleaning machinery in motion; the improvement of statistical information in regard to industrial accidents.

A number of the recommendations of this committee have already resulted in action. Among the most important of these has been the holding of conferences by the factory inspectors with the representatives of employers and workpeople for the purpose of discussing dangers and the best means of preventing accidents. In 1912 such conferences were held relating to cotton spinning, cotton weaving, worsted and woolen spinning, and to the iron foundry industry. In each case a substantial agreement was reached upon many important details, the agreement taking the form of detailed provisions in regard to the fencing and guarding of machinery and the regulation of working conditions.

GERMANY.

The accident situation in Germany will be fairly well shown by the published accident statistics. These have been given in quite full detail in the Twenty-fourth Annual Report of the United States Commissioner of Labor, and for 1907 are summarized in Bulletin No. 92 of the United States Bureau of Labor Statistics. The total number of accidents involving disability of more than three days in 1911 among the industrial workers insured under the German workmen's insurance system was approximately 484,000, or 58.4 per 1,000 full-time workers. It is fairly certain that these figures are not complete, as under the German insurance only those accidents resulting in disability of over 13 weeks or death are fully reported and classed as accidents, the shorter accident disabilities being compensated out of sick funds and being reported and treated as cases of sickness. For the industrial accident associations the fatal accident rate in the five-year period 1907 to 1911 was 0.71 per 1,000 full-time workers.

In Germany the study of the prevention of industrial accidents has for many years been one of the chief duties of the factory-inspection department. With the adoption of the compulsory-insurance system, under which the insurance associations are organized along industrial lines, additional measures were taken to reduce the number of accidents to the smallest number. Stringent rules were drawn up, applying to both employer and workmen, penalties were prescribed, and technical supervising inspectors devoted themselves to the work of instructing and advising the employer, as well as looking out for the enforcement of the rules. As the rate of insurance premium which is assessed against each employer is in a large measure dependent upon conditions in his particular establishment, as shown by his accident record and the report of the insurance inspectors, there is the strongest incentive for the employer to follow every rule and to follow every suggestion of the inspector.

On January 1, 1910, the number of technically trained inspectors employed by the accident insurance associations was 359, the 66 industrial associations having 321, while the 48 agricultural associations had 38. In 1909 the number of State factory inspectors was 543 and the number of mine inspectors 111, making a total of 654 factory inspectors. The number of employees in industry and in mining is approximately 11,250,000.

Five museums of safety for the study and illustration of safety appliances and methods of accident prevention exist in Germany. These are located at Bremen, Charlottenburg near Berlin, Frankfort on the Main, Munich, and Nuremberg.

AUSTRIA.

In Austria, with over 4,000,000 persons gainfully employed, about 3,000,000 are covered by the system of workmen's insurance. The statistics of accidents are probably not complete for the nonfatal accidents, because accidents resulting in disability of four weeks or less are compensated from the sickness insurance funds and classed along with cases of sickness. The official reports show a total of 128,094 accidents in 1907, or a rate of 63.4 per 1,000 full-time workers. Of these, 1,189 were fatalities, or a rate of 0.59 per 1,000 full-time workers.

In Austria, where the accident insurance associations are organized on a territorial rather than on an industry basis, as in Germany, the

work of inspection with a view to accident prevention is in the hands of the State factory inspectors. The accident insurance association may request the factory inspector to report on any factory, and as a result of the report may request the local authority to make rules.

The number of factory inspectors in Austria in 1910 was 126 and the number of mine inspectors 85. A museum of safety has been established at Graz.

By decree of January 6, 1899, the Emperor has sanctioned the creation of a commission for the prevention of accidents (Unfallverhütungskommission). The regulations governing this commission were published by the minister of commerce under date of May 13, 1900. (R. G. Bl. No. 86.)

This commission consists of the central industrial inspector and not more than 20 nor less than 16 members, who are appointed for three years and are selected from experts on mechanics and hygiene, representatives of the workmen's accident insurance institutions, and employers as well as employees of establishments subject to accident insurance; there are also appointed 10 substitute members who must reside in Vienna. The commission is under the direction of the minister of commerce, who appoints its regular and substitute members, the former in conjunction with the ministers of the various departments interested in accident insurance. The ministers of commerce, public worship and instruction, interior, finance, railroads, and agriculture may delegate to each meeting of the commission or one of its committees representatives who shall act in an advisory capacity. The minister of commerce is in addition authorized to call in special experts to these meetings, if he is requested to do so. The commission is authorized to form committees for the preliminary discussion of special topics. The commission convenes according to need on invitation of the minister of commerce.

The commission for the prevention of accidents is the advisory and consulting agency of the Government in all matters relating to the protection of life and health of workmen employed in establishments subject to accident insurance. The chief function of the commission is the rendering of opinions for the purpose of issuing general regulations or regulations for special industries relating to the safety of operation. It may also, of its own initiative, make proposals in relation to matters within its sphere of action.

FRANCE.

In France the prevention of accidents is chiefly in the hands of the factory inspectors, who enforce the law, which regulates many details of factory conditions. The law provides that factories and workshops must be kept in such a manner as to secure the safety of the workers. In every factory wheels, belts, cogwheels, and every other apparatus which may be the cause of danger must be separated from the workers in such a manner that they can not be approached except for the purposes of the work. Engines, machines, gearing, etc., must be installed and kept in the best possible condition for safety. This general provision of the law is supplemented by numerous decrees, framed in order to secure protection from some particular danger. The factory-inspection service in France was organized in 1874. In 1909 the factory inspectors numbered 139 and the mine inspectors 170. The number of persons employed in industry and in mining was approximately 7,000,000.

France also has a body known as the consulting committee on arts and manufactures, which advises regarding the general measures relating to the health and protection of employees, either generally or with reference to particular occupations or methods of operation. Within certain spheres the committee on hygiene is called in consultation.

BELGIUM.

In Belgium there is an office known as the permanent deputation of the provincial council which has local control over private industry, while the minister of agriculture, industry, and public works exercises authority with reference to enterprises established or operated by the State. Agents appointed by the minister of the interior have a supervisory power of inspection generally. The Government has authority to prescribe safety regulations and the adoption of devices suitable to the conditions in industrial and commercial establishments.

The Belgian factory inspection service was organized in 1889. In 1909 it included 45 factory inspectors and 98 inspectors of mines. The number of persons employed in industry and in mining is nearly one and one-half millions.

ITALY.

In Italy no general factory legislation was passed until 1898. In that year a law was enacted providing for the compulsory insurance of workpeople and empowering the Government to issue regulations for the prevention of accidents.

The law authorizes the minister of agriculture, industry, and commerce, after consultation with the appropriate technical Government council (mining, public works, railroads, etc.), to formulate regulations governing the particular industries and requiring the adoption of suitable safety devices either generally or for special establishments. By consultation with the technical councils it is possible to secure expert advice appropriate to particular conditions.

The inspection service, which was established in 1906, in 1909 employed 20 factory inspectors and 88 inspectors of mines. The persons employed in industry and in mining numbered approximately one and one-half million.

BRIEF SUBMITTED BY HON. ROBERT G. BREMNER, UPON THE SUBJECT OF THE ESTABLISHMENT OF A BUREAU OF INDUSTRIAL SAFETY.

The United States to-day occupies a curious position among industrial nations. Ambitious to be the first in point of output, we are sociologically the last in our methods of production. From the mechanical point of view we claim to lead, but the student of industrial economy is amazed to find that we practically ignore the modern science of conservation in its most important aspect. Trees, minerals, lands, water—these we admit (somewhat tardily) must be safeguarded from further waste. But the Government protection of these 34,000,000 men, women, and children, who constitute our industrial army, upon whose well-being rests the whole economic and social fabric of our Commonwealth—this is a phase of conservation practically ignored by our legislators and the public.

THE COST OF HUMAN WASTE.

One reason why the United States has not faced this question in the same practical spirit as other nations is the fact that we rely on immigration to make good our incredible waste of human material. Some figures, based on conservative estimates, help us to realize how serious an economic crime this policy has really proved.

It is estimated that out of 34,000,000 engaged in gainful occupations there are yearly some 38,000 deaths, 2,000,000 accidents (of which 500,000 are serious), and 3,000,000 cases of preventable industrial illness. While the killing of a man is usually only the beginning of the burden which society must assume (witness the 15,000 widows and 45,000 orphans which industry deprives annually of their natural supporters), let us rather accept the business view of the loss entailed by occupational deaths.

Death. The average economic value of a worker in this country (based on his usual earning capacity) is conservatively calculated at $2,900. We therefore squander, every 12 months, the equivalent of $110,200,000, and in addition burden private and public charity with the progressive financial and social consequences arising from the dependence of those left destitute or inadequately provided for.

Accident. Two million accidents, of which 500,000 are serious, entail an annual loss of probably $40,000,000 earnings.

Illness. On the German basis of calculation, the 3,000,000 cases of preventable industrial illness entail a cost of some $200,000,000. Who pays?

Broadly speaking, the United States ignores an annual wastage of normal earning capacity which, from three causes alone, exceeds $350,200,000.

In reality, society and industry itself share a far greater loss between them.

But there are other factors crippling our employers of labor and from these obvious causes of waste.

Only America ignores the fact that, for the producer, a man merely negatively well is inferior to a man in perfect health. Efficiency rests on a health basis. In fact, health is the original wealth.

Lowered vitality due to insanitary factory conditions; abnormal physical or mental overstrain due to speeding; depletion of reserve force; the long list of minor ailments ("feeling poorly, but able to work") reduce the value of the majority of employees fully 100 per cent.

Undue fatigue alone, plus resulting intemperance, costs industry close upon $1,000,000,000 a year. Such is the penalty industry must bear from "lack of taking thought."

THE REMEDY, BUREAU OF SAFETY.

"Eliminate waste" is the modern watchword of productive processes. Throwing aside the arguments of humanity and justice, other countries on a business basis have inaugurated campaigns for the elimination of industrial accident, disease, and lowered efficiency by the same scientific methods which they have brought to bear upon the technique of trade. Education is the key to occupational health and usefulness; the education of the public, the employer, and the worker in sanitary and safe methods.

MUSEUMS OF SAFETY.

In matters affecting the avocations of daily life, theoretical instruction is rarely efficient. "Seeing is believing" for the rank and file. Acting on that principle, Amsterdam, Barcelona, Berlin, Brussels, Budapest, Copenhagen, Dresden, Frankfort on the Main, Gratz, Helsingfors, Munich, Odessa, Paris, St. Petersburg, Stockholm, Wurtzburg, and Zurich have erected museums of safety in which are exhibited, at rest or in motion, every type of dangerous machinery and its scientific guard; systems of exhaust ventilation for the control of dangerous dusts and fumes; types of respirators, masks, goggles, and special suits for dangerous work; devices to lessen excessive glare and heat; and, in brief, safety appliances for every type of mechanical or industrial processes.

These museums, which set a standard for the safety-bureau movement of each country, are also institutes for disseminating industrial knowledge. Lectures are given, literature is printed and circulated, photographs of their contents are published, and every employer or worker of the country is free to apply to them for impartial advice or help in problems affecting accident or disease prevention.

WHY NATIONAL?

Perhaps in no country is the demand for such a national and visible indorsement of the safety movement so needed as in the United States. Practically 50 governments through State departments of labor are attempting "interference" (so regarded) in industrial processes. Practically 50 different standards may exist, be enforced, or neglected, to the disadvantage of allied trades situated in different localities, yet producing goods under nearly identical conditions. The exhaust ventilation "blower" control of one State which may carry off by its excess pull the dusty product, across the border line is allowed to accumulate without criticism. The wire-mesh guards over wheels or belts in one factory, for example, may represent an outlay of thousands of dollars spent in good faith, yet a change of political administration of a local department may change the policy which a predecessor approved and call for new installations of a different type.

To merely cover danger points is but a detail of the question of scientific safeguarding. Some of the most dangerous machines are employed on piecework. A guard which cuts the employees' earning capacity in halves will be "thrown" in every instance. The stamping-machine guard, which calls for three extra motions on a level with the worker's head, is an example of inexpert precautions which defeat their object.

Moreover, there is a certain reverence for Federal experts, a recognition that they are somewhat removed from the field of local trade jealousies and rivalries, which is a powerful aid in obtaining recognition for the standards. They set in the protection of extra hazardous mechanisms. They do not suggest local "rake-offs" for the changes advocated in Federal reports, publications, and safety literature.

No one questions the need for small museums of safety in every large industrial center, but foreign experience proves that such branches spring from the deep roots of the national institute. The local boards of trade which will devote a room to charts, photographs, and models from the National Museum at Washington will in the future make possible a more scientific education of the employer than almost any State department of labor is qualified to give to-day.

Human conservation is an expert science, calling for the leadership of a few thoroughly trained authorities. From every viewpoint of efficiency our efforts should be concentrated on procuring, through national appropriation, what must otherwise be cramped and rendered limited by State curtailments.

Finally, the public advertisement, to use a crude phrase of a national museum. The fact that any worker or employer can appeal to it for instruction or advice, gives a guaranty of efficiency of administration and progressive methods which assures to the proposed bureau of safety, of which it is the demonstration, a timeliness otherwise prone to lapse into departmental delay. And while its primary object is to lessen human suffering its crusade for safe and sane manufacturing methods will be of inestimable practical advantage in standardizing such methods throughout our whole industrial system.

THE LABORATORY OF HYGIENE.

Valuable as has been the work of the foreign museum of safety, the Institutes of Industrial Hygiene in Vienna, Paris, and Milan are demonstrating yet wider fields for the student of human conservation.

The subtler dangers to the worker involved in exposure to dust and fume, to overstrain, overspeeding, nerve exhaustion, occupational intem-

perance, and the thousand signals to insanitary conditions, are here studied and their remedies weighed and approved. Milan devotes three large four-story buildings, equipped with the latest apparatus in laboratories, hospital wards, lecture rooms, and libraries, to the elimination of those diseases peculiar to employments. Twelve scientists cooperate with the director in the investigation of trade poisonings, such as those of lead, mercury, and arsenic. The toxin of fatigue, of muscular effort, and nerve depletion are proved by experiments upon living animals. Every trade process offering risk to health is investigated with a view to scientific alterations which shall protect the worker without undue hardship to the employer.

All the information acquired by the laboratory is free to those who seek its aid. And in this case, as in that of the museum, the fact that it is national makes it a force throughout the land.

No State department is to-day fitted to carry out, although each can help to promulgate, so extensive a program. Yet no one familiar with American needs would be content to advocate less than Italy offers to her workers.

Great as was her need, ours is imperatively greater. Above all, we need the authority which invests a Government investigation of trade conditions to free the minds of our industrial employers from the too common fear of local departments and their betrayal of secret processes and technical formulas. To a Federal investigator the average owner, who would gladly bar his door to the Department of Labor, throws open the book of his manufacturing experiences. A national clearing house for industrial welfare experiments will save years of effort and millions of dollars to those who are to-day ignorant of what has already been accomplished along those lines.

This is no untried experiment which is advocated by the Bremner bill. We shall but duplicate the experience of those countries which have already proved the value of an effort toward human conservation; an effort which is dictated both by financial wisdom and by the dictates of humanity and justice.

The first organization of this kind was founded by a great captain of industry, Engel Dulfus, of Mulhouse, in 1867, and since that time innumerable similar societies have sprung up. There exist also museums similar to the one which is the subject of this article. Among the principal of these may be cited that at Vienna (1890), at Amsterdam (1891), at Berlin (Charlottenburg, 1903). This last one has cost about 1,000,000 marks and possesses an annual budget of 40,000 marks. The new Parisian museum was founded by the "Association des industriels de France contre les accidents dutravail," established in 1883 by Emil Muller, and was organized entirely by private gifts.

Its purpose, inspired by philanthropy, is to indicate to the present patrons the precautions to be taken, the devices and the means to employ, for protecting their workmen against risks of all sorts—unhealthful atmosphere, dangers from machines and transmission devices, harmful dusts, high electric voltages, poisoning, etc.

In the hall situated at the other end of the museum we find a great assortment of hoisting devices, hoisting blocks, movable ladders, climbing harness for linemen, safety devices for roofers, various models of elevators, and protective stair cagings.

The climbing harness of Ravasse-Lullier is intended to prevent falls of linemen, carpenters, roofers, painters, ironworkers, etc.

While the most fastidious precaution, the most vigilant attention, and the most perfect industrial hygiene all act to reduce to a minimum the number and seriousness of accidents, they can not pretend completely to suppress them, since by definition the accident is unforeseen.

Although many interesting attempts to improve conditions and to promote more cordial relations between master and man have been made with fair success, the safeguarding of life and limb has not been perfected to any appreciable extent. Ask a manufacturer if his circular saws, punches, and presses are protected by safety devices, and usually he replies, "No," or if they are, "My men won't use them."

As Dr. Josiah Strong points out, economic considerations are wholly secondary. This is, first of all, a question of conscience. Needless slaughter is criminal slaughter.

"Industrial homicide is being committed every hour of the day, and the employer who does not provide all practicable means for safeguarding life and limb is particeps criminis.

"We are told that ancient Athens was forced every nine years to pay a tribute of 7 youths and 7 maidens to be devoured by the Cretan Minotaur, until Theseus slew the monster. We have here in the United States a monster named Indifference, to which we are making human sacrifice, not at the rate of 14 every 9 years but at the rate of a dozen a day, besides many scores who escape with their lives but are maimed or mangled.

"The establishment of a museum of security for America would mean the saving of thousands of lives, and, through the prevention of accidents, hundreds of thousands of workmen would be saved from disability, and thus from becoming a charge on their families or dependent on the State. Such a museum would also lessen liability for damage suits growing out of accidents." (William H. Tolman, director of the American Institute of Social Service, Century Magazine, May–October, 1906.)

John B. Andrews, in the Survey, that great and good publication, last month said:

"But in the United States we need an institution that will correlate the experience of our scattered little group of hygienists and enable more medical men to direct their attention to the problems of industrial hygiene. We need for the purpose a special laboratory and hospital to accelerate progress in the study of the causes and prevention of industrial diseases. With such an institution phosphorous poisoning would quickly disappear from our match industry as a matter of scientific sense. The long list of poisons affecting scores of different occupations would gradually be shortened. Conditions which lower vitality, lessen efficiency, and invite disease would quickly be improved, to the advantage of manufacturer and wage earner. The necessary research would be carried on by scientists of unquestioned ability and singleness of purpose, and in a manner which would enlist from all the heartiest cooperation.

"For the past two years the American Association for Labor Legislation has had an able commission of industrial hygiene, and last June called the first American Congress on Industrial Diseases. As an outgrowth of that congress a committee of experts has submitted to the President a memorial calling attention to the urgent need of a national investigation. The most valuable aid in such an inquiry would be an American clinic for the study and prevention of industrial diseases."

Mr. LEWIS of Maryland. Mr. Chairman, I yield two minutes to the gentleman from California [Mr. J. I. NOLAN].

Mr. J. I. NOLAN. Mr. Chairman, I do not intend to address the House to-day on this subject, but I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from California [Mr. J. I. NOLAN] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. J. I. NOLAN. Mr. Chairman, I yield back the balance of my time.

Mr. LEWIS of Maryland. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has 10 minutes remaining.

Mr. STAFFORD. Before the gentleman proceeds, I would like to yield the balance of my time—four minutes, I believe—to the gentleman from Minnesota [Mr. SMITH].

Mr. MANN. Mr. Chairman, I ask leave to extend my remarks in the RECORD by printing the bill which I introduced and the report of the Labor Department on that bill.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to extend his remarks by printing the matter referred to. Is there objection?

There was no objection.

Mr. SMITH of Minnesota. Mr. Chairman, I am in full accord with this social-justice atmosphere that prevails in the House to-day. The primary functions of a government are the protection of the person and property of its people. The recognition of the rights of that great body of our people whose brain, brawn, and muscle keep the wheels of industry in motion, resulted in the recent establishment of the Department of Labor. I feel that that was wise, and that Congress should and will deal with the department generously, not only from a humanitarian standpoint, but for the general good of the whole people.

Our country is more and more becoming a manufacturing Nation. Hence the number of those employed in our factories, mills, and mines, and on the railways, is daily increasing. Their work is becoming more exacting, and we have for years been creating labor-saving devices. That, of course, was along economic lines. But we are becoming interested as a Nation in seeing that life-saving devices are created. The purpose of the bill under consideration is to stimulate the creation and use of safety devices and to prevent vocational diseases. No more worthy measure could be brought before this Congress. I am glad to see it so universally accepted.

I feel that the laborers of this country have not been receiving their just share of the increased wealth resulting from the numerous labor-saving devices. No doubt, with the spirit abroad which is manifest here to-day, in the near future they will come closer to receiving it than they have in the past. I trust that, in so far as legislation can assist in bringing about a fairer distribution of this increased wealth, it will be speedily enacted.

It is a pleasure to think that no partisan strife is here, and that the authors of the bill represent both sides of the House—the gentleman from Illinois [Mr. MANN] and the late Representative Bremner, of New Jersey—and that we have a composite bill here representing the best thought of its authors for the interests and welfare of the industrial workers of this country.

In the United States the question of the frequency of accidents and the best methods of prevention have been given but little study. It is true that nearly all, if not all, of the States have enacted laws in one form or another having for their object the prevention of accidents. The factory-inspection systems and the laws requiring that dangerous machinery be fenced and guarded are excellent measures; but these laws have not been adequate or uniform. Something more must be done. In countries that have given careful study to causes of accidents and the best methods of prevention, the annual fatal-accident rates have been reduced by two-thirds.

Royal Meeker, Commissioner of Labor Statistics, says:

> Save in mines and transportation we have in the United States few records to show the extent of the hazard of industry. In these two industries, and in the small amount of imperfect data which we have of other employments, we know enough to confirm the general impression that American industry pays an awful toll in death and suffering for the accidents of employment.

It has been proven that a large percentage of the accidents might have been prevented. The annual fatal accident rate of employees of coal mines in the United States for the 10-year period ending in 1906 was 3.10 per thousand, as compared to 1.29 in Great Britain, 1.35 in Austria, 1.81 in France, and 2.13 in Prussia during the same period.

Twenty-five hundred lives are annually lost by accident in the coal mines of the United States. A reduction of the rate in the United States to that of Great Britain would result in approximately saving 915 of the 2,500 lives. There has been no change for the better since 1906. During 1911 in the metal mines of

the United States 695 lives were lost, which was a rate of 4.19 per thousand men employed, as compared with 1.39 for Germany and 1.64 for Great Britain in the same industry.

Three thousand six hundred and fifty-three American railway employees in 1912 lost their lives in the accidents of their employment and the fatal accident rate was 3.02 per thousand, while the British rate for the five-year period from 1907 to 1912 was 0.65 per thousand, and the German rate for the same five years was 1.13 per thousand.

It has been estimated by the Bureau of Labor Statistics that at least 18,000 persons annually lose their lives as the result of employment accidents. These figures that I have given refer only to the accidents resulting fatally and comprise only a very small proportion of the entire number of accidents. Many an accident which does not result in death carries with it great suffering, impairment of earning capacity, and frequently absolute dependence. It has been estimated that there are annually 2,000,000 accidents in this country which do not result in death. The foreign countries which I have referred to have all given much attention to accident prevention. They have established governmental agencies which carry on organized safety work, with the result that the number of fatal accidents in those countries is about one-third the number in the United States in similar occupations.

Of the governmental functions of protecting the person and property, the latter has, I fear, been paramount in the past. The bill under consideration emphasizes the importance of the protection of the person.

Our country has had a wonderful history. Its annals are those of progress. Among the chief characteristics of our progress have been the perfection of system and the attainment of speed. Labor and time saving devices have increased manyfold the capacity of the individual for producing results. Distant portions of the world have been brought into almost instantaneous communication by wire and wireless. The time consumed in journeying from one place to another has been reduced to a period that would have seemed incredible a few years ago. The acquisition of property and the attainment of speed are more and more giving way to the protection of the individual and the attainment of security.

The slogan once was "Speed at whatever cost." Now it is "Safety first." And where, Mr. Chairman, is a more fitting place for the establishment of the rule of "safety first" than in the centers of industry, where are found the workers who are performing every duty owed by them to society, and in addition thereto adding to the general fund of everything that enters into the growth and advancement of the country?

As a matter of simple economy, conservation is far superior to reparation. Prevention is better than cure. This principle has long been recognized and put into practice when applied to property. The bill under consideration applies this principle to the person. An article of property may be repaired so as to be as good as new. It may even be improved upon. But there is no reparation for the loss of an eye or a limb. Such a loss affects not only the person immediately injured, but directly affects his family and incidentally the whole community.

We may talk about the conservation of natural resources, and the policy of this Government in that direction should have been commenced long before it was. The greatest of all natural resources still remains and will always remain to be conserved. The life, health, and vitality of its people is the most important natural resource that this or any other country possesses.

I am in favor of this bill, because this is its object and purpose, and because I believe that its enactment will go a long way toward the accomplishment of its aims.

The CHAIRMAN. The gentleman had about half a minute to yield back. Does the gentleman from Wisconsin [Mr. STAFFORD] desire to use that time?

Mr. STAFFORD. No.

Mr. LEWIS of Maryland. Mr. Chairman, I yield half a minute to the gentleman from Colorado [Mr. KEATING].

The CHAIRMAN. The gentleman from Colorado [Mr. KEATING] is recognized for half a minute.

Mr. KEATING. Mr. Chairman, I desire to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Colorado [Mr. KEATING] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. LEWIS of Maryland. Mr. Chairman, may I ask how much time I have remaining?

The CHAIRMAN. The gentleman has 10 minutes.

Mr. LEWIS of Maryland. I yield five minutes, Mr. Chairman, to the gentleman from Indiana [Mr. GRAY].

The CHAIRMAN. The gentleman from Indiana [Mr. GRAY] is recognized for five minutes.

Mr. GRAY. Mr. Chairman, I was a member of the Committee on Labor at the time these two bills came before the committee for consideration. I took the position at that time that there was room enough in all the world for all the people, and that consideration should be given by the Committee on Labor to both of these bills. I still adhere to my position taken at that time, and believe that the provisions of both should be retained.

I do not know which one of these Members first entertained the thought in his mind of the provisions of this bill, and we will never be able to determine that now. Death has closed the lips of one Member, who introduced one bill, and the law now closes the lips of the other Member who introduced the other bill. The main provisions of both are embraced in this bill, and there is room enough within these sections for credit for the living and honor for the dead.

Now, Mr. Chairman, the point has been made here that the Public Health Department will object to the Bremner bill provision. That would be perfectly natural. That is what we should expect them to do. If they did not, they would be unlike other men. They would be abnormal human beings.

Mr. MANN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. GRAY. I yield to the gentleman.

Mr. MANN. The objection made by the Public Health Service has nothing whatever to do with the Bremner bill.

Mr. GRAY. I understood the gentleman to say they were objecting to the provisions of section 2 of the bill. I said if that were true, it would be perfectly natural, because every department is jealous of the jurisdiction of every other department. The same is true in this House. Every committee is jealous of the jurisdiction of every other committee; and if the Public Health Department has not objected here at this late hour, I would expect that department to do so before we are through with this bill. If the reference was to section 1, I am glad to be corrected, but the same principle would apply.

Mr. Chairman, I believe that the world was created for all the people and not for a special few. I believe that every human being born into the earth inherits a part of it, which he takes and holds by a natural and superior title, including the right to labor and live upon the earth and to enjoy the fruits of his labor.

There was a time when the laboring man was more independent in the enjoyment of this right to labor to live upon the earth than he has to-day.

There was a time when he could say to his employer: "If you do not wish my services, I will go back to the crossroads, to the village workshop, and I will make a plow, a wagon, or a carriage. I will employ myself and I will sell my product for my wages." But this condition of the laboring man has passed and gone. A great industrial revolution has brought a change and a new order of things in manufacture and production. The machinery has taken the place of the human hand and supplanted the plane, the saw, and the anvil. The laboring man has lost his individuality as a producing factor and he has become a dependent part of a great machine.

Under this industrial condition the laboring man can no longer master an independent trade or become proficient in even one single line. He must specialize within certain narrow limits to meet the requirements of production. He can perform only one process of many in the manufacture of a single article, and he can not do this with his hands alone but only while working upon a machine that is owned and controlled by another. He may make the spoke of a wheel or a hub or an axletree, but he can not complete a wagon or finish a product for sale upon the market. If he has learned to make the spoke of a wheel, he knows nothing of the machine or the process to mold the hub or to form the rim or to shape the axletree upon which the wheel will turn.

He has lost his power to employ himself and to live independent by the labor of his hands alone. He can only work when others choose to employ him and when they will consent for him to work upon their machines. When he asks for employment, the answer that comes back tells him whether or not he can labor to live upon the earth, and if the answer is no, he has nowhere to turn. The crossroads workshop is closed against him forever.

If this condition of the laboring man is not complete to-day, it is only a question of a brief period when it will have been fully consummated.

We can all calmly and deliberately philosophize as to what will become of the horse when the automobile has taken his place, but the problem is before us as to what will become of the

laboring man and his family when the automatic machine has taken the place of his labor if we can not make wages keep pace with production and in a ratio to meet the necessities of life.

The strike for a living wage under these new industrial conditions is answered by the lockout, and we are already at war over work and wages and the right to labor to live upon the earth.

But the right to labor to live upon the earth includes more than the right to work, more than the right to enjoy the full fruits of that labor. It includes, among other things, the right to labor under safe and sanitary conditions. Under these new conditions and our system of industry, under our relations of employer and employee and capital and labor, capital recognizes no obligation to employ labor nor to provide employment to men, nor to pay men for value produced, nor to provide safe or sanitary working conditions, except when the same will effect economy and the increase of profits.

But these new industrial conditions must be met; the dependency of labor must be compensated for; the duties and obligations of men must be made to conform to these changed relations by new legislation, assuring and safeguarding men in their inheritance of the earth and the fruits of their labor. Governments are the instrumentalities through which the people act collectively and are instituted to secure to themselves the enjoyment of their natural and inherent rights, and it is to this end and to meet these new and changed industrial conditions that the Department of Labor has been created and this bill is being enacted into law. [Applause.]

The CHAIRMAN. The time of the gentleman from Indiana has again expired. The gentleman from Maryland [Mr. LEWIS] is recognized for four minutes.

Mr. LEWIS of Maryland. Mr. Chairman, I yield to the gentleman from Pennsylvania [Mr. FARR].

The CHAIRMAN. The gentleman from Pennsylvania [Mr. FARR] is recognized.

Mr. FARR. Mr. Chairman, I am heartily in favor of this measure, and believe that great good will come from the establishment of this bureau of labor safety in the prevention of accidents, in the lessening of occupational diseases, so serious in numerous trades and industries, and thus be the means of saving many lives. The men who toil in the coal and metal mines suffer a great loss in ill health without counting the awful cost in accidents and deaths that run annually into the thousands. Railroad accidents appall us. Notwithstanding our advanced position in the use of safety devices on railroads, the injury to body and loss of life are tremendous. Other industries have their sad burden of accidents and fatalities.

It is frequently stated, and statistics seem to make it true, that accidents are proportionately more numerous in American industries than in those of foreign countries. We want to know why this is so, and every effort should be made to discover the reason and apply the remedy to lessen accidents and the resulting injuries and deaths.

Jane Addams, the well-known social worker, in a recent statement says:

> Six hundred persons die each year in this country from preventable diseases and accidents, over many of which the Federal Government has large control.

In the great mining and industrial district which I have the honor to represent there has begun an active cooperative movement on the part of officials and employees to reduce the number of accidents. Indeed, all over the country there is evidence of an organized safety work that will surely lessen accidents and improve sanitary conditions. The passage of the measure now under consideration will prove an incentive to this movement, aside from the directly beneficial results that will follow from the Government's systematic activities in this great field of human welfare.

The purpose of this bureau, under the direction of the Secretary of Labor, will be to make general and special investigation and examination of safety plans and devices of all kinds and the need therefor, generally and specially, and also the study of all phases of the subject of vocational diseases, and to make public the results of such investigation, examination, and study from time to time. It shall also be the province and duty of such bureau, under the direction of the Secretary of Labor, to gather, compile, publish, and supply useful information concerning the use of labor safety plans and devices and vocational diseases in the industries of the United States and elsewhere, and that there shall be erected a museum of sufficient size and capacity with grounds thereto annexed, in and upon which shall be exhibited approved devices for the safeguarding of machinery, the protection of employees from injury, the lessening of dangerous conditions which may exist in any industrial enterprise, and the methods of lessening, preventing, and controlling industrial diseases. All such appliances, devices, and arrangements may be exhibited at rest or in motion, as may best serve the purposes of such exhibit. That in addition to the museum hereinbefore referred to and in connection therewith there shall be established a laboratory, wherein may be examined and tested the relative efficiency of types of guards or other devices for the protection of machinery calculated to safeguard the employee or the general public from injury or industrial disease.

This practical interest in the health and safety of the worker in the mine, in the mill and the factory, on the railroad, and in industries in general, he who carries the burden of the race, is a most healthful sign. We can not exist, let alone advance, without his toilsome, dangerous labors, and it is with great pleasure and satisfaction that I take this opportunity to advocate and vote for a measure that will lessen his dangers and increase the healthful conditions surrounding his occupation and defer the sorrows and hardships of accidents and deaths from entering many homes.

Mr. LEWIS of Maryland. Mr. Chairman, I yield now to the gentleman from New Jersey [Mr. WALSH].

The CHAIRMAN. How much time does the gentleman yield?

Mr. WALSH. Just half a minute.

The CHAIRMAN. The gentleman from New Jersey [Mr. WALSH] is recognized.

Mr. WALSH. Mr. Chairman, since Mr. Bremner, who was vitally interested in this bill, is not here, I ask unanimous consent that a statement which he prepared, and which appears in the report of the Committee on Labor on this bill, be extended in the RECORD.

The CHAIRMAN. The gentleman from New Jersey [Mr. WALSH] asks unanimous consent to extend his remarks in the RECORD by publishing the statement referred to. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Following is the statement referred to:

BRIEF SUBMITTED BY HON. ROBERT G. BREMNER, UPON THE SUBJECT OF THE ESTABLISHMENT OF A BUREAU OF INDUSTRIAL SAFETY.

The United States to-day occupies a curious position among industrial nations. Ambitious to be the first in point of output, we are sociologically the last in our methods of production. From the mechanical point of view we claim to lead, but the student of industrial economy is amazed to find that we practically ignore the modern science of conservation in its most important aspect. Trees, minerals, lands, water—these we admit (somewhat tardily) must be safeguarded from further waste. But the Government protection of these 34,000,000 men, women, and children, who constitute our industrial army, upon whose well being rests the whole economic and social fabric of our Commonwealth—this is a phase of conservation practically ignored by our legislators and the public.

THE COST OF HUMAN WASTE.

One reason why the United States has not faced this question in the same practical spirit as other nations is the fact that we rely on immigration to make good our incredible waste of human material. Some figures, based on conservative estimates, help us to realize how serious an economic crime this policy has really proved.

It is estimated that out of 34,000,000 engaged in gainful occupations there are yearly some 38,000 deaths, 2,000,000 accidents (of which 500,000 are serious), and 3,000,000 cases of preventable industrial illness. While the killing of a man is usually only the beginning of the burden which society must assume (witness the 15,000 widows and 45,000 orphans which industry deprives annually of their natural supporters), let us rather accept the business view of the loss entailed by occupational deaths.

Death: The average economic value of a worker in this country (based on his usual earning capacity) is conservatively calculated at $2,000. We therefore squander, every 12 months, the equivalent of $110,200,000, and in addition burden private and public charity with the progressive, financial, and social consequences arising from the dependence of those left destitute or inadequately provided for.

Accident: Two million accidents, of which 500,000 are serious, entail an annual loss of probably $40,000,000 earnings.

Illness: On the German basis of calculation the 3,000,000 cases of preventable industrial illness entail a cost of some $200,000,000. Who pays?

Broadly speaking, the United States ignores an annual wastage of normal earning capacity which from three causes alone exceeds $350,200,000.

In reality, society and industry itself share a far greater loss between them.

But there are other factors crippling our employers of labor and from these obvious causes of waste.

Only America ignores the fact that, for the producer, a man merely negatively well is inferior to a man in perfect health. Efficiency rests on a health basis. In fact, health is the original wealth.

Lowered vitality due to insanitary factory conditions, abnormal physical or mental overstrain due to speeding, depletion of reserve force, the long list of minor ailments ("feeling poorly, but able to work") reduce the value of the majority of employees fully 100 per cent.

Undue fatigue alone, plus resulting intemperance, costs industry close upon $1,000,000,000 a year. Such is the penalty industry must bear from "lack of taking thought."

THE REMEDY, BUREAU OF SAFETY.

"Eliminate waste" is the modern watchword of productive processes. Throwing aside the arguments of humanity and justice, other countries on a business basis have inaugurated campaigns for the elimination of industrial accident, disease, and lowered efficiency by the same scientific methods which they have brought to bear upon the technique of trade.

Education is the key to occupational health and usefulness—the education of the public, the employer, and the worker in sanitary and safe methods.

MUSEUMS OF SAFETY.

In matters affecting the avocations of daily life, theoretical instruction is rarely efficient. "Seeing is believing" for the rank and file. Acting on that principle, Amsterdam, Barcelona, Berlin, Brussels, Budapest, Copenhagen, Dresden, Frankfort on the Main, Gratz, Helsingfors, Munich, Odessa, Paris, St. Petersburg, Stockholm, Wurtzburg, and Zurich have erected museums of safety in which are exhibited, at rest or in motion, every type of dangerous machinery and its scientific guard; systems of exhaust ventilation for the control of dangerous dusts and fumes; types of respirators, masks, goggles, and special suits for dangerous work; devices to lessen excessive glare and heat; and, in brief, safety appliances for every type of mechanical or industrial processes.

These museums, which set a standard for the safety-bureau movement of each country, are also institutes for disseminating industrial knowledge. Lectures are given, literature is printed and circulated, photographs of their contents are published, and every employer or worker of the country is free to apply to them for impartial advice or help in problems affecting accident or disease prevention.

WHY NATIONAL?

Perhaps in no country is the demand for such a national and visible indorsement of the safety movement so needed as in the United States. Practically 50 governments through State departments of labor are attempting "interference" (so regarded) in industrial processes. Practically 50 different standards may exist, be enforced, or neglected, to the disadvantage of allied trades situated in different localities, yet producing goods under nearly identical conditions. The exhaust ventilation "blower" control of one State which may carry off by its excess pull the dusty product, across the border line is allowed to accumulate without criticism. The wire-mesh guards over wheels or belts in one factory, for example, may represent an outlay of thousands of dollars spent in good faith, yet a change of political administration of a local department may change the policy which a predecessor approved and call for new installations of a different type.

To merely cover danger points is but a detail of the question of scientific safeguarding. Some of the most dangerous machines are employed on piecework. A guard which cuts the employees' earning capacity in halves will be "thrown" in every instance. The stamping-machine guard, which calls for three extra motions on a level with the worker's head, is an example of inexpert precautions which defeat their object.

Moreover, there is a certain reverence for Federal experts, a recognition that they are somewhat removed from the field of local trade jealousies and rivalries, which is a powerful aid in obtaining recognition for the standards. They set in the protection of extra hazardous mechanisms. They do not suggest local "rake-offs" for the changes advocated in Federal reports, publications, and safety literature.

No one questions the need for small museums of safety in every large industrial center, but foreign experience proves that such branches spring from the deep roots of the national institute. The local boards of trade which will devote a room to charts, photographs, and models from the National Museum at Washington will in the future make possible a more scientific education of the employer than almost any State department of labor is qualified to give to-day.

Human conservation is an expert science, calling for the leadership of a few thoroughly trained authorities. From every viewpoint of efficiency our efforts should be concentrated on procuring, through national appropriation, what must otherwise be cramped and rendered limited by State curtailments.

Finally, the public advertisement, to use a crude phrase of a national museum. The fact that any worker or employer can appeal to it for instruction or advice gives a guaranty of efficiency of administration and progressive methods which assures to the proposed bureau of safety, of which it is the demonstration, a timeliness otherwise prone to lapse into departmental delay. And while its primary object is to lessen human suffering, its crusade for safe and sane manufacturing methods will be of inestimable practical advantage in standardizing such methods throughout our whole industrial system.

THE LABORATORY OF HYGIENE.

Valuable as has been the work of the foreign museum of safety, the Institutes of Industrial Hygiene in Vienna, Paris, and Milan are demonstrating yet wider fields for the student of human conservation.

The subtler dangers to the worker involved in exposure to dust and fume, to overstrain, overspeeding, nerve exhaustion, occupational intemperance, and the thousand signals to insanitary conditions are here studied and their remedies weighed and approved. Milan devotes three large four-story buildings, equipped with the latest apparatus in laboratories, hospital wards, lecture rooms, and libraries to the elimination of those diseases peculiar to employments. Twelve scientists cooperate with the director in the investigation of trade poisonings, such as those of lead, mercury, and arsenic. The toxin of fatigue, of muscular effort, and nerve depletion are proved by experiments upon living animals. Every trade process offering risk to health is investigated with a view to scientific alterations which shall protect the worker without undue hardship to the employer.

All the information acquired by the laboratory is free to those who seek its aid. And in this case, as in that of the museum, the fact that it is national makes it a force throughout the land.

No State department is to-day fitted to carry out, although each can help to promulgate, so extensive a program. Yet no one familiar with American needs would be content to advocate less than Italy offers to her workers.

Great as was her need, ours is imperatively greater. Above all, we need the authority which invests a Government investigation of trade conditions to free the minds of our industrial employers from the too common fear of local departments and their betrayal of secret processes and technical formulas. To a Federal investigator the average owner, who would gladly bar his door to the Department of Labor, throws open the book of his manufacturing experiences. A national clearing house for industrial welfare experiments will save years of effort and millions of dollars to those who are to-day ignorant of what has already been accomplished along those lines.

This is no untried experiment which is advocated by the Bremner bill. We shall but duplicate the experience of those countries which have already proved the value of an effort toward human conservation; an effort which is dictated both by financial wisdom and by the dictates of humanity and justice.

The first organization of this kind was founded by a great captain of industry, Engel Dulfus, of Mulhouse, in 1867, and since that time innumerable similar societies have sprung up. There exist also museums similar to the one which is the subject of this article. Among the principal of these may be cited that at Vienna (1890), at Amsterdam (1891), at Berlin (Charlottenburg, 1903). This last one has cost about 1,000,000 marks and possesses an annual budget of 40,000 marks. The new Parisian museum was founded by the "Association des industriels de France contre les accidents dutravail," established in 1883 by Emil Muller, and was organized entirely by private gifts.

Its purpose, inspired by philanthropy, is to indicate to the present patrons the precautions to be taken, the devices and the means to employ, for protecting their workmen against risks of all sorts—unhealthful atmosphere, dangers from machines and transmission devices, harmful dusts, high electric voltages, poisoning, etc.

In the hall situated at the other end of the museum we find a great assortment of hoisting devices, hoisting blocks, movable ladders, climbing harness for linemen, safety devices for roofers, various models of elevators, and protective stair cagings.

The climbing harness of Ravasse-Luilier is intended to prevent falls of linemen, carpenters, roofers, painters, ironworkers, etc.

While the most fastidious precaution, the most vigilant attention, and the most perfect industrial hygiene all act to reduce to a minimum the number and seriousness of accidents, they can not pretend completely to suppress them, since by definition the accident is unforeseen.

Although many interesting attempts to improve conditions and to promote more cordial relations between master and man have been made with fair success, the safeguarding of life and limb has not been perfected to any appreciable extent. Ask a manufacturer if his circular saws, punches, and presses are protected by safety devices, and usually he replies, "No," or if they are, "My men won't use them."

As Dr. Josiah Strong points out, economic considerations are wholly secondary. This is, first of all, a question of conscience. Needless slaughter is criminal slaughter.

"Industrial homicide is being committed every hour of the day, and the employer who does not provide all practicable means for safeguarding life and limb is particeps criminis.

"We are told that ancient Athens was forced every nine years to pay a tribute of 7 youths and 7 maidens to be devoured by the Cretan Minotaur, until Theseus slew the monster. We have here in the United States a monster named Indifference, to which we are making human sacrifice not at the rate of 14 every nine years, but at the rate of a dozen a day, besides many scores who escape with their lives but are maimed or mangled.

"The establishment of a museum of security for America would mean the saving of thousands of lives, and, through the prevention of accidents, hundreds of thousands of workmen would be saved from disability, and thus from becoming a charge on their families or dependent on the State. Such a museum would also lessen liability for damage suits growing out of accidents." (William H. Tolman, director of the American Institute of Social Service, Century Magazine, May–October, 1906.)

John B. Andrews, in the Survey, that great and good publication, last month said:

"But in the United States we need an institution that will correlate the experience of our scattered little group of hygienists and enable more medical men to direct their attention to the problems of industrial hygiene. We need for the purpose a special laboratory and hospital to accelerate progress in the study of the causes and prevention of industrial diseases. With such an institution, phosphorus poisoning would quickly disappear from our match industry as a matter of scientific sense. The long list of poisons affecting scores of different occupations would gradually be shortened. Conditions which lower vitality, lessen efficiency, and invite disease would quickly be improved, to the advantage of manufacturer and wage earner. The necessary research would be carried on by scientists of unquestioned ability and singleness of purpose, and in a manner which would enlist from all the heartiest cooperation.

"For the past two years the American Association for Labor Legislation has had an able commission of industrial hygiene, and last June called the first American Congress on Industrial Diseases. As an outgrowth of that congress a committee of experts has submitted to the President a memorial calling attention to the urgent need of a national investigation. The most valuable aid in such an inquiry would be an American clinic for the study and prevention of industrial diseases."

Mr. LEWIS of Maryland. Mr. Chairman, I think we can now proceed to the consideration of the bill under the five-minute rule.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

*Be it enacted, etc.*, That there is hereby created in the Department of Labor a bureau of labor safety. There shall be a commissioner of labor safety, who shall be the head of said bureau, to be appointed by the President, and who shall receive a salary of $5,000 per annum. There shall also be in the said bureau a chief clerk and such experts, special agents, clerks, and other employees as may be authorized from time to time by law. It shall be the province and duty of such bureau, under the direction of the Secretary of Labor, to make general and special investigation and examination of labor safety plans and devices of all kinds, and the need therefor, generally and specially, and also the study of all phases of the subject of vocational diseases, and to make public the results of such investigation, examination, and study from time to time. It shall also be the province and duty of such bureau, under the direction of the Secretary of Labor, to gather, compile, publish, and supply useful information concerning the use of labor safety plans and devices and vocational diseases in the industries of the United States and elsewhere.

Mr. LEWIS of Maryland. Mr. Chairman, I desire to offer two amendments which I send to the Clerk's desk, and ask that they be reported.

The CHAIRMAN. The gentleman from Maryland offers an amendment which the Clerk will report.

The clerk read as follows:

Page 2, line 2, strike out after the words "study of" the words "all phases of the subject," and insert in lieu thereof the words "devices and methods for the prevention."

Mr. MADDEN. Mr. Chairman, I move to amend by adding to the words to be stricken out the words "vocational diseases."

Mr. LEWIS of Maryland. If the gentleman will desist until both amendments are read, he will then see the completed scheme.

Mr. MADDEN. I want to add an amendment that will strike out the words "vocational diseases."

Mr. LEWIS of Maryland. If the gentleman will suspend until both amendments are read, then he will see what we intend to do.

Mr. MADDEN. I suspend for a moment, at the request of the gentleman from Maryland.

Mr. LEWIS of Maryland. I ask the Clerk to read the second amendment.

The CHAIRMAN. For the information of the House, the other one not being disposed of?

Mr. LEWIS of Maryland. Yes.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Page 2, line 5, after the word "time," at the end of the sentence, insert "it shall be the duty of the Public Health Service in its investigation of vocational diseases and their causes to cooperate with such bureau upon request of the Secretary of Labor."

Mr. LEWIS of Maryland. Mr. Chairman, these two amendments, taken collectively, operate to bring the bill within the view expressed that there should be no conflict between the functions to be exercised by the Department of Labor and by the Bureau of Health; and the studies of vocational diseases will be made upon request of the Secretary of Labor by the Bureau of Health. Those two amendments are intended to make that thought effective in the bill.

Mr. MADDEN. I am afraid that the first amendment offered by the gentleman did not quite go as far as his statement goes, did it?

Mr. LEWIS of Maryland. It confines the operations of the Secretary of Labor to methods of prevention of vocational diseases.

Mr. SHERLEY. I suggest that if the gentleman from Maryland will have the Clerk read the language as proposed to be amended, it will perhaps clarify the meaning.

Mr. MADDEN. Yes.

The CHAIRMAN. If there be no objection, that will be done.

Mr. SHERLEY. I suggest that the Clerk begin with the word "and," in line 2, page 2.

The Clerk read as follows:

And also the study of devices and methods for the prevention of vocational diseases, and to make public the results of such investigation, examination, and study from time to time. It shall be the duty of the Public Health Service, in its investigation of vocational diseases and their causes, to cooperate with such bureau upon the request of the Secretary of Labor.

Mr. WILLIS. Mr. Chairman, I desire to be heard on the amendment. As I understand the purpose of this amendment, it is simply to correlate and coordinate the work of this proposed bureau with the work of the Bureau of Public Health. I see no objection to that amendment and am heartily in favor of it.

While I am on my feet I want to say with reference to this bill that it seems to me it is in entire harmony with the tendency, and the proper tendency, of the age in which we live to legislate along lines of humanitarianism and justice for man as man. As I have been sitting here, I have been thinking of some of the laws that have been passed in recent years that go directly to the benefit of the men who toil. Here are some of these laws, not all of them of course: The various safety-appliance laws, laws for the regulation of the hours of labor, the legislation to secure better sanitary conditions, the establishment of the Bureau of Mines, the establishment of the Children's Bureau, the establishment of the Department of Labor, and many other laws that have for their purpose direct benefit to the men who labor.

It seems to me, Mr. Chairman, that this is an entirely appropriate kind of legislation. I am in hearty sympathy with it, and have supported all of it that has come before this House while I have been a Member, and I shall support this bill and all similar measures in the interest of the workingmen of this country.

Some question has been raised here as to the desirability of the second section of this bill. Personally I do not deem that section of as much importance as the first section of the bill; yet I see no valid objection to it and shall support it. My attention has been called to what has been accomplished in other countries by such a museum as is contemplated in this section. In the report which was alluded to by the gentleman from New Jersey [Mr. WALSH], our late colleague, Mr. Bremner, made reference to similar museums in Europe. As will be seen by referring to the report of the committee, reference is made to the fact that similar museums have been established in Amsterdam, Barcelona, Berlin, Brussels, Budapest, Copenhagen, Dresden, Frankfort on the Main, Gratz, Helsingfors, Munich, Odessa, Paris, St. Petersburg, Stockholm, Wurzburg, and Zurich; that in these museums various safety appliances have been collected together; and that from time to time instructive lectures are given there upon this line of work.

In his very able brief on this subject, our late colleague, Hon. Robert G. Bremner, says:

MUSEUMS OF SAFETY.

In matters affecting the avocations of daily life, theoretical instruction is rarely efficient. "Seeing is believing" for the rank and file. Acting on that principle, Amsterdam, Barcelona, Berlin, Brussels, Budapest, Copenhagen, Dresden, Frankfort on the Main, Gratz, Helsingfors, Munich, Odessa, Paris, St. Petersburg, Stockholm, Wurzburg, and Zurich have erected museums of safety in which are exhibited, at rest or in motion, every type of dangerous machinery and its scientific guard; systems of exhaust ventilation for the control of dangerous dusts and fumes; types of respirators, masks, goggles, and special suits for dangerous work; devices to lessen excessive glare and heat; and, in brief, safety appliances for every type of mechanical or industrial processes.

These museums, which set a standard for the safety-bureau movement of each country, are also institutes for disseminating industrial knowledge. Lectures are given, literature is printed and circulated, photographs of their contents are published, and every employer or worker of the country is free to apply to them for impartial advice or help in problems affecting accidents or disease prevention.

* * * * * * *

No one questions the need for small museums of safety in every large industrial center, but foreign experience proves that such branches spring from the deep roots of the national institute. The local boards of trade, which will devote a room to charts, photographs, and models from the National Museum at Washington, will in the future make possible a more scientific education of the employer than almost any State department of labor is qualified to give to-day.

Human conservation is an expert science, calling for the leadership of a few thoroughly trained authorities. From every viewpoint of efficiency our efforts should be concentrated on procuring, through national appropriation, what must otherwise be cramped and rendered limited by State curtailments.

Finally, the public advertisement, to use a crude phrase, of a national museum. The fact that any worker or employer can appeal to it for instruction or advice gives a guaranty of efficiency of administration and progressive methods which assures to the proposed bureau of safety, of which it is the demonstration, a timeliness otherwise prone to lapse into departmental delay. And while its primary object is to lessen human suffering, its crusade for safe and sane manufacturing methods will be of inestimable practical advantage in standardizing such methods and throughout our whole industrial system.

These are good and sufficient reasons, which appeal to the minds and hearts of all of us.

Consequently it seems to me that that second section is wise legislation, though I deem the first section, prepared by the gentleman from Illinois [Mr. MANN], of the most vital importance.

I have been struck by the statements made here in the report of the committee relative to the number of fatal accidents occurring in this country in the various industries. I have made a little computation, and, as I have figured it, according to the facts given here in the report of the committee, approximately 100 men per day are killed in the various industries of this country. It seems to me that those figures are astounding and staggering. Think of it. A hundred men a day are killed through accidents in the various great industries of this country. It seems to me that legislation which undertakes to reduce the number of those accidents is desirable and wise and statesmanlike legislation.

I call attention further to the rather discouraging presentation that is made here, comparing the rate of loss of life in this country with that in certain other countries. On page 6 of the report of the committee, attention is called to the fact that in the coal mines of this country for a certain period the average annual loss per 1,000 men was 3.1; in Great Britain it was only 1.29; in Austria, 1.35; in France, 1.81; and in Prussia, 2.13. In other words, we have the highest percentage of loss of life in the coal mines of this country to be found in any of the great coal-mining countries of the world.

Then, in the metal mines, it is stated that some 695 men were killed in the year for which the computation was made—at the rate of 4.19 per 1,000 men employed. The rate in the same industry in Germany was 1.39; in Great Britain, 1.64; in Spain, 2.25; in France, 3.16; and in the Transvaal, 4.20. That is the only one in which there was a greater percentage of loss than there was in this country.

These facts would indicate that in the United States the percentage of industrial accidents is much greater than in certain other great nations in similar industries. This is not as it should be; the American workingman is entitled to work under the most favorable conditions as to sanitation and safety, and it is the duty of the Congress to surround him by every possible statutory protection for health, life, and limb. Conservation should be applied not only to soils and water power and forests and minerals, but also to that most important of all resources, our boys and girls and men and women. This frightful waste,

economically indefensible, must stop; every sense of humanitarian feeling cries out for abatement of this shocking evil of loss of life and limb; let us protect our workingmen so far as in our power lies.

I am strongly in favor of this bill and hope it will be passed.

[Mr. WILLIS was given leave to extend his remarks in the RECORD].

Under the leave granted I desire to add a portion of the memorandum prepared by the Commissioner of Labor Statistics at the request of the gentleman from Illinois [Mr. MANN]. This memorandum contains some interesting and important facts, and is in part as follows:

In 1908 Frederick L. Hoffman, the well-known statistician, showed in Bulletin 78 of the United States Bureau of Labor Statistics that the annual fatal-accident rate of employees in coal mines in the United States for the 10-year period ending in 1906 was 3.10 per 1,000, as compared with 1.29 in Great Britain, 1.35 in Austria, 1.81 in France, and 2.13 in Prussia during the same period. A reduction of the rate in the United States from 3.10 to the level of Great Britain, 1.29, would, it was estimated, result in an annual saving of 915 lives. Since that date the situation has not changed for the better, for the American record of 1909, 1910, 1911, and 1912 showed rates of 4, 3.92, 3.73, and 3.27, while the British rate has risen slightly to 1.36 per 1,000 in the five-year period 1908 to 1912. Approximately 2,500 lives are annually lost by accidents in the coal mines of the United States.

Even higher than the rate among the coal-mine employees is that among employees of the metal mines. Thus in the calendar year 1911 in the metal mines of the United States 695 men were killed, representing a rate of 4.19 per 1,000 men employed. The fatality rates due to accidents in metal mines in a number of foreign countries were as follows: Germany, 1.39; Great Britain, 1.64; Spain, 2.25; France, 3.16; Transvaal, 4.29.

The fatal-accident rate in quarries in the United States is much lower than that in either coal or metal mines. In the calendar year 1911, 188 men were killed in quarry accidents, the death rate being 1.69 per 1,000 men employed. In Great Britain the death rate among quarry workmen was 1.08 per 1,000; in Germany in 1911, 1.48 per 1,000.

Fully as striking is the excessive fatal-accident rate among employees of American railways. Thus, the American rate for the 10-year period 1897 to 1906 was 2.50 per 1,000, against a rate of 0.98 per 1,000 among employees of German railways. In 1912, 3,635 American railway employees lost their lives in the accidents of their employment, and the American fatal-accident rate was 3.02 per 1,000, while the British rate for the 5-year period 1908 to 1912 was 0.65 per 1,000, and the German rate for the 5-year period 1907 to 1911 was 1.13 per 1,000. Even these figures certainly understate the real situation among railway employees, for according to the American practice only accidents to persons resulting in immediate death or death within 24 hours from the time of the accident are regarded as fatally injured, while the foreign practice takes account of the outcome of the injury.

In other American industries records of industrial accidents, even approximately complete, are lacking, but it is generally accepted as true that in most industries, except where organized safety work has already been done, the accident rate is considerably in excess of accident rates in corresponding employments in European countries.

In the bulletin of the Bureau of Labor Statistics already referred to an attempt has been made to estimate the annual loss of life in American industry. Upon the basis of the census reports within the registration area of the United States it was estimated that for the entire country the actual number of fatal accidents annually was between 30,000 and 35,000, one-half of which were the immediate result of employment. The nonfatal accidents of industry are, of course, far more numerous than the fatalities, and while many are not serious in permanent effect, even the minor ones impose a heavy burden of suffering, and many of the more serious ones involve permanent disability and loss of earning power, with frequently absolute dependency. Corresponding with the estimate of fatal accidents above given, it was estimated that there were annually 2,000,000 nonfatal accidents in the country.

The CHAIRMAN. The question is on the first amendment offered by the gentleman from Maryland.

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The question now is on the second amendment offered by the gentleman from Maryland.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

SEC. 2. That there shall be erected a museum of sufficient size and capacity with grounds thereto annexed, in and upon which shall be exhibited approved devices for the safeguarding of machinery, the protection of employees from injury, the lessening of dangerous conditions which may exist in any industrial enterprise, and the methods of lessening, preventing, and controlling industrial diseases. All such appliances, devices, and arrangements may be exhibited at rest or in motion, as may best serve the purposes of such exhibit. That in addition to the museum hereinbefore referred to and in connection therewith there shall be established a laboratory, wherein may be examined and tested the relative efficiency of types of guards or other devices for the protection of machinery calculated to safeguard the employee or the general public from injury or industrial disease.

Mr. MADDEN. Mr. Chairman, I move to strike out the section.

Mr. LEWIS of Maryland. Mr. Chairman, in reference to that motion I wish to be heard briefly. So far as we have information of the different countries of the world, the national institution for safeguarding life and limb is usually accompanied by museums, either of private or public establishments, where the proper information and device may be deposited, and to which those concerned may go for an exemplification of the devices themselves.

In the German Empire, for example, of which we have definite information, the museum exists, and is the subject of national ownership. The investment is something less than $300,000, and it is stated in the report of the Secretary of Labor, which I here insert, that over 26,000 visitors attend that museum in a year.

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
*Washington, March 10, 1914.*

Hon. DAVID J. LEWIS,
*Chairman Committee on Labor,*
*House of Representatives, Washington, D. C.*

MY DEAR MR. LEWIS: In reference to the cost of construction and maintenance of the European museums of safety, in so far as such information might have a bearing on the Bureau of Labor safety bill, H. R. 10735, now pending, I would like to submit the following:

The foreign museum which most nearly compares with that proposed by section 2 of the bill H. R. 10735 is the German Imperial museum, known as the Permanent Workmen's Welfare Exhibition (Ständige Ausstellung für Arbeiterwohlfahrt), located in Charlottenburg, a suburb of Berlin.

An appropriation to purchase a building site and begin the erection of a building for this museum was passed in the budget of the Imperial department in 1900. The exhibition was opened June 18, 1903. The grounds, amounting to 1.85 acres, cost $113,764; but, of course, much of this area is ornamental and not actually used for building purposes. The buildings as they now stand cost $177,191, making a total cost for land and buildings of $290,955. They consist of an administration building, an exhibition hall, and a building connecting these two. The upper floor of the latter structure forms an auditorium with a seating capacity of 200 persons. This is used for lecture purposes. The exhibition hall has a ground floor space of 27,244 square feet, and is provided with a gallery having 13,057 square feet; both floors are available for exhibition purposes and give a combined floor space of 40,301 square feet.

The annual cost of administration is at present $9,520. The administrative force consists of a general director, a technical director (these two ex officio), three expert assistants, and four workmen, a total of nine.

The total number of visitors to the museum in 1911 was 26,253. The institution has a system of special day exhibits for persons interested in specific industries or trades; and these bodies of visitors notify the institution in advance and preparation is made to show for their benefit the most up-to-date safety devices along the line indicated. There were 418 of these previously announced group visitations in 1911, comprising 14,700 persons. The institution at Charlottenburg is maintained wholly at Imperial expense, and charges no fee to exhibitors or others.

The Institute for Industrial Hygiene at Frankfort is a private foundation supported by guaranteed subscriptions. Its cost of administration for 1912 was $10,961.

The Paris Museum for the Prevention of Industrial Accidents and of Industrial Hygiene is maintained by a combination of State aid and membership fees. An establishment employing 10 persons pays the minimum annual fee of $1.93; the maximum fee of $57 is paid by firms employing 1,000 or more persons. The State or city furnishes the institution rent free. The floor space so provided equals 7,744 square feet. The Industrial Employers' Association report shows that they contributed $772 per annum to the maintenance of this museum. Whether or not this, added to free rent, is the total cost of maintenance, I am not able to ascertain.

A similar museum maintained by the city of Barcelona, Spain, cost $975 for 1908, and the appropriation was increased to $1,448 for 1909.

You will note that these figures relate only to the museum feature of house bill 10735, i. e., to section 2 of that bill.

In addition to the above, I have attached hereto such statements of methods, regulations, etc., as it has been possible to bring together respecting the conduct of these museums of safety appliances in Germany, France, Italy, and Spain. Some of this material seems important as throwing light upon scope, purpose, and method, and you may desire to incorporate in the record some of these details.

I am, faithfully, yours,

ETHELBERT STEWART,
*Chief Statistician.*

Mr. MADDEN. Will the gentleman yield?

Mr. LEWIS of Maryland. I will.

Mr. MADDEN. Is the gentleman, as chairman of the committee that reports this bill, willing to say to the House that he or his committee has given any investigation to the cost or utility of such an institution as this section proposes to establish?

Mr. LEWIS of Maryland. Not as to the cost, but as to the utility, decidedly yes. It was the unanimous opinion of the committee that the museum would prove of the highest efficacy in the discharge of the functions to be developed by this bill.

Mr. MADDEN. Is the gentleman prepared to say to the House what, in his judgment, such a museum will cost to construct and what will be the annual expense of maintenance?

Mr. LEWIS of Maryland. The gentleman from Illinois knows that I would be the poorest judge of a subject of that sort, and I therefore make no attempt at an answer. But, with respect to it, we have agencies that have the confidence of this House as to their judgment and capacity. One of them is the Committee on Appropriations. It would have to pass favorably upon any appropriation or any scheme of construction that may be recommended for this purpose. Before the Committee on Appropriations can have to do with it, the subject matter must have been worked out by the Secretary of Labor and his associates with a view to the proper recommendations.

Mr. MADDEN. The gentleman from Maryland must know that if the law authorizes the construction of a building without any limitations on its cost, that the Committee on Appropriations will have nothing whatever to do except to appropriate

any sum of money that may be recommended by the department having jurisdiction of the subject.

Mr. LEWIS of Maryland. I do not know that.

Mr. MADDEN. It is a fact.

Mr. LEWIS of Maryland. I do not understand it to be a fact.

Mr. MADDEN. This leaves the cost of the enterprise unlimited.

Mr. LEWIS of Maryland. The Appropriations Committee of the House is to pass upon it and they finally recommend the appropriation.

Mr. MADDEN. The Committee on Appropriations has no power whatever to say what the limit of cost shall be. The legislative act authorizing the appropriation is the only means by which the cost can be limited.

Mr. LEWIS of Maryland. I think that position is surely subject to challenge.

Mr. MADDEN. I am willing it should be challenged, for I think it can not be successfully challenged.

Mr. LEWIS of Maryland. The gentleman does not mean to say that the Secretary of Labor could come here with a recommendation for a building costing a million dollars and that the Appropriation Committee would have to appropriate a million dollars?

Mr. MADDEN. I certainly do.

Mr. LEWIS of Maryland. I think that is information to the House as well as to myself. However that may be, the institution has been found essential by the nations of the world.

The CHAIRMAN. The time of the gentleman from Maryland has expired.

Mr. LEWIS of Maryland. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. The gentleman from Maryland asks that his time be extended 5 minutes. Is there objection?

There was no objection.

Mr. WILLIS. Will the gentleman yield?

Mr. LEWIS of Maryland. I will.

Mr. WILLIS. The gentleman spoke about the great museum established in Germany; does he know whether in that museum they have the actual devices for exhibition, or do they have simply models as they do in the Patent Office?

Mr. LEWIS of Maryland. I can not answer that question. That is a point to be worked out. I suggest that the House primarily could not well resolve itself into such an agency as would work out such building matters in detail in advance. The House can settle the principle, namely, whether this function should have what has proved to be a necessary attendant abroad, a museum reasonably adapted for the exhibition of devices, and to which the people may go.

Let me recur to a statement made earlier in the discussion. The United States is in the sorest need of the most efficacious means of preventing accidents, because the accident ratios here run from two to five times as high as in other countries. Shall we be denied the agency that is found necessary, and freely granted, in other countries, where the casualty ratios are so much less than in the United States? I insist that this section is an essential feature of our duty to this subject, and I hope the motion of the gentleman from Illinois to strike out the section will not prevail.

Mr. GOULDEN. Will the gentleman from Maryland yield?

Mr. LEWIS of Maryland. Yes.

Mr. GOULDEN. The gentleman spoke about the great national institution in Germany costing $300,000.

Mr. LEWIS of Maryland. A little less.

Mr. GOULDEN. Has the gentleman any idea what it costs to maintain it?

Mr LEWIS of Maryland. A little less than $10,000 a year.

Mr. GOULDEN. Those are some of the figures that we all want.

Mr. McKENZIE. Is it understood that the building provided for in this section shall be erected in the city of Washington?

Mr. LEWIS of Maryland. That is all left to future judgment and investigation.

Mr. McKENZIE. Of whom?

Mr. LEWIS of Maryland. I presume the Secretary of Labor would be looked to for the recommendation.

Mr. McKENZIE. Is the word "shall," in line 11, section 2, to be construed imperatively, or is it possible to construe it as "may"?

Mr. LEWIS of Maryland. Imperatively, as imposing a duty on the Secretary of Labor to look into the matter of such museum and make proper recommendations to Congress for its construction.

Mr. McKENZIE. I would like to ask the chairman if he does not think it would be wise to state where this building should be constructed?

Mr. LEWIS of Maryland. I believe it would be very unwise. I am speaking for myself only.

[Mr. DECKER addressed the committee. See Appendix.]

Mr. STAFFORD. Mr. Chairman, this section mandatorily compels the Secretary of Labor to erect a museum of size and capacity, with adjoining grounds, sufficient to exhibit all kinds of labor-safety devices. Any person who has the barest acquaintance with labor-safety devices connected with railway transportation would know that it would require a building as large as the National Museum to house those devices alone. Any person acquainted with labor-safety devices connected with safeguarding the employees in the manufacture of steel would know that it would require a building larger than the National Museum, and any person acquainted in the slightest way with other industries of much magnitude would know that it would require a mastodonic building to house those devices. The gentleman from Missouri [Mr. DECKER], who just preceded me, says he wants sufficient money efficiently and effectively used for this purpose. I tell him that the money so used would be wastefully expended and that the same sums could be effectively and efficiently used for the purposes stated in the first section not only as the gentleman states for the investigation of vocational diseases, but for the study, investigation, and report of labor-safety devices. That is the prime purpose of this bill, and, as explained by the author of the bill, the gentleman from Illinois [Mr. MANN], the purpose is to have these experts go out into the field and investigate the well-equipped plants where these devices have been inaugurated and determine what are the best devices for the respective industries.

Would you rather have a million or two million dollars expended in the erection of some building on the Mall containing dead devices which will not be inspected by anyone, just like the models in our Patent Office that are now housed over here in the House Office Building, which no one inspects, or would you rather have that money expended on experts to carry that information broadcast over this country? Washington is not an industrial center. If it were a city like Chicago or Detroit or Philadelphia or the city which I represent in part, perhaps there might be some argument in that, but even then the very purpose of this measure is to give life to the information that is obtained by these experts of the bureau rather than to erect a building on the Mall or some other place to advertise some favorite device looking to labor safety.

It is all well and good for you to say that in some foreign countries there are some museums, but the report does not show that any of these museums are exclusively maintained by public support; in fact, the report shows that information is not definite in that particular; and I claim the conditions there are entirely different. The museums there are located in some industrial center, and it is likely that they are but an adjunct to the principal industries of the locality. The question before the House is, In what manner can the work be most effectively and efficiently done? I contend by sending these experts from the bureau out into the field disseminating the information among the small manufacturing establishments; by our experts inspecting model up-to-date establishments, like those in my State, and obtaining real evidence as to devices, and then disseminating it among the smaller plants rather than merely erecting a museum for some model that will convey no information to the manufacturing public at all and will be more a curiosity shop than a practical demonstrating plant. I hope the section will be stricken out.

Mr. J. I. NOLAN. Mr. Chairman, unfortunately the question of economy enters into this discussion and into the amendment to strike out the second section of this bill. It seems that economy is the order of the day whenever it comes to the conservation of human life, and especially before this House of Representatives. Some of the States of this Union have established industrial accident boards. They have also established bureaus of safety, and some of them have established safety museums. The United States Government has established a Bureau of Standards, as my colleague from Missouri states, and the reason for that is to give the States of this Union an opportunity to find out the results of the investigations that that bureau undertakes in reference to weights and measures and various other functions which they are called upon to perform according to law.

Mr. WILLIS. Will the gentleman yield for a question?

Mr. J. I. NOLAN. Yes.

Mr. WILLIS. The gentleman says several of the States had already established these museums. I am very much interested to know which ones.

Mr. J. I. NOLAN. Well, I have in mind particularly the State of California; and I had a conversation last October with

one of the members of the industrial accident board out there and he took me in any showed me two rooms set apart for museum purposes, and told me all the space of the rooms had been taken by manufacturers of safety devices who offered to install at their own expense their own devices, provided the industrial accident board thought they were of sufficient value to be installed and entitled to consideration as safety devices.

Mr. WILLIS. Right there will the gentleman state whether these devices which were installed were actual devices or models?

Mr. J. I. NOLAN. They were to be actual devices, either at rest or in operation.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. J. I. NOLAN. Yes.

Mr. MADDEN. Now, the gentleman is getting to the point where there is some sense in the question. If the National Government is going to erect a building in which to have a museum, and give people opportunity to exhibit their wares at their own expense, that is another thing, but if the Government is going to run the museum at its own expense, for the exhibition of the wares of private individuals who have them on sale, and the Government is simply going to act as an advertising museum——

Mr. J. I. NOLAN. I have only five minutes.

Mr. MADDEN (continuing). For the sale of commodities; if it is intended to do that, then this ought not to pass.

Mr. J. I. NOLAN. I will say, Mr. Chairman, it is up to the department, and especially it is the intent of this law to give the Secretary of Labor the right to say under what conditions these devices should be exhibited at rest or in motion. He also has the right to determine whether the device of a manufacturer is of value in the saving of life and prevention of accidents, and will not let devices go on exhibition unless they have merit.

Mr. MADDEN. This law does not do it.

Mr. J. I. NOLAN. Now, it seems unfortunate that whenever it comes to a proposition that is going to conserve human life and limb that the question of how much space this museum is going to take or the place in which the museum might be built also enters into it as a reason for not establishing it. Now, the committee gave this matter their consideration. First of all, we were under the impression the power to establish this museum is vested in the Secretary of Labor under section 1 of the original Mann bill. Mr. MANN, speaking before the committee, said that this first section was drawn and was in line with the law which created the Department of Agriculture.

Mr. MANN. Several bureaus, including the Public Health Service.

Mr. J. I. NOLAN. Well, several bureaus; but the second section was added out of respect to our late colleague from New Jersey, Mr. Robert Bremner. We were under the impression that the power was lodged in the first section, but I believe that this museum will be of great value to the various inspectors and various officials of the different States of this Union interested in labor safety.

The officials of the different States of this Union, interested in labor safety, interested in conserving human life, would come to Washington as well as they could go to Chicago or some other place, and get the benefit of this exhibition of these various devices at rest and in motion.

Mr. STAFFORD. Will the gentleman yield?

Mr. J. I. NOLAN. I will.

Mr. STAFFORD. Can not they get the benefit of it in actual operation in some private plants to-day?

Mr. J. I. NOLAN. I believe if they had to go down to New England, to the plant of some manufacturer of a device down there, or to South Carolina, or to some other State to visit the manufacturer of some device, they would be put to an unnecessary expense. If we can spend millions of dollars for the Department of Agriculture, the Bureau of Standards, and other bureaus in connection with this Government, we ought to spend some money for the conservation of human life, and we ought to make it as convenient as possible for the States of this Union to get the information, and not have it in pamphlet form or by the use of stereopticon lectures, but by practical demonstrations of these devices in motion and at rest.

Mr. Chairman, I hope that the amendment offered by the gentleman from Illinois [Mr. MADDEN] will fail. I believe the moral effect of this second section of the bill will be of great value to the Department of Labor in carrying out the terms of the law.

Mr. FOWLER. Mr. Chairman, I move to strike out the last word. I am very glad, indeed, to see a bill of this character come before the House, giving the Members an opportunity to express themselves, both in word and in deed.

Mr. Chairman, Richard Arkwright invented the factory a few centuries ago. He was then a penny barber at Preston, England. It made him a peer of England. For a long time after the factory was established the employees were housed and fed in a building adjacent to the factory. Within a short time it developed that the employees became diseased when crowded close in lodging houses. Operators at first were so unmindful of sanitary conditions that the night shift took the beds of the day shift before the beds were made up. Epidemics in the course of time broke out in these lodging houses, which were so severe and devastating in their ravages that the Government of England was compelled to take charge of conditions and regulate them. Now, what happened in England in the inception of the factory has happened in every other country to a greater or less extent. Disease and death follow in the wake of the factory wherever it is established, caused by more than one reason. One of them is the insanitary conditions. Instead of the employees being stowed away in a building adjacent to the factory, they are housed in a number of small buildings surrounding the factory, and the sanitary conditions in many instances, as I have been informed, are exceedingly bad. This bill will give an opportunity for the purpose of making a more thorough investigation of these conditions, with a view of correcting these dangerous surroundings in labor quarters.

Mr. Chairman, another of the greatest evils which follow the greed to make money, the greed to get rich quick on the part of the men who control factories, quarries, mines, and business, is the inefficiency of the machinery and the surroundings with which the laborer has been confronted in the past. It is absolutely necessary in order to conserve the lives and limbs of these human agencies to see that a better condition surrounds them while they are employed. They are the great producing army of the world. Without them death stares every other occupation in the face. With them life, happiness, and prosperity may prevail everywhere. It is good for us who do not labor in these factories, in the mines, and in the fields that we conserve the lives of this great army of men who are annually bringing to us millions of wealth.

Mr. Chairman, this museum will be a most efficient agency, in my opinion. It ought to be located in Washington, where the Representatives of the congressional districts can go conveniently for the purpose of studying all of the collections that are placed in it, in order that they may properly look after the labor of their districts. No place in these broad States affords a better opportunity for getting this information to the people and the labor of this country than to establish this museum here in Washington.

Mr. Chairman, I sincerely trust that this bill may be passed as it now stands, and that it may be one of the means of giving to the Department of Labor the power which will make it a vitalizing, energetic, living force to shield and protect labor against the danger of diseases and death-trap conditions and elevate it to a respectability of other professions.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FOWLER. Mr. Chairman, may I, please, have permission to extend my remarks in the RECORD?

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. MADDEN. Mr. Chairman——

Mr. MANN. Mr. Chairman, if the gentleman will permit, would it be possible to get an agreement as to the length of debate on this section?

Mr. LEWIS of Maryland. I was going to ask that the vote on this section and all amendments thereto be taken at half past 4 o'clock.

Mr. MANN. That may not be long enough.

Mr. MADDEN. There may be some amendments offered if this section is not stricken out.

The CHAIRMAN. The gentleman from Maryland [Mr. LEWIS] asks unanimous consent that the vote on the section and all amendments thereto be taken at the end of 20 minutes.

Mr. COOPER. Reserving the right to object, I desire to say to the gentleman from Maryland that I would like three minutes myself.

Mr. MANN. How much time is required now?

Mr. LEWIS of Maryland. Twenty minutes will cover it.

Mr. MANN. Let it go at 20 minutes.

The CHAIRMAN. The gentleman from Maryland [Mr. LEWIS] asks unanimous consent that the vote may be taken on this section and all amendments thereto at the end of 20 minutes. Is there objection? [After a pause.] The Chair hears none. The gentleman from Illinois [Mr. MADDEN] is recognized for five minutes.

Mr. MADDEN. Mr. Chairman, I yield to no man on the floor of this House or anywhere else in my desire to do the thing that is best for the people of the country, whether they be working by the day, or the week, or by the month; and it matters not what kind of employment they may be engaged in. But I seriously doubt the wisdom of the criticism of men's motives every time they rise in their place here to try to conserve the Public Treasury in connection with the legislation that is here for consideration. If the question be one in which labor seems to be affected, some man rises in his place and objects to the motives that prompt men when they try to do the thing that ought to be done with all legislation, regardless of what branch of endeavor it may affect.

This second section of the bill proposes to erect and maintain a museum. It proposes to erect that museum without any limitation whatever upon its cost. It directs that a building shall be constructed and maintained, and then the proponents of the measure come before this body and say they have given no consideration whatever to the cost.

Mr. WILLIS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Ohio?

Mr. MADDEN. It will not be said, I hope, that because some one here wants to know what a thing costs he is antagonistic to the interests that are proposed to be protected or represented. We represent all the people of the United States, if I understand the Constitution, embracing those that are employed by the day and those that employ them. One man has equal rights with the other and ought to be given equal protection, and the taxpayers of the United States have rights here that Members of this House can not and ought not to ignore.

Now I yield to the gentleman from Ohio.

Mr. WILLIS. Does the gentleman say that if this bill passes in its present form the officer named therein would have authority to go ahead and make a contract for the erection of a building without further authority being given?

Mr. MADDEN. That is exactly what I say, and I challenge any man to successfully contradict that statement. He can let a contract for a million dollars, if he wants to, or $5,000,000, if he wants to, under the provisions of this bill; and he can then come before the appropriating committees of the House and require appropriations to be made to carry out the provisions of the contract.

It is not a wise business method that we are undertaking to pursue. I believe that every consideration ought to be given to the men who are sought to be benefited by this legislation; but in giving them that consideration I believe, too, that the men who pay the bills ought also to be considered, and that we ought to use that same wisdom that an ordinary business man is expected to use if he is going to conduct his business successfully.

This Government of ours is a great business institution, and all the people of the Nation are stockholders in that institution. Their rights ought to be conserved, whether it be on a question of finance or on a question of conserving the life and the health of the citizens of the Nation; and I, for one, propose here and now, and always while I am here, to exercise every right I have as a Member of this House to criticize any recommendation that comes before the House from any committee, whether it be the Committee on Labor or the Committee on Appropriations or any other committee, if I do not think the recommendation is wise and in accordance with the business policy that ought to be pursued by a wise business manager.

This section ought not to be adopted. It ought to be stricken from the bill; or, if not stricken from the bill, it ought to be so amended that we and all others interested may know just where the limit of cost is going to be placed, and not give to any man, no matter who he may be, the power to plunge the Government of the United States into unlimited indebtedness for the construction of this or any other kind of a building. [Applause.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. GRAY rose.

The CHAIRMAN. The gentleman from Indiana [Mr. GRAY] is recognized for three minutes.

Mr. GRAY. Mr. Chairman, the objection has been made that there is no specific appropriation provided for in this bill to carry out the provisions of section 2. Probably it would have been better if there had been a fixed amount appropriated.

But I understand that there have been many investigations carried on and bureaus of information and research provided for the benefit of manufacturers and employers to promote trade, and are being carried on and provided for to-day, without any specific appropriation being named in advance, and I do not believe that trade or profits are more sacred than flesh and blood and human life.

But I believe that this defect can be remedied. I suggest to the chairman that he can amend this bill and provide a limit to the appropriation required. I am willing to go low enough in fixing such a limit.

Mr. MADDEN. That is what I suggested.

Mr. GRAY. I am suggesting this, and I am glad to have the gentleman's cooperation. Please suggest it to the chairman. [Laughter.]

There should be no difficulty when all men are on the same side of a question, and I am glad there will not be any protest over this amendment.

I am willing to fix the limit far below the annual loss by reason of death and serious accident. This amount is given as $40,000,000. If this is true, we could appropriate one-half that amount and be more than justified. But I believe the committee would be satisfied with a limit of $500,000, or one-eightieth of the amount of the annual loss as measured in dollars and cents. But an annual loss in wages of $40,000,000 is the least item to be considered. Annually there is left 15,000 widows and 45,000 orphans to suffer from the loss of the breadwinner. Shame on the Congress that would hold profits above and of more concern than health and life and limb! [Applause.]

Mr. GORMAN rose.

The CHAIRMAN. The gentleman from Illinois [Mr. GORMAN] is recognized for five minutes.

Mr. GORMAN. Mr. Chairman, I am opposed to section 2 of this bill for the reason that, as I view it, it is impracticable and will accomplish no useful purpose.

It has been suggested here that if an appropriation were included, so that we would know the measure of expense that the Government would be put to, that might cure the defect in this section of the bill. I do not believe, Mr. Chairman, that there ought to be a dollar expended to cure the so-called defect in section 2 of this bill. Suppose this section should be adopted. Where are you going to have the museum? And suppose you have the museum in a place that will be satisfactory to everybody. What good is it going to do if you enact any legislation that you can not enforce?

I submit, Mr. Chairman, that we now have enough legislation on the books if the courts will but enforce it. Some manufacturers of this country have found it more profitable to conduct the business in which they are engaged along lines that have resulted in this enormous loss of human life and this enormous injury to employees, rather than adopt safety devices, because of the inhuman policies that have been adopted in our courts.

Mr. Chairman, under the public policy now obtaining in our courts the man who seeks to recover damages because of an injury sustained by him in the line of his employment must first show that he was absolutely free from all negligence. The courts have long since abandoned the doctrine of comparative negligence that permitted a man injured in the line of his employment to measure his carelessness with the carelessness of his employer and allow a jury to fix the responsibility upon the one who was guilty of the greater negligence, and now, in most of the States, if not in all, if the defendant in a personal-injury suit can show that the employee was guilty of any negligence, however slight, that absolves the employer of all responsibility. The courts then proceeded to invent the doctrine of fellow servant, which imposes an almost intolerable burden upon the average plaintiff in a personal-injury suit against his employer. And, assuming this was not sufficient in all cases, the courts invented another barbarous doctrine which they call the "assumption of risk." This doctrine is based upon the theory that every man in seeking a job measures and takes into account the carelessness of his employer, the carelessness of his fellow workmen, and all the hazards of the employment in which he is about to engage.

Mr. Chairman, it seems to me that what we need more than legislation is a higher regard for human rights in the courts of this country, rather than the regard which now obtains for the privileges of property. I submit, Mr. Chairman, that if this bill is passed with section 2 included in it it will accomplish no useful purpose. It imposes a burden upon the Government that will do the employee and the employer absolutely no good. I am opposed to it because it seems to me we are wasting our time in enacting this kind of legislation; and if we just simply say to employers, "You must use those means for the safety of your employees that are generally regarded as appropriate for use in view of the state of the art in which you are engaged," and leave to the courts the enforcement of such a law, you will conserve the interests of the employer and the interests of the employee, and you will have done much to protect human life and limb. [Applause.]

Mr. BRYAN. Mr. Chairman, I am very much in favor of this legislation because it invades a little of the twilight zone, establishes a little more authority for the Federal Government; because it reaches out into an area that has heretofore been left to the States and takes over a little more jurisdiction for the Federal Government. It has been suggested that the States maintain these different investigating bureaus and that they enact remedial legislation; but that proposition has been tried and it has been shown to be insufficient. The other day I looked into one of the statutes of one of the Atlantic Seaboard States, and this is how it provided for the safety of employees:

It shall be the duty of each corporation or other employer to place in one or more conspicuous places in each room of the factory in which any children under 14 years of age are employed, a notice or notices to the effect that said children are forbidden to clean any gears, cams, or pulleys, or to clean in dangerous proximity thereto, while the same are in motion by aid of steam, water, electricity, or other mechanical power; and no such employer, or its officers, superintendents, overseers, or agents shall knowingly or willfully permit or consent to such children so cleaning the said moving parts.

See the safety devices to protect the employer against any trouble. That babies are cleaning the gears and pulleys while in motion is nothing; not even will permitting or consenting to this be wrong, but the employer is safe till he is convicted of knowingly or willfully consenting. In such cases, mirable dictu, he is subject to a terrific penalty, amounting in the maximum to a $100 fine. Such an excruciating and inhuman punishment.

Of course, the law is a dead letter, except in so far as it promotes baby labor, to the shame and disgrace of the State legislature which enacted the statute in the year of grace and democratic progress, 1909.

That is the way that some of the States have been looking after the safety of employees. I am glad enough to see the Federal Congress take hold of the matter and reach out, even in this poor, weak way, to establish some uniform system from ocean to ocean; some means of recommending and giving information to the States, so as to create a public sentiment that will cause them not only to enforce the laws they have but to make better laws, and in the end will extend our own power and enable the Federal Government to do first-hand that which it ought to do in such cases.

We have recognized hogs as important enough to be considered by the Federal Government by appropriating money to fight hog cholera. We have considered horses and other live stock, and I am glad to help enact a statute that promotes the safety of laboring men and that will in the end lead to a uniform system all over this country. We have dragged the hogs and horses out of the twilight zone, and it is encouraging to see this effort that will result in starting something for some of the human beings that inhabit this country. But even here we hear the noise about "States' rights." The time has come for us to consider human rights.

Mr. GOULDEN. Will the gentleman yield?

Mr. BRYAN. Yes.

Mr. GOULDEN. I trust the gentleman will be kind enough to give us the name of the State to which he refers.

Mr. BRYAN. In all kindness, I will say it is not the gentleman's State.

Mr. GOULDEN. We have some excellent laws in our State.

Mr. BRYAN. It is not the great State of New York. It is a State farther south.

[Mr. CALDER addressed the committee. See Appendix.]

Mr. COOPER. Mr. Chairman, in my judgment the gentleman from Illinois [Mr. MADDEN] clearly is wrong in his interpretation of the second section of this bill when he says that under it contracts could be entered into for the construction of a building. The section grants no authority to anybody to enter into any sort of a contract for the erection of a building. Who would presume to claim the right under the language of this section to enter into contracts and advertise for bids? It merely says "there shall be erected a museum." There is no authorization to enter into contracts nor to do anything else.

The customary and only proper way to grant such authority is for the bill in express terms to authorize some person to enter into a contract for the construction of a building the cost of which shall not exceed a definite amount fixed by the bill. Subsequently from time to time Congress makes appropriations to meet the terms of the contract. But there is no authority to enter into a contract granted by the pending bill.

The fact, therefore, is that the amendment of the gentleman from Illinois simply calls upon us to decide whether we are in favor of the establishment of such a museum ultimately.

Mr. LEWIS of Maryland. Will the gentleman yield?

Mr. COOPER. Certainly.

Mr. LEWIS of Maryland. I simply want to take advantage of the gentleman's courtesy to say that I hope to remove all doubt on that proposition by a committee amendment that will be offered if the motion of the gentleman from Illinois is voted down.

Mr. COOPER. Then, I have only to say further that a friend of mine told me a few years ago of a trip to Germany and of his visiting such a museum there, I think at Munich, where, with the utmost interest and with profit to himself, he examined the exhibit of safety appliances and other devices. He said it was a most instructive and useful exhibit to him, as it would be to any intelligent visitor. I am in favor of the establishment of such an institution as that in this country, and preferably in Washington, because it is the city best located for a building devoted to such purposes. More and more Washington is becoming the great convention city of this country. Every year thousands of men and women from all parts of the Nation gather here, and by means of such an exhibit could see demonstrated the usefulness of various appliances and devices for the saving of human beings from mutilation or death. The sum of $50,000 or more would be of little importance compared with the great benefits that such an institution would insure to the people of the United States.

One word more. I am glad to see the spirit evinced here—a spirit which is becoming more and more prevalent—of thinking of men as they ought to be thought of, not as property but as human beings. I recall that some years ago Gov. Dole, of Hawaii, in speaking of certain of the employers in those islands, said that they seemed to look upon men as mere machines and not as factors in the development of the State. [Applause.]

Mr. MADDEN. Mr. Chairman, by an arrangement between myself and the gentleman from Maryland [Mr. LEWIS], who proposes to offer an amendment which I think will cover my objection to this section of the bill, I ask unanimous consent to withdraw the motion to strike it out.

Mr. MANN. Reserving a right to object, I hope the section will not be stricken out, for this reason: All of the authority conferred upon the Secretary under section 2 is conferred upon him under section 1. If section 2 should be stricken from the bill, the same authority will exist as though section 2 were included in the bill. Section 2 is a direct tribute to the late Mr. Bremner, a beloved Member of this House, and I do not think we ought to do anything but honor his memory in keeping section 2 in the bill. [Applause.]

[Mr. ADAIR addressed the committee. See Appendix.]

Mr. MADDEN. Mr. Chairman, in view of the amendment to be offered by the gentleman from Maryland, I renew my request to withdraw the motion to strike out the section.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to withdraw his motion to strike out the section. Is there objection?

There was no objection.

Mr. LEWIS of Maryland. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 2, line 25, after the word "disease," at the end of the section, insert:

"*Provided*, That before making any contracts or incurring any liability under this section the Secretary of Labor shall first submit estimates of the cost therefor to Congress and secure appropriations therefor."

The amendment was agreed to.

Mr. LEWIS of Maryland. Mr. Chairman, I rise for information. The Committee on Labor has another bill which it desires to consider. Will it be in order to take it up now?

The CHAIRMAN. The Chair thinks not.

Mr. LEWIS of Maryland. Mr. Chairman, I move that the committee do now rise and report the bill favorably to the House.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. RUCKER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor, and had directed him to report the same back with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them in gross.

There was no demand for a separate vote.

The amendments were agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. LEWIS of Maryland, a motion to reconsider the vote whereby the bill was passed was laid on the table.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. ASHBROOK, for two days, on account of attending the funeral of a friend.

To Mr. L'ENGLE, for three weeks, to attend to important business.

IMPORTATION OF GOODS, WARES, AND MERCHANDISE MADE BY CONVICT LABOR.

Mr. LEWIS of Maryland. Mr. Speaker, I call up the bill (H. R. 14330) to prohibit the importation and entry of goods, wares, and merchandise made in whole or in part by convict, pauper, or detained labor, or made in whole or in part from materials which have been made in whole or in part or in any manner manipulated by convict or prison labor.

The SPEAKER. Under the rule the House resolves itself automatically into the Committee of the Whole House on the state of the Union.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. FOSTER in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 14330, which the Clerk will report.

Mr. LEWIS of Maryland. Mr. Chairman, I think perhaps the House is apprised of the subject matter of the bill, and I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LEWIS of Maryland. Mr. Chairman, the object of this bill is to provide means for the effectual accomplishment as to the importation of foreign-made goods of what has long been the established policy and law of the country. Beginning as early as 1890 provisions were inserted in our tariff legislation prohibiting the importation of convict-made goods from abroad. The clause has been repeated in every tariff bill since that time, and in the present tariff law, known as the Underwood law, the clause will be found with a provision giving the Secretary of the Treasury authority to make regulations to carry out the provisions. The administrative authorities have reported that as a matter of fact in all the time that has elapsed, and with reference to all the commerce that has taken place between this country and the other countries of the world since 1890, not a single instance of discovery and condemnation of the prohibited articles of commerce has taken place. The bill now before the House, introduced by the gentleman from Missouri [Mr. HENSLEY] undertakes to provide means by which the importation of such goods can be discovered and prevented, and one of the means for that purpose looks to giving the right to private citizens in the United States to make protest to the collector of the port or to initiate proceedings in admiralty, having in view a challenge of the importer's right to import such goods, whereupon proper judicial and administrative agencies will be set in motion with the purpose of discouraging this trade, denounced by all conceptions of fair commerce.

I now yield 10 minutes to the gentleman from Missouri [Mr. HENSLEY] and reserve the balance of my time.

Mr. HAWLEY. Mr. Chairman, will the gentleman yield to me before he yields the floor?

Mr. LEWIS of Maryland. With pleasure.

Mr. HAWLEY. Is it the purpose of the gentleman to bring the bill to a vote to-night?

Mr. LEWIS of Maryland. That would be very desirable, if it is found practicable, but I have no judgment as to what the feelings of the House might be with reference to that. I might, perhaps, test the feelings of the committee, if the gentleman will excuse me, by asking unanimous consent to close general debate at 20 minutes to 6 o'clock and then proceed under the five-minute rule.

Mr. SHERLEY. It is not the gentleman's expectation to try to pass this bill to-night, is it?

Mr. LEWIS of Maryland. I wanted to find the sense of the House with reference to the matter.

Mr. MANN. The gentleman might make the request to close general debate. I think if we got general debate closed to-night we would want to rise then.

Mr. STAFFORD. Mr. Chairman, this is a very important measure, and I know gentlemen on this side who wish to discuss it. I feel constrained to object for the time being, there having been only five minutes of debate.

The CHAIRMAN. Does the gentleman from Maryland withdraw his request?

Mr. LEWIS of Maryland. I think, perhaps, it will not be possible to close debate at this time. I withdraw the request and yield 10 minutes to the gentleman from Missouri [Mr. HENSLEY].

Mr. HENSLEY. Mr. Chairman, as has been said by the chairman of the Committee on Labor, this bill provides for the prohibition of the importation of convict-made goods. I will state as a matter of fact, so as to emphasize the importance of this measure, that we have in the United States something like 148,000 convicts who are employed in the prisons of this country in the manufacture of various articles of consumption. As against that, from the best information I can obtain, there are something like 2,400,000 convicts in European countries engaged in the manufacture of various articles which enter into the commerce of the world, and, under our present laws, are permitted to be brought into competition with the products of free labor. As the gentleman from Maryland [Mr. LEWIS] has said, since the tariff act of 1890 there has been a provision in the bill which prohibited, as was thought, the importation of convict-made goods. Upon investigation it has been discovered that there has never been a seizure of any convict-made goods, and the Treasury Department has been unable to enforce this provision of the law, which indicates that the law is deficient.

The tariff bills which have passed Congress since 1890 have contained almost the exact language which was employed in the bill of 1890, but the fact that we have been unable to prohibit the importation of convict-made goods emphasizes the necessity for the passage of my bill. The present tariff law contains a provision similar to the provision of the act of 1890. Inquiry was made of the Secretary of the Treasury to ascertain whether or not the prohibition contained in the tariff law to which I have referred has been effective, and the Treasury Department replied that if it is the purpose of Congress to prohibit the importation into this country of goods partially made by convicts, as well as wholly made by convicts, it is necessary that the law be supplemented.

Upon investigation it is found that there are a great number of articles brought into this country made in whole or in part by convicts in the prisons of European countries. The manufacturers of this country are desirous that a law of this character be placed upon the statute books which can be enforced, and on the other hand the laboring people throughout the country are very much interested in seeing such a law passed, and the consumer is also anxious to have such a measure passed. Why this is true is very easily seen and understood. We have many instances in this country where certain manufacturers employ convicts at a wage ranging from 50 to 75 cents per day, and incident or in connection with this employment is included the use of building, heat, light, and water. The manufacturer who employs free labor is, as can be seen, placed at a decided disadvantage. The manufacturer who employs free labor for which he pays a living wage can not compete in the markets of our country with the manufacturer who employs convicts under the conditions I have described. This very often produces a tendency on the part of the manufacturer who employs free labor to reduce his wage scale, which explains the interest of labor in the passage of the bill; or very often the manufacturer who employs free labor and is compelled to compete for business under such unfair conditions is prompted to skimp and use shoddy materials in the manufacture of articles, and such manufactured articles are palmed off on the consuming public, and on this account the consumers of the country have a just cause for complaint.

It is estimated that the convicts in this country produce $34,000,000 worth of goods; and giving foreign convicts the same proportionate productive capacity, there being approximately 2,500,000, as against our 148,000, they will produce $560,000,000 worth of goods which enter into and demoralize our commerce and seriously affect the conditions of free labor, and imposes a hardship upon the consumer, as I have already stated. I am sure you can therefore very readily see that there should be no delay in the passage of this very wholesome legislation.

My bill does not only prohibit the importation and entry of goods, wares, and merchandise made in whole or in part by convict, pauper, or detained labor, or made in whole or in part from materials which have been made in whole or in part or in any manner manipulated by convict or prison labor, but it will impress upon the Treasury Department the need for enforcing the law in the first instance, as well as supplementing the means by which the law may be enforced.

Mr. SISSON. Will the gentleman yield for a moment?

Mr. HENSLEY. Certainly, I will yield.

Mr. SISSON. I presume that a majority of the Members of the House will be in sympathy with the purposes of the bill, but I want to call the gentleman's attention, if he has given the matter study, and I am sure he has, because I notice he introduced the bill. On page 5, section 8, there is a provision as follows:

That the Secretary of the Treasury be, and he is hereby, authorized and empowered, whenever goods, wares, and merchandise have been delivered to him pursuant to the provisions of section 3 of this act, to dispose of the same by donation to the American National Red Cross.

What is the purpose of that?

Mr. HENSLEY. The purpose, I will say to the gentleman from Mississippi, is to empower the Treasury Department whenever it seizes goods that are brought in here in violation of this law to donate them to some national charitable organization such as the American National Red Cross Society or organization of like character for use.

Mr. SISSON. Now, let us see. You take these goods and confiscate the goods by law.

Mr. HENSLEY. Instead of destroying them under the present law.

Mr. SISSON. Wait a moment. The right of the Federal Government or the right of the State government or any sovereign, when certain laws have been violated, to confiscate goods has always been the right of the sovereign to confiscate, but does the right of the sovereign go so far that in addition to confiscating the goods for public use, and that is why they are confiscated, you then can take that particular character of goods confiscated, irrespective of delivery, and give them to a private individual or private institution or to an eleemosynary institution of any kind? Has the gentleman considered that phase of the bill?

Mr. HENSLEY. I have not made any investigation of that particular feature of the bill, but in my judgment there can be no question that the right or power vested in the sovereign to confiscate carries with it the right of disposition.

Mr. SISSON. Let us speak of the policy of it then. Ought it to be the policy of the Government, through the Secretary of the Treasury, to select a particular institution or a charitable organization; the gentleman preferably said here the Red Cross, but you mention any other national charitable organization——

Mr. HENSLEY. Yes, sir.

Mr. SISSON. To take the goods so confiscated and donate those goods irrespective of value to some institution or charitable organization of some kind?

Mr. HENSLEY. I will ask the gentleman if that is not preferable to a destruction of the property?

Mr. SISSON. I do not think so. I think the gentleman's bill ought to provide that where goods have been confiscated under penalty—and it must be under a penalty for violating the law—the man must be given some sort of a hearing. You can not take private property even of a foreigner under the Constitution without giving him a hearing. It must be confiscated in accordance with the law, and he would have to have a hearing. If you confiscate his goods for a violation of the law, it is in the nature of a penalty——

Mr. HENSLEY. Yes; to be sure.

Mr. SISSON. Can you take the proceeds of the confiscated goods or the goods themselves and donate them under the Federal Constitution and say that you are going to give them to the Red Cross? We have a fine upon such goods, and such fines, when recovered, should go into the Treasury, and then can we say that we are going to give them to the Red Cross?

Mr. HENSLEY. It is not a fine, as I understand it.

Mr. BORLAND. Would it not be perfectly proper, and is it not customary in enforcing laws of this character, to cover the forfeited goods into the Treasury?

Mr. SISSON. Of course.

Mr. BORLAND. Can not you make any disposition you choose——

Mr. SISSON. I do not believe it is good public policy.

Mr. BORLAND. Ah!

Mr. SISSON. I doubt extremely the right, and I certainly doubt it is the moral right, of the Federal Government to take property in the nature of a fine and——

Mr. BORLAND. Now, let me call the gentleman's attention to this——

The CHAIRMAN. The time of the gentleman from Missouri [Mr. HENSLEY] has expired.

Mr. LEWIS of Maryland. Mr. Chairman, I yield to the gentleman 10 minutes more.

Mr. BORLAND. Let me call the gentleman's attention to this: Suppose the goods are of a nature that the destruction of them would be a real loss. Suppose they are shoes?

Mr. SISSON. I am not discussing that phase of the question. That, of course, might subject property to be destroyed that ought to be used.

Mr. BORLAND. We will assume they are not; but nevertheless they come under the discussion of this, and to destroy them would be to destroy some property that would be of value to somebody. Suppose we have some convict-made shoes; would it not be proper for the Government, instead of converting them to its own use, to put them in the ordinary channels of trade? Would not that be proper?

Mr. SISSON. The gentleman loses sight of the fact that the amount of goods that would come in in this way would be very small. But the question is whether the Secretary of the Treasury should be permitted to select particular institutions to which he would distribute these goods. Why not have the goods sold and the money covered into the Treasury?

Mr. BORLAND. Because, as the gentleman will readily see, they would go right into commerce.

Mr. SISSON. I understand. De minimis non curat lex. There will be such a small amount of these goods that the effect on trade would be infinitesimal. I am discussing the policy of the Federal Government vesting the Secretary of the Treasury with the right to select an institution to which he would distribute these goods.

Mr. HENSLEY. Do I understand the gentleman to be opposed to a policy of seizing these goods and donating them to some institution where they would be properly used as against the destruction of them?

Mr. SISSON. I would infinitely rather, so far as I am concerned, as a policy of the Government, to have them destroyed than to have the Secretary of the Treasury invested with the right to select institutions to which he would donate these goods.

Mr. J. I. NOLAN. The gentleman asks whether any precedent could be cited for the State or Federal Government in such an instance.

Mr. SISSON. The Federal Government. The States, of course, occupy entirely different lines.

Mr. J. I. NOLAN. I was going to say that I know that in the State of California when fish and game are seized for violation of the fish and game laws, after the case is tried in the court, the fish and game commission turn them over to the various eleemosynary and charitable institutions, such as orphan asylums, and so forth, instead of destroying them.

Mr. SISSON. I want to suggest simply this: Suppose I am Secretary of the Treasury—and I am a human being like the balance of folks—and there are a number of institutions I might select—Episcopalian institutions, Roman Catholic institutions, and institutions of various kinds—and I would have to select the ones to which I would donate these goods. I believe the tendency would be in the wrong direction, and would get up all sorts of controversies as to which institution was entitled to the donation.

Mr. HENSLEY. The gentleman will discover from the reading of the bill that this says the "Red Cross or other national charitable institutions," and the Secretary of the Treasury will determine that matter when application is presented.

Mr. SISSON. The "Red Cross or other national institutions" is a very broad term. Now, what is a national institution? Is it one that is chartered by the Federal Government?

Mr. HENSLEY. Now, I would say to the gentleman from Mississippi [Mr. SISSON] that I have only a few moments in which to discuss this, and it is pretty evident that we are not going to reach a vote on the bill to-day.

Mr. SISSON. Then, for that reason——

Mr. HENSLEY. I would like if the gentleman would give a little serious thought to the question and then give us the benefit of his views upon the subject. I can not conceive of the gentleman taking the stand he has announced here.

Mr. SISSON. What is the meaning of "national institutions"? Are they ones which are chartered by the Federal Government?

Mr. HENSLEY. The Red Cross, or some other charitable institution. We can make no mistake when goods are donated to charitable institutions which need them. After passage of this bill there will be very little to confiscate.

Mr. SISSON. You may say that they will make no mistake, but——

Mr. HENSLEY. The devastating floods over in Ohio last year and in other parts of the country, when the Red Cross went there to render service to those people who were afflicted by that condition, I think would be an instance in point.

Mr. SISSON. The point I have in mind is this: That if we confiscate these goods they become the property of the Federal Government. Why should you take that forfeiture any more than you would take the forfeiture of cash or any more than

the money that comes into the Treasury from any other source and donate it to any institution?

Mr. SHACKLEFORD. Mr. Chairman, will the gentleman allow me a suggestion in that connection?

Mr. HENSLEY. Certainly; I yield to my colleague.

Mr. SHACKLEFORD. If the gentleman from Mississippi [Mr. SISSON] will think of this a moment, I think he will agree with me that if this becomes a law there would be very little to give to anybody.

Mr. SISSON. That is what I think. Therefore the sale of the goods and the covering of the proceeds into the Treasury would not amount to much. And, by the way, the Treasury has few friends. I used to think the Treasury had friends, but I have changed my mind about it now.

Mr. SHACKLEFORD. It would be difficult for the committee to draw a bill in such a way that someone could not say, "Why did you not draw it in another way?" The gentleman remembers the story of the man who had a little donkey——

Mr. SISSON. To my mind there is a serious precedent involved here in the disposition of this property.

Mr. HENSLEY. Let me say, Mr. Chairman, to the gentleman from Mississippi that the bill as originally drafted did not contain this provision. A bill similar to this was introduced in the Senate some time ago by Senator STONE, of Missouri, and it provided for the destruction of property, as the law now provides for it, and the committee to which this bill was referred, consisting of Senator REED, of Missouri, Senator LA FOLLETTE, Senator CUMMINS, and others, insisted that it be changed so as to enable the Treasury Department to donate the goods confiscated to such institutions as are named herein. This absolutely conforms to the suggestion of the Senators composing the committee of the Senate to which the bill was referred.

Mr. SISSON. That does not strengthen the question in my own mind—simply because some Senator happens to have done something that is not right, in my judgment.

Mr. HENSLEY. Let me read to the gentleman from the hearing had before the Committee on Labor in the House. Mr. HAWLEY, a member of the Committee on Labor, asked this question in commenting upon the bill reported by the Senate:

Mr. HAWLEY. I should like to ask you this question: The bill as reported by the Senate says the Secretary of the Treasury is authorized and empowered to deliver these goods to the American Red Cross Society or any other national charitable association?

Mr. HAWES. Yes, sir.

Mr. HAWLEY. Which is a very proper disposition of them. But do you think that under the language that is mandatory that they be so delivered if he knew them to be manufactured in infected prisons, where contagious diseases were epidemic at the time, or where the convicts were afflicted with tuberculosis? Has he any discretion to destroy any goods he knows to be infected or improper to be distributed among our people?

That matter was carefully gone into, I will suggest to the gentleman.

Mr. SISSON. That position is perfectly sound, but I do not believe that it is sound to vest in the Secretary of the Treasury the discretion of taking these fines. It must be that it is in the nature of a fine and in the nature of a forfeiture, and they are dealt with just alike. The title to it, of course, immediately vests in the Federal Government. Otherwise it could not dispose of it or give it away. I am not in favor of any provision or any departure whereby the Federal Government becomes a collecting agency and turns over its forfeitures and fines or any taxes, in the discretion of the Secretary of the Treasury or any other official. Every gift of property ought to be a specific gift by Congress, and there should be no general authority. However small this may be, it is the beginning, I say, of a new departure, and already we have a bureaucracy in this country.

Mr. HENSLEY. Mr. Chairman, I will say to the gentleman from Mississippi [Mr. SISSON] that being a question of policy largely—speaking for myself, and I think for other Members of the House—we would, of course, be glad to hear from the gentleman; but that question has been gone into very carefully by the committee heretofore, and it seems to me that my colleague from Missouri [Mr. SHACKLEFORD] has very pertinently suggested——

Mr. SISSON. I agree with Judge SHACKLEFORD that the amount would be very small——

Mr. HENSLEY (continuing). He has very pertinently suggested that the amount to be given to anybody will be very small under this bill when it becomes a law.

Now, I was about to say, when I was interrupted by the gentleman from Mississippi, that this supplements the means by which the prohibition can be enforced. It gives the parties affected, be it a manufacturers' association or a company or a labor union, the right to go into court and seize the property; and there the question of whether or not the goods have been made by convict labor can be determined by judicial proceedings. If the goods are discovered to have been made by convicts in other countries, they can be seized and disposed of under the provisions of this law.

Mr. Chairman, it seems to me there is no sort of question about the need of a law of this kind. We have been laboring under the opinion and belief that we had a law for this purpose and that it was being enforced; that the tariff law, which contained the language such as I have gone over, was sufficient; and it was only after an investigation of the subject that we found that the law has never been enforced. The Treasury Department, for some reason or other, has been unable to make this law what it was intended by Congress to be. It is certainly demanded not only by the laboring people of the country, but it is insisted upon by the manufacturers of the whole country, and consumers as well. There is a different proposition, as you all understand, submitted, of course, in the passage of a law of this kind from that which obtained in the passage of the law which had for its purpose the regulation of interstate commerce.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. LEWIS of Maryland. I yield two minutes to the gentleman from Washington [Mr. HUMPHREY].

Mr. HUMPHREY of Washington. Mr. Chairman, there has been considerable talk on the floor of the House within the last few days in regard to the effect of the new tariff law on imports. I read from the Seattle Post-Intelligencer of Thursday, March 5, 1914:

United States tariff booms exports from British Columbia—Trade almost doubled with revision of the American schedules—Shingles greatest gain—Lumber, wood pulp, fish, ore, and bullion leading articles imported by Uncle Sam.

Those are the headlines. This is the article:

VANCOUVER, BRITISH COLUMBIA, *March 4*.

Since the new United States tariff went into effect last autumn the exports from British Columbia have doubled, according to announcement made this morning by Robert E. Mansfield, United States consul general at Vancouver.

To cope with the extra export business which has resulted from the elimination and reductions in the duties on British Columbia commodities it has been found necessary for the local consular branch to acquire additional office accommodation.

The increase in the business relations between this Province and the United States was reflected in the comparative statement published early in January, showing the amount of exports up to December 31.

Later returns show that the exports have been practically doubled during the period that the new tariff revisions have been operative.

The greatest gains are noted in the figures for shipments of shingles, lumber of different classes, wood pulp, fish, ore, and bullion. It is the general opinion among those in touch with the lumber situation that the placing of shingles on the free list has imparted a big stimulus to the industry in British Columbia.

Large quantities of fish are being shipped almost daily from Vancouver, the exports showing a big increase since the adoption of the new tariffs.

I may say that that is in accordance with the report made by the experts who were sent out by the Department of Commerce to investigate the shingle industry. They reported that since the new tariff law went into effect more shingles had been imported into this country than ever before in the same length of time.

Mr. LEWIS of Maryland. I yield 10 minutes to the gentleman from Missouri [Mr. BORLAND].

Mr. BORLAND. Mr. Chairman, the question presented here is, Shall goods made in foreign prisons be imported into this country and come in competition with free American labor? The whole judgment of the American people says, No. It is shocking to think that foreign convict labor can be employed upon the manufacture of goods which are sent over to this country to compete with goods made by free American wage earners. Our American wage earners are men who maintain a self-respecting standard of living. They are taxpayers and rent payers; often home owners. They must educate their children, support their families, and discharge the duties of citizenship. This class of labor should not be debased by competition with foreign prison labor. Congress has just passed a law to prevent the shipment of prison-made goods in interstate commerce in this country, so that no State can dump its convict-made goods upon another State. Now, we ought to pass this law keeping out all foreign convict-made goods. I am strongly for it. The man who is honest and respectable is entitled to some show. He has a hard struggle and he is entitled to great credit; certainly he is entitled to an equal chance.

Sometimes I think our sympathy for the criminal or for the down and out may lead us to overlook the rights of the self-respecting man who is not down and out, but who is doing his duty and meeting his responsibilities like a man. The good citizen who supports his Government and does not break its laws should be given the first consideration.

This is a good law. It has teeth in it. It says that the convict-made goods shall be seized and destroyed if an attempt is made to import them. That is the way to make the law effective. Make it cost the foreigner something to try to ship prison-made goods in here. We have had a law on the statute books ever since the McKinley Tariff Act prohibiting the entry of prison-made goods from abroad, but it was a mere campaign dodge. It did not mean anything, and could not be enforced. Foreign convict goods have been coming in here under all the high-tariff laws. In ninety-nine cases out of a hundred you can not arrest the foreigner who owns the goods, and you can not prove guilty knowledge on the man who receives them in this country. The only effective way to stop the evil is the way this Hensley bill provides—seize the goods and destroy them. That will stop it. The foreigner can not stand that drain on his pocketbook. He will quit sending the goods in.

The provisions of the tariff law which have been carried ever since the McKinley Act provide that no goods shall be admitted to entry in this country that are the product in whole or in part of prison labor; but there being no penalty clause and no seizure clause, the only penalty is that the goods if they are known to be prison-made goods can be turned back at the port of entry, and the importer is at no other loss or expense than the transportation and the attempt to enter.

In order to stop the entry of prison-made goods something more effective is necessary, because it develops that under that provision of the tariff bill, which has been in force now more than 20 years, no seizures of goods have been made, and there is no report from the Treasury Department of any goods having been excluded on that particular ground. Manifestly they have no way of reaching a result.

Mr. BALTZ. Will the gentleman yield?

Mr. BORLAND. Certainly.

Mr. BALTZ. I understand that the Treasury Department can not enforce that law, for the reason that if the goods are partly made by prison labor, but finished by free labor, they can not be excluded.

Mr. BORLAND. Yes; they give that as one reason, that if the goods come from a shop where they are finished by free labor the department has no way of knowing that a prior part of the process of manufacturing was done by prison labor, and therefore they have no right to exercise arbitrary jurisdiction and exclude them. But under this bill the necessary legal provision has been provided by the Labor Committee that framed this bill. When the goods are here any American citizen or organization interested in the matter can, upon showing made to the collector of internal revenue, have the goods turned over for seizure here under the ordinary procedure relating to the seizure of goods in the enforcement of the revenue laws.

Then it becomes a question of fact, and the burden of proof is on the man who claims to own the goods. The proceeding being one in rem, any man who claims to own the goods will have his day in court and he will find it necessary to come forward and prove that the goods are not prison-made goods. If, on the trial of that question, it is determined that the goods are, in whole or in part, the product of prison labor—on which question, of course, any citizen or organization making the claim that they are will have an equal chance to be heard—the goods are condemned. I undertake to say that under that procedure very few prison-made goods will come into this country. It will be enforced, because back of it is the sentiment not only of the manufacturers but also of organized labor of America. They will probably see that sufficient test cases are made where goods can be traced to European prisons, and the goods will not simply be turned back at the port of entry but they will be seized, and the loss will fall on the importer.

The bill provides the usual penalty clause, but for the enforcement of that guilty knowledge is necessary. We can not arrest the man in Europe and punish him, and therefore this criminal clause can only fall on the importer in this country, and then only when guilty knowledge on his part is produced. So no injustice can be done to him. It must be proved that what he did was done knowingly and fraudulently, and the burden of proof is on the Government to show that the man under arrest is guilty. As to the goods themselves, however, the man must be able to prove the genesis and construction of his own goods. Therefore I say that the law has teeth in it. It has behind it the necessary material to make it effective, and the committee has done a great deal of careful work.

Now, the question arises, When these goods are admitted and forfeited to the Government, what shall be done with them? If they are sold and the proceeds turned into the Federal Treasury, the goods will enter again into commerce, the very purpose which it is intended to prevent. If goods are destroyed, if they be harmless, like twine or shoes or some goods not infected with disease, and coming from a place not infected with disease, there is a loss of valuable property that might do some one some good. They are goods of some value. It is provided therefore that instead of being destroyed they shall be turned over to some charitable organization; and I know of no charitable organization in this country better qualified to accept them than the Red Cross. The Red Cross has done a wonderful amount of work in the Mississippi and Ohio Valleys in the distribution of supplies furnished by the Federal Government to the innocent sufferers from those terrible floods.

Mr. LEWIS of Maryland. Will the gentleman yield?

Mr. BORLAND. I will.

Mr. LEWIS of Maryland. Is it not a fact that the Red Cross is recognized in the treaties of the different nations in regard to war as a privileged order and entitled to certain special conditions in the progress and prosecution of war?

Mr. BORLAND. Yes; the Red Cross performs a work that is subgovernmental in character. It not only takes care of noncombatants who suffer by war and distributes to them the necessary relief, but under the American amendment to the Red Cross treaty it takes care of the sufferers from great national calamities and disasters where large numbers of people, by a national calamity are thrown into want and into a helpless condition, as was the case in the Ohio Valley, and in Galveston, in San Francisco, and in many other similar disasters where the Government has felt itself under obligations to come to the immediate relief.

This suggestion did not come from the committee of this House or on this side of the aisle; it came from the gentleman from Oregon [Mr. HAWLEY], a Republican member of the committee. I quote from the hearings:

Mr. HAWLEY. I should like to ask you this question: The bill as reported by the Senate says the Secretary of the Treasury is authorized and empowered to deliver these goods to the American Red Cross Society or any other national charitable association?

Mr. HAWES. Yes, sir.

Mr. HAWLEY. Which is a very proper disposition of them.

I agree with him about that. I agree with my friend from Mississippi that the number of goods coming in here would be negligible, but what goods do get in, instead of being wantonly destroyed, as they would be under the older and ruder rules of law, if they are ordinary standard goods that can be used under any circumstances, should be turned over to a national organization, such as the Red Cross. I think this bill ought to pass. This is a measure in the interest of free, honest, self-respecting, high-grade American labor, and I am proud to vote for it. [Applause.]

Mr. LEWIS of Maryland. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has 23 minutes.

Mr. LEWIS of Maryland. I yield five minutes to the gentleman from Mississippi [Mr. SISSON].

Mr. STAFFORD. Before the gentleman from Mississippi begins, I would like to ask the chairman of the committee how long he intends to run? It is now half past 5.

Mr. LEWIS of Maryland. After hearing the gentleman from Mississippi it may be well to make some agreement in regard to Wednesday next. Mr. Chairman, I ask unanimous consent that after the committee adjourns to-day, when we take up the subject on next Calendar Wednesday——

Mr. STAFFORD. I suggest to the gentleman that that request can be granted only in the House.

Mr. LEWIS of Maryland. Very well. Mr. Chairman, I yield to the gentleman from Mississippi 10 minutes.

Mr. SISSON. Mr. Chairman, I do not think I shall consume 10 minutes. I do not think it is necessary for anybody to undertake to defend the Red Cross Society; it needs no defense at my hands. Everybody understands it is doing a great and noble work. I am willing that it shall prosper; I am willing that it shall thrive; but if you are going to leave these goods to be donated rather than to leave it to the discretion of the Secretary of the Treasury, it ought to be fixed so that he would not have to make a selection between the rival organizations, not only as between charitable, but as between those of a religious nature, each feeling that it was entitled to the goods and entitled to recognition. I would not like to be the Secretary of the Treasury under those conditions. We ought to avoid the very appearance of evil. We ought not to put the Secretary of the Treasury in the position where sometimes the most delicate question would have to be solved by him. I believe I have a right to appeal to the good common sense of the Members of this House. There never has been a time, and I hope the time never will come, when there ever will be any sort of a religious test or religious discussion on the floor of this House, and I am unwilling that the Federal Government, even in the small matter of a small number of goods that might possibly come in,

even if this bill were passed, should ever find itself face to face with the time when it shall be called upon to select between charitable institutions that may be dominated by religious institutions or one that may be dominated by people who belong to various denominations throughout the country. I believe that the very moment you begin to give charity in that way out of the Federal Treasury you are likely to get into trouble in the future.

If you are going to give these goods away, you had better say that they shall be given, always and outright, to the Red Cross; you had better fix it and not leave it to the discretion of the Secretary of the Treasury. If the Federal Government ever gets title to this property, it must get title to it by virtue of a forfeiture. It is in the nature of a fine; it is in the nature of money that may be collected from a criminal because of the violation of law; and according to all of the laws of the States it goes into the State treasury, and if it is a county violation it goes into the treasury of the county, or, if a municipal violation, into the treasury of the municipality. When a violation of law requires the Federal Government to forfeit goods, the money obtained from those goods ought to go into the Federal Treasury. If they are to be sold, they will be a very negligible feature and will cut very little figure in the trade of the country. If you are going to deflect money from the Federal Treasury, small amounts of money in this way, you could then deflect large amounts of money. The answer may be that Congress can always control that. That ought to be true, but those of us who have served a few years here know the wickedness of precedent. An innocent precedent set to-day will rise up and confront you in the future, and when we champion something like it in the future we search the books to find the precedents where Congress has done that thing before.

I am unwilling that this precedent shall be set, and I may say to my friend from Maryland [Mr. LEWIS] that I believe labor has suffered more from precedent in the courts than from any other one thing. The fellow-servant doctrine was all right when men used to employ labor and only a few men were employed and a man could look face to face the man who was employed and responsibilities were about the same, it was perhaps true that the fellow-servant doctrine worked no injury; but now, under the great corporate institutions and the great private institutions, men who organize their business place one man as superintendent or foreman, who himself is an employee, but who at the same time is a master of the men who work under him, and yet the courts, by virtue of the old precedent, have applied the fellow-servant doctrine to all of the great modern institutions of business throughout the country, notwithstanding the reason for the rule had long since disappeared. Conditions became such under this old rule that the legislative bodies had to change the rule by statute. In some States the courts modified the rule, as they did first in Georgia, that the fellow-servant doctrine should be abolished and the doctrine of comparative negligence established in its stead.

So it is with precedent in all other lines. It is difficult to get away from precedents. A law is nothing more or less than a rule of action, that which controls men's conduct, and when we violate the rule we are punished for it. So in making this precedent to-day, innocent though it may be in the beginning, it may rise up in the future to haunt us. It is so easy to pursue the proper way now, and that is to say that these goods shall be treated when they are sold by the Secretary of the Treasury as any other fines. They may be used in the Federal prisons, if they are suitable for the clothing of Federal prisoners.

Mr. IGOE. Would it not meet the gentleman's objection to stop with the donation to the American National Red Cross and leave out the other words?

Mr. SISSON. I do not like that at all, but I would rather have that fixed so that the institution to get the benefit of the goods is named, and not leave it to the discretion of the Secretary of the Treasury and compel him to decide as between churches as to who should have the money or clothing or to what hospital the goods should go, if they happen to be drugs.

If it is clothing, then various other institutions would be clamoring for it, and you could not blame the institutions; you could not blame the people who are at the head of these eleemosynary or charitable institutions for trying to get every particle of help they could get to help the inmates of those institutions over which they have charge. Now, in regard to the suggestion that this clause, "or other national charitable organizations," be stricken out, made by my friend, the gentleman from Missouri [Mr. BORLAND]. The Red Cross is in one sense of the word almost a public institution, because it is only in case of war and great calamities and great epidemics this institution is called upon, and it performs a great work, and therefore if we take this phrase out it would be infinitely better to fix upon one institution like the Red Cross rather than vest the Secretary of the Treasury with the discretion to dispose of the goods to those who might need them in accordance with his views. Now, I have no objection to the bill. In the first place, the purpose of the bill is all right.

There is one thing I want to call the attention of the committee to which struck me as being a little strange. I do not know whether it occurred to the committee, and I may be a little hypercritical, but I notice the provision which says:

By convict, pauper, or prison labor, etc.

The term "convict" is used, and then "pauper or prison labor."

Mr. HENSLEY. I will say to the gentleman the word "pauper"——

Mr. SISSON. I understand the word "pauper" is defined over here in another section; but it struck me when I first read the bill that a man may be a pauper and yet be guilty of absolutely no crime. He may be a pauper by virtue of some act of Providence, and a pauper may be a perfectly honorable man, and, therefore, if I had been drawing the bill I should have used the language which is contained in section 9, where it says—

Those persons who are held or confined in eleemosynary institutions at the public expense, in whole or in part.

Giving a definition and interpretation of the use of the word "pauper," because a pauper, in the general acceptation of the word, is a man without means, and, in the legal acceptation of the word, he is a man who has been declared a pauper by the proper authorities of the State; he may be hunting labor and be an honorable man; and I believe I would rather have the definition between convict and prison labor—have the section read as follows: "By convict, prison labor, or"—

Those persons who are held or confined in eleemosynary institutions at the public expense, in whole or in part.

That absolutely clears the bill, so far as I know, of any objection.

Mr. HENSLEY. Will the gentleman yield?

Mr. SISSON. Yes, sir.

Mr. HENSLEY. The word "pauper" does not fall within the purview of section 9.

Mr. SISSON. I did not hear the gentleman.

Mr. HENSLEY. A pauper, as the gentleman defines it, does not fall within the purview of section 9.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SISSON. I understand the definition you give over here of pauper is for the purpose of specifying the class of paupers who would be covered by your bill, but why not use the language covering the persons you desire to cover rather than to use the word "pauper," because the people who are poor may be the most honorable people in the world and should not be classed with prison or convict labor.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEWIS of Maryland. Mr. Chairman, if there is no further desire for discussion this evening, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. FOSTER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 14330 and had come to no resolution thereon.

CHANGE OF REFERENCE.

Mr. CURRY. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. CURRY. Mr. Speaker, I rise to ask unanimous consent for a re-reference of the bill H. R. 14438, introduced by me yesterday, which, through error, was referred to the Committee on the Judiciary. It should be referred to the Committee on Claims. It is a bill for the relief of persons suffering damages by the construction of a canal diverting the waters of the Mormon Slough into the Calaveras River.

The SPEAKER. Without objection, that reference will be so ordered.

There was no objection.

ORDER OF BUSINESS.

Mr. LEWIS of Maryland. Mr. Speaker, I want to see if it is possible now to agree upon debate for Wednesday next, when the consideration of this subject is to be resumed, and I ask unanimous consent of the House that one hour be then devoted to general discussion and that after that the bill be taken up under the five-minute rule.

The SPEAKER. The gentleman from Maryland asks unanimous consent that on next Calendar Wednesday general debate on H. R. 14330 be limited to one hour. Is there objection?

Mr. STAFFORD. Reserving the right to object, I assume it will be equally agreeable to the gentleman if he makes it conditional that one-half of the time be controlled by himself and one-half by the gentleman from Illinois [Mr. MANN].

Mr. LEWIS of Maryland. One-half to be controlled by myself and one-half by the gentleman from Illinois [Mr. MANN].

The SPEAKER. One half of the time to be controlled by the gentleman from Maryland [Mr. LEWIS] and the other half by the gentleman from Illinois [Mr. MANN]. Is there objection?

Mr. SISSON. Mr. Speaker, what is the request?

The SPEAKER. The request is that on next Wednesday the general debate on the bill H. R. 14330, the pending bill, be limited to one hour.

Mr. SISSON. On general debate?

The SPEAKER. General debate. One half to be controlled by the gentleman from Maryland [Mr. LEWIS] and the other half by the gentleman from Illinois [Mr. MANN]. Is there objection? [After a pause.] The Chair hears none.

ADJOURNMENT.

Mr. LEWIS of Maryland. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 42 minutes p. m.) the House adjourned until Thursday, March 12, 1914, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the assistant clerk of the Court of Claims, transmitting findings of fact and conclusions in the case of Peter Daniel *v.* The United States (H. Doc. No. 821); to the Committee on War Claims and ordered to be printed.

2. A letter from the Secretary of the Treasury, submitting supplemental estimate of appropriation increasing the salary of the Assistant Treasurer of the United States from $3,600 to $4,500 per annum (H. Doc. No. 822); to the Committee on Appropriations and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. CLARK of Florida, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 13870) to provide for the erection, furnishing, and equipping of a building in the city of Washington, D. C., for the Department of Justice, reported the same without amendment, accompanied by a report (No. 368), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

He also, from the same committee, to which was referred the bill (H. R. 11747) to increase the limit of cost for the purchase of a site and the construction of a public building in Memphis, Tenn., reported the same without amendment, accompanied by a report (No. 369), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. PATTON of Pennsylvania: A bill (H. R. 14491) for the purchase of a site and the erection thereon of a public building at Clearfield, Pa.; to the Committee on Public Buildings and Grounds.

By Mr. LEVER: A bill (H. R. 14492) to authorize the Secretary of Agriculture to establish uniform standards of classification for cotton; to provide for the application, enforcement, and use of such standards in transactions in interstate and foreign commerce; to prevent deception therein; and for other purposes; to the Committee on Agriculture.

Also, a bill (H. R. 14493) for securing the uniform grading of grain, preventing deception in transactions in grain, and regulating traffic therein, and for other purposes; to the Committee on Agriculture.

By Mr. TAYLOR of New York: A bill (H. R. 14494) to amend the interstate commerce act, giving and granting unto the Interstate Commerce Commission power and authority to fix and determine rates, charges, and compensation to be allowed a controlled common carrier by the controlling common carrier; to the Committee on Interstate and Foreign Commerce.

By Mr. BURKE of Wisconsin: A bill (H. R. 14495) authorizing the Secretary of War to donate to the trustees of Rhine Center Cemetery, in the town of Rhine, in the county of Sheboygan and State of Wisconsin, two bronze or brass cannon or fieldpieces, with their carriages; to the Committee on Military Affairs.

By Mr. L'ENGLE: A bill (H. R. 14496) to equalize freight rates over transportation lines engaged in interstate commerce; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 14497) denying admission to the mails as second-class mail matter to certain newspapers and periodicals; to the Committee on the Post Office and Post Roads.

By Mr. MONDELL: A bill (H. R. 14498) authorizing the Northern Arapahoe Tribe of Indians to submit claims to the Court of Claims; to the Committee on Indian Affairs.

By Mr. GODWIN of North Carolina: A bill (H. R. 14499) for the erection of a public building at Lumberton, N. C.; to the Committee on Public Buildings and Grounds.

By Mr. SINNOTT: A bill (H. R. 14500) providing for the exchange of lands or the making of additional entries in connection with lands entered on reclamation projects; to the Committee on Irrigation of Arid Lands.

By Mr. GUDGER: A bill (H. R. 14501) to regulate and improve the civil service of the United States; to the Committee on Reform in the Civil Service.

By Mr. LAFFERTY: A bill (H. R. 14502) to amend section 9 of the act entitled "An act to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes," approved December 23, 1913; to the Committee on Banking and Currency.

By Mr. SELDOMRIDGE: Resolution (H. Res. 435) authorizing the Committee on Printing to inquire into the sale and terms of the publication known as the "Messages and Papers of the Presidents"; to the Committee on Rules.

By Mr. ADAMSON: Resolution (H. Res. 437) to provide for the consideration of H. R. 14385; to the Committee on Rules.

By Mr. TREADWAY: Memorial of the Legislature of the State of Massachusetts, favoring the Hamill bill to pension civil-service employees in the Postal Service; to the Committee on Pensions.

By Mr. ROGERS: Memorial of the Legislature of the State of Massachusetts, favoring the Hamill bill to pension civil-service employees in the Postal Service; to the Committee on Pensions.

## PRIVATE BILLS AND RESOLUTIONS.

---

## SENATE.

THURSDAY, *March 12, 1914.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, loving Father, we desire, as we come to the tasks of this day out of the region of quiet and peace, one sacred, self-revealing moment in Thy presence to give to us the spiritual equipment for great service. We would not handle lightly the interests of so many millions of Thy children. We need the blessing of God to enable us to address ourselves to the tasks of this day that are so near to Thy heart and that mean so much to all the people. Grant, we pray, that at this moment we may carry the divine inspiration and guidance that we may faithfully and well discharge the duties that Thou dost require at our hands.

The Journal of yesterday's proceedings was read and approved.

### MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor, in which it requested the concurrence of the Senate.

### PETITIONS AND MEMORIALS.

The VICE PRESIDENT. The Chair lays before the Senate a letter from Arthur Simmons, president of the American Foreign Labor Exclusion League, with reference to the immigration bill, which will be printed in the RECORD and referred to the Committee on Immigration.

The letter is as follows:

AMERICAN FOREIGN LABOR EXCLUSION LEAGUE,
UNITED STATES AND CANADA,
OFFICE OF THE PRESIDENT,
*Houston, Tex., March 8, 1914.*

Hon. THOMAS R. MARSHALL,
*President of the Senate, Washington, D. C.*

DEAR SIR: May I call your kind attention to immigration bill now under consideration in the Senate?

No doubt 95 per cent of our American people desire a new immigration law. We use the term "undesirable immigration." We mean undesirable conditions rather than undesirable people. In one of our large cities the city police reported 108 (women) prostitutes in one house. Out of the 108 prostitutes, 101 were foreigners. In this we see an undesirable condition. Simple way out, we must consider, first, the foreigners here; second, those desiring to come to America.

Our present law on contract foreign labor—a fine of $1,000 each—too small; entirely too small. Should be $10,000 each. Add to this, criminal alien $10,000 each; also add for each prostitute alien $10,000 fine for any person, firm, company, partnership, or corporation who are directly or indirectly concerned in the importation of or directly or indirectly concerned in the employment of foreigners and aliens of contract labor or criminals or prostitutes in the United States.

SLAVE LABOR.

One very serious mistake has been made in the history of the Nation's development, and every precaution should be taken to prevent history repeating itself. At one time our forefathers seemed to have thought that the only way to secure an adequate supply of labor was importation of slaves. Their importation brought results and consequences little dreamed of. Possibly the demand for labor to grow cotton was solved thereby for a time, and the cotton industry was rendered more profitable, but every dollar proved blood money one hundredfold. For, after all, it is our institutions and ideals and their successful perpetuation that make us economically, industrially, and commercially great.

Will you do me the kindness to refer this to Committee on Immigration? Also print in RECORD.

Very truly, yours,

ARTHUR SIMMONS,
*President American Foreign Labor Exclusion League.*

Mr. SWANSON. I present a joint resolution adopted by the Legislature of Virginia in reference to the construction and maintenance of post or rural free delivery routes in the several States. I ask that the joint resolution be printed in the RECORD and referred to the Committee on Post Offices and Post Roads.

There being no objection, the joint resolution was referred to the Committee on Post Offices and Post Roads and ordered to be printed in the RECORD, as follows:

Joint resolution in reference to the construction and maintenance of post or rural free delivery roads in the several States.

Whereas there is much agitation over and interest manifested in the construction, maintenance, and improvement of the public roads and highways of the several States of this Union; and

Whereas monetary aid from the Federal Government would greatly further the construction, maintenance, and improvement of the post or rural free delivery roads, which are in the main traveled highways of the several States; and

Whereas the United States Government is now using over 1,000,000 miles of public roads through this country in carrying its mail over them, either through its star route contractors or its rural delivery carriers, without contributing to the States or communities one cent of compensation; and

Whereas the United States Government has appropriated little, if anything, for the construction, maintenance, and improvement of the post or rural free delivery roads of the several States of the Union; and

Whereas Senator CLAUDE A. SWANSON on July 7, 1911, introduced in the United States Senate a bill, No. 2935, to provide for the construction, maintenance, and improvement of post roads and rural delivery routes, through the cooperation and joint action of the National Government and the several States through which such post roads and rural free delivery routes may be established, which bill seeks to secure an appropriation of $20,000,000 annually for aid to the several States of the Union in the construction, maintenance, and improvement of the post or rural free delivery roads of the several States: Now, therefore, be it

*Resolved by the Senate of the State of Virginia (the House concurring)*, That the several Members of Congress and the United States Senators representing this Commonwealth in the National Congress now assembled in Washington, D. C., be, and they are hereby, requested and urged to secure the passage of Senator SWANSON'S bill, or a bill which has for its object of securing of an appropriation from Congress for the construction, maintenance, and improvement of the post or rural free delivery roads of the several States of this Nation; and that a copy of this resolution be forwarded to each Member of Congress and the United States Senate.

Agreed to by the senate January 27, 1914.

O. V. HAUGER,
*Clerk of the Senate.*

Agreed to by the house of delegates February 24, 1914.

JNO. W. WILLIAMS,
*Clerk House of Delegates.*

Mr. THOMPSON presented petitions of sundry citizens of Harper County, Kans., praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

Mr. SHEPPARD presented petitions of 361 citizens of Tyler, 200 citizens of Waco, 125 citizens of Luling, and 250 citizens of San Angelo, all in the State of Texas, and a petition of 5,500 citizens of the city of Washington, D. C., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. RANSDELL presented memorials of 656 citizens of New Orleans; of Local Union No. 496, Journeymen Barbers' Union, of New Orleans; and of Local Union No. 79, International Association of Marbleworkers, of New Orleans, all in the State of Louisiana, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of West Baton Rouge Parish, La., praying for the enactment of legislation to provide for Government control of the levees of the Mississippi River, which was referred to the Committee on Commerce.

Mr. GRONNA. I have a number of petitions from various church organizations in North Dakota asking that an amendment to the Constitution for national prohibition be enacted. I ask that one of the petitions may be printed in the RECORD and that all be referred to the Committee on the Judiciary.

There being no objection, the petitions were referred to the Committee on the Judiciary, and one ordered to be printed in the RECORD, as follows:

Resolution suggested for adoption by churches, young people's societies, clubs, and other organizations, and for public meetings generally. Woman's Christian Temperance Union speakers are urgently requested to secure from all meetings which they address the adoption of this resolution:

"*Resolved*, That we heartily indorse the movement for national constitutional prohibition embodied in the joint resolution introduced in the United States Congress by Congressman RICHMOND PEARSON HOBSON, proposing an amendment to the Constitution forever prohibiting the sale, manufacture for sale, importation, exportation, or transportation for sale of beverages or foods containing alcohol."

(Signature of president or chairman.)

(To be sent, when signed, to National W. C. T. U. headquarters, Evanston, Ill.)

Adopted by Jamestown Presbyterian Church, representing 729 people, December 24, 1913.

H. B. ALLEN.

Adopted by Christian Endeavor Society of same church, representing 70 plus.

A. J. BARTRAM,
*Vice President, Jamestown, N. Dak.*

Mr. GRONNA. I present a resolution from Bad Lands Lodge, No. 639, Railway Employees, of Dickinson, N. Dak., protesting against the passage of what is known as the Sutherland bill. I ask that it may be printed in the RECORD and appropriately referred.

There being no objection, the resolution was referred to the Committee on the Judiciary and ordered to be printed in the RECORD, as follows:

Whereas on April 22, 1908, there was enacted by Congress a law known as the Federal employers' liability law, under which the railway employees of America are for the first time in the history of the United States securing an approach to an equitable compensation for injuries sustained in the course of their employment; and

Whereas there is pending in Congress a compensation bill known as the Sutherland bill, S. 595, which, if enacted, will supersede or annul the Federal liability law: Therefore be it

*Resolved*, By the Brotherhood of Locomotive Firemen and Enginemen, No. 639, in regular meeting assembled at Dickinson, N. Dak., that we are unalterably opposed to the passing of any Federal compensation law that does not contain an optional clause that will leave undisturbed our rights in the Federal liability law; and be it further

*Resolved*, That a copy of these resolutions be mailed to each Member of Congress of North Dakota, and to the United States Senators of this State, that this resolution may be laid before the House of Representatives and the Senate of the United States and the respective committees thereof, and a copy be spread on the minutes of this meeting.

Adopted this 2d day of March, 1914.

JENS P. JOHNSON,
*Recording Secretary.*

Attest:

C. W. FOSTER,
*President.*

Mr. GRONNA presented a memorial of the Commercial Club of Palermo, N. Dak., remonstrating against any change being made in the law regulating the parcel post, which was referred to the Committee on Post Offices and Post Roads.

He also presented a resolution adopted by the North Dakota Retail Lumbermen's Association, favoring the adoption of 1-cent letter postage, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of Hettinger, N. Dak., praying for the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on Immigration.

He also presented petitions of 170 citizens of Fargo, 350 citizens of Grand Forks, 52 citizens of Forman, and 21 citizens of Hillsboro, all in the State of North Dakota, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. BRISTOW presented a petition of sundry citizens of Russell, Kans., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Topeka, Seneca, and Miltonvale, all in the State of Kansas, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Pleasanton, Kans., praying for the enactment of legislation to prohibit gambling in futures on stock exchanges, which was referred to the Committee on the Judiciary.

He also presented a memorial of sundry ministers of the Gospel, residents of Garden City, Kans., remonstrating against the enactment of legislation to change the present compensatory time provided for postal employees, which was referred to the Committee on Post Offices and Post Roads.

Mr. WORKS presented a memorial of the Chamber of Commerce of Los Angeles, Cal., remonstrating against any repeal of the clause in the Panama Canal act exempting American coastwise vessels from the payment of tolls, which was referred to the Committee on Interoceanic Canals.

Mr. STERLING presented a memorial of Thomas Elsom Post, No. 54, Department of South Dakota, Grand Army of the Republic, and of Women's Relief Corps No. 42, of Northville, S. Dak., remonstrating against any change being made in the American flag, which was referred to the Committee on the Judiciary.

He also presented a petition of Thomas Elsom Post, No. 54, Department of South Dakota, Grand Army of the Republic, of Northville, S. Dak., praying for the enactment of legislation to provide for the monthly payment of pensions, which was referred to the Committee on Pensions.

Mr. GALLINGER presented a petition of the congregation of the First Methodist Episcopal Church of Claremont, N. H., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxi-

cating beverages, which was referred to the Committee on the Judiciary.

Mr. BURTON presented petitions of the congregations of the Hildreth Baptist Church, of Columbus; the Calvary Presbyterian Church, of Canton; the Methodist Episcopal Church of Manchester; and the Broad Street Church of Christ, of Columbus; of sundry citizens of Toledo, Cleveland, Lakewood, Dayton, Columbus, Upper Sandusky, Steubenville, Akron, Manchester, Linden Heights, Ironton, East Liverpool, Van Buren, and Athens, all in the State of Ohio, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Cleveland, Toledo, Lima, and Coshocton, all in the State of Ohio, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of sundry citizens of Hamilton, Ohio, remonstrating against the enactment of legislation to compel the observance of Sunday as a day of rest in the District of Columbia, which was referred to the Committee on the District of Columbia.

He also presented a petition of sundry citizens of Little Hocking, Ohio, praying for the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on Immigration.

Mr. SHIVELY presented memorials of sundry citizens of Indianapolis, Evansville, Perry County, Spencer County, Knox County, and Posey County; of the South Side Improvement Association, of Richmond; of the Richmond Militaer Verein; and of Cigar Makers' Local Union, No. 54, of Evansville, all in the State of Indiana, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of the congregation of the First Mennonite Church of Berne, Ind., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. KENYON presented petitions of sundry citizens of Davenport, Delmar, Clinton, Iowa City, and Grinnell, all in the State of Iowa, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Lyons, Muscatine, Davenport, Dubuque, and Des Moines; of Cigar Makers' Local Union No. 60, of Keokuk; and of Local Union No. 527, Bartenders' League, of Dubuque, all in the State of Iowa, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. KERN presented a memorial of the Emmet Club, of Indianapolis, Ind., remonstrating against the repeal of that provision in the Panama Canal act exempting American coastwise vessels from the payment of tolls, which was referred to the Committee on Interoceanic Canals.

He also presented memorials of sundry citizens of Indianapolis, Covington, and Vincennes, all in the State of Indiana, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Dekalb County, Jasper County, and Laporte County, all in the State of Indiana, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. OLIVER presented petitions of Bridesburg Council, No. 135, Junior Order United American Mechanics, of Bridesburg; of Washington Camp, No. 180, Patriotic Order Sons of America, of Mountain Top; of Washington Camp, No. 401, Patriotic Order Sons of America, of Philadelphia; of Washington Camp, No. 586, Patriotic Order Sons of America, of Olanta; of Black Knight Commandery, No. 100, Ancient and Illustrious Order Knights of Malta, of Easton; of Washington Camp, No. 182, Patriotic Order Sons of America, of Herndon; and of West Scranton Council, No. 497, Junior Order United American Mechanics, of Scranton, all in the State of Pennsylvania, praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

He also presented petitions of the Federation of Young People's Societies of Allegheny County; of the congregations of the Hebron Lutheran Church, of Blairsville; the Methodist Episcopal Church of Shickshinny; and the First Methodist Episcopal Church of Wilkes-Barre, all in the State of Pennsylvania, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Pittsburgh, Belsano, York, and Wilkes-Barre; of Local Union No. 260, Bartenders' League, of Braddock; of the Central Labor Union of Erie; and of Local Union No. 108, Stereotypers and Electrotypers' Union of York, all in the State of Pennsylvania, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. THORNTON presented a memorial of sundry citizens of New Orleans, La., and a memorial of Local Union No. 738, Bartenders' League, of Baton Rouge, La., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. LA FOLLETTE presented memorials of sundry citizens of Eau Claire, Tomah, Appleton, Fond du Lac, Bangor, Oshkosh, Milwaukee, and Menasha, all in the State of Wisconsin, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of the Council of Grain Exchanges, of Milwaukee, Wis., remonstrating against the enactment of legislation to regulate dealing in farm products, which was referred to the Committee on Agriculture and Forestry.

He also presented memorials of sundry citizens of New London, Grand Rapids, Danbury, Oxford, and Neenah, all in the State of Wisconsin, remonstrating against the enactment of legislation compelling the observance of Sunday as a day of rest in the District of Columbia, which were referred to the Committee on the District of Columbia.

He also presented a petition of sundry citizens of Wausau, Wis., praying that an appropriation be made annually for the construction of two new battleships, which was referred to the Committee on Naval Affairs.

He also presented a petition of sundry citizens of Milton, Wis., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented a memorial of John McDermott Post, No. 101, Department of Wisconsin, Grand Army of the Republic, and of the Women's Relief Corps of John McDermott Post, No. 101, Department of Wisconsin, Grand Army of the Republic, remonstrating against any change being made in the United States flag, which was referred to the Committee on the Judiciary.

Mr. McLEAN presented a petition of the Scandinavian Grand Lodge of Connecticut, Independent Order of Good Templars, of New Britain, Conn., praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Wallingford and Hartford, in the State of Connecticut, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. WEEKS presented petitions of sundry citizens of Gardner and Hubbardston, and of the congregation of the St. Paul's Methodist Episcopal Church of Lowell, in the State of Massachusetts, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of Bartenders' Local Union No. 84, of Taunton, and of sundry citizens of Taunton, all in the State of Massachusetts, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a memorial of the Keystone Club, of Springfield, Mass., remonstrating against the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on Immigration.

Mr. BRADLEY presented a petition of sundry citizens of Richmond, Ky., praying for the enactment of legislation to provide an educational test for immigrants to this country, which was referred to the Committee on Immigration.

Mr. CLAPP presented memorials of sundry citizens of Moorhead and Glyndon, in the State of Minnesota, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. TOWNSEND presented a petition of Local Grange No. 1566, Patrons of Husbandry, of Ann Arbor, Mich., and a petition of Eldbridge Center Grange, Patrons of Husbandry, of Eldbridge, Mich., praying for the adoption of a system of rural credits, which were referred to the Committee on Banking and Currency.

He also presented petitions of the Christian Endeavor Society of the South Side Methodist Protestant Mission; of the United Brethren Church; of the First Baptist Church; and of the Young People's Society of Christian Endeavor of the Methodist Protestant Church, all of Adrian, in the State of Michigan, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented the memorial of Michael P. Smith, of Jackson, Mich., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. BRANDEGEE presented a petition of Bethel Council No 10, Junior Order United American Mechanics, of Bethel, Conn., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented a memorial of the Local Branch, Connecticut Federation of Labor, of Danbury, Conn., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. REED. For my colleague [Mr. STONE], who is detained from the Chamber on account of illness, I present a resolution adopted by the Legislature of Missouri, which I ask may be printed in the RECORD and referred to the Committee on Claims.

There being no objection, the resolution was referred to the Committee on Claims and ordered to be printed in the RECORD, as follows:

EXECUTIVE OFFICES,
STATE OF MISSOURI,
*City of Jefferson, March 10, 1913.*

Hon. WILLIAM J. STONE,
*Washington, D. C.*

DEAR SENATOR: Herewith I inclose you certified copy of the resolution passed by the house of representatives in reference to the adjustment of claims of citizens for services rendered and supplies furnished during the Civil War.

Trusting the same will have, as I know it will, your every consideration, I am,

Very truly, yours,

ELLIOTT W. MAJOR,
*Governor.*

Whereas the State of Missouri, in order to adjust the claim of its citizens for services rendered and supplies furnished in aid of the National Government during the Civil War, did, in 1874, appoint commissioners to adjust such claims; and

Whereas said commissioners, after due hearing, did so adjust such claims and accept and receive from the claimants their vouchers and other proof, issuing in exchange therefor certificates, and did thereupon deposit with the United States Treasury Department, in Washington, all of said vouchers and proof, where they now remain; and

Whereas such vouchers and proof have never been examined or reported thereon by the United States Government: Now, therefore, be it

*Resolved*, That the Senators and Representatives of the State in Congress assembled be requested to urge the passage of such legislation in Congress as will cause the examination of said vouchers and proof and the determination of the validity and justice of said claims, and the amount due thereon, and to whom due.

I, Omar D. Gray, chief clerk of the house of representatives, do hereby certify that the above is a true and correct copy of a resolution introduced into the house of representatives February 17, 1913, by Representative Towson, of Shelby County, and which was read and adopted.

OMAR D. GRAY,
*Chief Clerk.*

Attest:

NETTIE AUSTIN,
*Secretary to Chief Clerk.*

Mr. REED (for Mr. STONE) presented memorials of sundry citizens of Weston, Kansas City, Joplin, De Soto, St. Louis, and Edgerton, and of Local Union No. 343, Bartenders' League, of De Soto, all in the State of Missouri, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also (for Mr. STONE) presented memorials of sundry citizens of Carthage, Clinton, St. Louis, and Utica, all in the State of Missouri, remonstrating against the enactment of legislation to compel the observance of Sunday as a day of rest in the District of Columbia, which were referred to the Committee on the District of Columbia.

He also (for Mr. STONE) presented petitions of sundry citizens of Paris, St. Louis, Joplin, and Cape Girardeau, all in the State of Missouri, praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

He also (for Mr. STONE) presented a petition of the Common Council, of Kansas City, Mo., praying for the enactment of legislation providing for Government control of telegraph and telephone lines, which was referred to the Committee on Post Offices and Post Roads.

He also (for Mr. STONE) presented a petition of the Political Equality League, of Springfield, Mo., praying for adoption of an amendment to the Constitution to grant the right of suffrage to women, which was ordered to lie on the table.

He also (for Mr. STONE) presented a petition of the Post Office Clerks' Association, of St. Louis, Mo., praying for the enactment of legislation to grant pensions to post-office employees incapacitated in line of duty, which was referred to the Committee on Post Offices and Post Roads.

He also (for Mr. STONE) presented a petition of Local Lodge No. 57, International Association of Machinists, of Moberly, Mo., praying for an investigation of the Illinois Central Railroad and the Harriman lines' strike, which was referred to the Committee on Education and Labor.

He also (for Mr. STONE) presented a petition of the board of directors of the Bank of Sparta, of Sparta, Mo., praying for the adoption of an amendment to the income-tax law to provide a method of information at the source, which was referred to the Committee on Finance.

He also (for Mr. STONE) presented a memorial of the Board of Trade of Kansas City, Mo., remonstrating against the enactment of legislation to provide for Federal inspection of grain, which was ordered to lie on the table.

He also (for Mr. STONE) presented petitions of the Brotherhood of Locomotive Firemen and Enginemen, of St. Louis; the Brotherhood of Locomotive Engineers, of Fornfelt; and the Brotherhood of Locomotive Firemen and Enginemen, of Kansas City, all in the State of Missouri, praying for the enactment of legislation to pay longevity or overtime pay earned by Panama Canal employees, which were referred to the Committee on Interoceanic Canals.

He also (for Mr. STONE) presented petitions of the Board of Trade, the Association of Credit Men, and the Implement Vehicle & Hardware Co., all of Kansas City, in the State of Missouri, praying that an appropriation be made for the prevention and control of floods, which were referred to the Committee on Commerce.

He also (for Mr. STONE) presented a petition of sundry citizens of Poplar Bluff, Mo., praying that an annual appropriation be made for the construction of two new battleships, which was referred to the Committee on Naval Affairs.

He also (for Mr. STONE) presented a memorial of the Council of Grain Exchanges, of Kansas City, Mo., remonstrating against the enactment of legislation to regulate dealing in farm products, which was referred to the Committee on Agriculture and Forestry.

He also (for Mr. STONE) presented a petition of the Business Men's League, of St. Louis, Mo., praying for the enactment of legislation to establish a bureau of legislative reference and bill drafting, which was referred to the Committee on the Judiciary.

He also (for Mr. STONE) presented petitions of sundry citizens of Bland, Linn Creek, and Arrow Rock, and of Business Men's League of Carthage, all in the State of Missouri, praying for the enactment of legislation to improve the roads of the country, which were referred to the Committee on Agriculture and Forestry.

He also (for Mr. STONE) presented a petition of the Lumbermen's Club of St. Louis, Mo., praying for the enactment of legislation to provide for a continuance of the Commerce Court, which was referred to the Committee on the Judiciary.

He also (for Mr. STONE) presented a petition of the Commercial Club of Doniphan, Mo., praying that an appropriation be

made for a survey of the Current River, Mo., which was referred to the Committee on Commerce.

He also (for Mr. STONE) presented a petition of the Hannibal Club, of Hannibal, Mo., praying that an appropriation be made for the purchase of homes for representatives of the United States in foreign countries, which was referred to the Committee on Foreign Relations.

He also (for Mr. STONE) presented a petition of the house of delegates of St. Louis, Mo., praying for the enactment of legislation to make lawful certain agreements between employers and laborers, and persons engaged in agriculture or horticulture, and to limit the issuing of injunctions in certain cases, and for other purposes, which was referred to the Committee on the Judiciary.

He also (for Mr. STONE) presented petitions of the Missouri Bankers' Association, of Sedalia; of the United Commercial Travelers, of Carthage; of the Boosters' Club, of Sedalia; and of the Shoe Manufacturers and Jobbers' Association of St. Louis, all in the State of Missouri, praying for the adoption of a 1-cent letter postage, which were referred to the Committee on Post Offices and Post Roads.

CONDITIONS IN MEXICO.

Mr. SHEPPARD. I submit two telegrams in reference to the Mexican situation, which I ask to have read at the desk.

There being no objection, the telegrams were read and ordered to lie on the table, as follows:

[Telegram.]

ROCKPORT, TEX., *March 11, 1914.*

Hon. MORRIS SHEPPARD,
*Washington, D. C.:*

Fully nine-tenths of the people of Texas approve the policy of the Wilson administration with Mexico without qualification. Most of the few who want intervention by the United States are influenced by desire for office or for pecuniary considerations or for prospective pensions.

JNO. H. TRAYLOR.

[Telegram.]

TYLER, TEX., *March 11, 1914.*

Hon. MORRIS SHEPPARD,
*United States Senate, Washington, D. C.:*

Everyone here is with you.

HAMPSON GARY.

Mr. GALLINGER. Mr. President, I observe in the first telegram read that certain men in Texas are charged with desiring pensions. They want a war with Mexico, so that they can get wounded, I suppose. I think that is a most extraordinary statement.

INSPECTION AND GRADING OF GRAIN.

Mr. KERN. I present two telegrams relating to the bill for the Federal inspection of grain, which I ask to have printed in the RECORD.

There being no objection, the telegrams were ordered to lie on the table and to be printed in the RECORD, as follows:

[Telegram.]

INDIANAPOLIS, IND., *February 24, 1914.*

Senator JOHN W. KERN,
*Washington, D. C.:*

Understand McCumber's bill for Federal inspection of grain likely to come up any day. The grain trade of this State is opposed to Federal inspection. We are working with Department of Agriculture for standardization of grades and Federal supervision of inspection, thus giving relief sought by MCCUMBER and avoiding dual and cumbersome inspection and delays in transportation. We hope the matter can be worked out in orderly, intelligent manner in connection with Department of Agriculture under proper supervision.

INDIANA GRAIN DEALERS' ASSOCIATION.

[Telegram.]

INDIANAPOLIS, IND., *February 24, 1914.*

Hon. JOHN W. KERN,
*United States Senate, Washington, D. C.:*

We are informed McCumber Senate bill 120, Federal inspection of grain, likely come to a vote soon in Senate. The Indianapolis Board of Trade is pledged to adopt grain standards as promulgated by the Department of Agriculture, and is in favor and is now asking the Secretary of Agriculture to assist in passing a law creating a bureau in that department to supervise the inspection of grain in all markets in some such manner as national banks and railway transit bureaus are supervised. We are opposed to Federal inspection, because it would create a cumbersome and expensive system of dual inspection of State and interstate grain.

WILLIAM H. HOWARD, *Secretary.*

REPORTS OF COMMITTEES.

Mr. WORKS, from the Committee on Public Lands, to which was referred the bill (H. R. 122) authorizing the State of California to select public lands in lieu of certain lands granted to it in Imperial County, Cal., and for other purposes, reported it without amendment and submitted a report (No. 327) thereon.

Mr. RANSDELL, from the Committee on Public Health and National Quarantine, to which was referred the bill (S. 2616) to promote the efficiency of the Public Health Service, reported it with amendments and submitted a report (No. 328) thereon.

Mr. JOHNSON. I am directed by the Committee on Claims, to which was referred the bill (S. 1882) for the relief of Bolognesi, Hartfield & Co., to report it adversely, and I submit a report (No. 330) thereon. I ask that the bill may be placed on the calendar.

The VICE PRESIDENT. The bill will be placed on the calendar.

Mr. JOHNSON, from the Committee on Claims, to which was referred the bill (S. 4449) for the relief of Frank Austin and others, reported it without amendment and submitted a report (No. 329) thereon.

Mr. CHAMBERLAIN, from the Committee on Commerce, to which was referred the bill (S. 3800) making an appropriation for aids to navigation in Alaska, reported it without amendment and submitted a report (No. 331) thereon.

He also, from the Committee on Public Lands, to which was referred the bill (S. 531) to set apart certain lands in the State of Oregon as a public park, to be known as the Saddle Mountain National Park, reported it with amendments and submitted a report (No. 332) thereon.

Mr. MYERS, from the Committee on Public Lands, to which was referred the bill (H. R. 4938) providing for the issuance of patents to transferees of town lots purchased from the United States at public sale in certain cases, reported it without amendment and submitted a report (No. 333) thereon.

CARIBOU NATIONAL FOREST RESERVE.

Mr. BRADY. From the Committee on Agriculture and Forestry I report back favorably with an amendment the bill (S. 1739) to reserve certain lands and incorporate the same and make them a part of the Caribou National Forest Reserve, and I submit a report (No. 326) thereon. I ask unanimous consent for the present consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. SHAFROTH. Mr. President, I should like to have the bill read.

The VICE PRESIDENT. In the absence of objection, the Secretary will read the bill.

The bill was read, as follows:

*Be it enacted, etc.*, That the following-described lands, to wit, the east half of section 23 and all of sections 26 and 35, township 11 south, range 45 east, Boise meridian; also sections 1 and 2, east half of section 10, sections 11 to 14, inclusive, east half of section 15, east half of section 22, sections 23 to 26, inclusive, east half of section 27, and sections 31 to 36, inclusive, township 12 south, range 45 east, Boise meridian; also sections 1 to 5, inclusive, north half of section 10, north half of section 11, and north half of section 12, township 13 south, range 45 east, Boise meridian, be, and the same are hereby, reserved and withdrawn from entry and made a part of and included in the Caribou National Forest Reserve.

Mr. SHAFROTH. I should like to have the chairman of the Committee on Public Lands, to which I presume this bill was referred, to make an explanation of it.

Mr. CLARK of Wyoming. The bill was not referred to the Committee on Public Lands.

Mr. THOMAS. What committee reports the bill?

Mr. SMOOT. The bill has been reported from the Committee on Agriculture and Forestry.

Mr. BORAH. Mr. President, I can say to the Senator from Colorado [Mr. THOMAS], as I introduced the bill and am somewhat familiar with it, that it has for its purpose the inclusion in the national forests of some Government lands in the immediate vicinity of a city of our State. It is for the purpose of protecting the watershed of the city.

Mr. LANE. What is the name of the city to which the Senator from Idaho refers?

Mr. BORAH. Montpelier.

Mr. SHAFROTH. Will the Senator from Idaho state how many acres are included in this reservation—I mean under the act proposing to increase the reservation, if there is an increase?

Mr. BORAH. About 3,000 acres, I believe; but the Senator from Colorado must understand that this is solely for the purpose of protecting the watershed of the city of Montpelier. It is a matter which has been very thoroughly investigated, and I would not be the author of a bill here to include lands in a forest reserve for any other purpose.

Mr. THOMAS. Does not the Senator think it would be better to convey the land to the city for that purpose, rather than to include it in the forest reserve?

Mr. BORAH. That, in my judgment, would be an impossibility. I do not think we could put through such a bill.

Mr. SMOOT. I should like to ask the Senator reporting the bill if there has been a report on it from the Department of Agriculture?

Mr. BRADY. There has been. The favorable report on the bill is unanimous from the committee, and there is also a report from the Agricultural Department from the Assistant Secretary, B. T. Galloway.

Mr. SMOOT. I am not going to object to the bill, because I think in principle it is right. I think that where a watershed needs protection the land ought to be deeded outright to the city; and I think such a bill can be passed in this body and in the other House, for such a bill has been passed; but I do believe that this bill ought to have been referred to the Committee on Public Lands, because it is a proposition to take public lands and put them into a forest reserve.

Mr. BORAH. Mr. President, I am opposed to this bill going to the Committee on Public Lands. There is no need of delaying this matter any longer.

Mr. SMOOT. I am not asking that the bill go to the Committee on Public Lands.

Mr. BORAH. Then I trust the Senator will not suggest that the bill should have gone there.

Mr. SMOOT. I did not understand what the Senator from Idaho said.

Mr. BORAH. This bill has been delayed for the last year, and there is no need for delaying it any longer. It ought either to be defeated or to be passed.

Mr. SMOOT. Mr. President, I do not know to what the Senator from Idaho has reference. I simply said that I was not going to object to the passage of the bill; but I did say, and I repeat it, that the bill originally ought to have gone to the Committee on Public Lands.

Mr. GRONNA. As a member of the Committee on Agriculture and Forestry, I wish to say to the Senator from Utah that the committee considered this bill and considered the report made by the Assistant Secretary of Agriculture, Dr. Galloway. Inasmuch as the bill simply proposes to include certain land within a forest reserve, which is under the jurisdiction of the Agricultural Department, we thought that the Committee on Agriculture and Forestry had jurisdiction. Therefore I believe it had full authority to consider and report on the measure.

Mr. SHAFROTH. Mr. President, I should like to ask the Senator from Idaho whether this bill has been petitioned for or has been introduced at the request of the city council of the city?

Mr. BORAH. It has been petitioned for by the mayor and citizens and indorsed by the council. The question has been agitated there for the last year and a half or two years.

Mr. SHAFROTH. Then, Mr. President, I have no objection whatever to the bill.

Mr. BRADY. There is no question but that the passage of this bill will be of material benefit to the citizens of Montpelier in the protection of their water supply.

Mr. SHAFROTH. I feel that the citizens of a State ought to have control of these matters, and if they ask for such a measure it seems to me it ought to be granted them.

Mr. THOMAS. Mr. President, I will not oppose this bill, for the reason that both Senators from Idaho ask for its passage; but I do not want, by not opposing it, to be considered as acquiescing in the proposition that because a forest reserve is under the control of the Agricultural Department, therefore the Committee on Public Lands should not consider, pass upon, and report upon bills of this character.

It is quite true that the Forestry Service is within the jurisdiction of the Department of Agriculture, but it never ought to have been there; and it would be a good piece of business, irrespective of the fact that the public lands should be under the jurisdiction of the Interior Department as to the Forestry Service as well as to other matters, if some such legislation could be effected at this session of Congress that would transfer the Forestry Service to the Interior Department.

The VICE PRESIDENT. The amendment reported by the committee will be stated.

The SECRETARY. On page 1, line 3, before the word "half," it is proposed to strike out "east" and insert "west."

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

### LAND IN PENSACOLA, FLA.

Mr. MYERS. From the Committee on Public Lands, I report back favorably with an amendment the bill (S. 4172) releasing the claim of the United States Government to that portion of land, being a fractional block, bounded on the north and east by Bayou Cadet, on the west by Cevallos Street, and on the south by Intendencia Street, in the old city of Pensacola, Fla., and I submit a report (No. 335) thereon.

Mr. FLETCHER. Mr. President, I ask unanimous consent for the present consideration of the bill. It has passed the Senate, and has been unanimously reported from the Committee on Public Lands. It is intended to remove a cloud on the title of property in Pensacola, which has been in adverse possession of private owners for over 20 years. I should like to have the matter disposed of.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Public Lands with an amendment to strike out all after the enacting clause and to insert:

That the Secretary of the Interior be, and he is hereby, authorized and directed to issue a patent remising, releasing, and quitclaiming forever all right, title, claim, and interest of the United States of America in and to that portion of land, being a fractional block, bounded on the north and east by Bayou Cadet, on the west by Cevallos Street, and on the south by Intendencia Street, in the old city of Pensacola, in the county of Escambia and the State of Florida, to such person or persons, firms or corporations, as shall make proof that he himself, or he and his grantor or grantors, has had continuous possession thereof under claim of ownership during the last 20 years next before the passage of this act. Such patent, however, shall be subject to any public easement or other adverse right suffered or granted by the patentee or his grantors.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill authorizing the Secretary of the Interior to issue a patent to that portion of land, being a fractional block, bounded on the north and east by Bayou Cadet, on the west by Cevallos Street, and on the south by Intendencia Street, in the old city of Pensacola, in the State of Florida."

Mr. MYERS. From the Committee on Public Lands I report back favorably, with an amendment, the bill (S. 4173) releasing the claim of the United States Government to lot No. 306, in the old city of Pensacola, Fla., and I submit a report (No. 334) thereon.

Mr. FLETCHER. Mr. President, this bill is precisely of the same nature as the bill just passed, and I ask unanimous consent for its present consideration.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Public Lands with an amendment to strike out all after the enacting clause and insert:

That the Secretary of the Interior be, and he is hereby, authorized and directed to issue a patent remising, releasing, and quitclaiming forever all right, title, claim, and interest of the United States of America in and to lot No. 306 in the old city of Pensacola, in the county of Escambia and the State of Florida, to such person or persons, firms or corporations, as shall make proof that he himself, or he and his grantor or grantors, has had continuous possession thereof under claim of ownership during the last 20 years next before the passage of this act. Such patent, however, shall be subject to any public easement or other adverse right suffered or granted by the patentee or his grantors.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill authorizing the Secretary of the Interior to issue a patent to lot No. 306, in the old city of Pensacola, Fla."

### THE COMMITTEE ON PUBLIC HEALTH AND NATIONAL QUARANTINE.

Mr. RANSDELL. I ask unanimous consent for the immediate consideration of Senate resolution 282, which authorizes the Committee on Public Health and National Quarantine to hold hearings on Senate bill 4573, to encourage rural sanitation, with special reference to the prevention and suppression of malaria and typhoid fever.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read the resolution.

The resolution (S. Res. 282) was read, as follows:

*Resolved*, That the Committee on Public Health and National Quarantine be, and it is hereby, authorized to send for papers and persons, administer oaths, and to employ a stenographer, at a cost not to exceed $1 per printed page, to report such hearings as may be had in connection with the consideration of S. 4573, to encourage rural sanitation, with special reference to the prevention and suppression of malaria and typhoid fever; to have its hearings printed for the use of the committee; that the expenses of such hearings be paid out of the contingent fund of the Senate on vouchers to be approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. BRISTOW. Mr. President, has this resolution been referred to the Committee to Audit and Control the Contingent Expenses of the Senate?

Mr. RANSDELL. It has been referred to that committee and was reported by the Senator from Mississippi [Mr. WILLIAMS] on the 6th instant.

Mr. WORKS. I should like to ask the Senator from Louisiana, the chairman of the committee, to what bill reference is made in the resolution? I do not remember it from the number.

Mr. RANSDELL. Senate bill 4573 is a bill to promote rural sanitation, with special reference to the prevention of typhoid fever and malaria. It is the bill on which several hearings were held some days ago.

Mr. WORKS. I understood the hearings on that subject had been practically closed.

Mr. RANSDELL. The hearings have been closed, but they have not as yet been published. We proceeded to hold the hearings really without authority.

Mr. SMOOT. Mr. President, under the law the committee has the right to have published 1,000 copies of the hearings; but I suppose what the Senator desires to arrive at is an authorization to pay for the reporting of the hearings?

Mr. RANSDELL. That is exactly what I desire.

Mr. SMOOT. That is all the resolution includes?

Mr. RANSDELL. That is included in the resolution.

The VICE PRESIDENT. The question is on agreeing to the resolution.

The resolution was agreed to.

CONVICT-MADE GOODS.

Mr. HUGHES. I move that the Committee on Education and Labor be discharged from the further consideration of the bill (H. R. 1933) to limit the effect of the regulation of interstate commerce between the States in goods, wares, and merchandise wholly or in part manufactured, mined, or produced by convict labor or in any prison or reformatory.

Mr. SMITH of Georgia. That course is entirely agreeable to the committee. I understand that a similar bill is before another committee and that it was unnecessary really to send this bill to the Committee on Education and Labor.

The VICE PRESIDENT. To what committee does the Senator from New Jersey desire to have the bill referred?

Mr. HUGHES. I ask that it may lie on the table.

The VICE PRESIDENT. The question is on agreeing to the motion to discharge the Committee on Education and Labor from the further consideration of the bill.

The motion was agreed to.

The VICE PRESIDENT. The bill will lie on the table.

BILLS AND JOINT RESOLUTIONS INTRODUCED.

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CUMMINS:

A bill (S. 4869) granting an increase of pension to Camwells P. Davis (with accompanying papers); to the Committee on Pensions.

By Mr. BRISTOW:

A bill (S. 4870) granting an increase of pension to Samuel N. Johnson; to the Committee on Pensions.

By Mr. PERKINS:

A bill (S. 4871) to increase the limit of cost of site and public building at Red Bluff, Cal.; to the Committee on Public Buildings and Grounds.

By Mr. THORNTON:

A bill (S. 4872) to prohibit the taking or catching of commercial sponges in the Gulf of Mexico or the Straits of Florida; to the Committee on Fisheries.

By Mr. BRYAN:

A bill (S. 4873) for the relief of the heirs of the estate of Charles Morgan, sr., deceased; to the Committee on Claims.

By Mr. CHAMBERLAIN:

A bill (S. 4874) authorizing and directing the Interstate Commerce Commission to prepare and establish a single uniform classification of freight, with its rate schedule, and to prescribe rules for the ascertainment and apportionment of freight operating expenses; to the Committee on Interstate Commerce.

A bill (S. 4875) to authorize the Secretary of Commerce to exchange rights of way in connection with lands pertaining to the Lighthouse Service; to the Committee on Commerce.

By Mr. POMERENE:

A bill (S. 4876) to amend section 41 of the national-bank act, being renumbered as section 5144 of the Revised Statutes of the United States; to the Committee on Banking and Currency.

By Mr. McLEAN:

A bill (S. 4877) granting an increase of pension to Egbert Dart (with accompanying papers); to the Committee on Pensions.

By Mr. SHIVELY:

A bill (S. 4878) granting an increase of pension to Moses A. Sisco (with accompanying papers); to the Committee on Pensions.

By Mr. GORE:

A bill (S. 4879) to increase the membership of the Interstate Commerce Commission, and for other purposes; to the Committee on Interstate Commerce.

By Mr. OWEN:

A bill (S. 4880) authorizing Ponca City, Okla., and the board of education of said city to convey certain lands; to the Committee on Public Lands.

By Mr. LEWIS:

A bill (S. 4881) to create a national university at the seat of the Federal Government (with accompanying paper); to the Committee on the University of the United States.

By Mr. GRONNA:

A joint resolution (S. J. Res. 123) authorizing the printing of 200,000 copies of the Special Report on the Diseases of the Horse; and

A joint resolution (S. J. Res. 124) authorizing the printing of 200,000 copies of the Special Report on the Diseases of Cattle; to the Committee on Printing.

By Mr. JONES (by request):

A joint resolution (S. J. Res. 125) proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

By Mr. CHILTON:

A joint resolution (S. J. Res 126) proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

AMENDMENT TO INDIAN APPROPRIATION BILL.

Mr. TOWNSEND submitted an amendment proposing to appropriate $2,500 for the erection of a gymnasium and manual training building and equipment at the Indian school at Mount Pleasant, Mich., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

THE MONROE DOCTRINE.

Mr. CHAMBERLAIN. I offer a resolution and ask unanimous consent for its immediate consideration.

Mr. SMOOT. Let it be read.

The VICE PRESIDENT. The resolution will be read.

The Secretary read the resolution (S. Res. 298) as follows:

Whereas there was published in the morning papers what purported to be a London cable to the New York American, giving an account of the annual dinner of the Associated Chambers of Commerce, in London, in which Hon. Walter Hines Page, the American ambassador to Great Britain, is reported to have said, "The Monroe doctrine simply meant this: That the United States would prefer that no European Governments should gain more land in the New World"; and

Whereas it is further stated that, amid laughter, Mr. Page declared that he would not say that the United States had constructed the Panama Canal for Great Britain, but that it had added greatly to the pleasure of building that great work to know that the British would profit most by its use: Therefore be it

*Resolved*, That the Secretary of State be requested to procure and furnish to the Senate, without delay, a copy of the speech made by the American ambassador, and particularly that part thereof giving his definition of the Monroe doctrine, and that portion thereof in which he is alleged to have stated amid great laughter that the British would profit most by the use of the Panama Canal, and that he call upon the American ambassador to furnish forthwith for the use of the Senate the evidence upon which that portion of his speech was based wherein he is alleged to have said that it added greatly to the pleasure of the people of the United States in the building of the Panama Canal to know that the British would profit most by its use.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

The resolution was considered by unanimous consent and agreed to.

SOIL SURVEY OF YORKTOWN AREA, VIRGINIA.

Mr. MARTIN of Virginia submitted the following resolution (S. Res. 294), which was read and, with the accompanying papers, referred to the Committee on Printing:

*Resolved*, That 1,300 copies of the Soil Survey of the Yorktown Area, Virginia, be printed for the use of the Senate document room.

CLAIM OF HALL-GARRISON & CO.

Mr. MARTINE of New Jersey submitted the following resolution (S. Res. 295), which was read and referred to the Committee on Foreign Relations:

*Resolved*, That the Secretary of State of the United States be, and hereby is, directed to immediately transmit to the Senate all documents on file in his office or in or under his possession relating to the claim of Hall-Garrison & Co. against the Republic of Nicaragua.

DISCONTINUANCE OF STAR ROUTES.

Mr. CLARK of Wyoming submitted the following resolution (S. Res. 296), which was read, considered by unanimous consent, and agreed to:

*Resolved*, That the Postmaster General be directed to furnish to the Senate detailed information as to how many and what star routes have been discontinued during the present fiscal year; what curtailment has been made in the service; and what, if any, discontinuance or curtailment has been determined upon for the ensuing fiscal year.

LUCY B. KASSON.

Mr. BURTON submitted the following resolution (S. Res. 297), which was read and referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved*, That the Secretary of the Senate be, and he hereby is, authorized and directed to pay out of the contingent fund of the Senate to Lucy B. Kasson, widow of H. A. Kasson, late a member of the Capitol police force, a sum equal to six months' salary at the rate he was receiving by law at the time of his death, the said sum to be considered as including funeral expenses and all other allowances.

HEARINGS BEFORE THE COMMITTE ON PRINTING.

Mr. FLETCHER submitted the following resolution (S. Res. 299), which was read and referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

*Resolved*, That the Committee on Printing or any subcommittee thereof be, and the same is hereby, authorized to employ a stenographer from time to time, as may be necessary, to report such hearings as may be had on bills or other matters pending before said committee and that said stenographer be paid as compensation not to exceed $1 per printed page out of the contingent fund of the Senate.

PAINT CREEK DISTRICT, WEST VIRGINIA.

Mr. KERN submitted the following resolution (S. Res. 300), which was read and referred to the Committee on Printing:

*Resolved*, That there be printed 10,000 additional copies of the report (No. 321) of the Senate Committee on Education and Labor on the investigation of the conditions in the Paint Creek coal fields of West Virginia.

INITIATIVE AND REFERENDUM.

Mr. ASHURST submitted the following resolution (S. Res. 301), which was read and, with the accompanying papers, referred to the Committee on Printing:

*Resolved*, That Senate Document No. 603, Sixty-first Congress, the code of the people's rule; Senate Document No. 624, Sixty-first Congress, representative government; Senate Document No. 556, Sixty-second Congress, initiative and referendum; Senate Document No. 302, Sixty-second Congress, initiative, referendum, and recall; Senate Document No. 521, Sixtieth Congress, memorial of State Referendum League of Maine, concerning initiative and referendum; Senate Document No. 529, Sixtieth Congress, supplemental memorial of Initiative and Referendum League of America, relative to national initiative and referendum; and Senate Document No. 516, Sixtieth Congress, memorial of Initiative and Referendum League of America, relative to a national initiative and referendum, be printed for the use of the Senate.

ADDRESSES BEFORE THE SOUTHERN COMMERCIAL CONGRESS.

Mr. FLETCHER. At the fourth annual convention of the Southern Commercial Congress, at Nashville, a number of addresses were delivered at a session which was arranged as a memorial to the late Dr. Seaman A. Knapp, formerly in charge of the farmers' cooperative demonstration work in the Department of Agriculture. In view of the achievements of Dr. Knapp, the great public interest in his work, and the great benefits derived from it, I desire to have those addresses printed as a public document, and I ask that the matter be referred to the Committee on Printing.

The VICE PRESIDENT. It will be referred to the Committee on Printing.

COMBINATIONS IN RESTRAINT OF TRADE.

Mr. JONES. Mr. President, I have a brief but very carefully prepared statement by Mr. N. C. Richards, of North Yakima, Wash., a gentleman with whom I am very well acquainted, setting out reasons why cooperative organizations composed solely of growers of agricultural and horticultural products which are not formed for profit should be exempt from legislation looking to the control of combinations in restraint of trade. I ask that the statement may be printed in the RECORD and referred to the Committee on Interstate Commerce, which I understand will have jurisdiction over legislation of that character.

There being no objection, the paper was referred to the Committee on Interstate Commerce and ordered to be printed in the RECORD, as follows:

One of the live issues of the day is the reduction of the high cost of living, and it is the avowed policy of the present administration to endeavor to reduce the cost of the necessities of life to the consuming masses. To this end the tariff bill recently passed removed or greatly reduced the tariff on all agricultural products.

An element that enters into the present high prices which consumers of food products are paying therefor and is much more responsible for such high prices than the tariff is the cost of distribution. Our producers are only getting on an average 43 per cent of the price which the ultimate consumer pays. Of the remaining 57 per cent, about 5 per cent pays the cost of transportation; the balance is consumed in middlemen's profits and waste in distribution.

The elimination of a part of the expense of distribution of our agricultural products is one of the great problems that confronts us, and its solution is worthy of our best efforts. As has been demonstrated in some of the European countries, one of the most potent factors in accomplishing this result is the bringing together of the producers into cooperative organizations for marketing and distributing farm products. As yet little progress has been made in this direction in this country. It has, however, been demonstrated, both in the United States and abroad, that if the growers can be united in associations so that their products can be marketed in quantity through a common selling and distributing agency a part of the middlemen's profits and of the expense of distribution can be eliminated. Thus better prices can be obtained for the producer and also lower the cost to the consumer.

The movement for the organization of cooperative associations among our farmers is growing. Especially is this true of those engaged in fruit raising. The prosperity of those sections of our country devoted to horticulture seems to be absolutely dependent upon the ability of the growers to develop marketing organizations which will deliver them from the tribute exacted by the commission men. Associations have been formed among the growers of both citrus and deciduous fruits. Many of these associations have no capital stock, and all of them are cooperative nonprofit organizations, composed solely of growers. They are in no sense corporations in restraint of trade, and are not organized to enable anyone to corner any product or article in order to make a profit out of it. Their expenses are paid by a uniform percentage charged on the produce handled. If this amounts to more than the actual cost, the surplus is returned to the growers. These organizations have two fundamental objects—first, to obtain for the producer of agricultural or horticultural products a fair living price for what he grows and avoid having it all taken from him by middlemen; second, to get these products into the hands of the consuming masses at prices which they can afford to pay and thus increase consumption and enlarge the demand. The producers' organizations are always ready to sell at what their produce is fairly worth in the market.

Naturally, the commission men and dealers who have fattened and grown rich at the expense of the farmers are antagonistic to these organizations and use every available means to prevent their growth and to alienate their members. These men will be very quick to seize upon anything which they might use to disrupt the farmers' associations. If any law for the regulation of trusts is so framed that it can be construed to include these associations or furnish a pretext for attack upon them, it will be readily seized upon and used to deter farmers from organizing and to destroy the organizations formed by them for mutual protection.

In framing legislation for the control of combinations in restraint of trade it should be made clear that such legislation is not intended to reach or affect cooperative organizations composed solely of growers of agricultural or horticultural products which are not formed for profit and whose control is always retained in the hands of the farmers. It would not seem that there can be any legitimate objection to this, as it is for the benefit of everyone except the men who have heretofore profited by the helplessness of our agricultural classes, owing to their lack of organization. The laborer, the capitalist, the professional man, the manufacturer, and all our great mass of consumers will be benefited, as the ultimate result of the success of such organizations will be to reduce the price to the consumer.

Many of the European Governments have taken the lead in promoting and fostering cooperation among their agriculturists, with the result that they have not only greatly improved the condition of the tillers of the soil but have materially added to the general prosperity of all their people.

Any bill passed for the regulation of combinations in restraint of trade should contain an exception in favor of farmers' cooperative organizations, about as follows:

"The provisions of this act shall not apply to or be construed to include cooperative associations or organizations which are not formed for profit and in which only producers of agricultural or horticultural products can become members or stockholders."

Mr. JONES. I have been informed by the Senator from Iowa [Mr. CUMMINS] that a bill relating to the subject matter of the paper is now before the Committee on the Judiciary. That being the case, I should like to have the paper referred to the Committee on the Judiciary. I had supposed that the proposed legislation was before the Committee on Interstate Commerce.

The VICE PRESIDENT. Without objection, that change of reference will be made.

WOMAN SUFFRAGE.

Mr. SHEPPARD. Mr. President, I ask to have read the editorial which I send to the desk with reference to the suffrage question.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

[From the News, Indianapolis, Ind., March 7, 1914.]

A DIFFICULT SITUATION.

Senator ASHURST, of Arizona, is fairly entitled to the sympathy of the public. The distinguished statesman has been working hard to get a vote of the Senate—and a favorable one—on the woman-suffrage amendment. Yet yesterday he received a telegram from Mrs. O. H. P. Belmont, one of the suffrage leaders, in which she said: "If you allow the suffrage amendment to go to vote now, I shall consider you to be false to our interests and shall not hesitate to make that fact known in important places." We do not know what the poor man is to do. Doubtless he does not know himself. Mrs. Belmont represents the Congressional Union, which is said to have "unlimited financial resources."

On the other hand, Mrs. Medill McCormick, of the National American Woman Suffrage Association—to which the Congressional Union does not belong—asks for a vote on the amendment. "The national board," Mrs. McCormick says, "is standing firmly by the Woman Suffrage Committee of the Senate in its effort to secure this vote." Mrs. Belmont, we are assured, "holds no office in the National American Woman Suffrage Association and can not speak for its 400,000 members." As Mr. Dooley says, "There ye are."

Quite as interesting is Mrs. Belmont's characterization of the Woman Suffrage Association. That, as we have seen, desires an immediate vote, and Mrs. McCormick is urging it. Yet Mrs. Belmont, of the Congressional Union, says to Senator ASHURST:

"Those who have asked you to push amendment to vote are not genuinely interested in its immediate success. They are progressives and are using you. Beware of their advice. We expect you to represent us—not them."

The charge is that the Woman Suffrage Association does not want the "immediate success" of the amendment, but that it is playing politics in the interest of the Progressive Party. The embattled ladies have certainly made things very unpleasant for Senator ASHURST. He can not admit the claim of one of them to represent the movement without discrediting the other, and that is something that no gentleman would care to do. So we say that the Senator is entitled to the sympathy of the public.

AMENDMENT OF THE RULES.

Mr. KERN. I desire to call up the resolution I submitted a few days ago, and of which I gave notice, proposing an amendment to Rule XXV of the Senate, with a view to its reference.

The resolution (S. Res. 293) was read, as follows:

*Resolved*, That so much of Rule XXV of the Senate as relates to the membership of the Committee on Banking and Currency and the Committee on Transportation Routes to the Seaboard be amended to read as follows:

"A Committee on Banking and Currency, to consist of 13 Senators.

"A Committee on Transportation Routes to the Seaboard, to consist of 9 Senators."

Mr. KERN. I move that the resolution be referred to the Committee on Rules.

The motion was agreed to.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Latta, executive clerk, announced that the President had approved and signed the following acts:

On March 9, 1914:

S. 3454. An act authorizing the Secretary of Commerce to lease to the city of Port Angeles, Wash., certain property.

On March 12, 1914:

S. 48. An act to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

HOUSE BILL REFERRED.

H. R. 10735. An act to create a bureau of labor safety in the Department of Labor was read twice by its title and referred to the Committee on Education and Labor.

COAST GUARD.

Mr. RANSDELL. I ask unanimous consent for the immediate consideration of Senate bill 2337. It is a bill to create the coast guard by combining therein the existing Life-Saving Service and Revenue-Cutter Service. In making the request I wish to say that this bill has passed the Senate twice in substantially this form, and that it now comes here with the unanimous report of the Committee on Commerce.

Mr. SMOOT. I should like to ask the Senator if there is any need for the immediate consideration of the bill. We have an appropriation bill here that we want to get rid of before 2 o'clock, if possible.

Mr. RANSDELL. I will say to the Senator that the consideration of this bill will take but a very few minutes.

The VICE PRESIDENT. Is there any objection to the present consideration of the bill? The Chair hears none.

The Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. JONES. Mr. President, the bill has not been read, has it?

The VICE PRESIDENT. The Chair is just laying the bill before the Senate. It will be read.

The Secretary proceeded to read the bill, which had been reported from the Committee on Commerce, with amendments.

The first amendment was, in section 2, page 3, line 2, after the word "division," to insert "one from each service to be appointed by the Secretary of the Treasury," and in line 7, after the word "guard," to strike out "abolishing such clerical positions as may not be needed," so as to read:

There shall be in the administrative service of the coast guard two chiefs of division, one from each service to be appointed by the Secretary of the Treasury, with annual salary of $3,000 each, together with such clerical and technical positions and the incumbents therein as it may be necessary to transfer from the two existing organizations to the coast guard. There may be such other clerical and technical assistance as may from time to time be authorized by Congress.

The amendment was agreed to.

The next amendment was, in section 3, page 4, line 6, after the word "allowance," to strike out "for the present offices and their incumbents" and insert "in the present Life-Saving Service and the present Revenue-Cutter Service," and on line 10, after the word "successors," to insert "This shall include all laws and regulations which now give to the enlisted men of the existing Revenue-Cutter Service increased pay of $1 per month for each three years' service, allowances for uniforms, and all other allowances or gratuities due to enlisted men, which are hereby made applicable to the enlisted men of the coast guard, who were formerly surfmen in the Life-Saving Service," so as to make the paragraph read:

SEC. 3. That all existing laws affecting pay and allowance in the present Life-Saving Service and the present Revenue-Cutter Service shall apply to the corresponding positions in the coast guard and the officers and men transferred thereto and their successors. This shall include all laws and regulations which now give to the enlisted men of the existing Revenue-Cutter Service increased pay of $1 per month for each three years' service, allowances for uniforms, and all other allowances or gratuities due to enlisted men, which are hereby made applicable to the enlisted men of the coast guard who were formerly surfmen in the Life-Saving Service.

The amendment was agreed to.

The next amendment was, in section 3, page 4, line 17, after the word "sections," to insert "three"; in line 18, after the word "seven," to insert "eight"; in line 24, after the word "be," to strike out "placed on waiting orders" and insert "retired from active service"; and on page 5, line 1, after the word "the," to strike out "pay and allowance" and insert "duty pay, salary and increase," so as to read:

The provisions of sections 3, 4, 5, 6, 7, 8, and 9 of the act of April 12, 1902, providing for the retirement of officers of the Revenue-Cutter Service, are hereby extended to include commissioned officers, warrant officers, and enlisted men of the coast guard. A commissioned officer, warrant officer, or enlisted man who has served 30 years may, upon suitable application, be retired from active service and receive 75 per cent of the duty pay, salary and increase of his grade or rating.

The amendment was agreed to.

The next amendment was, in section 4, page 6, line 7, after the word "keeper," to insert: "*Provided*, That the district superintendents shall be the chief officers and first in authority in their respective districts"; in line 10, before the words "the organization," to strike out "As soon as" and insert "When"; and in the same line, after the word "guard," to strike out "is completed" and insert "shall have been perfected," so as to make the section read:

SEC. 4. That hereafter whenever a vacancy occurs in the grade of keeper of a life-saving station or house of refuge it shall be filled by promotion and appointment from the grade of surfman, and whenever a vacancy shall occur in the grade of district superintendent the vacancy shall be filled by promotion and appointment from the grade of keeper: *Provided*, That the district superintendents shall be the chief officers and first in authority in their respective districts.

When the organization of the coast guard shall have been perfected the President is authorized to retire the general superintendent on 75 per cent of his present salary, and no further appointment shall be made to such office. At the same time the office of assistant general superintendent shall be abolished.

The amendment was agreed to.

The next amendment was, on page 6, to strike out all of section 6, in the following words:

SEC. 6. That this act shall become effective on the first day of the fourth month next following the date of its passage.

The amendment was agreed to.

The next amendment was, on page 6, line 25, after the word "Sec.," to strike out "7" and insert "6."

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

PRESIDENTIAL PRIMARIES.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a previous day, which will be read.

The resolution (S. Res. 284) submitted by Mr. CUMMINS on the 5th instant was read, as follows:

*Resolved*, That the Committee on Privileges and Elections be discharged from the further consideration of Senate bill 773, being a bill to establish a primary election for the nomination by political parties of candidates for President and Vice President of the United States, and for other purposes.

The VICE PRESIDENT. The Chair understands the resolution is to lie over without prejudice until called up by the Senator from Iowa.

Mr. CUMMINS. I ask that the resolution be still further laid over. The bill, as I understand, is now before a subcommittee of the Committee on Privileges and Elections, and I am quite willing that it shall have all needful time for consideration.

The VICE PRESIDENT. Has the Senator any objection to the resolution going to the calendar or to the table?

Mr. CUMMINS. I think not. I can bring up the resolution at any time. I do not care to have it called up every day.

The VICE PRESIDENT. The resolution will go to the Table Calendar.

DISTRICT OF COLUMBIA APPROPRIATION BILL.

Mr. SMITH of Maryland. I ask unanimous consent that the Senate proceed to the consideration of House bill 10523, the District of Columbia appropriation bill.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 10523) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1915, and for other purposes.

The Secretary resumed the reading of the bill, beginning on page 14, line 13.

The next amendment of the Committee on Appropriations was, in the item of appropriation for the maintenance of the Free Public Library, including Takoma Park Branch, on page 15, line 3, before the word "janitors," to strike out "two" and insert "three"; in line 5, after the word "engineer," to strike out "$1,080" and insert "$1,200"; and in line 7, after the words "in all," to strike out "$46,640" and insert "$46,740" so as to read:

Ten pages, at $360 each; three janitors, at $480 each, one of whom shall act as night watchman; janitor of Takoma Park Branch, $360; engineer, $1,200; fireman, $720; workman, $600; library guard, $720; two cloakroom attendants, at $360 each; six charwomen, at $240 each; in all, $46,740.

The amendment was agreed to.

The next amendment was, on page 16, after line 2, to insert:

For purchase and installation of 80-horsepower auxiliary boiler, $2,500.

Mr. THOMAS. Mr. President, I wish to inquire from the chairman of the committee what exigency exists for that additional appropriation?

Mr. SMITH of Maryland. I will say to the Senator that it was represented to us that the boiler they now have is very old, about 11 years old, and it is liable to get out of order at any time. Even if it were in order, it is thought by the committee that there ought to be an auxiliary boiler to take the place of the other when it is out of use. We investigated the matter thoroughly, and we believe this boiler is absolutely necessary.

The PRESIDING OFFICER (Mr. ROBINSON in the chair). The question is on agreeing to the amendment.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 16, line 5, after the words "In all," to strike out "$21,000" and insert "$23,500," so as to read:

In all, $23,500.

The amendment was agreed to.

The next amendment was, under the head of "Contingent and miscellaneous expenses," on page 17, line 11, before the word "herein," to strike out "one additional motor vehicle" and insert "two additional motor vehicles," so as to make the clause read:

For maintenance, care, and repair of automobiles, motor cycles, and motor trucks, acquired for the government of the District of Columbia, that are not otherwise herein provided for, including such personal services in connection therewith not otherwise herein authorized, as the commissioners shall in writing specially order, and for the purchase of two additional motor vehicles herein specified; namely,

Mr. THOMAS. Mr. President, it appears from this bill that 11 automobiles are now provided for the use of the District and its officials, and the House has provided one additional motor vehicle. This amendment is designed to provide still another. I should like to inquire whether there is any need for this extra automobile? It would seem to me that with 13 automobiles for the use of the officials of the District we are providing for them very liberally at public expense.

Mr. SMITH of Maryland. I will say to the Senator that the number "13" probably does not cut any figure in this appropriation. The object is that each member of the Board of Commissioners of the District of Columbia shall have an automobile. We feel, after investigation, that it is necessary for each of them to have one. Two of them have automobiles already; and this is to give the third man equal facilities with the other two.

Mr. THOMAS. I quite agree that there should not be any discrimination between the commissioners; but why should any of them have automobiles?

Mr. SMITH of Maryland. One of them has had an automobile all along. They believe that in order to attend to the business of the District it is absolutely necessary they should have automobiles. They go all over the District to look after the business of the District.

Mr. THOMAS. Upon the theory that at least one of them should be at headquarters all the time, I should think there would be enough automobiles to go around, the other two being engaged in the use of them. I object to the amendment, and hope it will not be adopted.

Mr. SHAFROTH. Mr. President, I should like to ask the chairman of the committee a question. Does this involve an expenditure for the employment of a chauffeur?

Mr. THOMAS. Why, of course. The automobile will not run itself.

Mr. SHAFROTH. I desire to know about it.

Mr. SMITH of Maryland. I assume it will.

Mr. THOMAS. How much is the appropriation?

Mr. SMITH of Maryland. That is included in the item further on. I do not remember what it is.

Mr. SHAFROTH. Does the Senator know what character of automobile it is proposed to get?

Mr. SMITH of Maryland. It will cost $2,000.

Mr. GALLINGER. Mr. President, I will suggest that each one of the civilian commissioners now has a horse and carriage, and those will be dispensed with. The House bill provides one automobile for the two civilian commissioners. They could not well do their work under that arrangement. They have to go all over the District almost every day to look at the streets, the proposed improvements, and so forth.

Mr. SMITH of Georgia. I should like to ask the Senator a question: If the commissioners as a body had one machine for that purpose, would they not be able to do all the visiting of the streets they wanted to, but would they not have to dispense with the use of it for private purposes?

Mr. GALLINGER. Of course there is a provision in every appropriation bill denying them the right to use these vehicles for other than official business. Whether they do that or not, I can not say. I am afraid in the past that was done to some extent.

Mr. THOMAS. I think the rule is honored more in the breach than in the observance.

Mr. GALLINGER. I think likely so.

Mr. SMITH of Georgia. Then is not the proper thing for us to do, instead of increasing this number to cut it down, and give the commissioners one machine to use for official purposes and nothing else?

Mr. GALLINGER. Mr. President, as I said, a provision in the bill requires that they shall use these vehicles only for official purposes. All the committee knew about this matter was the statement made by the commissioners, the chairman of the commission saying:

I have found since I have been commissioner that it has been absolutely impossible for me to get over the District of Columbia as we ought and find out what the District government is doing and how it is doing, and to observe the conditions that need attention. Each civilian commissioner is supplied with a horse and vehicle, but it is impossible to cover the District with a horse and vehicle. It simply can not be done.

This is a large municipality, 7 or 8 miles square, and improvements are going on constantly. I think we ought to supply the commissioners with whatever transportation they actually need.

Mr. SMITH of Maryland. In regard to the chauffeur, the matter about which the Senator from Colorado inquired, I will say that there would be very little difference between the expense of the chauffeur and what it costs to keep the horse and keep up the vehicle.

Mr. THOMAS. Mr. President, my attention has been called to the fact that on page 18, line 18, the word "six" is stricken out by the committee and the word "three" substituted therefor. I will read the proviso:

That all motor vehicles and all horse-drawn carriages and buggies owned by the government of the District of Columbia shall be of uniform color and have painted conspicuously thereon, in letters not less than 3 inches high and markedly contrasting in color with the body color of the motor vehicle, the words "District of Columbia."

I should like to inquire why this sign is diminished in size by 50 per cent, unless it be to enable the gentlemen to use these machines for private and pleasure purposes. The sign will be much less conspicuous if the letters are only 3 inches high.

Mr. SMITH of Maryland. There was no such intention on the part of the committee. If the Senator prefers to have the letters 6 inches high, we have no objection to their being made 6 inches high.

Mr. LODGE. Mr. President, it seems to me obvious that this is a case of economy. It costs less to paint a 3-inch letter than it does to paint a 6-inch letter.

Mr. THOMAS. I was going to say that if it is designed for that purpose, perhaps it is an evidence of economy; but, Mr. President, the proviso just preceding the one I read is to the effect that—

No automobile shall be acquired hereunder, by purchase or exchange, at a cost, including the value of a vehicle exchanged, exceeding $2,000 for one seating more than two persons or $1,000 for one seating not more than two persons.

We know that a good automobile seating two persons can be obtained for very much less than that sum. It seems to provide for the most expensive sort of vehicle for these gentlemen. We are not only going to give them one machine, but the best

machine one can buy. It appears to me that this is a matter which ought to receive serious consideration.

Mr. SMITH of Maryland. It is a question of economy whether a lower-priced machine is cheaper in the end than a higher-priced one. That is a question which I am not able to determine. I take it for granted that more people think that a good machine at a fair price is cheaper than a common machine at a low price. In my own personal use, in considering the question of economy, I would think that a good machine is cheaper than a common machine, and I do not see why the representatives of the Government should not be able to exercise their judgment in buying what is probably the cheapest in the end. Of course it costs less money in the beginning, but in the end a more expensive machine is cheaper than one at a lower price.

Mr. THOMAS. I quite agree that in many instances the highest-priced article is the most economic, but I have a little knowledge upon this subject. I believe that a machine seating more than two persons can be acquired for very much less than $2,000, a first-class machine, and one seating not more than two persons I know can be acquired for $500. My objection goes not so much to the cost as to the two additional motor vehicles which I do not think ought to be provided for.

Mr. SMITH of Georgia. Mr. President, I should like to ask the Senator in charge of the bill just what the provision means. In line 15, page 17, the committee propose to strike out 12 machines and insert 13 machines. Does that mean that they have 12?

Mr. THOMAS. They already have 11.

Mr. SMITH of Georgia. Twelve were provided by the House and now we are making the number 13.

Mr. SMITH of Maryland. The House gave 12 and we provided for an additional one, so that each commissioner should have a machine. That is the whole matter in a nutshell.

Mr. SMITH of Georgia. I should like to ask further, is it supposed that the three commissioners are going to be out of their offices separately all the time, and that therefore each one needs a machine all the time to attend to his official duties out of his office?

Mr. SMITH of Maryland. I will say to the Senator from Georgia that we accepted the representations of the Commissioners of the District of Columbia. They reported to us that these machines are actually necessary to properly conduct their business, and they made the impression upon us that their statement is true. Therefore we reported the provision for an additional machine.

Mr. WILLIAMS. Mr. President, while we are upon this subject I want to say a few words about the automobile business generally. I do not believe in the Government of the United States giving public officials, except in very exceptional cases, passenger automobiles. These exceptional cases are where very exceptional duties are to be performed. If they are not paid sufficient salaries, we had better pay them sufficiently and be done with it, and then let them hire their own autos when deemed needful by them. If they do not have to pay out of their own pockets, they will think them needed when not.

I see no peculiar reason why a Commissioner of the District of Columbia should not have one if the chiefs of departments and other people are to have them. But I do not believe the Government of the United States ought to give an automobile to any of them, the Speaker of the House, or a member of the Cabinet, or anybody else. I do not see any greater reason why they should be given to them than why they should be given to Senators or Representatives or Supreme Court judges. Some Senators imagine that they can not attend to their business without automobiles, but they buy the automobiles and attend to their business in them. As to myself, being a good deal of a democrat, I find that I can get along with the street cars about as well as any automobile, somewhat more rapidly, in fact, as a rule, if you count the time that it takes to get the auto from the garage and at your service.

Here are 13 automobiles for the service of the District of Columbia, paid for in part by a good many rather poor people in the District, some of them costing $2,000 and some of them costing $1,000, "then there are some"—18 more. While we are talking about economy I do not know of anything better to begin economy on than automobiles. They are used very largely by the officials, who have them for social purposes. We all know that. They are perhaps more largely used for social than for official business. They are put at the behest of guests and other people by the officials as well as used for themselves and for their families.

Now, if it be true that there be an official who absolutely needs an automobile in order to attend to his business, and that he must have it, and that he is paid such a small salary that he can not have it, and therefore must without it neglect his business, we ought to increase the salary sufficiently to give interest upon the automobile and make allowance for the wear and tear of the vehicle until it is worn out, and then force him to perform his duty, even if he has to buy an automobile or hire a taxicab from time to time to do it. In this very bill we are increasing the salaries of the commissioners, I believe, by a thousand dollars.

Mr. SMITH of Maryland. It has not been done.

Mr. WILLIAMS. I know it has not been done, but the bill proposes to do it. It has been passed over; but it will be done, and it ought to be done. Their salaries ought to be increased. I am in favor of paying every man a fair wage for a fair day's or month's or year's work, considering the character of the work and the character and preparation necessary to fit the man for the work before he undertook the duty. I am in favor of erring rather upon the side of liberality than of being skinflinty about it; but I do not believe in the theory that so many people have, or seem to have—Senators have it, too—that the minute a man gets an office you must somehow furnish him, together with the salary of the office, as perquisites everything necessary for him to have to attend to the duties of the office. Some people go so far as to think we ought to furnish them with something outside of plain water to drink, if they prefer other sorts of water, or typewriters, as well as the secretaries to run them. Some have thought we ought to furnish free baths and bath attendants. They go so far as to think we ought to furnish them with whatever is needed in attendance to their public duties.

They take the office; they take the office willingly; generally they are anxious to have it; and it does not follow that everything which is incidental to one's attention to public duty should be paid for by the public, even down to transportation from and to the office. The salary is intended to cover all that.

Pro forma, at any rate, and as a beginning, I am going to move to strike out all of the language of the bill beginning with line 5, on page 17, and ending with and including the language in line 20, page 18. That will carry with it the entire appropriation for the maintenance and purchase of passenger automobiles for the District of Columbia. Then, when we increase the salaries of the commissioners $1,000 additional—if that is not thought sufficient, an amendment may be moved to make it more—we will pay them sufficient to enable them to purchase automobiles and to give them a sinking fund, and the wear and tear upon them, and interest upon the investment.

Mr. GALLINGER. But, if the Senator will permit me, there are only three commissioners, and it was a question as to the officials who have in the performance of their duties to traverse this District constantly, such as the building inspectors, the health inspectors, would the Senator deprive those officials, without increasing their salaries, of means of transportation?

Mr. WILLIAMS. I undoubtedly would. The street car service of Washington is splendid, and there is no reason why merely because a man is an official he should disdain the common chariot of the common people. I ride in it here, and so does the Senator from New Hampshire.

Mr. GALLINGER. Yes.

Mr. WILLIAMS. We find it amply sufficient. There is hardly a part of Washington that is not reached by a street car if you walk three or four or five squares at the end of the trip—at the getting-off place.

Mr. GALLINGER. But these officials——

Mr. WILLIAMS. I will answer further that it is the abuse of the thing. It grows and waxes by what it feeds on, to wit, itself; and the more of them you furnish the more of them you are going to have to furnish. Every petty official will tell you, if you leave it to him, that he needs an automobile in his business.

Now, there might be some exceptions in the fire and police and health departments, and perhaps some of the more delicate inspectorships, where celerity of movement is absolutely necessary at times; but these can be provided for in a more deliberate manner later, after consideration by the committee.

Mr. LODGE. Mr. President——

Mr. WILLIAMS. By the way, I may say that the abuse anent automobiles in the District of Columbia is nothing compared to what it is in some of these departments.

Mr. SMITH of Maryland. I will say to the Senator if his motion prevails, it would strike out the motor trucks and everything of that character which are included in it.

Mr. LODGE. I was going to call attention to that.

Mr. SMITH of Maryland. It is conceded now that it is cheaper to use motor trucks and vehicles of that kind than it is to use horses.

Mr. WILLIAMS. There are 13 of these automobiles.

Mr. SMITH of Maryland. But the motion would include all of the motors pertaining to the service of the District of Columbia.

Mr. LODGE. The Senator's motion would strike out motor trucks. They could not carry building material, electrical materials, and things for the parks on the street cars.

Mr. WILLIAMS. I do not want to strike out motor trucks.

Mr. LODGE. That is included in the Senator's motion.

Mr. WILLIAMS. I want to modify my amendment so as to strike out all of the language I have designated, except the language in lines 19, 20, 21, 22, 23, and 24, on page 17. Those lines seem to include all of the motor trucks. I want to change my amendment by moving to strike out, beginning on line 13, page 17, instead of line 5, down to and including line 20, on page 18, except lines 19, 20, 21, 22, 23, 24, on page 17.

Mr. GALLINGER. I will venture to suggest to the Senator from Mississippi that the order was that committee amendments should first be considered. The Senator, I think, ought to take a little time to digest this matter, because the very provision the Senator proposes to strike out involves the care and maintenance of motor trucks. I would suggest that the Senator withhold his amendment until the committee amendment is disposed of and later on offer it.

Mr. WILLIAMS. I think the suggestion made by the Senator from New Hampshire is a good one. I had momentarily lost sight of the unanimous-consent agreement to consider committee amendments first. We could not consider this even if I wanted to now. I give notice that I shall make the motion in proper form later.

Mr. SMITH of Georgia. Then, in the interest of the motion of the Senator from Mississippi, we will first beat the committee amendment which undertakes to enlarge the number to 13.

Mr. WILLIAMS. If we are going to have 11, I would as soon have 13. The principle is what I am after.

Mr. SMITH of Georgia. The Senator does not understand me. What I mean is that we ought not now to add this one, but take the first step to beat it, and as soon as we have the opportunity let him present his amendment. I hope his amendment will be adopted. I shall vote for the amendment suggested by the Senator from Mississippi to strike out the 12 that the House provided for.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from New Hampshire?

Mr. SMITH of Georgia. I yield.

Mr. GALLINGER. The contingency suggested by the Senator can be met by passing over the matters relating to automobiles.

Mr. SMITH of Georgia. We can pass it over and later take it up.

Mr. WILLIAMS. Frankly, as far as I am concerned, if we are to have 11 I would just as soon vote for 13. It is the principle involved of furnishing public officials with automobiles that I am striking at, not the number. If you are going to furnish one you ought to furnish all of them, I reckon, to be consistent.

Mr. SMOOT. While the Senator from Mississippi is considering this question, I should like to have him take into consideration the horse transportation to be dispensed with. If we strike this out we have to make some kind of an arrangement to take care of what they have to-day in the way of horse transportation.

Mr. WILLIAMS. Let me ask the Senator a question there. Have we any horse transportation except for wagons to carry stuff? Are there carriages for these people?

Mr. SMOOT. Certainly.

Mr. WILLIAMS. That ought to be stricken out. We ought not to furnish any carriages and horses to any of them for their own transportation.

Mr. SMOOT. Let me answer the Senator. The horse transportation that can be dispensed with, as given by the commissioners, is as follows: 10 drivers, 28 horses, and 18 vehicles.

Mr. WILLIAMS. Are those horse trucks?

Mr. SMOOT. It simply says vehicles. I can say, however, that for the assistant to the engineer commissioner there are 2 drivers, 2 horses, and 4 vehicles; for the engineer of highways there are 1 driver, 1 horse, and 1 vehicle; for the superintendent of streets, 1 driver, 1 horse, and 1 vehicle. In the sewer department there are 2 drivers, 8 horses, and 4 vehicles. In the water department there are 4 drivers, 16 horses, and 8 vehicles.

Mr. WILLIAMS. I will ask some member of the committee how many of those vehicles are carriages for the transportation of the officials themselves. I want to strike out the provision for them. If any of them are express wagons or truck wagons for the transportation of materials, I do not want to strike that out.

Mr. SMOOT. In the water department, of course, we know what those vehicles are. We see in all parts of the city drivers and men going from one end of the city to the other in light wagons.

Mr. WILLIAMS. Are they, as a matter of fact, for the transportation of materials or for the use of the officials?

Mr. SMOOT. Both. I have seen vehicles with material for the repair of water mains, and I have seen employees of the department in the same vehicles going to make repairs.

Mr. WILLIAMS. There is no objection to somebody riding in it when it is used for that purpose.

Mr. SMITH of Georgia. I wish to suggest to the Senator from Utah that we go a little further in our efforts to stop joy riding and get rid of the vehicles not used for the public service, but for personal pleasure. If the amendment of the Senator from Mississippi should reach some that are necessary for the public service, there will be an opportunity for the conferees when they investigate it to take care of those that are actually required for the public service. I understand the Senator from Mississippi is reaching after those that are used largely for pleasure, and I so cordially agree with him that I hope he will press his motion to amend and that I may have an opportunity to vote for it.

Mr. SMITH of Maryland. Mr. President, in regard to this matter we all recognize that this is a day of progress and that in many particulars business can be facilitated by using automobiles rather than horses. The committee in considering the matter took into consideration the number of men who would be employed and the amount of work that could be done by a motor rather than by horses, and in taking a broad view of the whole situation we felt that the work of the District could be conducted as economically and better with motors than with horses. There are many horses that can be dispensed with, and there will be fewer men employed under this arrangement than otherwise.

I would say to the Senator from Georgia, if he feels that these vehicles are being used for personal purposes it would be better, rather than obstruct the business of the District of Columbia, to put a penalty upon their use and thus prevent the use of a vehicle by anybody who might feel disposed to ride in it for personal comfort. We felt that they should have this various equipment for the purpose of conducting the business properly. If there is any fear on the part of any Senator that the vehicles will be used for purposes other than official business, then put a penalty upon such use to prevent it.

Mr. SMITH of Georgia. Now the proposition is to give each one of the commissioners an automobile for official purposes.

Mr. SMITH of Maryland. I will say to the Senator that these vehicles are used, not only by the commissioners themselves but by people in their employment when the business requires their use.

Mr. SMITH of Georgia. But there are already a number of others, and the proposition is that each commissioner shall have an automobile for official purposes. It is utterly impossible that three automobiles should be required for the official work of the three commissioners. One would certainly do all the work that they could possibly do requiring the use of an automobile.

Mr. SMOOT. I wish to call the Senator's attention to the persons who are going to use these automobiles. It is under the head of contingent and miscellaneous expenses, on page 17:

> Automobiles for the offices of the civilian commissioners and the engineer commissioner, including the building-inspection and street-cleaning divisions, surveyor's office, and electrical department.

If the Senator will only stop and think, he will see that it is impossible for the employees in the street-cleaning division to run around on the street cars. It is impossible for the building inspectors to do the same. It is impossible for the water department or the sewer department, or the officers of the District government, called on at any time of day to go to any part of the city, to be without some kind of transportation. This does not mean that they are simply for the commissioners, and I call the Senator's attention to the fact that what we are furnishing them to-day here is 10 drivers, 28 horses, and 18 vehicles. The committee think, and so do the commissioners, that it will save money to the Government of the United States to provide the automobiles instead of these vehicles, just the same as we have done for the Government Printing Office and just the same as we have done for many of the other departments of the Government. If the reports can be relied upon and the statements made to the committee are true, there is not any question that it is cheaper to run the automobiles than it has been in the past to maintain stables, horses, wagons,

drivers, and attendants upon the horses and wagons after the day's work is over. Mr. President, it is for that purpose that this provision is made.

Mr. SMITH of Maryland. And it will save the cost of the keep of the horses, which is very expensive.

Mr. SMOOT. Of course I included that in what I stated. I will say to the Senator that I will take the Government Printing Office as an illustration. The Government Printing Office had stables to maintain, with three or four men there in the nighttime and in the daytime, and they had wagons galore, hauling paper from the depot to the Government Printing Office. They maintained those stables there; and they were not only a nuisance, but they were a constant menace to the Government Printing Office on account of the danger from fire. If the reports are to be relied upon, since the Government has purchased the few motor trucks and automobiles they now use for the carrying of employees from one department to the other, the expense has been decreased rather than increased.

Mr. WILLIAMS. Mr. President, I do not want my position to be misunderstood. I am emphatically in favor of the substitution of motor trucks for horse vehicles for the transportation of material and for the doing of everything that they can properly do in that way in the Post Office Department, in the Government Printing Office service, and elsewhere. The committee of which I have the honor to be chairman has substituted for horse vehicles in the service of the Senate here, for the delivery of the mail and various other things, motor trucks instead. That is all right; it is all right, because it affords better service and cheaper service; but that is not what I am striking at at all; that is not what I intend to try to accomplish. What I want is to strike at the carriages and the buggies and the automobiles used ostensibly for official purposes by public officials for the transportation of themselves. It seems to me the two things are as unlike as daylight and darkness.

Mr. SMOOT. I want to say to the Senator from Mississippi that I am in full accord with his position. Let me tell the Senator now——

Mr. WILLIAMS. One word more.

Mr. SMOOT. I thought the Senator was through.

Mr. WILLIAMS. The Senator from Maryland [Mr. SMITH] said that we could provide that these automobiles be used only for official purposes. We have done that, but it does not do any good.

Mr. SMITH of Maryland. Is there any penalty attached to the violation of that regulation?

Mr. WILLIAMS. No; there is no penalty.

Mr. SMITH of Maryland. Then, put in a penalty if you think they are going to use them for "joy riding" and for purposes of that kind.

Mr. WILLIAMS. You would have to be going around indicting Cabinet officers on the ground that they had done such a thing. I do not think that is practicable. I do not think we would do that.

Mr. SMITH of Maryland. I do not think we ought to assume that these people are going to violate the law.

Mr. WILLIAMS. I am not assuming it. There is not a man here who does not know that there are automobiles furnished to public officials for official purposes which are used for other purposes. We all know that. I do not know that that is the case in this particular instance, but we all know that it is done at times.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from New Hampshire?

Mr. WILLIAMS. I do.

Mr. GALLINGER. If the Senator will permit me, I will suggest to the chairman of the committee that it occurs to me that there is already a penalty in the bill in the form of a provision that there shall be letters painted on the carriage of a different color from the carriage itself. If any official wants to ride in a carriage of that kind for social purposes, he must be rather indifferent to the dignity of the thing.

Mr. WILLIAMS. How would you or I, if we saw him on the streets, know whether he was going for official, social, personal, or any other purpose?

Mr. GALLINGER. My suggestion was that I did not think any self-respecting official would go for a social purpose in a carriage of that kind with letters painted on it.

Mr. WILLIAMS. I do not understand that this lettering business goes through the entire service. I will ask the Senator from New Hampshire for information, whether the requirement, which is in the bill, for the uniform coloring of the vehicles and painting conspicuously thereon the letters——

Mr. GALLINGER. The letters are to be of a different color, I will suggest to the Senator.

Mr. WILLIAMS. Does that requirement go through the entire automobile service of the Government departments, or is it confined to those included in this bill?

Mr. GALLINGER. I think it does apply to the entire Government service by provisions in other bills, that there shall be such lettering.

Mr. LODGE. Mr. President, I merely wish to say a word. The provision for the transportation of the District officials is more required for business purposes and for the advantage of the conduct of the city business than for any other reason. The officials are all obliged, from the commissioners down through every grade, and in all departments, to constantly travel back and forth here within the city. Take the electrical department, as an illustration. There comes a break in the wires here and there, which must be attended to, and attended to at once. They have to take their tools, and efficient workmen must immediately go to the point where the trouble has occurred. The water department has a break in a pipe, and it is of enormous importance to get there at once to repair it. It is the same with the sewerage system. If there is any justification for furnishing such transportation, in my judgment, it is abundantly justified in the case of these District officials.

Mr. KERN. Mr. President——

Mr. LODGE. I hope the Senator from Indiana will wait a moment before interrupting me.

We give to the Cabinet officers, and I think properly so, horses and carriages to transport them from their homes to their respective offices. Those officers are not obliged to go about the city; they are not obliged by the call of duty to run hither and yon over the whole surface of this District in the public service, and nothing else. We give this transportation to the Public Printer; we give it to the Commissioner of Indian Affairs; we give it to other officials; and now it is proposed to take it away from the one class of men who are obliged to be on the move constantly in all parts of the city. It seems to me it is poor economy to take this means of transportation from these city departments. The Senator from New Hampshire [Mr. GALLINGER] calls my attention to the fact that it is a question of time. These officials in this way save half the time they would otherwise lose on the street cars, and it seems to me that this provision is good economy for the District.

Mr. KERN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Indiana?

Mr. LODGE. I yield to the Senator from Indiana.

Mr. KERN. I ask the Senator if the electrical department and the water department are not already provided for?

Mr. LODGE. No; they are all included here.

Mr. KERN. There is no proposition here to abolish or dispose of the automobiles already on hand.

Mr. LEA of Tennessee. Mr. President——

Mr. KERN. They are already provided with as many automobiles as they need.

Mr. LODGE. The bill includes automobiles for the building-inspection and street-cleaning divisions, the surveyor's office, and the electrical department. Then, of motor cycles, one is provided for the plumbing division, four for the street-cleaning department, and three for the electrical department. Of motor trucks, one is provided for the municipal architect's office, one for the electrical department, and one for the parking commission.

Mr. LEA of Tennessee. Mr. President, if the Senator from Massachusetts will yield to me for a moment, I think I can answer that question, as I heard the commissioners testify on that point.

Mr. WILLIAMS. Before the Senator from Tennessee proceeds, I want to say to the Senator from Massachusetts that the street-cleaning department and the electrical department, to which he refers, are not included in my motion.

Mr. LODGE. The Senator very properly left out motor trucks.

Mr. WILLIAMS. I want to say that if I thought this reform would end here I would not be willing to make this distinction; but, I think, if we begin it here we will carry it clear through all the executive departments.

Mr. LODGE. The point I wanted to make was, that if there are any officers of the Government who really require automobiles, not merely for their own official purposes, but for the benefit of the public service as time-saving arrangements, it is the officers who are charged with the conduct of the affairs of the District of Columbia. We provide liberally for automobiles for all the executive departments, for officials whose public

business only requires them to travel to and fro between their houses and their offices; they are not obliged to superintend street repairs or to look after broken water pipes or anything of that kind.

Mr. WILLIAMS. In that connection, I should like to ask the Senator——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Mississippi?

Mr. LODGE. I yield to the Senator from Mississippi. The Senator from Tennessee [Mr. LEA], however, first asked me to yield.

Mr. WILLIAMS. I should like to ask the Senator from Massachusetts if he does not think that we ought to put an end to that very thing of giving automobiles to men just to get to their offices and to go home from them?

Mr. LODGE. I think it has been carried pretty far.

Mr. LEA of Tennessee. With the permission of the Senator from Massachusetts, the amendment on page 17 will merely increase the number of automobiles, so that each commissioner may have one. At this time the commissioners have different duties to perform and different departments to supervise. It is merely in the interest of an orderly and businesslike conduct of their offices to provide each of them with an automobile, and it is not an extravagance.

In answer to the suggestion of the Senator from Georgia [Mr. SMITH] I will say that the commissioners are obliged to be at the same time on different branches of departmental work, and it is poor economy to pay men the salaries which the commissioners receive and make them lose time by waiting for one automobile to return from a previous trip or to travel on street cars or horse-driven carriages.

Mr. SMITH of Georgia. The automobile will cost nearly as much as the salary of a commissioner, will it not?

Mr. LEA of Tennessee. No; not at all, because the automobile will last longer than one year.

Mr. LODGE. Mr. President, I am obliged to the Senator from Tennessee. I entirely agree with what he says as to the need of the additional automobile. The automobiles provided for are not extravagant ones. The Senator from Colorado said that $2,000 would purchase the highest type of automobile. Why, Mr. President, the high-power cars, such as the Pierce-Arrow, the Packard, and the Peerless, cost from seven to eight thousand dollars each; they range all the way from that down. A thousand dollar car is not an expensive car, although the cheap car is the dearest car you can buy. A good car will outlast three cheap ones, as a rule.

But apart from that, Mr. President, it seems to me, in the interest of the efficient conduct of the District business, the saving of time to enable the commissioners to properly attend to the municipal business, to get rid largely of all the paraphernalia of horses and carriages, which they now maintain, and to simplify the whole service, we should give them a proper equipment of automobiles. I do not believe they will be used enough by the commissioners for social purposes to rob the United States to a very great extent.

Mr. KERN. Mr. President, I fear we are laboring under a misapprehension as to this matter. I understand now the proposition is to purchase 13 new automobiles. That information is given to me by the Senator from Utah——

Mr. SMITH of Maryland. Oh, no.

Mr. KERN. I asked the Senator from Utah the question whether or not the fire department, the engineer department, and the water department are not now furnished with automobiles, and the Senator assured me they are not, and that the purpose is to buy 13 new automobiles.

Mr. SMOOT. Mr. President, if the Senator will allow me, if I give him that impression, of course I want to correct it. To-day there are 11 automobiles, which have already been purchased, for the purposes about which I spoke to the Senator.

Mr. KERN. They have already been purchased under a former appropriation?

Mr. SMOOT. They have been purchased under a former appropriation, and the amendment of the Senate committee is to increase the number of automobiles allowed by the House, which is 12——

Mr. KERN. Thirteen.

Mr. SMOOT. No; under the House bill twelve were allowed, but the Senate committee has increased it by one, making it thirteen provided for in the bill.

Mr. KERN. The increase is to provide an automobile for each of the three commissioners?

Mr. SMOOT. It will provide one for each of the three commissioners.

Mr. SMITH of Georgia. The proposition is now to give each of the commissioners one automobile.

Mr. SMITH of Maryland. Which we think is all right.

Mr. LEA of Tennessee. I will say to the Senator from Georgia that the automobile now authorized for the commissioners is for the engineer commissioner, and it is now proposed to authorize one for each of the civilian commissioners.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. KERN. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Indiana suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

| | | | |
|---|---|---|---|
| Asburst | Hughes | Norris | Smoot |
| Brady | James | Owen | Stephenson |
| Brandegee | Johnson | Page | Sterling |
| Bryan | Kenyon | Perkins | Sutherland |
| Burton | Kern | Pittman | Thomas |
| Chamberlain | Lane | Poindexter | Thompson |
| Chilton | Lea, Tenn. | Ransdell | Thornton |
| Clapp | Lee, Md. | Robinson | Tillman |
| Clark, Wyo. | Lodge | Shafroth | Townsend |
| Dillingham | McCumber | Sheppard | Warren |
| Fletcher | McLean | Smith, Ariz. | Williams |
| Gallinger | Martin, Va. | Smith, Ga. | Works |
| Gronna | Martine, N. J. | Smith, Md. | |
| Hitchcock | Myers | Smith, S. C. | |

Mr. CHILTON. I am requested to announce that the Senator from North Carolina [Mr. OVERMAN], the Senator from Missouri [Mr. REED], the Senator from Montana [Mr. WALSH], and the Senator from Minnesota [Mr. NELSON] are necessarily detained from the Senate upon business of the Senate in connection with the lobby investigating committee.

Mr. SHEPPARD. I wish to announce the necessary absence of my colleague [Mr. CULBERSON] and to say that he is paired with the Senator from Delaware [Mr. DU PONT]. This announcement may stand for the day.

Mr. KERN. I desire to announce the unavoidable absence of my colleague [Mr. SHIVELY] on important public business.

The PRESIDING OFFICER. Fifty-four Senators have answered to their names. A quorum is present.

Mr. KERN. Mr. President, there has been some controversy here about the number of automobiles already owned and in use by the city. I refer, not to motors or trucks, but to passenger cars.

I find, on page 562 of the House hearings, that there are 31 passenger cars already owned and in operation by the various departments of the city government. There is 1 passenger car in the building department, 1 in the engineer commissioner's department, 4 in the fire department, 1 in the surveyor's office, 6 in the police department, 3 in the electrical department, 5 in the street-cleaning department, 3 in the surface division of the engineer office, 4 in the sewer department, and 3 in the water department, making a total of 31 passenger cars already owned and in operation by the District government.

In addition to that, there are 19 trucks or delivery vehicles, and there are 21 motor cycles. There are 12 more passenger cars estimated for the fiscal year 1915; but the total number of passenger cars, trucks, and motor cycles now owned by the city is 71, of which 31 are passenger cars.

Mr. SMITH of Maryland. Mr. President, I wish to say in regard to this amendment that it provides one additional car, and that is for one of the District commissioners, the other two District commissioners being already furnished with cars. We felt, upon investigation, and as a result of the hearings we had, that it was absolutely necessary for each one to have a car.

The Senator from Indiana [Mr. KERN] speaks of the total number of cars now owned by the city. I will say that every corporation of any size furnishes itself with these cars. They believe it is good policy. The Capital Traction Co. of this city has 8 cars for its own service; the Washington Railway & Electric Co. has 7; there is a total of 15 cars that those companies feel they should have in order to conduct their business properly.

We feel that this additional car is necessary, and we hope the Senate will back us up in our opinion.

Mr. LANE. I should like to ask the chairman of the committee to what particular department these automobiles are to be assigned, or is only one being asked for?

Mr. SMITH of Maryland. One additional car, for the use of one of the District Commissioners. The House has already granted one. This will make three altogether. We feel that each one of the commissioners should have a car, and, feeling that way, we have put in this amendment.

Mr. HITCHCOCK. Mr. President, I should like to inquire of the Senator from Maryland whether these cars are used exclusively on official business or whether they are used for private purposes?

Mr. SMITH of Maryland. As the Senator will notice, the bill requires that there shall be placed on the vehicles, in letters 3 inches high, and markedly contrasting in color with the body color of the motor vehicles, the words "District of Columbia"; and the bill also requires that they shall be used for official purposes only.

Mr. GALLINGER. If the Senator will turn to page 18 of the bill, he will find this provision:

All of said motor vehicles and all other motor vehicles provided for in this act and all horse-drawn carriages and buggies owned by the government of the District of Columbia shall be used only for purposes directly pertaining to the public services of said District, and shall be under the direction and control of the commissioners.

Mr. HITCHCOCK. If that is a fact, and if these vehicles are not to be used for private or individual purposes, why is it necessary to have so many? Why can not the District of Columbia have a certain number of vehicles not assigned to any particular department, but located at the District Building, to be used by any public official who has public reasons for using them?

My impression is that as a result of allotting these vehicles to different departments, if the officials do not use them for their private business there must be a large part of the time when they are idle, because the officials can not be constantly traveling. Any large corporation which had reason to provide automobiles for the use of its officials would not assign one automobile to one department and another to another department, but would keep them available at headquarters, to be used by any official at any time.

I think this practice of subdividing the use of the vehicles is a mistake; and from what I have seen here in Washington I am very suspicious that these vehicles which are purchased for public use are being constantly used by the officials for private purposes when they are absolutely under their own control.

Mr. SMITH of Maryland. I will say to the Senator that that is not a matter that the committee went into. The arrangement had already been made. When the matter came before us, however, from the reports we had we felt that each member of the Board of Commissioners should have a car, under the arrangement as it now exists. I am not discussing the propriety of what the Senator has just referred to; but there is no question that they have different and entirely separate departments to attend to, and at times they all have to be out attending to their respective matters. We feel, therefore, that it is in the interest of the Government, in order to facilitate the transaction of business, that each commissioner should have one.

Mr. LANE. Mr. President, I wish to say that I am in favor of giving the commissioners plenty of facilities for attending to their duties promptly, and I think it is a matter of economy. I believe, however, that the vehicles should be painted some distinctive color, so that they could be known wherever they were. This matter of merely lettering them with small letters does not answer the purpose, and I presume a great deal of use is made of them in "joy riding." They go so fast when they are on those excursions that you do not have time to distinguish the letters; and they should be painted some distinctive color, so that they can be recognized. Otherwise, I am in favor of giving the commissioners plenty of facilities to perform their duties.

Mr. NORRIS. Mr. President, I notice that the Senator having charge of the bill illustrates the necessity of providing these automobiles for the District officials by giving us some statistics on the number of automobiles that are in use by private corporations. He gives, as an illustration, the number of automobiles that are used by the Capital Traction Co. and the number of automobiles that are in use by the Washington Railway & Electric Co. Those are the two street car companies doing business in the District of Columbia. It seems to me they do not illustrate the proposition, and are of no force as an argument.

These street car companies are themselves engaged in the transportation business. They make their money by transporting on street cars people who are hanging onto straps. They know from their own experience that it is at least not enjoyable, and sometimes not safe, and certainly never good for the health, to ride in their own conveyances, and therefore, as a matter of self-protection, they have to resort to automobiles.

Mr. SMITH of Maryland. I will say to the Senator from Nebraska that I take it for granted that these motor cars are not maintained for the purpose of having the officials ride in them. I take it for granted that they are used in the conduct of their business. If street railway people feel that it is incumbent and necessary and better for the promotion of their business to have motor cars to look after their interests, in my judgment it is only an illustration of the fact, if they are conducting their business properly, that it is not an exceptional thing for the city of Washington to have motor cars for the conduct of its business.

Mr. NORRIS. I am inclined to commend the street car companies for thus protecting the lives and the comfort of their officials when they have to ride around on official business. We all know from experience that if they had to resort to the methods that the people have to adopt who give their money to them so that they can buy automobiles they would be, at least, carrying their hands in slings a good share of the time.

Mr. BRISTOW. Mr. President, I should like to inquire what kind of a motor vehicle this additional one is that the committee proposes to authorize the commissioners to purchase?

Mr. SMITH of Maryland. It is a vehicle to cost not to exceed $2,000.

Mr. BRISTOW. But is it a truck or an automobile?

Mr. SMITH of Maryland. It is a passenger vehicle.

Mr. BRISTOW. Who is to use it?

Mr. SMITH of Maryland. One of the District Commissioners.

Mr. BRISTOW. How many have they now?

Mr. SMITH of Maryland. They have two, and this is to furnish one to the third commissioner, each having different departments to look after.

Mr. BRISTOW. Why is it not designated in the bill as an automobile for the commissioner? That is a very deceptive way to put in automobiles—"motor vehicles." They might be trucks, they might be motor cycles, or they might be almost anything.

I think it is scandalous, as I have said before, to buy automobiles, for which the public is expected to pay, for these officials about Washington to use. Some of us have difficulty in keeping out of the way and preventing ourselves from being maimed and killed by public vehicles, automobiles, that are ridden about in by officials, not on official business but on pleasure trips as a rule.

Mr. LEA of Tennessee. Mr. President, on page 14, line 5, the bill reads:

Automobiles for the offices of the civilian commissioners and the engineer commissioner.

There is no attempt, as I understand, to deceive.

Mr. BRISTOW. I thought we were on page 17.

Mr. LEA of Tennessee. Perhaps I have a different print from that which the Senator has.

Mr. MARTIN of Virginia. It is on page 17 in the regular print.

Mr. WILLIAMS. It is page 17 here.

Mr. BRISTOW. On page 17 it says:

Two additional motor vehicles.

Mr. LEA of Tennessee. Yes. The language I refer to is on line 13, page 17:

Automobiles for the offices of the civilian commissioners and the engineer commissioner.

Mr. BRISTOW. But the amendment we are on now is just above that, is it not?—

Two additional motor vehicles.

Mr. LEA of Tennessee. Yes; and it specifies what they are:

Namely, automobiles for the offices of the civilian commissioners and the engineer commissioner.

Mr. WILLIAMS. Mr. President, one word for the information of the Senate.

I realize that I have not the knowledge concerning the exact service of these vehicles that would enable me to draw up an amendment so as to save those that ought to be saved and do away with those that ought to be done away with; so I give notice that at the proper time I am going to offer an amendment to refer back to the District of Columbia Committee all of the bill beginning on line 5, page 17, and going down to and including line 20, page 18, with instructions to so amend the same as to strike out all appropriations for maintenance or purchase of passenger automobiles, except for the fire department and the police department and the emergency health service. I think nobody else of Washington officialdom needs them.

I ask to have printed in the RECORD a statement of my proposed amendment, for the information of the Senate.

The PRESIDING OFFICER. Without objection, that will be done.

The matter referred to is as follows:

Mr. WILLIAMS moves to recommit to the District of Columbia Committee all of the bill beginning on line 5, page 17, down to and including line 20, page 18, with instructions so to amend the same as to strike out all appropriations for maintenance or purchase of passenger automobiles, except for the fire department and the police department and the emergency health service.

Mr. WORKS. Mr. President, so far as I am concerned, I have been inclined to be liberal in the matter of making appropriations for the District of Columbia. I think, however,

the people of Washington City do not appreciate the liberality that has been displayed on the part of Congress in their behalf.

Ever since I have been in the Senate there has been constant and continuous complaint of Congress for failing to make the appropriations that the people here seem to think they are entitled to have. I have grown a little bit tired of that sort of thing. I begin to feel that it might be a good thing for us to turn over the government of the District of Columbia to the people who are complaining of us and allow them to run it for a while and have the Government simply pay taxes upon the property it owns within the District; but they would not be satisfied with that. They are protesting against any movement of that kind. It is apparently a very difficult thing to satisfy them in the matter of furnishing them money. They do not represent the people of the Nation, whose Capital this is, but their own selfish interests.

Of course, the whole country is interested in the city of Washington. It is the Capital of the Nation. It does not belong alone to the people who live in Washington. We are all interested in making it a great city, a beautiful city, and one of which all of us may be proud. If, however, a Senator conscientiously votes against any particular appropriation or votes in favor of reducing it, he is at once attacked by the people of Washington and by the newspapers as being an unreasonable economist.

That occurred only yesterday, when there was a question about the appropriation for a fish market, where there was a difference of $25,000 involved. The committee proposed to appropriate $125,000 for the purpose. It seemed to me and to others that $100,000 was ample to supply that need, but you notice in the newspapers this morning that complaint is made of that, and the Senators who voted against the higher appropriation are criticized for having voted against it. This attitude of the District toward Members of Congress is calculated to arouse resentment and lose them what they so much want in their own interest.

With respect to the particular matter that is before the Senate, if the use of another automobile is reasonably necessary to do the business of the District in a proper way, then I think this appropriation should be made. I do not know whether it is necessary or not. I am willing to take the judgment of the members of the committee who have dealt with this matter and made the necessary investigation. I do not think we ought to be penurious about these matters, but I do not understand why there should be this constant antagonism on the part of the people of the city of Washington with the Congress of the United States, who are endeavoring, I think, to treat them very liberally.

Mr. MARTIN of Virginia obtained the floor.

The PRESIDING OFFICER. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The SECRETARY. A joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. SMITH of Maryland. I ask that the unfinished business be temporarily laid aside.

The PRESIDING OFFICER. The Senator from Maryland asks unanimous consent that the unfinished business be temporarily laid aside.

Mr. SMOOT. In this connection I merely wish to say a word. I am perfectly willing that it shall be laid aside for the consideration of the appropriation bill.

Mr. SMITH of Maryland. That is all.

Mr. SMOOT. But for that purpose only. At the first opportunity, of course, the joint resolution will be pressed for consideration.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Maryland? The Chair hears none. The Senator from Maryland asks unanimous consent that the Senate may proceed with the consideration of House bill 10523, the District of Columbia appropriation bill. Without objection, that will be done. The Chair hears none. The Senator from Virginia will proceed.

Mr. MARTIN of Virginia. Mr. President, the question of automobiles used in the Government service in Washington is a big one. I have no doubt that a great many abuses have crept in. I have no doubt there are many automobiles in use that ought not to be. I have no doubt that some of them are being used for unofficial purposes, for objectionable purposes, and there is, no doubt, great room for reformation in this service.

But I desire to say to the Senate that the automobiles that are used, whether wisely put in service or not, were put in the service by the Congress of the United States. They are not brought into use by this appropriation bill. There are now in the service of the District of Columbia, not including the departmental service, 31 passenger vehicles. Those 31 passenger vehicles were put into use by Congress from time to time. It was not done at one time, but a gradual increase of the service has been going on for years until we now have, as I said, 31 passenger automobiles in the service of the District of Columbia. It may be that the question ought to be overhauled, but the committee did not feel that it was incumbent upon it to go into an investigation of the automobile service of the District of Columbia which had been authorized by the laws of Congress.

Mr. WORKS. Mr. President——

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Does the Senator from Virginia yield to the Senator from California?

Mr. MARTIN of Virginia. I yield.

Mr. WORKS. I should like to ask the Senator from Virginia whether these automobiles have been provided for in the past from time to time in the manner that this is proposed to be done? Has it all been done in appropriation bills?

Mr. MARTIN of Virginia. Undoubtedly; but they were purchased under acts of Congress; they were provided for by Congress.

Mr. WORKS. I was not seeking to criticize that mode of providing for them. I was only asking for information.

Mr. MARTIN of Virginia. I do not mean to say that all of them were originally authorized in appropriation bills; I have not any knowledge as to that; but I do mean to say that they were purchased under acts of Congress and provided for the service of the government of the District of Columbia by acts of Congress, not by this bill. They were purchased and paid for by the Government and put into the service of the Government by the authority of Congress.

So, when the Committee on Appropriations took up the work of appropriating for the District service in the pending bill, it was incumbent upon it to appropriate for the automobiles which had been provided for and put into the service of the Government by acts of Congress.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Virginia yield to the Senator from Kansas?

Mr. MARTIN of Virginia. I do.

Mr. BRISTOW. The bill, however, not only proposes to maintain those automobiles, but it proposes to buy additional machines.

Mr. MARTIN of Virginia. I am coming to that. To narrow the question which the Senate now has before it, these 31 automobiles, I will say, were put into the service by the authority of Congress. The committee, of course, has appropriated in one place or another for them, but not at this place. This particular section provides for only 13 automobiles, 11 of which are already in the service. The House added one additional automobile, and the Senate committee added still another, making two additional automobiles provided for now in the bill.

So the question was not before the committee, and the committee did not consider that it was a part of its function at this time to undertake an investigation of abuses in the automobile service in the city of Washington, either in the District government or in the departments, if such abuses exist. Very likely there are abuses which creep in. We are all prone to err, and in the public service particularly there will be encroachments from time to time, and things that ought not to be will creep in. We shall have to be always vigilant and careful to keep down abuses as far as possible. It may be that some of these machines ought to be eliminated, and I think that is most likely, but so far as the matter now before the Senate is concerned it is within a very narrow compass.

There is a proposition here to add two automobiles to the service in the District of Columbia. All we are dealing with, all the committee undertook to deal with, all it has presented to the Senate for its consideration is that the House added one automobile and the Senate committee added still another, making two additional automobiles now proposed in this appropriation bill. Whether we have acted wisely in giving the additional automobile is for the Senate to determine. It was presented to us in this way: The District Commissioners appeared before us and asked for these additional automobiles. They say they can not efficiently and satisfactorily discharge the duties assigned to them unless they have them. It seems to me reasonable and proper if there are automobiles that ought to be eliminated to let them be eliminated, but I do not think that the District Commissioners can discharge their duties efficiently unless each one of them is provided with an automobile. It is a very wide area that they have to travel over and that they have to inspect and govern.

Mr. BRISTOW. Let me inquire of the Senator, if he will——

The PRESIDING OFFICER. Does the Senator from Virginia yield further to the Senator from Kansas?

Mr. MARTIN of Virginia. I yield.

Mr. BRISTOW. How did the commissioners or the authorities of the District of Columbia get along for the hundred years in which the government of the District of Columbia was conducted before automobiles came into use?

Mr. MARTIN of Virginia. I can not state the number of years, but I remind the Senator that I have heard there was a time when our forefathers went to mill with a sack of corn and put the corn in one end of the sack and a rock in the other to balance it. Instead of dividing the corn, they put the corn in one end and a rock in the other end. I have never heard it contended that we were wrong when we changed that usage. I do not think that we can stand still. I think we must use those facilities that are necessary for the dispatch of business in the stage of civilization in which we find ourselves.

Mr. BRISTOW. If the Senator will pardon me——

The PRESIDING OFFICER. Does the Senator from Virginia yield further to the Senator from Kansas?

Mr. MARTIN of Virginia. I do.

Mr. BRISTOW. They may have put the stone in one end and the corn in the other end in Virginia, but in the region where I was raised we divided the corn into two parts and left the rock out. I think in the old days probably just as good men were developed under those conditions as in the days of the automobile. The idea that these commissioners can not do the work without an automobile, I think, is ridiculous. They could do it if they wanted; but it is a convenient and luxurious thing to have, provided the public pays for it and provides somebody to run it for them. I see that this very bill contains the following clause:

including such personal services in connection therewith, not otherwise herein authorized, as the commissioners shall in writing specially order.

That is, if the commissioners want a chauffeur or some other assistant they can order them; and, of course, they go on the pay roll as their body servants.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Virginia yield to the Senator from New Hampshire?

Mr. MARTIN of Virginia. I yield.

Mr. GALLINGER. I rose simply to say that it rather surprises me to have the Senator from Kansas refer to 100 years ago. I recall the fact that I have read that Dolly Madison dried the household clothing in the East Room of the White House. That would not be done to-day. We have progressed, and progressed very rapidly, and we are continuing to progress. These officials now have horses and carriages. It is believed to be a matter of economy to give them automobiles. They are high-cost officials, and they will get to their places in half the time and save two or three dollars a day if they are busily engaged in inspection work, and pay for the automobiles in a little while. I think we are wasting a great deal of time this morning on an absolutely inconsequential matter.

Mr. MARTIN of Virginia. I think, Mr. President, that a great deal of time has been wasted because of the impression that it was in order now to take up the entire question of abuses in the automobile service. I am surprised that the progressive Senator from Kansas should want to deprive the District government of those modern appliances which have come into use, and which facilitate business so much. I realize, of course, that at the time when our ancestors put a rock in one end of the sack to balance the corn the State of Kansas had not been born. It came into existence in modern times, and I thought it was abreast of modern ideas. I was very much amazed to hear the Senator say that he thinks the District Commissioners can get along without automobile service.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Virginia yield further to the Senator from Kansas?

Mr. MARTIN of Virginia. I yield.

Mr. BRISTOW. The Senator was dilating upon the importance of the commissioners having automobiles in order that they might properly attend to their duties. The inference was that before automobiles were used the duties were not properly attended to. I thought it was a reflection upon the distinguished and able men who have served in that office previously, I think, with credit to themselves and to the Government.

Now, so far as progress is considered, I am in favor of all reasonable progress, but I observe we are making the greatest progress in the spending of the people's money for luxurious appurtenances to public officials. It takes three or four hundred thousand dollars to build an ordinary office building here in Washington to house a few hundred Government clerks. It would be more progressive to buy out some of the office buildings that we are maintaining now by renting rooms from the parties who constructed them. We could buy three or four of them for what one Government building will cost and put more people in them than are in the entire Government buildings now that we spent probably $40,000,000 or $50,000,000 for. If we had a little common sense in the matter of Government expenditures, in my opinion it would be better progress than the progress the Senator is discussing.

Mr. MARTIN of Virginia. Mr. President, we can not undertake in this bill to go into the construction of public buildings or the rental of buildings. I think we had better keep ourselves down to the question whether we shall buy one additional automobile in order that each Commissioner of the District may have that facility for the dispatch of his business. The commissioners have a very wide field of labor. They have the health service of the District; they have the street improvements of the District; they have the electric lines of the District, the street car service, and the telephone service. I will not undertake to enumerate all the services, but the duties of the District Commissioners are exceedingly comprehensive and exacting. I myself do not believe that they can attend to those duties promptly and efficiently and faithfully unless they have facilities to get from place to place to look after their various duties.

Mr. LANE. I wish to ask the Senator if each one of the commissioners makes use of a separate automobile and has an individual driver while he is attending to these numerous duties, and if there will be any possibility of getting the commissioners to double up and ride in couples?

Mr. MARTIN of Virginia. I will say to the Senator from Oregon that these automobiles are not used exclusively by the commissioners themselves. They are used under their orders as well as by themselves for the District service. They send their assistants in the automobiles. They are not used for their own purposes only, but for the purposes of their subordinates and assistants.

Mr. LANE. I would then inquire if the largest use and the greatest mileage is not made after dark?

Mr. MARTIN of Virginia. Mr. President, it is very easy to impute evil to people.

Mr. LANE. I am asking the question. I do not know.

Mr. MARTIN of Virginia. I am not in the detective service here.

Mr. LANE. I was wondering if there was any way of striping them like a yellow jacket or painting them with phosphorescent paint, so that we could tell these automobiles after dark?

Mr. MARTIN of Virginia. They are striped sufficiently to be identified. The bill requires appropriate lettering to be put upon them for that purpose. Whether they are put to an improper purpose I am not advised. If the Senator knows of any improper use made of these automobiles, I think he ought to make the charge. I do not think it is very fair treatment to these officials to be merely theorizing that they may perhaps be violating the law and violating their oath of office. I know of no improper use made of them. Very likely there are some abuses, but I do not know anything about them.

Mr. LANE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Virginia yield further to the Senator from Oregon?

Mr. MARTIN of Virginia. I do.

Mr. LANE. I do not think the commissioners themselves make any improper use. I do not think that they indulge even in joy riding. I have not so great confidence, however, in the chauffeurs. It seemed to me that we might get the commissioners to double up and ride together.

Mr. MARTIN of Virginia. I do not think it is an excessive allowance when we allow to each commissioner for his own official use and for the agencies under him a single automobile. I do not think it would be economy, as a rule, for the two commissioners to go out at one time. They generally have to go separately, each in his own sphere of work. They came before us and insisted that each one of them needed an automobile for his use and to be used under his orders in the execution of public duties. I believe their claim to be correct and just, and I think they ought to have this additional automobile.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Virginia yield to the Senator from North Dakota?

Mr. MARTIN of Virginia. I yield.

Mr. McCUMBER. I should like to ask a question simply for information. I wish to ask the Senator from Virginia if the Public Printer, the Commissioner of Pensions, the Commissioner of the General Land Office, and the Commissioner of Indian Affairs are each furnished an auto and driver under the existing law, and also under pending appropriation bills?

Mr. MARTIN of Virginia. I would not like to undertake to answer as to each of those officers. I have no doubt there is a very large number of automobiles in the Government service. There are 35 in the service of the District of Columbia, and that may be too many.

Mr. WARREN. The Senator from North Dakota will remember that those would not be provided for in this bill.

Mr. MARTIN of Virginia. They are not provided in this bill, and therefore I do not undertake to answer.

Mr. WARREN. If the Senator from North Dakota will pardon me in this connection, I understand that the commissioners had horses and carriages before, and so have many of their assistants. As I read the bill, we now provide for doing away with horses and carriages and these automobiles will simply take the place heretofore filled by horses and carriages.

Mr. MARTIN of Virginia. That is provided for by the bill in order to have a more economical and a more expeditious service. I believe the Government will be the gainer by giving an automobile to each commissioner. I remember on one occasion making some investigation into the use of horses and I found that one of the commissioners had three horses and two coachmen.

Mr. McCUMBER. The Senator refers to the Commissioners of the District of Columbia?

Mr. MARTIN of Virginia. Not the present commissioners, but a former commissioner of the District of Columbia. That was discovered and it was corrected, but one commissioner did have three horses. When we substitute automobiles, giving one to each commissioner and putting out of commission the horses and carriages and coachmen they now have, I believe there will be a more expeditious and a more economic service. I think it is fair and reasonable and just. It is in accordance with modern usages and in accordance with efficiency of business service. The committee so believing have made this report, and it is for the Senate to decide. All we have done is to give one more automobile in order that each of the commissioners may have an automobile under his control.

Mr. McCUMBER. My mind was not fixed so much upon the question of the automobiles for the Commissioners of the District of Columbia as to understand the law governing the supply of autos for these other officers. It could not be done in this bill, but I should like to ask the Senator a single question. In the case of the Commissioner of the Land Office, the Commissioner of Indian Affairs, the Commissioner of Pensions, the Public Printer, all their work is wholly inside, and there is practically nothing outside, while the Senator from Virginia himself not only performs all his labors here but he must go down to the departments several times a week, and rush back again in order to be present at the opening of the session of the Senate each day. Can the Senator give any reason why the Commissioner of Indian Affairs, taking that one officer, for instance, should be furnished a carriage and a driver or an auto and a chauffeur any more than any other Government employee, any more, than a Senator or Representative, who must do a great deal more outside work, who must run around a great deal and visit a department a great many times more than any of the officials I have named?

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Virginia yield to the Senator from Colorado?

Mr. MARTIN of Virginia. I will answer the Senator from North Dakota, and then I will yield to the Senator from Colorado. No doubt there are abuses of that sort. I started out with the statement that the committee in this bill have had no occasion and were under no duty to take up that big question. I have no doubt Congress has been too generous, and has given too many automobiles and chauffeurs to Government officials. I have no doubt it is a good field for investigation and for reform, but this committee is not answering to the Senate on that question now. We are simply answering as to our recommendation to add one more automobile, so as to give each of the District Commissioners an automobile to be used exclusively in the Government service and to be substituted for the horse service which the commissioner now has.

Mr. WARREN. Will the Senator, right there, allow me to correct a matter?

Mr. MARTIN of Virginia. Yes; if the Senator from Colorado will excuse me——

Mr. WARREN. I will say to the Senator from North Dakota I do not think the commissioners he has mentioned have automobiles.

Mr. THOMAS. That was exactly what I wanted to state.

Mr. WARREN. If the Senator will permit me, one can not always tell because a man uses an automobile whether it is a Government automobile or his own; but the appropriation act will show.

Mr. McCUMBER. Right there may I suggest to the Senator that I referred either to automobiles or carriages?

Mr. WARREN. It is the same in either case. I include both.

Mr. BRISTOW. I will just say here that the Commissioner of Pensions does not have a carriage.

Mr. WARREN. If he does, it is probably from the Secretary of the Interior.

Mr. McCUMBER. Every one of them has.

Mr. WARREN. There are so many for the Interior Department. I may be mistaken, but I know of no place where they are provided for the head of a bureau.

Mr. MARTIN of Virginia. I appeal to Senators to investigate that question at some other time. Now let us narrow this question down and let us determine whether each commissioner of the District shall have an automobile.

Mr. WARREN. I want to state the reason why there is a difference in the case of the commissioners referred to. Their duties are at their home office mainly, and they can go to their department by street car lines. The Commissioners of the District of Columbia are supposed to visit every portion of the District where there are cars and where there are not. The area of this city is broadening, of course, and it has broadened a great deal of late years. They really have about the transportation they had 25 years ago when the city was nearly half as large. The difference is very great between the duties of the Commissioners of the District of Columbia, who have both office and outside work to do, and those who have been mentioned, such as the Commissioner of the Land Office, the Commissioner of Indian Affairs, and so forth.

Mr. MARTIN of Virginia. Now I yield to the Senator from Colorado.

Mr. THOMAS. If it be true that the various officials mentioned by the Senator from North Dakota are supplied at public expense with these conveyances, I think it should be done away with.

Mr. MARTIN of Virginia. If the Senator will excuse me, I beg him not to go into a long general discussion of the question.

Mr. THOMAS. I am not going into it. I think the Senator from North Dakota is mistaken, but, of course, if he says such is the case, I accept his statement. I have been accompanied by a number of officials in the street cars when going to and from the Capitol for a long time. My impression is, therefore, that the Senator is mistaken in his assumption that the heads of bureaus and divisions under the Cabinet officers are given conveyances.

Mr. MARTIN of Virginia. Mr. President, I am not dealing now with that proposition. I am dealing simply with the proposition to give each of the Commissioners of the District of Columbia an automobile. The committee of which I am chairman having investigated that matter and having reached the conclusion that it ought to be provided, we have reported it to the Senate for its acceptance or rejection. That is the sole question that we have submitted to the consideration of the Senate to-day.

Mr. McCUMBER. Mr. President, I did not hear the last remarks of the Senator from Colorado [Mr. THOMAS]. Did I understand the Senator from Colorado to say that the officials which I have mentioned are not furnished with either autos or carriages?

Mr. THOMAS. No; I did not. If the Senator asserts it as a fact, I accept his statement, but I based my statement upon the fact that I have frequently accompanied these gentlemen in public conveyances to and from their offices.

Mr. McCUMBER. It is a fact that they have them, but under what provision of law it is done I have no knowledge. I do not know whether it is by direct appropriation or whether it is paid out of the contingent fund; but such has been the case and probably is the case at the present time.

Mr. HITCHCOCK. I think I can explain the seeming discrepancy between the Senator from North Dakota and the Senator from Colorado.

Mr. THOMAS. There is no discrepancy, because I accepted the Senator's statement.

Mr. HITCHCOCK. I think there is, because this matter was up in the House of Representatives some 10 years ago, when I was a Member. I had the honor of bringing it up at that time. It developed that public vehicles paid for by the Government were being used by the families of public officials and were being used for private purposes; that the wives were going to market in the vehicles; that they were making their calls in the vehicles; and the men who were acting as their chauffeurs were on the pay rolls as messengers. I have no doubt that vice, to some extent, is continued to the present time, and while the very officials for whom the vehicles were purchased are using the

street cars, as the Senator from Colorado [Mr. THOMAS] states, the families of those officials are using the vehicles for personal and private purposes.

Mr. WORKS. Mr. President——

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from California?

Mr. HITCHCOCK. I do.

Mr. WORKS. I should like to ask the Senator from Nebraska whether he does not think the wives of Senators and others do more traveling than the officers themselves and are more in need of the conveyance in making their calls?

Mr. HITCHCOCK. I think probably there is something in the suggestion made by the Senator from California. The fact is that this is a great vice. I wish the chairman of the Committee on Appropriations would treat it as a whole. One of the serious evils is that nobody knows how many of these vehicles are purchased nor how many of them are employed. I think the chairman of the Committee on Appropriations owes it to the Senate to lay before the Senate in some systematic and simple manner the total number of vehicles, whether automobiles or carriages, that are employed supposedly in the public service here.

Mr. GALLINGER. I feel sure that I am not mistaken in the recollection that the Senator from Kansas [Mr. BRISTOW] less than two years ago offered a resolution calling for this information. It was transmitted to the Senate, and I apprehend it can be found in the document room to-day.

Mr. HITCHCOCK. It may be; but when Senators rise here——

Mr. GALLINGER. If the Senator will permit me, I will add just one suggestion. There is no question about a long list of officials using carriages at the Government expense. The Public Printer certainly does or did, the Commissioner of Pensions certainly does or did, not long ago. I have been spattered with mud by Assistant Secretaries more than once with spanking horses and carriages. There is no doubt about it, I think, and I have always thought it was an evil, but it can not be remedied in this bill.

Mr. WILLIAMS. I would ask the Senator from New Hampshire how he can remedy the evil unless he begins it in some bill and then continues it in every other bill as rapidly as the bills come before us?

Mr. GALLINGER. That is a pertinent question. I will say in reply that I have sent to my committee room and have failed to find the assignments that are made to the three Commissioners of the District of Columbia. I think each one of them has more than 25 different duties to perform in the District. I have failed to find the document, and so I can not at this moment present it, as I had intended doing, but will insert it later.

If there is any class of officials in the District of Columbia who are entitled to modern means of transportation, it is the Commissioners of the District of Columbia. They are underpaid to-day, and their duties are so large, so numerous, and so onerous that they ought to be given first consideration.

Whether or not other officials ought to have automobiles I am not prepared to say to-day. I think it is a matter that might well be taken up in a comprehensive, systematic way, so that some proper solution of it may be found.

Mr. HITCHCOCK. Mr. President, it is that for which I am speaking; but the chairman of the committee rather resented the idea that when the committee recommended this particular automobile for this particular official, Senators should rise and protest against the extravagance in the purchase of automobiles and the employment of chauffeurs for officials.

Mr. SMITH of Maryland. Mr. President, I would say to the Senator from Nebraska that he is mistaken if he thinks I have done that. I had no such intention. I merely said that it was a matter which we did not investigate and upon which we were not prepared to give any information, and referring especially to this case I remarked that we had made no investigation of that kind, and we knew nothing about it. There may be wrongs going on and there may be discrepancies, which are not in accordance with the laws and not in accordance with the appropriations, which we did not take into consideration; but I had no idea of resenting anything that the Senator from Nebraska may have said with regard to the matter.

Mr. HITCHCOCK. Mr. President, the point I was endeavoring to make some moments ago, and what I want to repeat here, is this: It seems to me that the Committee on Appropriations, when it recommends an additional automobile and realizes that every year the demand is increasing for automobiles, it ought to prepare some comprehensive plan by which the public service can be cared for in an economical way. It certainly is not good business to buy an automobile, turn it over to a single official, and to buy another automobile and turn it over to another official, and another one, until we have 31 automobiles employed in the local government. There must be some more economical means by which necessary transportation can be afforded to these men. Each of these officials can not spend all of his time in an automobile. It ought to be possible to have a limited number of automobiles at the disposal of the occupants of the District Building, and to permit the officials to use them when necessary on the public service. If you assign one automobile to each official, then whenever an official is engaged in his office the automobile is idle, which must be a large part of the time, and the chauffeur is idle, which must be a large part of the time. If the service must be rendered, why can not the Committee on Appropriations provide in some comprehensive way for a limited number of automobiles for the use of the officers employed in the District Building without assigning to each one a separate automobile?

Mr. MARTIN of Virginia. Mr. President, if the Senator will excuse me for interrupting him, I will say that I am not prepared to concede his suggestion, that it is incumbent upon the Appropriations Committee to undertake to investigate the automobile abuse in the Federal Government. That would be putting on the committee a duty that perhaps would require months, if they did nothing else. If this abuse is to be investigated, there ought to be a resolution passed by the Senate to that effect, and a special committee ought to be appointed.

The Senator must bear in mind that if some abuses have crept in through the Appropriations Committee it is only a very small part of them. There are other committees which handle these matters. Take, for instance, the Army and Navy. I think, if there be abuses, there are perhaps more of them in those departments than in the departments of the District of Columbia.

The Committee on Naval Affairs handles the naval bill, the Military Committee handles the Army bill, the Indian Affairs Committee handles the Indian appropriation bill, and so on throughout. I do not conceive that it is a part of the duty of the Appropriations Committee, of its own motion, without any initiation of the subject by the action of the Senate, to undertake a reform of that sort. I think it would be almost impossible for the Appropriations Committee, with the time at its disposal and with the duties that are imposed upon it, to undertake to investigate an abuse of that character. I have no doubt there is an abuse, and that it ought to be investigated. I am very willing to do my part of it, and shall endeavor to be more careful in the future in investigating automobile appropriations that come through my committee, but I do not feel that the committee are called upon to investigate the whole subject; it would not be possible for them to do justice to it.

Mr. HUGHES. Mr. President——

The VICE PRESIDENT. Does the Senator from Virginia yield to the Senator from New Jersey?

Mr. MARTIN of Virginia. I yield to the Senator from New Jersey.

Mr. HUGHES. What the Senator says is very true, but has any explanation been made of the necessity for this additional automobile? As I understand, the other House investigated this matter very thoroughly. Is this one of the cases where an appropriation was refused by the House because it was understood that it would be certain to be put in by the Senate?

Mr. MARTIN of Virginia. The House did give consideration to it. Each one of the commissioners asked for an automobile; the engineer commissioner already had an automobile, but the two civilian commissioners did not have automobiles. The House gave one additional automobile. The commissioners then appeared before the Senate committee and stated that they could not get along with one additional automobile; that each commissioner needed an automobile to discharge his duties efficiently. In view of the large field of labor which is intrusted to them and the explanations they made, we felt that their request was reasonable, and we added one automobile, so as to give to each civilian commissioner what the engineer commissioner already had.

Mr. HUGHES. Has the Senator from Virginia given any consideration to the suggestion made by the Senator from Nebraska [Mr. HITCHCOCK], which I regard as a very valuable one—that of having one, two, or three automobiles for the common use of all the commissioners? As the Senator from Nebraska has said, in the nature of things the commissioners must spend a great deal of time in their offices, and they could arrange their business in various parts of the city so that they would not conflict. If that suggestion has not already been given consideration by the committee, it seems to me that it should receive consideration.

Mr. MARTIN of Virginia. That suggestion received consideration by the committee; but I call attention to the fact that

these automobiles are not used exclusively by the commissioners, but are used by other people in the employ of the commissioners in the execution of the work of the District government. The commissioners say they can not get along efficiently with fewer than three automobiles. I repeat, they themselves do not use them exclusively, but they assign them to a very large number of other people; and they say, considering the amount of field labor, the large number of services which they must investigate and consider, and the large number of agencies that they must use in assisting them in the discharge of their duties, it is necessary that this additional automobile should be provided. The committee may be mistaken; it is for the Senate to say. I am perfectly willing for all of the automobiles to be taken from the commissioners if it is the judgment of the majority of the Senate that they do not need them. We thought they needed them—that each commissioner should have one automobile—and we have reported that conclusion to the Senate. We gave the matter the best investigation we were able, which was chiefly hearing the commissioners themselves and considering the scope of the service they were required to render. I believe the Senate will make no mistake in giving each one of the commissioners an automobile.

I think that the suggestion of the Senator from Nebraska that this subject should be investigated is eminently proper, and I hope it will be done; but I do not think it is the duty of the Committee on Appropriations to take upon itself that labor, and I do not think the Committee on Appropriations would have the time and the opportunity to do justice to the matter if it should undertake it. The duties of the committee are very large, and we find it very difficult to discharge the duties that are specifically assigned to us; but a reformation of that sort in the Government service at Washington ought to be undertaken by a special committee, created under a resolution of the Senate, it seems to me. I will do the best I can in investigating the subject as matters move along, but I can not promise that it is possible for me to give a proper and thorough investigation and to afford a remedy by reporting measures to the Senate.

The VICE PRESIDENT. The question is on the amendment reported by the committee.

Mr. THOMAS. I ask for the yeas and nays, Mr. President.

The yeas and nays were ordered.

Mr. GALLINGER. Mr. President, before the yeas and nays are taken, I ask permission at this point in the discussion to insert a little statement showing the assignment of the duties of the several Commissioners of the District of Columbia.

The VICE PRESIDENT. Without objection, permission to do so will be granted.

The statement referred to is as follows:

SPECIAL ASSIGNMENT OF OFFICES AND DUTIES TO THE COMMISSIONERS, AS COMMITTEES, AS ESTABLISHED JANUARY 24, 1910, AND AMENDED JANUARY 24, 1911.

PRESIDENT OF THE BOARD, OLIVER P. NEWMAN.

All unassigned matters.
Anatomical board.
Assessments.
Assessor.
Assistant assessors.
Asylum and jail, Washington.
Auction matters.
Auditor.
Bathing beach.
Charities.
Child labor.
Children's Guardians, Board of.
Claims against District of Columbia.
Coal furnished for use of district government.
Collector of taxes.
Columbia Hospital, appointment of trustees.
Corporation counsel.
Dental examiners.
Disbursing officer.
Dog tags.
Druggists to the poor.
Excise board.
Historical tablets.
Insurance, superintendence of.
Library, free public.
Licenses for general business.
Liquor licenses.
Medical examiners, boards of.
Medical supervisors, board of.
Municipal lodging house.
National Training School for Boys, ex officio trustee of.
Paupers, transportation and care of.
Pharmacy, board of.
Physicians to the poor.
Playgrounds.
Purchasing officer.
Public library.
Public schools.
Reformatory.
Rock Creek Park, board of control, president.
Taxes.
Veterinary medicine, board of examiners.
Washington Asylum and Jail.
Workhouse.

COMMISSIONER FREDERICK L. SIDDONS.

Coal for private use, weighing of.
Columbia Hospital, ex officio trustee of.
Coroner.
Drainage of lots.
Employment agencies.
Fire department.
Fish wharf.
Flour, inspection of.
Food, inspection of.
Garfield Hospital, isolating wards.
Hacks and hack stands.
Harbor master.
Hay scales.
Health office.
Insane.
Lumber, inspection of.
Markets.
Morgue.
Nurses' examining board.
Police department.
Pound.
Providence Hospital, isolating wards.
Superintendent of weights, measures, and markets (act of Mar. 3, 1911).
Smoke abatement.
Surgeon, police and fire departments.
Vehicles on streets, movement of.
Veterinary surgeon.
Wood, inspection of.

COMMISSIONER CHESTER HARDING, LIEUTENANT COLONEL, CORPS OF ENGINEERS, UNITED STATES ARMY.

Ashes, removal of (Jan. 24, 1911).
Asphalts and cements.
Automobile board.
Boilers, inspection of.
Bridges.
Building sites, purchase of.
Buildings, dangerous, removal of.
Buildings, insanitary, condemnation of.
Buildings, inspector of.
Conduits.
Contracts.
District Building.
Electrical department.
Elevators.
Engineer department.
Fire escapes.
Garbage, removal of (Jan. 24, 1911).
Gas and meters, inspection of.
Highway extension.
Lighting of streets.
Municipal architect.
Night soil, removal of (Jan. 24, 1911).
Parking.
Pavements.
Permit clerk.
Plumbing.
Railroads.
Refuse, removal of (Jan. 24, 1911).
River front.
Roads.
Rock Creek Park, board of control, secretary.
Sewers.
Sidewalks.
Stables, engineer department.
Steam engineers, board of examiners.
Street and alley cleaning (Jan. 24, 1911).
Street railways.
Streets.
Subdivisions.
Surveyor.
Trees.
Water department.
Wells.
Wharves.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. CLARK of Wyoming (when his name was called). I have a general pair with the Senator from Missouri [Mr. STONE]. In his absence I withhold my vote.

Mr. FALL (when his name was called). I have a general pair with the senior Senator from West Virginia [Mr. CHILTON] and therefore refrain from voting.

Mr. GALLINGER (when his name was called). I have a general pair with the junior Senator from New York [Mr. O'GORMAN]. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. TOWNSEND (when the name of Mr. JONES was called). The senior Senator from Washington [Mr. JONES] has been called from the Senate on official business.

Mr. LEA of Tennessee (when his name was called). I have a pair with the senior Senator from South Dakota [Mr. CRAWFORD]. I transfer that pair to the junior Senator from New Hampshire [Mr. HOLLIS] and vote "yea."

Mr. OVERMAN (when the name of Mr. SIMMONS was called). I wish to announce that my colleague [Mr. SIMMONS] is unavoidably absent on account of illness. I will ask that this announcement stand for the day.

Mr. SUTHERLAND (when his name was called). I have a pair with the Senator from Arkansas [Mr. CLARKE]. He is absent, and I do not know how he would vote if present. Therefore I withhold my vote.

Mr. THOMAS (when his name was called). I have a pair with the senior Senator from New York [Mr. ROOT], which I transfer to my colleague [Mr. SHAFROTH] and vote "nay."

Mr. WARREN (when his name was called). I inquire if the Senator from Florida [Mr. FLETCHER] has voted?

The VICE PRESIDENT. The Chair is informed that he has not.

Mr. WARREN. I have a pair with that Senator; but I transfer that pair, so that the Senator from Florida may stand paired with the Senator from Illinois [Mr. SHERMAN], and I will vote. I vote "yea."

Mr. WILLIAMS (when his name was called). I have a pair with the senior Senator from Pennsylvania [Mr. PENROSE]. Not knowing how he would cast his vote upon this particular question, if present, I withhold my vote.

The roll call was concluded.

Mr. DU PONT. I have a general pair with the senior Senator from Texas [Mr. CULBERSON], who is absent on account of illness. I do not know how the Senator from Texas would vote on this amendment, if present, and therefore I withhold my vote.

Mr. WALSH (after having voted in the affirmative). I wish to announce my pair with the senior Senator from Rhode Island [Mr. LIPPITT]. I am advised, however, that, if present, he would vote as I have voted, and therefore I will allow my vote to stand.

Mr. BANKHEAD. I have a pair with the junior Senator from West Virginia [Mr. GOFF], which I will transfer to the junior Senator from Mississippi [Mr. VARDAMAN] and vote "yea."

Mr. SHEPPARD. I wish to announce that the junior Senator from Mississippi [Mr. VARDAMAN] is absent on account of illness, and that the junior Senator from Delaware [Mr. SAULSBURY] is absent on official business and has a pair with the junior Senator from Rhode Island [Mr. COLT].

The result was announced—yeas 33, nays 19, as follows:

YEAS—33.

| | | | |
|---|---|---|---|
| Bankhead | Fall | Owen | Swanson |
| Bradley | Gallinger | Page | Thornton |
| Brady | Lea, Tenn. | Perkins | Townsend |
| Brandegee | Lodge | Ransdell | Walsh |

So the amendment of the committee was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 17, line 16, before the words "in all," to strike out "twelve" and insert "thirteen," and in the same line, after the word "including," to strike out "one" and insert "two," so as to make the clause read:

Automobiles for the offices of the civilian commissioners and the engineer commissioner, including the building-inspection and street-cleaning divisions, surveyor's office, and electrical department, 13 in all, including 2 to be purchased hereunder for the service of the civilian commissioners.

The amendment was agreed to.

The next amendment was, on page 18, line 1, after the word "vehicles," to strike out "$9,150" and insert "$15,634"; and in line 18, before the word "inches," to strike out "six" and insert "three," so as to make the clause read:

In all, for motor vehicles, $15,634. All of said motor vehicles and all other motor vehicles provided for in this act and all horse-drawn carriages and buggies owned by the government of the District of Columbia shall be used only for purposes directly pertaining to the public services of said District, and shall be under the direction and control of the commissioners, who may from time to time alter or change the assignment for use thereof or direct the joint or interchangeable use of any of the same by officials and employees of the District of Columbia: *Provided*, That no automobile shall be acquired hereunder, by purchase or exchange, at a cost, including the value of a vehicle exchanged, exceeding $2,000 for one seating more than two persons or $1,000 for one seating not more than two persons: *Provided further*, That all motor vehicles and all horse-drawn carriages and buggies owned by the government of the District of Columbia shall be of uniform color and have painted conspicuously thereon, in letters not less than 3 inches high and markedly contrasting in color with the body color of the motor vehicle, the words:

The amendment was agreed to.

The next amendment was, on page 18, line 21, to strike out the headline "City service" and to insert "District of Columbia."

The amendment was agreed to.

The next amendment was, on page 19, line 18, after the word "sewers," to strike out "chief inspector," and insert "assistant superintendent," so as to make the clause read:

Telephones connected with the system of the Chesapeake & Potomac Telephone Co. may be maintained in the residences of the superintendent of the water department, superintendent of sewers, assistant superintendent of the street cleaning division, secretary of the Board of Charities, health officer, chief engineer of the fire department, and superintendent of police, under appropriations contained in this act.

The amendment was agreed to.

The next amendment was, on page 19, after line 23, to insert:

The Commissioners of the District of Columbia are hereby authorized, in their discretion, to furnish necessary transportation in connection with strictly official business of the Government of the District of Columbia by the purchase of car tickets from appropriations contained in this act: *Provided*, That the expenditures herein authorized shall be so apportioned as not to exceed a total of $5,000 for the fiscal year 1915: *Provided further*, That the provisions of this paragraph shall not include the appropriations herein made for the fire and police departments.

Mr. THOMAS. Mr. President, the proposed amendment appropriates a sum not in excess of $5,000 for the purchase of car tickets. On page 63, line 22, there is a similar appropriation of $5,000 "for purchase of car tickets for strictly official use"; and on page 66, line 16, there is another amendment providing $650 "for purchase of car tickets for strictly official use," making a total appropriation for that purpose of $10,650. I will be obliged to the chairman of the committee for information in regard to the matter.

Mr. SMITH of Maryland. Mr. President, I wish to say to the Senator from Colorado that in the past car tickets have been furnished out of appropriations for the District, but under a decision by the Comptroller of the Treasury it is now necessary that there should be a specific appropriation. I read from a letter on this subject addressed to the committee by the commissioners:

In a decision dated July 29, 1913, on the question of the use of car tickets, the Comptroller of the Treasury of the United States said: "In the act of March 4, 1913 (37 Stat., 758, 776, and 782), specific provisions have been made for purchase of car tickets for the Treasury Department, Departments of the Interior and Justice, thus showing that when Congress intends car tickets to be furnished for local travel it makes specific provision therefor."

So it will be seen that the comptroller claims that there must be a specific provision made for the purchase of car tickets for the police and other departments of the District government. As I have said, this is not a new thing at all.

Mr. THOMAS. Mr. President, I do not want to object to a reasonable appropriation.

Mr. SMITH of Maryland. The Senator will notice the car tickets are not to be used for any other purpose whatever except strictly official business.

Mr. THOMAS. Oh, yes.

Mr. SMITH of Maryland. I asked one of the commissioners whether the tickets would be allowed to be used for the transportation of officers from their homes to their places of business and from their places of business to their homes, and the commissioner said "No."

Mr. THOMAS. I am aware of that; I think the committee have safeguarded that provision so far as they can, unless, perhaps, some provision should be made whereby the tickets should have a certain color or designation; but the sum of $10,650 will purchase 255,600 car tickets, and it seems to me that that is a very large number of passages to be secured for this purpose. The Senator from Utah has called my attention to the fact that something less than $5,000 has been expended hitherto for this purpose.

Mr. SMOOT. That is, for this particular department, I will say to the Senator.

Mr. THOMAS. Then it was not the total expenditure for that item?

Mr. SMOOT. Oh, no; for this particular department.

Mr. THOMAS. I misunderstood the Senator.

Mr. SMOOT. I want to say to the Senator that Commissioner Siddons, when this item was up for consideration, said:

The reason for that item is, briefly, as follows: After the enactment of the public-utilities law the then utilities commission ruled that by virtue of its provisions the practice which had theretofore prevailed of permitting policemen and firemen to ride free on the street cars of the District could no longer be permitted, and an order carried out that view of the law. So the free transportation of these officers was refused. The embarrassment and, I think, distress on the part of the police officers and firemen that followed led to an effort on the part of

the commissioners to secure an opinion from the Comptroller of the Treasury whether or not under the existing contingent appropriations car tickets could be provided to police officers and firemen when engaged upon official missions about the District. The opinion of the comptroller was adverse. He said that under the existing law the commissioners could not do that.

Mr. SMITH of Maryland. I desire to say to the Senator from Colorado that, according to the records of the District, the expenditures previously for this purpose have been about $5,000 annually.

Mr. THOMAS. For this department?

Mr. SMITH of Maryland. For this department.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

Mr. SMITH of Georgia. Mr. President, I should like to ask the Senator in charge of the bill whether the chartered privileges of the street railway companies are such that we could require them to furnish this transportation to the District as compensation in part for the privilege they enjoy of using the streets? I do not believe in the street car companies furnishing free transportation as a gift to city employees, but I do think, as a part of the obligations imposed upon them for the privilege of using the streets, it is eminently proper that they should be required to furnish certain transportation to the municipality or to the local government—the District Commissioners in the present instance—as a part of the compensation which they should pay to the District for the franchises given to them. If the charters of these companies are in such shape that that could be done, it seems to me the proper thing for us to do would be to require the street car companies to furnish a certain amount of transportation to the District Commissioners, to be by the District Commissioners used for public purposes.

Mr. SMITH of Maryland. I will say to the Senator from Georgia that we investigated that matter, considering that probably it would be one way to get rid of making this appropriation. The law, as we understand, does not compel the street car companies to furnish such transportation now. We might go to them and ask it as a privilege, but the commissioners thought that that would not be a wise thing to do, because possibly it would put those who might ride on those tickets under some obligation to the companies, and it was not deemed wise to allow policemen to ride upon tickets procured in that way. There is no law now to authorize such a proceeding, but possibly there could be a law passed compelling the street car companies to do as the Senator from Georgia suggests they might be made to do. The Senator may be right, and on account of the privileges which they enjoy from the District of Columbia it might be right to take such action, but there is no way under which we can proceed at this time except by a specific appropriation, and the committee thought it wise to make this appropriation to meet the exigency of the situation.

Mr. GALLINGER. Mr. President, it is proper to add that the street car companies are quite willing to transport the policemen and firemen free of cost, as they have been doing, but they are inhibited from doing so by the public-utilities bill and the decision of the comptroller.

Mr. SMITH of Georgia. Then I suggest that we might put on this bill a provision requiring that a certain amount of transportation shall be furnished to the District Commissioners.

Mr. GALLINGER. That would be rather in contravention of the position we have taken against free transportation.

Mr. SMITH of Georgia. It would not be free transportation at all. It would be a price of the franchise. It would be a part of the tax fixed upon them incident to the franchise they receive. They would make no presents to policemen. They would be required by law to furnish the District Commissioners a certain amount of transportation, which they would furnish as a part of their franchise tax. It would belong to the commissioners and would be distributed by the commissioners as the property of the District to the servants employed by the commissioners.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 20, after line 24, to insert:

For repair of the morgue building, $3,500.

The amendment was agreed to.

The next amendment was, on page 22, after line 24, to insert:

For the purchase of new apparatus in the office of the inspector of asphalts and cements, $1,000.

The amendment was agreed to.

The next amendment was, under the head of "Improvements and repairs," on page 24, after line 5, to strike out:

That hereafter whenever, under appropriations made by Congress, the roadway of any street, avenue, or road in the District of Columbia is improved by laying a new pavement thereon or by resurfacing an existing pavement from curb to curb or from gutter to gutter, where no curb exists, where the material used is sheet asphalt, asphalt block, asphaltic or bituminous macadam, concrete, or other fixed roadway pavement, such proportion of the total cost of the work, including all the expenses of the assessment, to be made as hereinafter prescribed, shall be charged against and become a lien upon the abutting property, and assessments therefor shall be levied pro rata according to the linear frontage of said property on the street, avenue, or road, or portion thereof upon the roadway of which said new pavement is laid or the existing roadway of which is resurfaced: *Provided, however*, That there shall be excepted from such assessment the cost of paving or resurfacing the roadway space included within the intersections of streets, avenues, and roads, as said intersections are included within building lines projected, and also the cost of paving the space within such roadways for which street railway companies are responsible under their charters or under law on streets, avenues, or roads where such railways have been or shall be constructed.

The assessments herein provided for shall be levied and paid for in the following manner, namely: Where the width of the roadway actually to be paved is 40 feet or less between the curbs, or between the gutters, where no curbs exist, after deducting the amount required to be paved by the street railway companies, the total cost of the work, including the expenses of assessments, shall be assessed against the abutting property owners, one-half to each side; where the width of the street thus to be paved, after deducting the amount required to be paved by the street railway companies, shall exceed 40 feet, the cost of construction as herein provided for shall be levied and paid for as follows: The cost of constructing 20 feet on each side of said street shall be assessed against the abutting property owner, and the cost of paving the remaining portion of said street, including the cost of intersections, shall be paid for by the government of the District of Columbia out of funds available for that purpose.

Assessments levied under the provisions hereof shall be payable and collectible in the same manner and under the same penalty for nonpayment as is provided for assessments for improving sidewalks and alleys in the District of Columbia, as now provided by law: *Provided*, That the cost of publication of the notice of such assessment upon the failure to obtain personal service upon the owner of the property to be assessed therein provided for and of the services of such notices shall be paid out of the appropriation for the work, and such assessments, when collected, shall be deposited in the Treasury of the United States to the credit of the fund available for similar public work.

Mr. SMITH of Georgia. Mr. President, I think this is one of the most objectionable amendments that has been presented by the committee. I am not prepared to approve the provision of the bill just as it comes to us from the House. I think it is rather extreme to charge all of the improvements to the property holders; but I do think a fair proportion of the street improvements should be charged to the adjacent property holders.

I notice in the RECORD this morning that, in speaking of certain improvements made under the bill passed by the last Congress, I was quoted as referring to those improvements as having been made in the northeastern section. I said, or, at least, I meant to say, the northwestern section. I was seeking to reply to the suggestion of the Senator from New Hampshire [Mr. GALLINGER]. I rode around and looked at a number of those improvements carried in the last bill, just to see how much they were public improvements and how much they were private improvements; and I found a number of them that seemed to me useless, except for the benefit they did to the property immediately adjacent to the improvements.

Improvements of that character are proper. They ought to be made. They give a chance for the city to grow. Where, however, the property holder receives preeminently the benefit of the street improvement, it is not fair that the charge should fall upon the entire city; and in the case of the District, where the property holder receives preeminently the benefit of the improvement, it is not fair that the District treasury should carry the entire improvement. The natural consequence of such a line of action is that the man who has the influence gets the street improved and the man who has not does not.

The only fair way to conduct these improvements, it seems to me, is that which has grown up as the result of the experience of most of the cities of the country. If we could, as a substitute for what the House has sent us, provide a plan by which the District Commissioners might improve streets upon the petition of two-thirds of the property holders in a particular locality, charging to the District that portion of the improvement which applied to the cross streets and charging to the District one-third of the entire improvement, and in the narrower streets, of 40 feet, charging one-third to the adjacent property holders on each side, I believe we would find that petitions would come in from neglected portions of the city—from the east and northeast sections—and that many of those people would find it practicable to have streets improved that now are neglected.

My own observation has been, where I live, that a petition is required from the owners of two-thirds of the frontage on a certain area of a street to authorize the city council to have the street improved, asphalted, or paved in the way designated.

Then the city pays a third and the adjacent property holders each a third. This would be especially fair on narrow streets where there are no street cars.

If the present action of the committee prevails and the matter goes back to conference, at least I hope there may come out of the conference an agreement by which, instead of the extreme form in which this matter is left by the action of the House, a plan may be substituted under which petitions can be presented to the commissioners by the property holders, and where they are ready to pay two-thirds of the expense the District shall pay one-third and the District shall also pay for the crossings.

Mr. GALLINGER. Mr. President, the Senator from Georgia has presented a view of the case that I confess impresses me. The Senator will understand that the committee struck out this provision in the House bill not because of entire hostility to the proposition, but for the purpose of putting it in conference and seeing if an agreement could not be reached that would be satisfactory to all parties.

In connection with what the Senator has said, and for the purpose of clearing up a misapprehension that is in the minds of some Senators I will say that my attention has been called to the fact that great improvements are going on where there are not any houses in the district, and yet the streets are beautifully asphalted. I was referred, for instance, to the extension of Massachusetts Avenue. That is all done by the owners of the property. The same is true of these beautiful suburban subdivisions like Edgewood. The owners of the property make those improvements with a view of selling the property, of course.

Mr. SMITH of Georgia. They pay it all?

Mr. GALLINGER. They pay it all; yes.

Mr. SMITH of Georgia. Not having a provision by which legislation authorizes the improvement, they go to the expense of doing it all?

Mr. GALLINGER. They do. The suggestion I made yesterday—and one which still impresses itself upon my mind—was as to the possible hardship which would be imposed upon the poorer classes unless we work out this problem very carefully. I suggested that on these beautiful streets and avenues the Government has made the improvements and the property owners have not paid a copper; while in the northeast and southeast, where they need improvements tremendously, and where we have not appropriated heretofore sufficient money to give them what I think they are entitled to, where the clerks and people of moderate means are building little homes, the provision as it comes from the House would impose upon those poor people the burden of paying all of the cost.

Mr. SMITH of Georgia. Except for the fact, if the Senator will allow a suggestion, that they are not getting anything now.

Mr. GALLINGER. They are not now; no. It is possible that the Senator's suggestion about a petition would remedy that evil.

Mr. SMITH of Georgia. If the committee in conference could agree upon a plan by which a certain proportion of the property holders might petition for the improvement, and thereupon two-thirds of it would be assessed to the adjacent property holders and one-third to the District, it would conform to what I think is now the generally accepted plan in the majority of the cities of the United States, and I am sure it works well where I live.

The VICE PRESIDENT. The question is upon agreeing to the committee amendment.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 26, line 26, before the word "feet" to strike out "thirty" and insert "forty," so as to make the clause read:

Repaving with asphalt the granite roadway of P Street NW., between Rock Creek and Twenty-eighth Street, 40 feet wide, $11,500.

Mr. LANE. Mr. President, I wish to ask the chairman of the committee, in relation to that item, whether it is merely for laying the asphaltum or whether it includes the grading?

Mr. SMITH of Maryland. It is for repaving.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The next amendment was, at the top of page 27, to insert:

For constructing a suitable viaduct and bridge to carry Benning Road over the tracks of the Philadelphia, Baltimore & Washington Railroad Co. and of the Baltimore & Ohio Railroad Co., in accordance with plans approved by the Commissioners of the District of Columbia, to be available until expended, $110,000. And the commissioners are hereby authorized to make the necessary expenditures for the construction of said viaduct and bridge and approaches under the like conditions prescribed for the expenditure of the appropriation for a subway and bridge at Cedar Street, contained in the act of May 18, 1910, making appropriations for the expenses of the District of Columbia for the fiscal year 1911: *Provided*, That the cost of constructing said viaduct and bridge within the limits of the rights of way of said Philadelphia, Baltimore & Washington Railroad Co. and the Baltimore & Ohio Railroad Co. shall be borne and paid, half by said railroad companies in proportion to the widths of their respective rights of way, and half by the United States and the District of Columbia, as provided in section 10 of an act entitled "An act to provide for a union railroad station in the District of Columbia, and for other purposes," approved February 28, 1903; and said sums shall be paid by said companies to the Treasurer of the United States, one half to the credit of the District of Columbia and the other half to the credit of the United States; and the same shall be valid and subsisting liens against the franchise and property of said Philadelphia, Baltimore & Washington Railroad Co. and the Baltimore & Ohio Railroad Co., respectively, and shall be a legal indebtedness of said companies in favor of the District of Columbia, jointly for its use and the use of the United States as aforesaid; and the said lien or liens may be enforced in the name of the District of Columbia by bill in equity brought by the commissioners of said District in the Supreme Court of said District, or by any other lawful proceedings against the said Philadelphia, Baltimore & Washington Railroad Co., or said Baltimore & Ohio Railroad Co., or both; and any relocation in the line or change in the grade of the tracks of the Washington Railway & Electric Co. necessary to permit the completion in accordance with approved plans of the viaduct and bridge and approaches herein provided for shall be made by and at the cost of said railway company; and in the event of said railway company failing or refusing to do such work the same shall be done by the Commissioners of the District of Columbia, the cost to be paid from the appropriation for said bridge and viaduct and collected from said street railway company in the manner provided for in section 5 of "An act providing a permanent form of government for the District of Columbia," approved June 11, 1878, and paid into the Treasury, one-half to the credit of the United States and one-half to the credit of the District of Columbia.

The amendment was agreed to.

The next amendment was, on page 29, after line 11, to insert:

Payment for ground and damages on account of condemnation proceedings: To pay Thomas W. and Alice N. Keller for ground taken and damages on account of condemnation proceedings in square No. 2838, in the city of Washington, $4,150.

The amendment was agreed to.

The next amendment was, on page 31, line 2, after "$1,800," to insert "and hereafter said street between Seventeenth and Eighteenth Streets shall become a part of Irving Street, and be known and designated upon the plats and maps of the District of Columbia as Irving Street," so as to make the clause read:

Northeast: Fort Place, Seventeenth Street to Eighteenth Street, grade and improve, $1,800, and hereafter said street between Seventeenth and Eighteenth Streets shall become a part of Irving Street, and be known and designated upon the plats and maps of the District of Columbia as Irving Street.

The amendment was agreed to.

The next amendment was, on page 31, after line 10, to insert:

Northeast: Minnesota Avenue, Benning Road to Forty-second Street, grade and improve, $5,000.

The amendment was agreed to.

The next amendment was, on page 31, after line 12, to insert:

Northwest: Connecticut Avenue, Tilden Street to Pierce Mill Road, grade and improve, $5,500.

The amendment was agreed to.

The next amendment was, on page 31, after line 14, to insert:

Northwest: Avenue of the Presidents, Montague Street to the Military Road, $26,952.

The amendment was agreed to.

The next amendment was, on page 31, after line 16, to insert:

Northwest: Park Road, Fourteenth Street to Sherman Avenue, grade and improve, $10,400.

The amendment was agreed to.

The next amendment was, on page 31, after line 18, to insert:

Southeast: Highview Place, Nichols Avenue to Brothers Place, grade and improve, $500.

The amendment was agreed to.

The next amendment was, on page 31, after line 20, to insert:

Southeast: Fifth Street, Alabama Avenue to Savannah Street, and Savannah Street, Fourth Street to Randle Place, grade and improve, $1,800.

The amendment was agreed to.

The next amendment was, on page 31, after line 23, to insert:

Southeast: Waclark Place, Nichols Avenue to Raleigh Street, grade and improve, $800.

The amendment was agreed to.

The next amendment was, at the top of page 32, to insert:

Northeast: Hunt Place, Deane Avenue, and Grant Street, from Minnesota Avenue to Division Avenue, grade and improve, $14,400.

The amendment was agreed to.

The next amendment was, on page 32, after line 3, to insert:

Northeast: Streets in Burrville, Division Avenue to District line, grade, $10,000.

The amendment was agreed to.

The next amendment was, on page 32, after line 5, to insert:

Southeast: Fourth Street, Nichols Avenue to Savannah Street, grade and improve, $1,000.

The amendment was agreed to.

The next amendment was, on page 32, after line 7, to insert:

Southeast: Sixth Street, Alabama Avenue to Savannah Street, grade and improve, $1,100.

The amendment was agreed to.

The next amendment was, on page 32, after line 9, to insert:

Southeast: Randle Place, Alabama Avenue to Savannah Street, grade and improve, $1,100.

The amendment was agreed to.

The next amendment was, on page 32, after line 11, to insert:

Northeast: Twenty-fifth Street, Hamlin Street to Irving Street, grade and improve, $1,500.

The amendment was agreed to.

The next amendment was, on page 32, after line 13, to insert:

Northeast: Twenty-fourth Street, Irving Street to Hamlin Street, grade and improve, $3,300.

The amendment was agreed to.

The next amendment was, on page 32, after line 15, to insert:

Northeast: Otis Street, Twelfth Street to Fourteenth Street, grade $4,200.

The amendment was agreed to.

The next amendment was, on page 32, after line 17, to insert:

Northwest: Eleventh Street, Columbia Road to Park Road, grade and improve, $6,500.

The amendment was agreed to.

The next amendment was, on page 32, after line 19, to insert:

Northeast: Lawrence Street, Sixteenth Street to Eighteenth Street, grade and improve, $3,600.

The amendment was agreed to.

The next amendment was, on page 32, after line 21, to insert:

Northwest: Harrison Street, Belt Road to Wisconsin Avenue, grade and improve, $5,400.

The amendment was agreed to.

The next amendment was, on page 32, after the line 23, to insert:

Northwest: Forty-first Street, from Ingomar Street to Harrison Street, grade and improve, $800.

The amendment was agreed to.

The next amendment was, at the top of page 33, to insert:

Northwest: Audubon Street, Albemarle Street to Broad Branch Road, grade, $15,000.

The amendment was agreed to.

The next amendment was, on page 33, after line 2, to insert:

Northeast: Kearney Street, Fourteenth Street to Eighteenth Street, grade and improve, $5,500.

The amendment was agreed to.

The next amendment was, on page 33, in line 5, after the words "in all," to strike out "$85,500" and insert "$210,452," so as to read:

In all, $210,452.

The amendment was agreed to.

The next amendment was, on page 33, after line 5, to strike out:

Hereafter the street designated as the Avenue of the Presidents shall be known and designated as "Sixteenth Street" in accordance with the original plans of the city of Washington.

Mr. SMITH of Maryland, Mr. WILLIAMS, and Mr. LODGE addressed the Chair.

The VICE PRESIDENT. The Senator from Maryland is recognized.

Mr. SMITH of Maryland. I was going to say that the Senator from Mississippi [Mr. WILLIAMS], I understand, wishes to say something about this amendment.

Mr. WILLIAMS. Mr. President, in the early days our forefathers laid out the plan of the city of Washington. They made it so that all the streets running north and south were numbered, and all the streets running east and west were lettered, and the diagonal highways were called "avenues of the States."

Our forefathers were a logical, sensible, consistent sort of people, and they laid down a logical and sensible and consistent plan of a city. It is true that since then the letters of the alphabet have given out—such has been the growth of the Federal city—and the new and suburban streets running east and west have had to have their names supplemented; but numbers never will give out, and there is no necessity for changing the names of the north-and-south streets.

Sixteenth Street NW. was so called because it was *the* sixteenth street of the city of Washington west of North Capitol Street. It was just half way between Fifteenth and Seventeenth Streets, and it received, in the forum of common sense, the name of Sixteenth Street. A year ago, I believe, by way of a rider upon the appropriation bill, this time-honored name, whereby the sponsors in baptism of Sixteenth Street had made it a member of the Washington municipality, was changed to "Avenue of the Presidents." This change was partially dictated by the desire of property owners upon the street, who thought that calling it an "avenue" would appreciate the value of the property there, or, rather, the price of property, not its value, and partially by an identical desire on the part of influential real estate dealers in lots there.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Mississippi yield to the Senator from Colorado?

Mr. WILLIAMS. I do.

Mr. THOMAS. I should like to inquire of the Senator whether he can state a better reason for it?

Mr. WILLIAMS. Yes; I think I can state another and an equally compelling reason.

Mr. THOMAS. I do not think the Senator can.

Mr. WILLIAMS. I am going to do it in a few minutes.

One of the reasons, I repeat, that led to the change was that certain property owners on Sixteenth Street and certain real estate dealers dealing in property on Sixteenth Street thought they could thereby appreciate the price of their holdings. I understand there really are in existence people of certain types, notably conspicuous among the nouveaux riches, who decline to own a home on anything that is not called an "avenue" or a "boulevard" or something of that sort, and I have been told that some "so-called folks" of that ilk had really declined to buy property upon Sixteenth Street because it was not called a boulevard or an avenue. Then, in addition to this influence, there was another, and that was the influence of society, spelled with a "s-a-s" and a "s-i-e" and a "t-y."

Mr. BRYAN. Mr. President, I wish to inquire of the Senator whether he bought his home on this celebrated street before or after the change of the name?

Mr. WILLIAMS. I bought mine before the change, and I did not belong to the class who absolutely required to be situated and located upon an avenue in order to be happy or feel respectable. Well, "sassiety" wanted it—a certain sort of "sassiety"—so as to put it on a visiting card, you understand, "Mr. John Smith, No. So-and-so Avenue of the Presidents." It is just one of those illustrations of ridiculous snobbery that might have been delightfully satirized by Molière in a manner after that of Les Precieuses Ridicules.

Now, a good, plain Mississippian comes up here and wants to see me. I live on Sixteenth Street. The only property I own in Washington is my home there. When he knows that I live on Sixteenth Street he knows that when he gets off the Fourteenth Street car he has two squares to walk west, but when he hears that I live upon the Avenue of the Presidents he not only does not know where I live, but nobody out there can tell him, because the people in that vicinity as yet positively refuse to call it the Avenue of the Presidents.

I have received a mass of letters since the name was changed, and only two of them were ever directed to me at the Avenue of the Presidents, and they were invitations to dinners. The folks out home do not know it. The folks in the neighborhood do not know it under its masquerade name. If you get off at Fourteenth Street and ask the first passerby who lives there which way you shall take to get to the Avenue of the Presidents, the chances are he will tell you that he does not know.

It is a peculiar sort of thing. The people who brought about the change just wanted to call it an avenue; they did not care much what.

For a while they suggested "Executive Avenue," but that looked as if the inhabitants and residents upon it might be executed. [Laughter.] Then they wanted to call it the "Avenue of the Allies," because it ran from Jackson Square, where the monuments to our allies, Rochambeau, and von Steuben, and Lafayette, and Kosciusko, and the balance of them, including Andy Jackson, I suppose, are; but just so they got it called an avenue they did not much care what avenue it was called. I am astonished that they did not call it a boulevard while they were about it, because there is no boulevard in Washington, and they might have called it just simply "The Boulevard."

It indicates a sort of a snobbish respect and reverence for official position and titles that is absent even from London and St. Petersburg. In London, so far as I know, there is no "Avenue of the King." In St. Petersburg, as far as I have yet learned, there is no "Avenue of the Tsars." Even in Berlin, where the Kaiser not only reigns but rules, while there is an "Avenue Unter den Linden," showing the reverence of humanity for beautiful trees, there is no "Avenue of the Kaisers." It remained for Washington to originate an "Avenue of the Presidents," named after all of them, good, bad, and indifferent, from George Washington down to Theodore Roosevelt and the rest, inclusive. [Laughter.]

I live on the street, and I do not want to be known as living on the "Avenue of the Presidents." Somebody down in Mississippi might think I bought the house after the street was

so named. If it had been so named beforehand, I would have hesitated, because I would not have brought upon my visiting friends the confusion of trying to locate me after they got here.

Now, the House of Representatives, seeing the utterly too great ambitiousness of this appellation, introduced into this bill a clause which we have just reached, restoring to Sixteenth Street its time-honored name and giving it permission to cease masquerading under the denomination of the Avenue of the Presidents. In doing it the House did a very sensible and a very wise thing.

Knowing the members of the District of Columbia Committee as I did, I thought it would only be necessary to mention the fact to one of them and that they would imitate the House example. But the Senate committee has an amendment upon this bill striking out the House provision. The House provision is:

Hereafter the street designated as the Avenue of the Presidents shall be known and designated as "Sixteenth Street," in accordance with the original plans of the city of Washington.

The Senate committee strikes out that House provision from the bill, so that the question presents itself now over the Senate committee amendment. I hope that the Senate committee amendment will be voted down and that those of us who love high thinking and plain living may be permitted to think as highly as we can and live as plainly as we know how on Sixteenth Street and not upon the Avenue of the Presidents.

Mr. SMITH of Arizona. Mr. President, I am a member of the Committee on the District of Columbia, but other business has kept me away from the meetings, as much as I should like to have attended them. I heartily agree with everything the Senator from Mississippi has said, and I would not take the floor now for what few words I am going to say except to explain to that committee that it is usually not my habit to go away from the recommendations made by the committee of which I am a member without first giving notice to the committee that I shall take such a position on the floor of the Senate.

This name seems to me to be the extreme of all snobbishness. If we have the Avenue of the Presidents, I will insist that we shall have an Avenue of the Vice Presidents. I shall insist that we shall change old Seventeenth Street into an Avenue of the Cabinet, and go through with all that ridiculous——

Mr. WILLIAMS. An Avenue of Senators, by all means.

Mr. SMITH of Arizona. Yes; Avenue of Senators; and when they name that avenue away out in the country somewhere I hope I may be able to buy a home on it. But as to the idea of designating old Sixteenth Street the Avenue of the Presidents, I can do no more than to express the sentiment which was better expressed by the Senator from Mississippi and declare it to be a snobbishness with which I have no patience.

Mr. THOMAS. I desire to offer an amendment to the committee amendment, beginning after the word "Washington," in line 9, page 33. I ask that it be read.

The VICE PRESIDENT. The Secretary will read the amendment to the amendment.

The Secretary read as follows:

*Provided*, That the alley running parallel with the said avenue north of Massachusetts Avenue and between said avenue and Seventeenth Street shall hereafter be known and designated as the Alley of the Vice Presidents.

[Laughter.]

Mr. WILLIAMS. I should like to suggest to the Senator from Colorado that for the sake of brevity he might amend by striking out the word "Presidents" and let it go that way. [Laughter.]

Mr. LODGE. Mr. President, it is always difficult to argue a matter of taste, because when you declare your reasons for liking or disliking something as a matter of taste it is very apt to seem as if you were reflecting upon those who take an opposite view. It seems to me that good reason as well as good taste dictate a return to the name of Sixteenth Street.

Washington is one of those capitals which is the creation of government like St. Petersburg, and in a less degree Madrid and Berlin. Therefore they took here a number of farms, open country, and upon it they laid out a city. They adopted a simple system of naming. I do not think, myself, as an abstract proposition that letters and numbers are particularly inspiring names for streets. I think they indicate some poverty of invention, but they are at least simple, sensible, and convenient. They have stood for many years. They serve every purpose. By making this change we adopt what seems to me—and I say it with all deference to those who differ from me—is a pompous, ostentatious, affected name. It is not in consonance with the general naming of the Capital. It is not in consonance with the language in which it is stated. "Avenue of the Presidents" is not an English idiom. It belongs to another language. It is very appropriate in Paris to say "Street of the Peace," but it would be absurd to do it in English. If we are going to use that name we should say "Peace Street." That gives it a still further air of affectation, to my mind. I suppose everyone here recalls the familiar ballad of Thackeray, in which he indulges in a little humor at the French method of naming streets:

A street there is in Paris famous,
For which no rhyme our language yields,
Rue Neuve des Petits Champs its name is—
The New Street of the Little Fields.

And even when Thackeray translated it, he did not make a literal translation. He had to say "New Street" instead of "Street New of the Little Fields."

Here we take and contort English in order to reach a name which I do not think adds to the dignity of the city at all. It seems to me it is far more dignified to keep the simple and very serviceable and convenient nomenclature for our streets that we always had. I was very sorry when I saw the change made, and I sincerely hope that the committee amendment will not be agreed to.

Mr. GALLINGER. Mr. President, I approach the discussion of this matter with a good deal of trepidation. I was notified in advance that the Senate was to be treated to the rarest kind of wit in discussing the name of this highway, and it is a matter of gratification that Senators who always indulge in gaiety when they have an opportunity have given us a sample of real wit in this discussion.

Mr. President, when the Senator from Massachusetts [Mr. LODGE] came to Washington he bought a home on Massachusetts Avenue, and we are all glad that he is living on that beautiful avenue and enjoying his beautiful home. There are some people in Washington and some people who will come to Washington in the future who have very clear notions that our street nomenclature is not of the best, and that numbering streets First, Second, Third, Fourth—and we had until recent years a Four-and-a-half Street—is an awkward way of designating our streets. It is true that it is a convenient way to find people, and I regret exceedingly that the Senator from Mississippi, for the first time in his life, has established a home where he can not be found. But he would be laboring under the same handicap if he lived on New Hampshire Avenue, or Vermont Avenue, or Massachusetts Avenue, or Rhode Island Avenue, or any of the other great avenues that George Washington placed in a swamp when he thought the city was going to travel in another direction, and his followers have been disappointed to find that New England has all the beautiful avenues of the city of Washington.

George Washington put the avenues down here in the northeast and southeast, and when a distinguished southern Senator started out two or three years ago to find the avenue that was named after his State, one of the original thirteen States, he found it was paved with cobblestones and ran directly through the navy yard. He came to me, as chairman of the Committee on the District of Columbia, in great trouble, asking that we would find some other avenue to name after his State. The result was that we found one which runs in a straight line and is known as Georgia Avenue.

Mr. President, about this Sixteenth Street, and I hold no brief in behalf of the people living on that street, I think the Senator from Mississippi inadvertently has done some of them an injustice. I do not think they are snobs. I do not think that they had any snobbery in their minds when they felt it would be a good idea to give some other name to that street than Sixteenth Street. Over 90 per cent of the property owners on that street signed a petition for a change of name. The first suggestion was, I believe, that it should be Executive Avenue, and various other names were suggested. Among others, the late lamented Justice Brown, who lived on the street, suggested White House Road, taking a name that is common in England; that is, the "road" part of it. Other names were suggested by various persons. The matter drifted along until last year.

However, to go back a little way, I will say that the Commissioners of the District of Columbia, of their own volition, some years ago named the part of Sixteenth Street running north of the old boundary line—that is, from Florida Avenue—the Avenue of the Presidents. They put the name on the street lamps. The citizens on that street adapted themselves to the change and were apparently happy. But some influences were set at work and the next board of commissioners changed it back to Sixteenth Street. So the change last year was not the first change that happened to that important thoroughfare.

Various objections have been made to the present name. We have heard some of them humorously suggested this afternoon. While perhaps I am somewhat devoid of the scintillating humor that certain other Senators are in the habit of treating us to, I think I could make one or two suggestions that perhaps would

entertain the occupants of the galleries as much as those already made; but I will not venture on that course.

I made a suggestion some years ago about that street, and were it not for the difficulty of pronouncing the French name I would have had it called L'Enfant Avenue, in honor of the man who did so much toward laying out this beautiful city and who in his wisdom, suggested, perhaps, to him by George Washington himself, made these magnificent avenues which run obliquely from the Capitol, like spokes in a wheel.

But Congress changed the name of this street last year, and various objections have been made to the change in this debate and elsewhere. One of the objections that has been urged more often than any other is that it is too long a name. It contains 21 letters, while the avenue that the distinguished Senator from Massachusetts lives on has 19 letters, while New Hampshire Avenue has 18 letters, Pennsylvania Avenue has the same number, and Connecticut Avenue has 17 letters. So the length of the name does not seem to be very important. The number of the words might well, I think, be objected to.

It has also been objected that no President ever lived on that avenue. Suppose no President ever did live on the avenue, every President the country has ever had, including the one that New Hampshire contributed, has looked up that avenue from the porch of the White House a great many times, no doubt; and I am not quite sure but that in view of that fact it is a rather happy appellation.

It is further insisted that the street runs on straight lines, while it was intended that the avenues should run diagonally, like the spokes of a wheel. That was doubtless the intention of the men who laid out the city of Washington, but I do not apprehend that it ever entered the minds of those men that other avenues might not be added that did not run like the spokes of a wheel.

Let us see what we have done. We have Georgia Avenue, we have Oregon Avenue, we have Denison Avenue, we have Dumbarton Avenue, we have Wisconsin Avenue, we have Sherman Avenue, we have Wyoming Avenue, we have South Avenue, and we have other avenues in the city of Washington that run on straight lines. So the argument that we have departed from the plan laid out by those wise men in the early days of the Republic does not hold good.

Mr. President, Sixteenth Street is one of the most magnificent thoroughfares in all the world, and it is destined, in my judgment, to be in the next 25 years the grandest street in all the world. It is a most beautiful thoroughfare, wide, lined by elegant residences, extending out into the country almost to the District line now, and destined, as I believe, to be extended through the States of Maryland and Pennsylvania to the historic battle field of Gettysburg. It was in that view, no doubt, that some people thought it would be a good idea to change the name from a street to that of an avenue.

I am not going to argue that the change of name was wisely made, or that the present name should remain unchanged, but I do, Mr. President, suggest in all sincerity that that great thoroughfare may well be called an avenue rather than remain as a numbered street.

It is undeniable, Mr. President, that the change of the name of Sixteenth Street to that of "Avenue of the Presidents" has given a splendid impetus to the development of that great thoroughfare. Beautiful houses and other magnificent structures have been erected. The Russian embassy, the French embassy, the Spanish embassy, the Brazilian embassy, the Bolivian legation, and the Venezuelan legation are located on that avenue at the present time, and I understand it is not a wild dream to believe that other embassies will find their homes on that avenue.

The name has been changed on the street lamps. Property has been assessed under the new name, unimproved property has been acquired for building purposes, and many other things have been done because of the fact that it is no longer a numbered street.

Mr. President, I have no greater interest in this matter than any other Senator. Personally, it is immaterial to me what name the highway bears, because I do not own a foot of land on that avenue or in any other part of the District of Columbia. So if it is thought desirable to change the name of that street back to Sixteenth Street it will not affect me.

Mr. President, I think I understand how the change was made in another body. It did not get much consideration. But if the Senate in its calm moments and forgetting the influence that wit and oratory always play in a discussion of a matter of this kind, concludes to make the change, no fault can be found.

What I have hoped for, Mr. President, is that this matter might go to conference, and it was for that purpose, and that purpose alone, that the committee struck out the provision the House inserted in the bill. I believe if it goes to conference a compromise will be reached and that there will be gratification on the part of the good people living on that beautiful thoroughfare as well as the people in general at the result which will be attained.

I should not stand here or elsewhere in stubborn advocacy of the present name of that avenue, but I do insist, Mr. President, that in view of what is going on along that great highway, what has been accomplished already, and what will be accomplished in the near future, the people living on that thoroughfare are entitled to more serious consideration than they have been given to-day. They are among our best and most patriotic citizens, among our most generous citizens. They stand for what is best in the District of Columbia, and they have a right, as they have done by a petition of 90 per cent of the property owners, to ask Congress to change the name from a street to that of an avenue.

Mr. President, that is all I will say about the matter except to repeat that I trust the Senate will not be carried off its feet by the humorous suggestions that have been made to-day, and that they will permit this matter, as the committee would wish them to do, to go to conference with a view to an agreement that I think very likely would be satisfactory to all the Members of both Houses of Congress.

But if that is not done no Senator will be more content than I will be to have the old name restored, because I do not expect to own a mansion on Sixteenth Street or a home, however modest, on any other street or avenue in the District of Columbia.

Mr. WILLIAMS. Mr. President, the Senator from New Hampshire [Mr. GALLINGER] "hopes that the Senate will not be carried off its feet" by what he pleases to call humor. There is absolutely nothing humorous at all in restoring to Sixteenth Street its original name. It is a plain and simple, comprehensible name. There was something quite humorous in giving it the name of "Avenue of the Presidents," and perhaps that accounts for its getting the name; maybe it was a joke.

Mr. President, the Senator referred to the manner in which the House changed the name back to what it originally was. He said it received "little consideration" there. I want to say that when it was originally changed in this body from Sixteenth Street to the Avenue of the Presidents it was done by a rider upon an appropriation bill, without notice to a single Senator in this body who lived upon Sixteenth Street. As far as I was concerned, I did not know of it for several days after the new name was blazoned on the street lamps.

Mr. GALLINGER. The motion was made by a Senator living on Sixteenth Street.

Mr. WILLIAMS. Very well. Then he had notice of it, of course.

Mr. GALLINGER. And a considerable property owner on the street.

Mr. WILLIAMS. I admit that he had notice of his own motion, but I did not have any notice of it. I did not know it until as I told you and then found it in the RECORD two or three days afterwards.

In the next place, I deny that the people on Sixteenth Street wanted the change. Of course, a great many people signed the petition, but we know how people sign petitions. Nor did I a moment ago say that "the people living on Sixteenth Street were snobs," as the Senator seemed to quote me as saying. I live there myself, and a great many of my dearest friends and neighbors are there; but I did say it seemed to me the motive behind this change was twofold—a desire to appreciate the price of the street property and, secondly, a sort of innocent snobbery. Not all of them, nor a tenth of them, were actuated by the mere society fad idea, but some of them were, undoubtedly.

I do not want any compromise. I do not want it to go to conference for the purpose of compromising and, it may be, bringing it out as the "Avenue of the Senators," or the "Sergeants at Arms," or something else. I want it restored to its rightful name. I want the plan of the city maintained, as far as it can be. If we named a street Oregon Avenue, it was perhaps a street running east and west after the letters for such streets had given out. We have had to resort to names for east-and-west streets when we exhausted the letters of the alphabet.

Not only that, but the plan of the city had another delightful and significant thing about it. This is the Government of the United States. It is the only Government in the world that is plural in number. The consequence was that the avenues were named after the States. There are States yet that have no avenues named for them, and if it is going to be called an avenue at all, it seems to me it would have been well to have kept up the original idea.

Mr. President, a majority of the people who wanted this wanted it for the plain pocketbook purpose of increasing the price of the property on Sixteenth Street—amongst others, real estate dealers interested in that proposition.

I live on Sixteenth Street. The only property I own in Washington is on Sixteenth Street. I tell you the price of the property there is too high already, and Congress ought not to do anything to make the price of property out there any higher. I can sell mine to-day for more than I gave for it. I bought it when it was Sixteenth Street, and the price that was given for it was given as property on Sixteenth Street.

It is true that there are people of a certain class who will buy a lot upon a highway called an avenue and will not buy a lot upon a highway called a street. I am not desirous to increase the number of such silly people in my immediate neighborhood. As to the embassies that have been built out there, they would have been built anyhow. They went to Sixteenth Street because it is the greatest residence highway in this town. Continued due northward it would strike Gettysburg.

By the way, if you were going to change the name at all, it ought to be called "the Gettysburg Road."

Mr. GALLINGER. I would say to the Senator that that suggestion has been made by other people.

Mr. WILLIAMS. Well, I said if you were going to change it, but I do not want to change it at all. I want the Sixteenth Street of Washington called Sixteenth Street. That is its right name, and I do not want a great long name given to it of any description. I do not want the simple plan of the city destroyed, nor do I want this parade of humor continued which was begun when they started out masquerading it under the appellation of "Avenue of the Presidents."

The Senator very truthfully says it is one of the grandest streets in the world. It is broad, splendidly paved, with large, deep yardways between the beautiful sidewalks and the houses. It is very well improved for the most part and is destined to be improved very much more. Its avenue of shade trees, double in places, is a thing of beauty and a joy to the eye. Values out there are appreciating all the time, appreciating too rapidly and too much. It is not the best thing for a city to have the prices of lots in eligible parts of it so high that men of modest means can not buy them at all. So even if those people were right about the change of name appreciating values, I for one am not selfish enough to want that done, so far as what I own is concerned, and it ought not to be done by the aid of Congress. If it takes place in the natural course of development, all right. Then I shall welcome it. But I want no law to accelerate the appreciation.

The Senator says that Massachusetts Avenue has more letters in it than Avenue of the Presidents.

Mr. GALLINGER. Not quite as many.

Mr. WILLIAMS. But when people come to write it they do not write it Massachusetts Avenue. They write it "Mass." with a period, and when they come to write Connecticut Avenue it is "Conn." with a period. So I suppose while this would be written Ave. of Presidents, or something of that sort, or to abbreviate it still further "Ave. of Pres.," which suggests some thoughts into which I shall not go.

I imagine that the real reason which guided the House in restoring the old and right name was that the House had a recurrence of plain, ordinary, simple, common sense, and the common sense of the situation was to let the Sixteenth Street NW. alone, and let it continue to be called for what it was—Sixteenth Street NW. This was its baptismal name. Its sponsors in municipal baptism were very great men. Then the historical associations of Sixteenth Street are such that I should hate to see the historical continuity destroyed.

It reminds me of the time when Amos Cummings, whom I loved very much, came to me over in the other House and said he wanted to change the name of the Congressional Library and to call it the "National Library." I said, "Amos, I could imagine that coming from a Philistine, but not from you. The whole history of this great library is mixed up with its name. It started out with a few books for the use of Congressmen. It was literally the 'Congressional Library'; and you come along and want to change its name and just run a plow of revolution across the line of historical continuity. I do not want it done." And Amos dropped it. So if there were no other reason except that, I do not want to destroy the historical continuity of things on Sixteenth Street by having its name changed.

Some very great men in Washington have lived on Sixteenth Street in former days, and their names are connected with it and the name. I do not want the man who comes here seeking to have pointed out to him where they lived told that their homes and habitations, so far as they have any on earth now—they being dead—are to be found upon a street by a different name.

In all due seriousness, Mr. President—it is hard to argue seriously the name of a street—but with all due seriousness I hope that the Senate will vote down the Senate committee amendment, and that the name of Sixteenth Street may be restored. I think, so far as I have been able to learn, while I will not say a majority of the people there are in favor of the restoration I do know that a great number of them are, and a majority of those whom I have met are.

Mr. CLARK of Wyoming. Mr. President, I concur with the views expressed by the Senator from Mississippi [Mr. WILLIAMS]. It does not occur to me that a name gives dignity to a street; I do think that the street gives dignity to the name; and it is immaterial whether you call it Sixteenth Street or whether you call it the Avenue of the Presidents. It will not change the character or the importance of the street. So far as the fine buildings upon the street are concerned, if my recollection serves me aright the improvements had all been made or had been projected before there was a thought of the change of name, and they went to Sixteenth Street and not to the Avenue of the Presidents. Sixteenth Street is a great, broad, fine street, and those improvements were bound to be made there, whatever name should be applied to it.

I know that I and many others, while we did not feel that it was a matter of very great importance, were really sorry when we ascertained that the name had been changed. It was not changed with due deliberation, whatever may be said to the contrary now.

Mr. President, I think we all know the reason why it was changed. It was not that the street would be any more dignified or any more beautiful or any more useful, but it was because there was a sort of a fad that the name "Avenue of the Presidents" sounded a little more harmonious perhaps to the listening ear than did "Sixteenth Street." I hope, with the Senator from Mississippi, that the House provision will be concurred in; and I hope that the matter will not go to conference, for the reason stated by the Senator from Mississippi, that if it does it may be very well taken that the wish and the will of the Senate is that it shall remain "Avenue of the Presidents."

Mr. LODGE. Mr. President, while I have the greatest possible confidence in the Senate conferees on the District appropriation bill, it seems to me that this is a question with which the Senate itself is capable of dealing. The Senate knows whether it wishes the old name or the new. I am rather surprised at statements that have been made that the people feel so about having it called an avenue. The Senator from New Hampshire [Mr. GALLINGER] referred to my house being on Massachusetts Avenue. I should not have cared sixpence whether it was an avenue or a street. In the old city in which I was born pretty much everything is called a street; I have never lived in anything but a street there. If Massachusetts Avenue had been called "Massachusetts Street," it would have been just as attractive to me as "Massachusetts Avenue"; but if it had been called the "Avenue of the Massachusetts," I think I should have revolted. [Laughter.]

Besides, the name "Massachusetts" is an American name, an Indian name, relating to the name of an Indian tribe. The names of all the States have a meaning, and they have a peculiar significance and appropriateness here in this Capital. "Avenue of the Presidents" goes against the grain with me, because it is an unnatural way to entitle a street in the American Capital; and it is done with a French idiom.

I sincerely hope that we shall vote upon the question here, and retain the House provision.

Mr. GALLINGER. Mr. President, if I had greater hope than I have of the committee amendment being agreed to—I still hope it will be, but I am somewhat solicitous about it—I would perhaps feel like expressing regret that anything has occurred in the renaming of Sixteenth Street to lead the Senator from Massachusetts [Mr. LODGE] to think that we are aping foreign manners, for I feel sure there is no such purpose in it. We have a President Street in New York City. I do not know but that they ought to get rid of that name. All the avenues of New York City run on straight lines. The Senator from Massachusetts alludes to the city in which he was born. I presume that was Boston. They have there a Commonwealth Avenue, a Huntington Avenue, a Massachusetts Avenue, and a Columbus Avenue. When I mentioned "Commonwealth Avenue" the Senator said, sotto voce, that that was the only one. I have enumerated others and could add to the list. These avenues all run in straight lines out into the country, and are magnificent thoroughfares. I do not imagine the people of Boston would

want to name one of those avenues "Sixteenth Street," or any other kind of a street.

There is a dignity to the name "avenue." I do not like the name "boulevard"; I think that is too Frenchy; but "avenue" is an American word. I confess that if I were rich enough to buy a home in Washington, I should endeavor to get it on one of the great avenues of this city. I might not succeed in doing so, but I should endeavor to do so. I do not wonder that people coming here to make their homes and to invest their money turn their eyes toward the avenues of the city with a feeling that they prefer them to the streets. I am glad a great many of those people are building their beautiful homes on the avenue named after the little State which I in part represent, and I know that they have a pride in it. I am willing that they should gratify that pride; it does not do anybody any harm, and perhaps it does some people good.

Mr. President, it would be idle to continue the discussion, but I felt constrained to say a few words on the subject, because I thought it a matter of some consequence to the city of Washington. I have abundant faith to believe that the committee of conference would deal with this subject very wisely and reach a wise conclusion, but if it is the judgment of the Senate that the name of Sixteenth Street should be restored, let it be done. After we have done that, we ought to turn our attention to some other avenues the courses of which are violative of the plan that was laid down by Washington and L'Enfant and Ellicott, and rename those avenues as streets. We would be consistent if we did that. However, the matter is before the Senate, and I hope it will come to a speedy vote, for the reason, as I said yesterday, that I am extremely anxious as a member of the Committee on Appropriations to see this bill make as rapid progress as possible.

Mr. MARTINE of New Jersey. Mr. President, as a resident of Washington for the past two years or more, I am interested in this subject. First, I wish to say that I believe that there is a good deal in a name. I have laid out a great many streets and a great many avenues, and whenever the opportunity came, I am frank and free to say that I tried to dignify those thoroughfares with the name of "avenue."

It seems to me, accepting the argument of the Senator from Mississippi [Mr. WILLIAMS], that if the change of name has increased the value of the property on that avenue, it has been of infinite benefit to the District of Columbia. I believe the dignified name "Avenue of the Presidents" has conduced to the value of the property, but aside from that personal view of it, it seems to me it is eminently fitting that the name should be the "Avenue of the Presidents," approaching the White House as that avenue does. Having been changed—it is on your lamp posts, it is in many of your titles, and it is generally accepted now—pray Heaven, what particular reason can there be at this time for subverting this and coming back to the name "Sixteenth Street"? Naturally, that name would have a peculiar appeal for me, because I was born on Sixteenth Street in the city of New York, but I believe that the public have accepted the present name. I do not believe there is any general rebellion against the name "Avenue of the Presidents," and I believe that it adds to the dignity and character of the city. I trust that the motion to change this name will not prevail. I have not one dollar's worth of interest in this city, nor any interest other than the general interest as a sojourner here and a lover of the Capital.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

Mr. GALLINGER. Before the question is put I wish to call attention to one matter that I intended to state, and it will take but a word.

The proposition to change the name of Sixteenth Street to "Avenue of the Presidents" was originally offered in the Senate when there was a reasonably full attendance—I recall the circumstance very well—and it was agreed to without dissent. It went to conference, and the House conferees immediately agreed to it. So the House in its present attitude assumes a position different from that assumed by the conferees on the part of the House when the name was changed.

Mr. WILLIAMS. Mr. President, I want to ask the Senator a question. I myself do not know, but I inquire of the Senator if he remembers whether or not an intimation came from the House to the effect that if the Senate would put in the amendment changing the name the House conferees would agree?

Mr. GALLINGER. I have no knowledge of that.

Mr. SMOOT. Mr. President, I was one of the conferees, and I will say to the Senator that I never heard of any such intimation.

Mr. CLARK of Wyoming. Mr. President, if the Senator from Utah was one of the conferees, I will ask him if this matter had ever come before the House so that there could be a vote on it as a distinct and separate proposition?

Mr. SMOOT. No; there was not a direct vote upon it, but it came before the House on the question of the House concurring in the amendments proposed by the Senate.

Mr. CLARK of Wyoming. They agreed to the amendment changing the name of Sixteenth Street because they had to agree to it with the rest of the conference report; but the provision was never voted upon by the House in any way, either as an original proposition or on a question to concur in it as a separate amendment.

Mr. SMOOT. That is perfectly true, Mr. President; but the Senator from New Hampshire has well stated the position of the conferees of the House. I remember that just as soon as we reached the amendment of the Senate changing the name of Sixteenth Street, Mr. Burleson, who was then the senior member of the conferees on the part of the House, immediately stated, "the House recedes"; and the amendment of the Senate became a part of the bill.

Mr. BRANDEGEE. Mr. President, I am not interested at all in the legislative processes by which this high-sounding name became attached to this very beautiful street. The only practical question before us now is whether the Senate prefers the name Sixteenth Street to the present name. I hate to pronounce the name now attached to the lamp-posts on that magnificent thoroughfare. Some Senators seem to think that name, having been painted upon the glass lamp-posts, is given a quality of fixity and endurance, if not of antiquity, that should make any modern vandal hesitate to desecrate it. I do not feel in that way. I confess that the first time I saw that name emblazoned on a lamp-post, if I had had a stone within reach I think I would have thrown it at the lamp-post in my revulsion at the horror that had been perpetrated upon an otherwise respectable and handsome-looking street. I still find it difficult to restrain my disgust at the motive which operated to put the name there, and I admit the continuing irritation it causes me to be compelled to observe it. I think the change in name was actuated by some sort of a "hifalutin" idea, if not of snobbery, at least of a pursuit of a delusion of grandeur.

The Presidents have had nothing whatever to do with that street, any more than with any other street. It is a good, wide street, such as Fourteenth Street and other streets.

Mr. GALLINGER. It is wider.

Mr. BRANDEGEE. It may be wider, but it is parallel with all the other numbered streets. If the geometrical plan upon which the city is laid out is that the numbered streets should be at right angles to the lettered streets and the avenues should be superimposed upon that rectangular plan, running diagonally, I think there is some merit in preserving the nomenclature of the streets as they were laid out; but, be that as it may, this importation of an idiom or the aping of a foreign method of plastering a lot of words on to one street when a brief designation is all that is necessary is repugnant to me, and I think it ought to be repugnant to the idea of simplicity and good taste and lack of ostentation and splurge which ought to be characteristic of a democratic form of government.

Mr. THOMAS. Mr. President——

Mr. BRANDEGEE. I yield to the Senator.

Mr. THOMAS. It has been suggested to me that perhaps the real reason why the name of this street was changed was because of the revulsion of public sentiment from the old principle of 16 to 1. [Laughter.]

Mr. BRANDEGEE. If there has been a revulsion, I am with the revulsion, and I hope it will be permanent. [Laughter.]

Mr. THOMAS. There is where the Senator and I differ.

Mr. BRANDEGEE. I know the Senator still adheres to his shattered idols, theoretically at least. [Laughter.]

Mr. THOMAS. That is one among other reasons why I shall vote with the Senator from Mississippi [Mr. WILLIAMS]

Mr. BRANDEGEE. If that is one, I have sixteen why I shall also vote with the Senator from Mississippi. That is all there is to it, Mr. President. It is simply a matter of how this would strike a man of simple taste who wanted to rely upon the appearance of the street itself for its dignity, and not upon the name that was painted upon the lamp-posts or printed upon the visiting cards of the residents. While I admit that some attention ought to be paid to the people who reside upon a street and to their desire for a name, I do not think that ought to be a controlling reason.

I can see no propriety whatever in calling this street the "Avenue of the Presidents." You might just as well call it the avenue of anything else. I do not see why all the Presidents of this country, including those who are now departed and reposing in peace, should be held responsible for this

thing. They made good records in their lives, and now that they have gone to their eternal repose, why they should have this name foisted upon the street with which they had nothing to do I do not see. It appears to me that if "Sixteenth Street" was a good enough name for that thoroughfare for 100 years it is good enough now, and I do not approve the motive which I think operated to change it, and so I shall vote to restore it.

Mr. GALLINGER. Mr. President, I am interested to observe that the flow of wit continues, and I am gratified that the Senator from Connecticut [Mr. BRANDEGEE], who doubtless looks out on beautiful Connecticut Avenue day by day and thanks heaven that his State has been so honored, has added his interesting contribution to this discussion.

As I said before, Mr. President, I have no personal interest in this matter; but I do think that Senators ought not to suggest that there was an evil motive animating the change of name. I have some little knowledge about that matter—I will not impose it upon the Senate—but I think the motive was just as pure and just as worthy as any motive could be.

If the Senator from Connecticut, arm in arm with the Senator from Mississippi, will go up Pennsylvania Avenue, he will find a street running north and south called John Marshall Place. Its name was changed from a numbered street at the instance of a Senator whom we all honored and with whom we joined with great alacrity in making that change because he wanted to honor the name of a great jurist. I did not think then that the name was particularly applicable to that little street; but it is there and it is a departure from the plan of the city which has been so earnestly urged should be retained.

Mr. President, forgetting the witticisms, overlooking the suggestion that interested motives had something to do with the change of name, I have no doubt that the Senate will act conscientiously. I do not think Senators ought to argue that if this amendment prevails and this matter goes to conference the present name will be continued. I will venture to suggest that this is almost the first time in my recollection where a committee, acting deliberately, has asked that a matter, not of such great importance that it should startle the Senate, be allowed to go to conference for the adjustment of differences, has had its request denied; but if it should be denied, I shall find no fault, however much I may regret it.

Mr. THORNTON. Mr. President, all that I care to say on this question is that ever since Sixteenth Street lost its ancient and rightful name I have been hoping for an opportunity to be able to vote to restore it, and I am very thankful that the opportunity has now come.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

The amendment was rejected.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 33, after line 15, to insert:

To carry out the provisions contained in the act making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1914, and for other purposes, which authorizes the Commissioners of the District of Columbia to open, extend, or widen any street, avenue, road, or highway to conform with the plan of the permanent system of highways in that portion of the District of Columbia outside of the cities of Washington and Georgetown, there is hereby appropriated, payable entirely from the revenues of the District of Columbia, such sum as is necessary for said purpose during the fiscal year to end June 30, 1915.

Mr. THOMAS. Mr. President, if I correctly understood the Secretary in reading that amendment, there is no fixed amount of appropriation for the purpose indicated. It seems to be a question of indefinite amount. I should like to ask the Senator in charge of the bill to give me some further information concerning it.

Mr. SMITH of Maryland. I will say to the Senator from Colorado that it is impossible to fix an amount, because it is not known what amount will be realized from condemnation proceedings. It is always put in this form, so that whatever may be necessary may be used. If the Senator would like to hear it read, I have here an explanation of the whole matter.

Mr. THOMAS. I will not trouble the Senator to read it; but, if he will allow me, I will be glad to read it myself.

Mr. SMITH of Maryland. Certainly.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 34, line 8, after the word "material," to strike out "and maintenance of motor vehicle for use of engineer commissioner and his assistants," so as to make the clause read:

Repairs—Streets, avenues, and alleys: For current work of repairs of streets, avenues, and alleys, including resurfacing and repairs to asphalt pavements with the same or other not inferior material, and this appropriation shall be available for repairing pavements of street railways when necessary; the amounts thus expended shall be collected from such railroad companies as provided by section 5 of "An act providing a permanent form of government for the District of Columbia," approved June 11, 1878, and shall be deposited to the credit of the appropriation for the fiscal year in which they are collected, $339,185.

The amendment was agreed to.

The next amendment was, on page 34, after line 17, to insert:

Repave with asphalt the roadway of Seventh Street NW., from New York Avenue to Q Street, $30,000.

The amendment was agreed to.

The next amendment was, on page 36, after line 3, to insert:

For surfacing with asphalt the roadways of approach on both sides of the Highway Bridge, $30,000, and the Commissioners of the District of Columbia are authorized and directed to do this work with their portable asphalt plant if, in the judgment of the officer in charge of public buildings and grounds, such work can be economically performed by the use of said plant.

Mr. LANE. Mr. President, I wish to inquire of the Senator in charge of the bill why in the provisions for the improvement of streets all through the bill there is at all times specified an asphaltum pavement? No other type of pavement apparently is considered. It seems to me such provisions restrict the choice of the commissioners. Asphaltum makes a fairly good pavement—not the best kind of a pavement, but as good perhaps as most others. It has the disadvantage of being slippery in wet weather, when horses fall and sometimes are seriously hurt. Is there no choice as to the kind of paving which may be used? Is this city tied down to one particular type of pavement, without any opportunity whatever to secure any other? If that be true, they are at the mercy of a company or a trust which controls the entire market, as I understand, of that article. It seems to me the city should have the choice of selecting any form of pavement which would give satisfaction on a fair test.

Mr. SMITH of Maryland. I will say to the Senator that I am not exactly prepared to answer his question. I can only say that this city, as a general proposition, is paved with asphalt, and they have machinery here for the purpose of repairing asphalt pavements. I am unable to tell the Senator just why that has been done.

Mr. LANE. That is what attracted my attention to these items—the continuation of a policy which seems to be already in existence, confining the city officials to that particular kind of pavement.

Mr. SMITH of Maryland. I will say to the Senator that so far as Washington is concerned it seems to be the accepted pavement here, and has been accepted by the commissioners as the best. That is all I can say by way of explanation.

Mr. LANE. It is not a better pavement than others. It has the disadvantage of being a pavement which, on any slope, if there is any grade, is a very cruel one on horses. It is a pavement upon which an automobile, such as the one we bought a while ago for the commissioner, will skid, and he may break his blessed neck if the chauffeur turns a corner quickly. It has that disadvantage. The supply of the material, as I understand, is in the hands of a trust, and the price which the city pays is an arbitrary one, not open to any competition whatever.

If that is true, and I think it is—it has been proven to be true in other cities—a grievous injustice is done the city in that respect, and a remedy for it should be provided. The commissioners should be allowed the liberty of selecting what, in their opinion, is an equally good pavement. There are many of them. In fact, there are several which are not only as good but are superior. It will not cost the city any more, and if you bring in competition you will get your paving done more cheaply. There are other pavements on which horses do not fall and split open the skin over their knees. All of you have seen on a slippery day the pitiful spectacle of poor beasts slipping and falling on these pavements, and straining every nerve in their bodies to keep upon their feet.

I think that ought to be considered. I do not know just what to do. If there is any way of offering an amendment to cure this, I shall do so.

Mr. GALLINGER. Mr. President, this matter has been thrashed over a good many times. It is not in the hands of a trust, for the reason that in the bill we have put upon asphaltum pavement a specific price which the commissioners can not exceed.

Mr. LANE. I noticed that.

Mr. GALLINGER. It is a very low price. It is conceded on all hands that the price is very low.

Mr. LANE. One dollar and eighty cents for resurfacing with asphalt, the Senator says, is a low price?

Mr. GALLINGER. I do not think it is $1.80. I have forgotten just what it is. However that may be, we have investigated this matter. Others have come here and I have championed their cause, but when we came to consider the matter it was always found that their pavements were more expensive than the asphaltum and for that reason they have not been used. We have a concern in New England that I should like to help, which I think makes a superior pavement, but it is a very much more costly pavement. It is not so slippery.

Mr. LANE. The bitulithic and other pavements have nearly always underbid this pavement in our city. In the case of asphalt pavement, under the provisions of this bill you can lay anything you want; you can put it in half an inch thick, and it is an asphaltum pavement; but it is not worth the money you pay for it.

Mr. GALLINGER. Of course this pavement is laid under the direction of the engineer commissioner, and every detail is looked after. The pavements are unquestionably placed as they ought to be and of the requisite thickness.

Mr. LANE. Here is a provision which states that not more than $1.80 per square yard shall be paid, but it does not state the thickness of the pavement. Now, you can pay that price for any pavement. I think it is as wide open a specification for street laying as I have ever seen in my life. I do not know any city engineer who would accept such a provision as that or attempt to do business under it or lay a street pavement under it. Still, you may get good work here, and you may get your work done economically and cheaply; but if you do, you ought to be grateful to God and your good luck. You do not do it by tying yourself down to anything specific.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 36, after line 18, to insert:

For alteration of the Pennsylvania Avenue Bridge across the Eastern Branch of the Potomac River, so as to provide for a draw span therein, to be located and constructed in accordance with plans to be approved by the Commissioners of the District of Columbia, to be immediately available, $60,000.

Mr. THOMAS. Mr. President, I wish to inquire of the chairman of the committee whether this amendment is intended to provide for a new draw span to take the place of one now existing, or whether it is to provide a draw span where none now exists?

Mr. SMITH of Maryland. I will say to the Senator that there is no draw in that bridge. There is another bridge, which I believe the Pennsylvania Railroad Co. owns, in which we can not compel them to make a draw until we put in one here.

Mr. THOMAS. Will they make the draw, or can they be compelled to do it, in case this is provided?

Mr. SMITH of Maryland. Oh, yes.

Mr. THOMAS. Is it necessary for navigation?

Mr. SMITH of Maryland. That is what is reported to us—that it is necessary for navigation and for the improvement of the Anacostia Flats.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, under the head of "Sewers," on page 37, line 9, after the word "sewers," to strike out "$161,600" and insert "$200,000," so as to read:

For suburban sewers, $200,000.

The amendment was agreed to.

The next amendment was, under the head of "Streets," on page 38, line 9, after the word "exceed," to strike out "$20" and insert "$25"; in line 11, after the word "bicycles," to insert "purchase of uniforms, not to exceed $3,000"; and, in line 12, after the word "expenses," to strike out "$269,900" and insert "$273,000," so as to make the paragraph read:

Dust prevention, cleaning, and snow removal: For dust prevention, sweeping, and cleaning streets, avenues, alleys, and suburban streets, under the immediate direction of the commissioners, and for cleaning snow and ice from streets, sidewalks, crosswalks, and gutters in the discretion of the commissioners, including services and purchase and maintenance of equipment, rent of storage rooms; maintenance and repairs of stables, hire, purchase, and maintenance of horses; hire, purchase, maintenance, and repair of wagons, harness, and other equipment, allowance to inspectors and foremen for maintenance of horses and vehicles used in the performance of official duties, not to exceed $25 per month for each inspector or foreman; purchase, maintenance, and repair of bicycles; purchase of uniforms, not to exceed $3,000, and necessary incidental expenses, $273,000, and the commissioners shall so apportion this appropriation as to prevent a deficiency therein.

The amendment was agreed to.

The next amendment was, on page 38, after line 21, to insert:

For the purposes of investigating and reporting upon the collection and disposal of garbage and other city waste originating in the District of Columbia, including the preparation of plans and specifications for the construction of disposal plants, the necessary accessories, and the employment of personal services and such other incidental expenses as may be necessary to carry out the purposes of this appropriation, $7,500.

The amendment was agreed to.

The next amendment was, on page 39, after line 10, to insert:

Bathing beach: Superintendent, $600; watchman, $480; temporary services, supplies, and maintenance, $500 to be immediately available, $2,250; for repairs to buildings, pools, and upkeep of grounds, $1,500, to be immediately available; in all, $4,830.

The amendment was agreed to.

The next amendment was, on page 39, after line 18, to insert:

On and after August 1, 1914, fees received for the use of public scales shall be paid to the collector of taxes and covered into the Treasury to the credit of the appropriated trust-fund account, "Miscellaneous trust-fund deposits, District of Columbia," and the commissioners of the said District are empowered to use so much as may be necessary of said fees for the payment of compensation, to be fixed by the said commissioners, of the weighmasters authorized by the act approved March 19, 1906, entitled "An act authorizing the Commissioners of the District of Columbia to make regulations respecting the public hay scales," and the said commissioners are hereby authorized to appoint and pay such weighmasters. Any balance of said fees remaining at the close of each fiscal year shall be covered into the Treasury to the credit of the United States and the District of Columbia in equal parts.

The amendment was agreed to.

The next amendment was, on page 40, line 14, after the word "facilities," to insert "wading pools," and in line 19, after the word "commissioners," to strike out "$9,000" and insert "$12,490," so as to make the clause read:

Playgrounds: For maintenance, equipment, supplies, tools, construction of toilet facilities, wading pools, fencing, grading and repairs, including labor and materials, and necessary incidental and contingent expenses for all playgrounds, including not to exceed $100 for rent of storage houses, under the direction and supervision of the commissioners, $12,490.

The amendment was agreed to.

The next amendment was, on page 41, after line 8, to insert:

For construction of swimming pools, shower baths and equipment, purchase and installation of toilets, lockers, and screens, including necessary personal services, for the Rosedale and Howard Playgrounds, to be made immediately available, $7,500.

The amendment was agreed to.

The next amendment was, on page 41, after line 13, to insert:

For supplies, repairs, and necessary expenses of operating swimming pools, and purchase of bathing suits, to be made immediately available, $500.

The amendment was agreed to.

The next amendment was, on page 41, after line 16, to insert:

Two guards or swimming teachers for four months at $60 per month each, to be made immediately available, $480.

The amendment was agreed to.

The next amendment was, on page 41, line 19, after the word "playgrounds," to strike out "$31,295, which sum shall be paid wholly out of the revenues of the District of Columbia" and insert "$43,265," so as to make the clause read:

In all, for playgrounds, $43,265.

The amendment was agreed to.

The next amendment was, under the head of "electrical department," on page 42, line 14, after the word "repairman," to strike out "$960" and insert "$1,200"; and in line 21, after the words "in all," to strike out "$47,695" and insert "$47,935," so as to make the clause read:

Electrical engineer, $2,500; assistant electrical engineer, $2,000; four electrical inspectors, at $1,200 each; inspector, $1,000; electrician, $1,200; two draftsmen, at $1,000 each; three telegraph operators, at $1,000 each; four inspectors, at $900 each; expert repairman, $1,200; three repairmen, at $900 each; telephone operators—three at $720 each, four at $540 each, one $450; electrical inspectors—one $2,000, one $1,800, one $1,350; cable splicer, $1,200; assistant cable splicer, $620; clerks—one $1,400, one $1,200, two at $1,125 each, one $1,050, one $750; assistant repairmen—one $620, two at $540 each; laborers—one $630, two at $540 each, one $460, two at $400 each; storekeeper, $875; in all, $47,935.

The amendment was agreed to.

The next amendment was, under the head of "Washington Aqueduct," on page 44, after line 16, to insert:

For ordinary repairs, grading, opening ditches, and other maintenance of Conduit Road, $3,500.

The amendment was agreed to.

The next amendment was, on page 45, line 9, after the words "McMillan Park Reservoir," to strike out "$2,000" and insert "$5,000," so as to make the clause read:

For continuation of parking grounds around McMillan Park Reservoir, $5,000.

The amendment was agreed to.

The next amendment was, on page 45, line 24, after the word "hand" to insert "the work to be done by the present force of men engaged on the Washington Aqueduct when their services can be spared from other work," so as to make the clause read:

For erection of a house for the assistant to the overseer at Great Falls, Md., including purchase of necessary materials not now on hand, the work to be done by the present force of men engaged on the Washington Aqueduct when their services can be spared from other work, $1,000.

The amendment was agreed to.

The next amendment was, under the head of "Rock Creek Park," on page 46, after line 10, to insert:

For the removal of dead and down timber from the woods and streams of Rock Creek Park, $5,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, under the head of "Public Schools," on page 46, line 17, after the word "principals" to strike out "and supervisor of manual training, fifteen" and insert "supervisor of manual training, and director of primary instruction, sixteen"; and in line 22, after the words "in all," to strike out "$53,700" and insert "$55,900," so as to make the clause read:

Officers: Superintendent, $6,000; 2 assistant superintendents, at $3,000 each; director of intermediate instruction, 13 supervising principals, supervisor of manual training, and director of primary instruction, 16 in all, at a minimum salary of $2,200 each; secretary, $2,000; clerks—1 $1,400, 2 at $1,000 each, 1 to carry out the provisions of the child-labor law, $900; 2 stenographers, at $840 each; messenger, $720; in all, $55,900.

The amendment was agreed to.

The next amendment was, on page 46, after line 23, to insert:

The director of primary instruction now in the service of the schools, or hereafter to be appointed, shall be placed at a basic salary of $2,200, and shall be entitled to an increase of $100 per year for five years.

The amendment was agreed to.

The next amendment was, on page 47, line 6, before the word "teachers," to strike out "one thousand seven hundred and sixty-nine" and insert "one thousand seven hundred and sixty-eight," so as to make the clause read:

Teachers: For 1,768 teachers, to be assigned as follows:

The amendment was agreed to.

The next amendment was, on page 47, after line 9, to strike out:

Director of primary instruction, at a minimum salary of $1,800.

The amendment was agreed to.

The next amendment was, on page 47, after line 14, to insert:

Hereafter the directors of domestic science, domestic art, and kindergartens shall receive a salary of $1,500 per annum, with an increase of $100 per annum for five years: *Provided further*, That for the year ending June 30, 1915, each of said directors shall receive the salary next above his present salary.

The amendment was agreed to.

The next amendment was, on page 48, line 21, after the word "teachers," to strike out "$1,377,050" and insert "$1,375,250," so as to read:

In all for teachers, $1,375,250.

The amendment was agreed to.

Mr. LANE. Mr. President, there is an item here in regard to the high school, to which I wish to offer an amendment before we pass on it. I have offered it, in fact.

Mr. SMITH of Maryland. We have not come to it yet.

Mr. LANE. Very well; I simply wanted to call attention to it.

The reading of the bill was resumed.

The next amendment was, on page 49, line 22, after the date "1912," to strike out "$400,000" and insert "$462,935," so as to make the clause read:

Longevity pay: Longevity pay for director of intermediate instruction, supervising principals, supervisor of manual training, principals of normal, high, and manual training high schools, principals of grade manual training schools, heads of departments, director and assistant director of primary instruction, directors and assistant directors of drawing, physical culture, music, domestic science, domestic art, and kindergartens, teachers, clerks, librarians and clerks, and librarians to be paid in strict conformity with the provisions of the act entitled "An act to fix and regulate the salaries of teachers, school officers, and other employees of the Board of Education of the District of Columbia," approved June 20, 1906, as amended by the acts approved May 26, 1908, May 18, 1910, and June 26, 1912, $462,935.

The amendment was agreed to.

The next amendment was, on page 51, line 4, after the word "janitors," to strike out "$1,200" and insert "$1,500," so as to make the clause read:

Janitors and care of buildings and grounds: Superintendent of janitors, $1,500.

The amendment was agreed to.

The next amendment was, on page 51, line 10, after the word "engineer," to strike out "$900" and insert "$1,000," and in line 11, after the words "in all," to strike out "$3,000" and insert "$3,100," so as to make the clause read:

J. Ormond Wilson Normal School and Ross School: Engineer, $1,000; janitor, $600; laborers—one $420, 3 at $360 each; in all, $3,100.

The amendment was agreed to.

The next amendment was, on page 53, line 26, after the words "In all," to strike out "$123,390" and insert "$123,790," so as to read:

In all, $123,790.

The amendment was agreed to.

The next amendment was, on page 54, after line 16, to insert:

For 5 graduate nurses, 1 of whom shall be colored, who shall act as public-school nurses, at $900 each, $4,500.

The amendment was agreed to.

The next amendment was, on page 55, line 6, after the word "same," to strike out "$115,000" and insert "$150,000," so as to make the clause read:

For repairs and improvements to school buildings and grounds and for repairing and renewing heating, plumbing, and ventilating apparatus, and installation of sanitary drinking fountains in buildings not supplied with same, $150,000.

The amendment was agreed to.

The next amendment was, on page 55, line 23, after "$1,500," to strike out "4 kindergartens, $1,350; 1 sewing school, $150; in all, $4,000," and insert "5 kindergartens, $1,700; 1 sewing school, $150; 1 cooking school, $300; 1 manual-training shop, $300; in all, $4,950," so as to make the clause read:

For furniture, including clocks, pianos, and window shades for additions to buildings for kindergartens, and also tools and furnishings for manual-training, cooking, and sewing schools, as follows: One four-room addition to the Congress Heights School, $1,000; 1 six-room addition to the Birney School, $1,500; 5 kindergartens, $1,700; 1 sewing school, $150; 1 cooking school, $300; 1 manual-training shop, $300; in all, $4,950.

The amendment was agreed to.

The next amendment was, on page 56, line 8, before the word "superintendent," to insert "each the superintendent of schools and," so as to make the clause read:

For contingent expenses, including furniture and repairs of same, stationery, printing, ice, purchase and repair of equipment for high-school cadets, and other necessary items not otherwise provided for, including an allowance of $300 for livery of horse or garage for each the superintendent of schools and superintendent of janitors, and including not exceeding $1,000 for books, books of reference, and periodicals, $47,500.

The amendment was agreed to.

The next amendment was, on page 57, line 8, after the word "apparatus," to insert "and technical books," so as to make the clause read:

For purchase of apparatus and technical books, and extending the equipment and for maintenance of the physics departments in the Business, Central, Eastern, Western, and M Street High Schools, $3,000.

The amendment was agreed to.

The next amendment was, on page 57, line 12, after the word "materials," to insert "and technical books," and in line 17, after the word "same," to strike out "$2,100" and insert "$2,500," so as to make the clause read:

For purchase of fixtures, apparatus, specimens, and materials and technical books for laboratories of the departments of chemistry and biology in the Central, Eastern, Western, Business, and M Street High Schools, J. Ormond Wilson Normal School, and Normal School No. 2, and installation of same, $2,500.

The amendment was agreed to.

The next amendment was, on page 57, after line 18, to insert:

Hereafter the taxes levied by the government of the District of Columbia and paid for the year next preceding the time of levying tutelage charges by nonresident pupils or the parents of nonresident pupils shall be accepted as a credit or part credit, as the case may be, on said tutelage.

The amendment was agreed to.

The next amendment was, on page 57, after line 23, to insert:

Hereafter all pupils whose parents are employed officially or otherwise in the District of Columbia shall be admitted and taught free of charge in the schools of said District.

The amendment was agreed to.

The Secretary read the paragraph on page 58, lines 3 to 8, inclusive, as follows:

Buildings and grounds: Toward the construction of the new Central High School on the site purchased for that purpose and toward grading and other work necessary to prepare the site, grading of an athletic field, construction of retaining walls, and construction of an athletic stadium, $450,000.

Mr. LANE. Mr. President, there is the item to which I wished to call attention. I do not know whether this is the proper time to offer an amendment or not.

The VICE PRESIDENT. The Chair has invariably ruled that the committee amendments are first to be passed on, and then the bill is open for amendment by Senators.

Mr. LANE. Very well.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, at the top of page 59, to insert:

For the purchase of a site for a new Eastern High School, to be located east of Tenth Street east and north of D Street south, $150,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, on page 59, after line 3, to insert:

For a four-room addition to the John F. Cook School, $33,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, on page 59, after line 5, to insert:

For an 8-room addition to the Powell School, $66,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, on page 59, after line 7, to insert:

For a site for a new school building in the sixth division, north of G Street and east of Tenth Street, $45,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, on page 59, after line 16, to strike out:

No part of any money appropriated by this act shall be paid to any person employed under or in connection with the public schools of the District of Columbia, who shall solicit or receive, or permit to be solicited or received, on any public-school premises any subscription or donation of money or other thing of value from pupils enrolled in such public schools for presentation of testimonials or for any purposes other than for the promotion of school athletics, school gardens, and commencement exercises of high schools.

Mr. THOMAS. Mr. President, it seems to me that is a very meritorious provision, and I should like to inquire why it was stricken out by the consent of the committee. It prohibits, under pain of loss of salary, the solicitation on any public-school premises of any subscription or donation of money or other thing of value, from pupils enrolled in the public schools, for presentation of testimonials or for any purposes other than for the promotion of school athletics, school gardens, and commencement exercises of high schools. I think that is a very salutary provision, on the face of it. I am open to conviction, however, if I am wrong.

Mr. SMITH of Maryland rose.

Mr. LEA of Tennessee. Mr. President, if the Senator from Maryland will permit me, several delegations of students came before the committee, and they all testified that if this provision was left in the bill it would curtail a great many student activities, such as the publication of different magazines and papers by the students, and we thought it inadvisable to do that. There seemed to be no abuse or excess in the matter of these subscriptions, and the students in the schools seemed to be unanimous in desiring to have the provision stricken out.

Mr. SMITH of Maryland. I will say further that the superintendent of schools of the District of Columbia wanted it out. He had no objection to the practice, and said it had not been abused in any way.

Mr. THOMAS. The point is not that the practice has been abused but that it is susceptible of abuse, and if it is permitted it is bound in time to lead to abuses through established custom. Therefore I do not think the paragraph should be stricken out. Whether the students desire it or whether the principals are willing to accede to it or not, I do not believe any person receiving a salary out of the revenues of the United States should be permitted to solicit or to receive, on any public-school premises, any subscription or donation from any of the students for any purpose whatever.

Mr. MARTIN of Virginia. Mr. President, I call the attention of the Senator from Colorado to the fact that the school officers have absolute control of the matter without any legislation, and they will regulate it satisfactorily.

Mr. THOMAS. Yes; but in these days the absence of a positive requirement is very apt to be made an excuse for indulgence in things which are in themselves momentarily popular. The best way is to put a prohibition upon them, and then the evil can not become so great as to amount to an abuse.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, at the top of page 60, to strike out:

No greater amount of floor or room space shall be occupied in the Franklin School Building for office purposes of the Board of Education or of the superintendent of education than was so used January 1, 1913; and the remainder of said building shall, until otherwise provided, be devoted solely to the actual work of teaching.

The amendment was agreed to.

The next amendment was, on page 61, line 1, after the word "commissioners," to strike out "$12,000" and insert "$12,250," so as to make the clause read:

Columbia Institution for the Deaf: For expenses attending the instruction of deaf and dumb persons admitted to the Columbia Institution for the Deaf from the District of Columbia, under section 4864 of the Revised Statutes, and as provided for in the act approved March 1, 1901, and under a contract to be entered into with the said institution by the commissioners, $12,250, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, on page 61, line 8, before the word "blind," to strike out "indigent," so as to make the clause read:

For instruction of blind children of the District of Columbia, in Maryland or some other State, under a contract to be entered into by the commissioners, $7,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, under the head of "Metropolitan police," in the item of appropriation for salaries of major and superintendent and members of the police force, on page 62, line 12, after the word "each," to strike out "18 drivers, at $7[illegible] each," and insert "20 drivers, at $900 each"; in line 14, before the word "police," to strike out "three" and insert "five"; and in line 15, after the words "in all," to strike out "$907,161.53" and insert "$913,341.53," so as to read:

Sixty-four lieutenants, sergeants, and privates, mounted on bicycles, at $50 each; 20 drivers, at $900 each; 5 police matrons, at $900 each, to possess police power of arrest; in all, $913,341.53.

The amendment was agreed to.

The next amendment was, on page 62, line 24, after the word "grounds," to strike out "$5,500" and insert "$7,000," so as to make the clause read:

For repairs and improvements to police stations and grounds, $7,000.

The amendment was agreed to.

The next amendment was, on page 63, after line 21, to insert:

For purchase of car tickets for strictly official use, $5,000.

The amendment was agreed to.

The next amendment was, on page 64, line 2, after the words "in the," to strike out "third precinct station house modern locking devices, $4,520" and insert "second, third, seventh, and ninth precinct station houses eight modern locking devices, $18,080," so as to make the clause read:

For the reconstruction of cell corridors and the making, erecting, and placing therein in the second, third, seventh, and ninth precinct station houses eight modern locking devices, $18,080.

The amendment was agreed to.

The next amendment was, on page 64, line 8, after the words "In all," to strike out "$50,620" and insert "$70,080," so as to read:

In all, $70,680.

The amendment was agreed to.

The next amendment was, on page 64, line 18, before the word "each," to strike out "$900" and insert "$1,000"; and in line 24, after the words "in all," to strike out "$13,640" and insert "$13,840," so as to make the clause read:

House of detention: To enable the commissioners to provide transportation, including purchase and maintenance of necessary horses, wagons, and harness, and a suitable place for the reception, transportation, and detention of children under 17 years of age and, in the discretion of the commissioners, of girls and women over 17 years of age, arrested by the police on charge of offense against any law in force in the District of Columbia, or held as witnesses, or held pending final investigation or examination, or otherwise, including two clerks, at $1,000 each; four drivers, at $600 each; hostler, $600; six guards, at $600 each; three matrons, at $600 each, to possess police powers of arrest; miscellaneous expenses, including rent, forage, fuel, gas, horseshoeing, ice, laundry, meals, horses, wagons and harness and repairs to same, and other necessary expenses, $3,440; in all, $13,840, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, under the head of "Fire department," on page 66, after line 15, to insert:

For purchase of car tickets for strictly official use, $650.

The amendment was agreed to.

The next amendment was, on page 66, line 17, after the words "In all," to strike out "$127,550" and insert "$128,200," so as to read:

In all, $128,200.

The amendment was agreed to.

The next amendment was, on page 66, line 20, after the word "company," to strike out "Tenley" and insert "Tenleytown," so as to make the clause read:

Permanent improvements: For house, site, furniture, and furnishings for an engine company to relieve No. 20 Engine Company, Tenleytown, D. C., including the cost of necessary instruments for receiving alarms and connecting said house with fire-alarm headquarters, $40,500.

The amendment was agreed to.

The next amendment was, on page 66, after line 23, to insert:

For new house, furniture, and furnishings for No. 1 Engine Company, K Street, between Sixteenth and Seventeenth Streets NW., including cost of necessary instruments for receiving alarms and connecting said house with fire-alarm headquarters, $33,000.

The amendment was agreed to.

The next amendment was, on page 67, after line 3, to insert:

For house, site, furniture, and furnishings for Truck Company No. 1 of the fire department of the District of Columbia, including cost of necessary instruments for receiving alarms and connecting said house with fire-alarm headquarters, $55,000.

The amendment was agreed to.

The next amendment was, on page 67, line 13, after the words "In all," to strike out "$65,700" and insert "$153,700," so as to read:

In all, $153,700.

The amendment was agreed to.

Mr. GALLINGER. Mr. President, my attention is attracted to the words "Sixteenth Street," in line 25, page 66, and it reminds me to suggest that the words "Avenue of the Presidents" are found in two or three places in the bill. The Secretary, I think, should be instructed to change those words to "Sixteenth Street" without formal action.

The VICE PRESIDENT. Without objection, that will be done.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 67, after line 13, to strike out:

The commissioners are authorized and directed to transfer the officers and men and all apparatus, horses, and supplies connected with the fire station and fire-engine house at Randle Highlands to the first additional fire station that may be established, or to any other fire station in the District of Columbia, and in their discretion they may at any time discontinue the maintenance of said fire station and fire-engine house.

The amendment was agreed to.

The next amendment was, under the head of "Health department," on page 70, after line 6, to insert:

Bacteriological laboratory: For the purchase and installation of new apparatus, $2,000.

The amendment was agreed to.

The next amendment was, on page 70, after line 8, to insert:

For the replacement of apparatus and supplies, $1,000.

The amendment was agreed to.

The next amendment was, on page 70, after line 9, to insert:

For maintaining and keeping in good order, and for the purchase of reference books and scientific periodicals, $300.

The amendment was agreed to.

The next amendment was, on page 70, after line 11, to insert:

In all, $3,300.

The amendment was agreed to.

The next amendment was, on page 70, after line 12, to insert:

Chemical laboratory: For the equipment and maintenance of the chemical laboratory and the purchase of reference books and scientific journals, as follows:

For the purchase and installation of new apparatus and equipment, $1,920;

For the replacement of apparatus and equipment, $755;

For maintaining and keeping chemical laboratory in good order and the purchase of chemicals, filter paper, absorbent cotton, gauze, etc., reference books and journals, $500;

In all, $3,175.

The amendment was agreed to.

The next amendment was, on page 72, after line 10, to insert:

For the completion of the pound and stable, including necessary equipment and paving, $2,200.

The amendment was agreed to.

The next amendment was, under the head of "Courts," subhead "Juvenile court," on page 73, line 3, after the word "officer," to strike out "$1,200" and insert "$1,500"; in line 5, after the word "chief," to strike out "$1,500" and insert "$2,000"; in the same line, after "$2,000," to strike out "one $1,200" and insert "two at $1,200 each"; in line 6, after the word "each," to strike out "two" and insert "three"; in line 7, after the word "bailiff," to strike out "$700" and insert "$900"; and in the same line, after the words "in all," to strike out "$14,600" and insert "$17,800," so as to make the clause read:

Juvenile court: Judge, $3,000; clerk, $2,000; deputy clerk, who is authorized to act as clerk in the absence of that officer, $1,500; stenographer and typewriter for judge's work and to aid in keeping records in clerk's office, $900; probation officers—chief $2,000, two at $1,200 each, three at $1,000 each; clerk for probation office, $900; bailiff, $900; janitor, $600; in all, $17,800.

The amendment was agreed to.

The next amendment was, on page 73, line 9, after the word "jurors," to strike out "$1,300" and insert "$900," so as to make the clause read:

Miscellaneous: For compensation of jurors, $900.

The amendment was agreed to.

The next amendment was, in the items for juvenile court, on page 73, line 11, to strike out "For rent, $240" and insert: "For rent, $2,400, or so much thereof as may be necessary: *Provided*, That the selection of new quarters shall be made by the judge of the juvenile court subject to the approval of the Commissioners of the District of Columbia."

Mr. THOMAS. There is an increase of 1,000 per cent in the item—from $240 to $2,400. I should like to have it explained.

Mr. SMITH of Maryland. I will state to the Senator from Colorado that the present rental was merely nominal, because the building is on ground belonging to the Government.

Mr. GALLINGER. And the building is to be torn down and a new Hall of Records erected on it. So the court must necessarily move.

Mr. THOMAS. It is necessary to get quarters somewhere else?

Mr. SMITH of Maryland. Quarters elsewhere must be rented for the court.

Mr. THOMAS. Was it determined to abandon the present structure and rent other quarters between the time the bill came from the House and the time it was reported by the committee?

Mr. LEA of Tennessee. If the Senator will permit me, the Secretary of the Treasury has rented the building to the juvenile court at a nominal rental, and after the bill passed the House Judge Latimer received notice that he would be dispossessed and the building torn down. So it has become necessary to provide for the rental of other quarters, and the lowest estimate which could be placed on such rental was $2,400.

The amendment was agreed to.

The next amendment was, on page 73, line 16, after the word "equipments," to insert "cost of moving," and in line 17, after the word "grounds," to strike out "$500" and insert "$1,500," so as to make the clause read:

For furniture, fixtures, and equipments, cost of moving, and repairs to the courthouse and grounds, $1,500.

The amendment was agreed to.

The next amendment was, on page 73, line 23, after the words "provided for," to strike out "$1,200" and insert "$2,500," so as to make the clause read:

For fuel, ice, gas, and laundry work, stationery, printing, law books, books of reference, periodicals, typewriter and repairs thereto, binding and rebinding, preservation of records, mops, brooms, and buckets, removal of ashes and refuse, telephone service, traveling expenses, and other incidental expenses not otherwise provided for, $2,500.

The amendment was agreed to.

The next amendment was, on page 73, line 24, after the words "in all," in the total of the miscellaneous items for the juvenile court, to strike out "$3,240" and insert "$7,300," so as to read:

In all, $7,300.

The amendment was agreed to.

The next amendment was, on page 74, line 7, after the word "fireman," to strike out "$480" and insert "$600," and in line 9, after the words "In all," to strike out "$30,060" and insert "$30,180," so as to make the clause read:

Police court: Two judges, at $3,600 each; clerk, $2,200, deputy clerks—one $1,600, one $1,500, two at $1,200 each, one who shall be a stenographer and typewriter $900; deputy financial clerk, $1,500; seven bailiffs, at $900 each; deputy marshal, $1,000; janitor, $600; engineer, $900; assistant engineer, $720; fireman, $600; two assistant janitors, at $300 each; matron, $600; three charmen, at $360 each; telephone operator, $480; in all, $30,180.

The amendment was agreed to.

The next amendment was, on page 75, line 3, before the word "janitor," to insert "messenger, $600," and, in the same line, after the words "in all," to strike out "$17,600" and insert "$18,200," so as to make the clause read:

Municipal court: Five judges, at $2,500 each; clerk, $1,500; three assistant clerks, at $1,000 each; messenger, $600; janitor, $600; in all, $18,200.

The amendment was agreed to.

The next amendment was, on page 75, line 9, after the word "court," to strike out "$19,850" and insert "$20,450," so as to make the clause read:

In all, for the municipal court, $20,450.

The amendment was agreed to.

The next amendment was, under the head of "Courts and prisons," on page 76, line 12, after the words "District of Columbia," to insert "for expenses of shipping remains of deceased convicts to their homes in the United States," so as to make the clause read:

Support of convicts: For support, maintenance, and transportation of convicts transferred from the District of Columbia; for expenses of shipping remains of deceased convicts to their homes in the United States; for expenses incurred in identifying and pursuing escaped convicts and for rewards for their recapture; to be expended under the direction of the Attorney General, $70,000.

Mr. THOMAS. I should like to inquire whether it has heretofore been the practice to ship the remains of deceased convicts to their homes in the United States or whether a new policy is going to be entered upon under this provision of the bill?

Mr. SMITH of Maryland. I am unable to say whether that is the case or not, but it does seem to me that it should be the policy.

Mr. THOMAS. It seems to me to be a most extraordinary provision that after convicts die the United States Treasury is to be put to the expense of shipping their remains to their homes in the United States. Generally speaking, if I am correctly informed, their remains are sent to various medical schools and colleges of the United States for scientific purposes.

Mr. SMITH of Maryland. I will state to the Senator that there is no increase whatever in the appropriation because of this item.

Mr. THOMAS. I understand; but the next time the bill comes in there will be a special appropriation for that specific purpose. I think it ought to be stricken out.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The next amendment was, under the head of "Charities and corrections," on page 78, line 10, after "$3,500," to insert "assistant secretary and stenographer, $1,400"; in line 12, before the word "messenger," to strike out "stenographer, $1,200," and in line 16, after the words "in all," to strike out "$18,060" and insert "$18,260," so as to make the clause read:

Board of Charities: Secretary, $3,500; assistant secretary and stenographer, $1,400; clerk, $1,200; messenger, $600; inspectors—one $1,200, three at $1,000 each, two at $900 each, two at $840 each; drivers—one $780, three at $720 each; hostler, $540; traveling expenses, including attendance on conventions, $400; in all, $18,260.

The amendment was agreed to.

The next amendment was, under the subhead "Reformatories and correctional institutions," on page 79, line 18, after the word "items," to strike out "$35,000" and insert "$38,000," so as to make the clause read:

For provisions, fuel, forage, harness and vehicles and repairs to same, gas, ice, shoes, clothing, dry goods, tailoring, drugs and medical supplies, furniture and bedding, kitchen utensils, and other necessary items, $38,000.

The amendment was agreed to.

The next amendment was, under the head "Reformatories and correctional institutions," on page 79, after line 21, to insert:

For hospital furnishings, including sterilizers and accessories for operating room, and microscope for laboratory, $2,000.

The amendment was agreed to.

The next amendment was, on page 80, after line 16, to insert:

For installing laundry plant in jail, including dry box, washing machine, and other appurtenances, $1,500.

The amendment was agreed to.

The next amendment was, on page 80, line 25, after the word "Jail," to strike out "$122,825" and insert "$129,325," so as to read:

In all, under Washington Asylum and Jail, $129,325.

The amendment was agreed to.

The next amendment was, on page 82, line 6, before the word "teachers," to strike out "three" and insert "four"; in line 8, after the word "engineer," to strike out "$600" and insert "$720"; in line 9, after the words "assistant engineer," to strike out "$480" and insert "$600"; and in line 10, after the words "in all," to strike out "$11,040" and insert "$11,880," so as to make the clause read:

National Training School for Girls: Superintendent, $1,200; treasurer, matron, and four teachers, at $600 each; overseer, $720; parole officer, $600; seven teachers of industries, at $480 each; engineer, $720; assistant engineer, $600; night watchman, $480; two laborers, at $300 each; in all, $11,880.

The amendment was agreed to.

The next amendment was, on page 83, line 6, after the word "Girls," to strike out "$24,540" and insert "$25,380," so as to read:

In all, for National Training School for Girls, $25,380.

The amendment was agreed to.

The next amendment was, under the subhead "Medical charities," on page 83, line 11, after the word "Charities," to strike out "$34,000" and insert "$36,000," so as to make the clause read:

For care and treatment of indigent patients, under a contract to be made with Freedmen's Hospital by the Board of Charities, $36,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, in the items for the Columbia Hospital for Women, on page 83, after line 16, to insert:

For new washer in laundry, $500.

The amendment was agreed to.

The next amendment was, on page 83, line 21, after the word "exceed," to strike out "$14,000" and insert "$15,000," so as to make the clause read:

For care and treatment of indigent patients, under a contract to be made with Children's Hospital by the Board of Charities, not to exceed $15,000.

The amendment was agreed to.

The next amendment was, on page 84, after line 4, to insert:

Toward the construction of a new building for the Central Dispensary and Emergency Hospital, to be erected on the site purchased and owned by said hospital, $50,000.

The amendment was agreed to.

The next amendment was, on page 84, line 17, after the words "Board of Charities," to strike out "$5,000" and insert "$6,000," so as to make the clause read:

For care and treatment of indigent patients under a contract to be made with Georgetown University Hospital by the Board of Charities, $6,000.

The amendment was agreed to.

The next amendment was, on page 84, line 20, after the words "Board of Charities," to strike out "$5,000" and insert "$6,000," so as to make the clause read.

For care and treatment of indigent patients under a contract to be made with George Washington University Hospital by the Board of Charities, $6,000.

The amendment was agreed to.

The next amendment was, on page 85, line 1, before the word "each," to strike out "$180" and insert "$240"; and in line 5, after the words "in all," to strike out "$18,000" and insert "$18,120"; so as to make the clause read:

Tuberculosis Hospital: Superintendent, $1,800; resident physician, $480; pharmacist and clerk, superintendent of nurses, and engineer, at $720 each; pathologist, $300; matron, dietician, chief cook, assistant engineer, laundryman, and seven graduate nurses, at $600 each; assistant cooks—one $360, two at $240 each; assistant engineer, $480; elevator conductor, $300; three laundresses, at $240 each; farmer, laborer, night watchman, three orderlies, and assistant laundryman, at $360 each; two ward maids, at $180 each; four servants, at $240 each; in all, $18,120.

The amendment was agreed to.

The next amendment was, under the subhead "Tuberculosis Hospital," on page 85, line 11, after the word "items," to strike out "$30,000" and insert "$32,000," so as to make the clause read:

For provisions, fuel, forage, harness, and vehicles and repairs to same, gas, ice, shoes, clothing, dry goods, tailoring, drugs and medical supplies, furniture and bedding, kitchen utensils, books and periodicals not to exceed $50, temporary services not to exceed $1,000, and other necessary items, $32,000.

The amendment was agreed to.

The next amendment was, on page 85, line 13, after the word "grounds," to insert "including roads and sidewalks"; and in line 14, after the word "sidewalks," to strike out "$2,000" and insert "$5,000"; so as to make the clause read:

For repairs and improvements to buildings and grounds, including roads and sidewalks, $5,000.

The amendment was agreed to.

The next amendment was, on page 85, line 16, after the words "Tuberculosis Hospital," to strike out "$56,000" and insert "$61,120," so as to read:

In all, for Tuberculosis Hospital, $61,120.

The amendment was agreed to.

The next amendment was, on page 85, after line 16, to insert:

For the preparation of plans and specifications, necessary grading of site, and for the erection of hospital buildings, including power house and domestic-service building, for municipal purposes, to be located and erected on the site now owned by the District of Columbia at Fourteenth and Upshur Streets, and hereafter to be known as Gallinger Hospital, with authority to contract for the completion of said buildings at a total cost not to exceed $300,000, which amount is hereby appropriated and made immediately available

Mr. THOMAS. The Senate has devoted itself for a number of hours now continuously to the consideration of the bill, and in view of the fact that I desire to say something upon this amendment at the bottom of page 85, I would suggest that the business of the Senate be laid aside for the day.

Mr. SMITH of Maryland. Very well.

EXECUTIVE SESSION.

Mr. THOMAS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 8 minutes spent in executive business the doors were reopened, and (at 5 o'clock and 20 minutes p. m.) the Senate adjourned until to-morrow, Friday, March 13, 1914, at 12 o'clock meridian.

## NOMINATIONS.

*Executive nominations received by the Senate March 12, 1914.*

ASSOCIATE JUSTICE OF THE SUPREME COURT OF HAWAII.

Ralph P. Quarles, of Honolulu, Hawaii, to be associate justice of the Supreme Court of Hawaii, vice Antonio Perry, term expired.

SECRETARY OF THE TERRITORY OF HAWAII.

Wade Warren Thayer, of Honolulu, Hawaii, to be secretary of the Territory of Hawaii, vice Ernest A. Mott-Smith, resigned.

MARSHAL OF THE DISTRICT OF THE CANAL ZONE.

William Howard May, of Culebra, Canal Zone, to be marshal of the district of the Canal Zone.

COLLECTOR OF CUSTOMS.

Fred C. Pabst, of Galveston, Tex., to be collector of customs for the district of Galveston, in place of Francis L. Lee, whose term of office will expire by limitation March 31, 1914.

## CONFIRMATIONS.

*Executive nominations confirmed by the Senate March 12, 1914.*

ASSISTANT SECRETARY OF THE TREASURY.

William P. Malburn to be Assistant Secretary of the Treasury.

POSTMASTERS.

MAINE.

Edgar M. Frisbee, Kittery Point.
Patrick F. Welch, Calais.

MASSACHUSETTS.

James M. Hurley, Marlboro.

MISSOURI.

William Arterburn, Carrollton.
Hugh J. Bowen, South St. Joseph.
B. C. Drummond, Lexington.
Edgar J. Greisinger, Unionville.
Benjamin F. Hackney, Carthage.
William H. Hambaugh, Craig.
W. A. Kirkpatrick, Joplin.
Alfred T. Lacey, Fredericktown.
Dudley A. Reid, Gilman City.
James E. Sater, Monett.
John K. Scott, Golden City.
James Todd, Maryville.
Charles L. Wilson, Sarcoxie.

NEW YORK.

Claud M. Armitage, Candor.

NORTH DAKOTA.

Kathleen Kelly, Agricultural College.
Myrtle Nelson, Bowman.

OHIO.

Richard D. Brown, Pataskala.

SOUTH DAKOTA.

J. W. Applegate, Edgemont.
E. W. Babb, Wakonda.
F. B. Boyle, Corsica.
Albert P. Monell, Stickney.
Matthew F. Ryan, Mobridge.
Lloyd L. Truesdell, Burke.

UTAH.

Isadore Lessing, Beaver.

## HOUSE OF REPRESENTATIVES.

### THURSDAY, *March 12, 1914.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Take us, O God our Father, into Thy nearer presence and make us willing factors in the furtherance of the great eternal plan which Thou hast ordained; that the coming of Thy kingdom upon the earth may be hastened; that contentions, strife, wars, and all ungodliness cease and men live together as brothers, each for all and all for each, under the divine leadership of Thy son Jesus Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

REPRINT OF SPEECH OF HON. SIMEON D. FESS ON ABRAHAM LINCOLN.

Mr. MADDEN. Mr. Speaker, I would like to ask unanimous consent to have the very excellent speech delivered by the Hon. SIMEON D. FESS, on the 12th day of February, on the life of Abraham Lincoln made a public House document.

The SPEAKER. The gentleman from Illinois [Mr. MADDEN] asks unanimous consent that the oration delivered by Mr. FESS, of Ohio, on Abraham Lincoln on the 12th day of February be printed as a House document. Is there objection?

Mr. BORLAND. Reserving the right to object, Mr. Speaker, I would like to ask the gentleman from Illinois if he has consulted the Joint Committee on Printing?

Mr. MADDEN. I have not. It is a matter that would be of no expense of any consequence, and I think the document is so valuable and so full of interest and valuable information that the people of the country would like to have it, and the people of Illinois especially, the State from which I come.

Mr. BORLAND. I am inclined to think the gentleman is entirely right about that; but it seems to me the Joint Committee on Printing should pass upon this matter first.

Mr. MADDEN. It has not been the custom, and it ought not to be the custom.

The SPEAKER. Is there objection?

Mr. BORLAND. I object.

The SPEAKER. The gentleman from Missouri [Mr. BORLAND] objects.

ORDER OF BUSINESS.

Mr. HENRY. Mr. Speaker, as a member of the Committee on Rules, I wish to announce to the House that immediately after final action on the Agricultural appropriation bill and the river and harbor bill the Committee on Rules will present a special rule to the House for the consideration of the Sims free-tolls bill.

Mr. MANN. Mr. Speaker, when the gentleman is making his announcement, may I ask him when the rule is to come in for the consideration of the Flood bill, to carry out the provisions of the fisheries treaty?

Mr. HENRY. We would like to bring that in, if it will take only a short time, and provide for only two hours' discussion. We would like to wedge that in between the two in some way.

Mr. MANN. That was not in the gentleman's announcement.

Mr. HENRY. I know; but that is the desire of the committee.

Mr. MANN. It is not coming in before the Agricultural appropriation bill is disposed of?

Mr. HENRY. No; I have no desire to do that.

The SPEAKER. The announcement of the gentleman from Texas [Mr. HENRY] is that at the conclusion of the consideration of the Agricultural appropriation bill and the river and harbor bill he will call up his resolution in regard to the Panama Canal tolls bill.

Mr. ADAMSON. Mr. Speaker, pertinent to that announcement, I wish to say that so many people are interested in that question that I suppose it might just as well be understood that it will be impossible to reach it before the latter part of next week under that announcement.

The SPEAKER. The Chair has figured on that matter, and if the gentleman from South Carolina [Mr. LEVER] gets through with his Agricultural appropriation bill on Saturday, it seems to me that the earliest date that this tolls rule could be reached would be a week from to-day or a week from to-morrow. The river and harbor bill sometimes takes one day, and sometimes two, but the Chair has never known it to take more than two.

Mr. FOSTER. I think it will take a little longer this time. [Laughter.]

Mr. ADAMSON. I wish to say, Mr. Speaker, that the gentleman from California [Mr. J. R. KNOWLAND] spoke to me just now, and I ask unanimous consent that he be granted two more days in which to file the report containing the minority views.

Mr. MANN. I suggest that the gentleman ask that the minority be granted two more days. Somebody else on the minority might wish to file a report.

Mr. ADAMSON. Yes.

The SPEAKER. The gentleman from Georgia [Mr. ADAMSON] asks unanimous consent that the minority of the Committee on Interstate and Foreign Commerce be granted two additional days beyond what has already been granted in which to file their report. Is there objection?

Mr. HUMPHREY of Washington. Now that the matter is before the House, I want to say that I understand that there will be in connection with the consideration of the river and harbor bill something in the way of general debate that has not been customary heretofore.

The SPEAKER. The chairman of the Committee on Rivers and Harbors informed the Speaker that he thought there would be four hours of debate on the river and harbor bill.

Mr. HUMPHREY of Washington. I think there will be six hours' debate.

The SPEAKER. Then the rule on this tolls bill can not be reached until next Friday.

Mr. MADDEN. Mr. Speaker, may I ask the gentleman from Texas [Mr. HENRY] if he can give the House any idea as to how much general debate the rule he will bring in will provide for?

Mr. HENRY. Fifteen hours' general debate.

Mr. MADDEN. Does the gentleman think that is enough to cover so important a question as this?

Mr. HENRY. It seems that ought to be abundant time.

Mr. MADDEN. For that reason, I want to suggest to the chairman of the Committee on Rules that we ought to have the most liberal amount of debate possible for the committee to accede to.

Mr. HENRY. It seems to me that is very liberal. Some gentlemen wanted 8 hours, and others 10 hours, and others 12 hours, and finally we concluded that 15 hours would be abundant.

Mr. MADDEN. I think it should be 20 hours.

Mr. MURDOCK. Let me say to the gentleman that I have had more demands for time to speak on this subject than any other subject that has come up in this Congress. The desire seems to be general on the part of individuals to debate it.

Mr. HENRY. There is no desire to be harsh in the terms of the rule. Probably they would be liberal in regard to time for discussing the rule.

Mr. ADAMSON. If the gentleman from Texas will yield, Mr. Speaker, so far as I am concerned I would be very willing that there should be the utmost liberty of debate. I wrote 15 hours into the rule because I took that suggestion from some one on the other side.

Mr. J. R. KNOWLAND. Mr. Speaker, will the gentleman yield?

Mr. ADAMSON. Certainly.

Mr. J. R. KNOWLAND. I will state, Mr. Speaker, that the gentleman first suggested to me 15 hours for the minority. I did not know then how great the demand would be, but I will state that since that time at least 7 hours have been asked for on that side of the House, to say nothing of the Republican and Progressive Members.

Mr. ADAMSON. I do not want to restrict the debate at all.

Mr. STEPHENS of Texas. Mr. Speaker, will the gentleman yield?

Mr. HENRY. Yes.

Mr. STEPHENS of Texas. I desire to ask the gentleman from Georgia [Mr. ADAMSON] a question.

Mr. HENRY. I yield to my colleague [Mr. STEPHENS].

Mr. STEPHENS of Texas. I desire to ask when we can have the complete report of the committee on this very important question.

Mr. HENRY. The report of the Committee on Interstate and Foreign Commerce has been printed several days.

Mr. ADAMSON. Our report is already in print.

Mr. STEPHENS of Texas. I refer to the views of the minority.

The SPEAKER. Leave has just been granted to the minority for two days' additional time in which to file their views.

Mr. STEPHENS of Texas. That is the information I desired to get.

Mr. MURDOCK. Mr. Speaker, I desire to ask the gentleman from Texas [Mr. HENRY] if the Committee on Rules have decided on 15 hours or if that is merely suggested?

Mr. HENRY. They have decided on 15 hours and have authorized the reporting of the resolution.

Mr. MURDOCK. Will it not be possible to extend that time?

Mr. HENRY. When we get the rule up for consideration we will talk it over again.

Mr. UNDERWOOD. Mr. Speaker, I think it is manifest that this matter can be arranged, if at all, when the rule is reached, and as we are only consuming time now I demand the regular order.

### EDUCATION.

Mr. CHURCH. Mr. Speaker, I ask unanimous consent that I may extend my remarks in the RECORD by printing a very short joint resolution, consisting of one page, passed by both houses of the California Legislature, recommending to Congress that a department of education be established in Washington.

Mr. FOSTER. Reserving the right to object, is that to go in the back of the RECORD or in the body of the proceedings?

The SPEAKER. It will go in the back of the RECORD, if the Public Printer knows his business.

Mr. BORLAND. I should like to suggest to my colleague that if that is a petition for the establishment of a department of education, it ought to go into the basket with other petitions and does not need to be printed as a part of the gentleman's remarks.

Mr. CHURCH. It is a joint resolution passed by both houses of the California Legislature.

Mr. BORLAND. It can be introduced by the gentleman as a petition. It amounts to a petition.

Mr. CHURCH. It is a memorial to Congress.

Mr. BORLAND. It ought to be presented as a petition.

Mr. GARRETT of Tennessee. It ought to be referred to the proper committee. It will not get to any committee if it is simply printed in the RECORD.

The SPEAKER. Is there objection?

Mr. BORLAND. I object.

### LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. FALCONER, for one week, on account of the death of Mrs. Falconer's father.

### AGRICULTURAL APPROPRIATION BILL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 13679, the Agricultural appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill, with Mr. HAMLIN in the chair.

Mr. HUMPHREY of Washington. Mr. Chairman, under the agreement I think we are to return to page 29 the first thing this morning.

Mr. LEVER. Yes.

Mr. HUMPHREY of Washington. To take up the Chugach Forest.

Mr. LEVER. Yes.

Mr. HUMPHREY of Washington. Page 29, line 24.

The CHAIRMAN. When this bill was last under consideration it was agreed that on the next day the bill was considered the committee should return to page 29, line 24. The Clerk will report the paragraph.

The Clerk read as follows:

Chugach National Forest, Alaska, $16,320.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that the debate on this paragraph and all amendments thereto shall close in 15 minutes.

Mr. HUMPHREY of Washington. No; I had rather you would wait 10 minutes. Then I think we can get an agreement.

Mr. LEVER. All right. I withdraw the request.

Mr. HUMPHREY of Washington. I move to strike out the paragraph.

Mr. Chairman, I make this motion for the reason that no one has ever yet been able to explain why this reserve was created or what purpose it serves. I call the attention of the committee to a map of this reserve. The reserve is located in southeastern Alaska, and it contains about 11,000,000 acres, as much as three or four of the New England States combined. If the committee will look at this map they will discover that the only things conserved by this reservation are glaciers. It contains more glaciers than any other area of its size in North America. I may say that on 90 per cent of the entire reserve there is not a tree. I was talking this morning with a gentleman who has resided in that reserve for at least 20 years, and he told me that there was not a merchantable saw log on the entire reserve.

A short time ago the Senate committee had before it the Forester and one of his assistants, and they made an attempt to tell why this forest reserve was created. I want to read a few extracts from the hearing to show the character of this reserve and the use that it serves.

Mr. STEPHENS of Texas. Will the gentleman inform us when and by whom this forest reserve was created?

Mr. HUMPHREY of Washington. I do not recall the exact time, but it was created when Mr. Gifford Pinchot was the Forester, during the administration of President Roosevelt. First, I read from page 250 of the hearings as to the character of this forest reserve. This statement was read to the Forester and to his assistant, and he was asked whether it was correct. Before the American Mining Congress at Chicago, October 24, 1911, Mr. George E. Baldwin gave this description of that forest:

> One of Alaska's needs is the immediate abolition of forest reserves. The recent and present governors of the Territory have in their reports condemned them. I wish to speak for a moment upon the Chugach Reserve, in which I live. This reserve covers thousands of square miles along the southern coast, more than 90 per cent of which is utterly destitute of timber, being barren slopes, glaciers, and mountains above timber line. Less than 10 per cent is covered with a scattering growth of spruce, hemlock, and cottonwood of inferior quality, practically all mature and supermature. Not a foot of this timber will ever be exported. In fact, a large part of the lumber used within

the limits of this reserve is shipped from Puget Sound. It is only useful for local needs, and should be used by our people without undue restriction.

The gentleman to whom I was talking this morning, who lives on the western end of the reserve, the only place where they have any timber, told me he did not believe there was a tree standing that was over 30 years old in that portion of the reserve on the Kenai Peninsula.

The trees grow on the surface of the ground and as soon as they reach any height the wind blows them over. He assures me that there are hundreds and thousands of acres of small timber overturned by storms that is, of course, of no value whatever. There are 150 fish traps along the shores of the reserve. They use timber 20 inches at the butt and 6 inches at the small end for piles, and they can not find timber suitable even for that purpose, and practically all the piles for fish traps are brought from Puget Sound.

Now, I will read further:

Forest reserves are supposed to be created to provide timber for future generations, to attract rainfalls, to regulate stream flow, to prevent forest fires, and provide Government revenue. Let us take up these propositions in turn.

First. What is the use of preserving timber that is falling down and rotting of old age for future generations?

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I ask for 10 minutes more.

Mr. LEVER. Reserving the right to object, does the gentleman think he can finish in that time?

Mr. HUMPHREY of Washington. I think I can get through. I want to say that I appreciate the courtesy of the chairman of the committee. I know he has been very patient; but this is an important proposition, and especially so in view of the fact that we have appropriated money to build a railroad in Alaska. I want to show by the evidence of the forester himself that the only purpose of this reserve is to protect the title.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington that his time be extended 10 minutes?

Mr. LEVER. I do not object.

Mr. HUMPHREY of Washington. I think this item ought to be stricken out. I think I am not making any very rash guess in saying that it will be stricken out in the Senate, because a committee of the Senate had the forester before it and tried for two hours to find out what was the purpose of this reservation and failed. Now I read further:

Second. As to rainfall, the area embraced within the limits of this forest reserve receives a rainfall of from 70 to 120 inches per annum. As over 90 per cent of this reserve is destitute of timber and the treeless Aleutian Islands to the west of us receive more rains than we do, the idea that the cutting of the timber needed by our people will have an effect upon rainfall is utterly absurd.

Third. As to stream flow, our streams largely have their sources in the everlasting glaciers, and would flow bank full for centuries without a drop of precipitation.

Fourth. As to forest fires, there never has been a forest fire in this reserve, and never will be—soaked with rain in summer and covered with snow all winter.

Fifth. As to Government revenue, it has cost the Government two dollars for every one it has collected so far, besides imposing a cost of thousands of dollars upon our citizens in obtaining permits.

We defy the Forest Service to show one single benefit it has conferred upon the people living in this reserve, upon the people who will live in it in the future, or upon the people of the United States generally.

Now I want to read further from the hearings as to the character of this reservation. I read from page 343 of the hearings, and I am reading from the statement of the Delegate from Alaska [Mr. WICKERSHAM], who was before the committee:

Mr. WICKERSHAM. As the representative of Alaska, I say to the committee that the people in those forest reservations in Alaska have long since learned that it is a question of years to secure any result in the way of action on applications for homesteads, with the probability that they will be refused; it has resulted in keeping many people away from these great forest reservations, and has practically depopulated that part of the country, except in the towns. And as to this particular reservation, the Chugach Forest Reservation, I want to say to this committee and to Mr. Greeley, as the representative of the forestry reserve, that it is a shame that such a reservation should be maintained there. It is a fraud upon the people and a fraud upon the forestry reservation, for there is not anything there that is worthy the forestry reservation maintaining it as a forest reservation, and it lowers the Forest Service in the opinion of the people, who really favor proper forest conservation.

I read again, from page 460 of the hearings, where Mr. WICKERSHAM makes a further statement and says:

Mr. WICKERSHAM. I want to call your attention to the fact, Mr. Graves, before this committee, that in the opinion of the people who are best acquainted with this Chugach Forest Reserve, that it has no timber on it of any commercial or other value except for local use, and has very little of that on it, and that very largely on the western side, along Cooks Inlet, where the slight timber area there covers large areas of valuable coal lands; that the most of this Chugach Forest Reserve is covered with immense glaciers, the greatest glaciers in the world; that it is very largely very high mountains covered with perpetual snows; that the mountains are very steep, running right down to the sea; that there is no necessity at all for its being perpetuated as a forest reserve; that it hurts the purpose of those who wish to conserve resources of this kind; and that it is a fraud upon you and upon the service, and upon the people of the country, and tends only to discourage development in this particular region.

Now I want to read you what the assistant forester says about it himself, and I read from page 336 of these hearings:

The CHAIRMAN. Then, how have you conserved anything by handling it for them?

Mr. GREELEY. I do not know that we have conserved anything to date, except the title.

The CHAIRMAN. And, as a matter of fact, you have lost the Government money so far, have you not?

Mr. GREELEY. The title to the land has been kept clear.

The CHAIRMAN. The title to the land was not in danger anyway, under the law.

Mr. WICKERSHAM. Yes; it is in danger. Men might settle on some of it as homesteads.

The CHAIRMAN. Yes, I know; but we can protect against that. Now, as a matter of fact, have you not caused the Government an expense without doing anything so far, other than would naturally happen if you never had been there, so far as conservation is concerned?

Then, further on, the chairman asked this question:

The CHAIRMAN. Let us see if you can answer this question; if you can not, say you can not answer it; I say, so far you have done nothing toward conservation. I say, so far, mind you, not what may happen a thousand years from now, but so far you have done nothing toward conservation that would not have naturally happened if you had not been there.

Mr. GREELEY. We have preserved the title to the land.

The CHAIRMAN. That is all. Is that your answer?

Mr. GREELEY. That is my answer.

The sole purpose of this reservation, so far as Mr. Greeley or Mr. Graves were able to show, was to preserve the title and keep the people from settling there.

Mr. LEVER. Will the gentleman indicate the date of the hearings that he is reading from?

Mr. HUMPHREY of Washington. It says on the back of this document, "May 12, 1913."

Mr. MANN. Who was the chairman?

Mr. HUMPHREY of Washington. Senator PITTMAN.

Now, I want to show you, according to their own statement, that the question of fire protection is not involved. I read from page 338, where Senator JONES asked this question:

Senator JONES. The only public interest, I gather from your testimony, that has been subserved up there has been to hold the title in the Government thus far?

Mr. GREELEY. I think that is the main thing. There is a small fire danger in that forest, but it does not amount to much.

Senator JONES. That amounts to nothing. That was not the purpose of it, to protect from fires, was it?

Mr. GREELEY. No, sir.

Now, if there was no purpose to protect from fires, what is the purpose of that reservation? I challenge any man to answer that question. After the Senate committee had had the forester before them and he was cross-examined by Senators WALSH, JONES, and PITTMAN for two hours in an attempt to find out the purpose of this reserve, they gave it up in disgust. The forester's statement is the most striking illustration of the saying that the English language can be used to conceal thought that I have ever seen.

The other day I had the expense of conducting this reservation given me, and I saw what the receipts were, but I have not been able to find it. I know it is small compared with the amount expended. This is not only a useless expense, but it ought to be abolished, because they interfere with every settler that wants to go into that part of the country.

I was talking with a gentleman this morning who has resided in the Territory for 20 years, and he stated to me that last year there were five or six settlers came up into the western part of this reserve desiring to take up homesteads, and that they tried all summer to find a forester and failed. The only purpose of the reservation to keep settlers out did not fail of its purpose in this instance.

He told me this morning that he knew of 15 or 20 families that contemplated going in this summer if the reservation could be abolished.

The CHAIRMAN. The time of the gentleman from Washington has again expired.

Mr. HUMPHREY of Washington. I ask for five minutes more, and then I will quit.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. STAFFORD. Will the gentleman yield?

Mr. HUMPHREY of Washington. Certainly.

Mr. STAFFORD. Will the gentleman inform the committee what value the land is, whether it has any mineral deposits which was the reason for the withdrawal of the land from public entry?

Mr. HUMPHREY of Washington. I do not know how valuable in minerals the lands are, but mineral lands can not be taken up for homesteads.

Mr. STAFFORD. I mean, are there any mineral deposits upon the land?

Mr. HUMPHREY of Washington. Mr. Chairman, I presume there is coal in that portion of the country, certainly.

Mr. STAFFORD. The gentleman is aware that the Committee on the Public Lands has reported a bill to safeguard the interests of the Government so far as mining claims are concerned?

Mr. HUMPHREY of Washington. Yes.

Mr. STAFFORD. Does the gentleman not think it would be well before we withdraw our control over this tract to wait the passage of that or some similar bill?

Mr. HUMPHREY of Washington. Does the gentleman advocate creating forest reserves to control the title to mineral lands?

Mr. STAFFORD. I think it justifiable to withdraw public land if there are valuable mineral rights not adequately protected.

Mr. HUMPHREY of Washington. Does the gentleman advocate withdrawing public land under fraud and pretense of creating a forest reserve?

Mr. STAFFORD. But it was not withdrawn under fraud and pretense. There was some timber there, and perhaps it was withdrawn for the purpose of protecting the mining rights of the public.

Mr. HUMPHREY of Washington. If it was withdrawn for the purpose of protecting the titles to mineral lands, then it was withdrawn under fraud and pretense and sham, and a fraud was perpetrated on the public. What right has any forester or any President of the United States to withdraw land under pretense of protecting the forest if in reality it is to protect the title to mineral lands?

Mr. STAFFORD rose.

Mr. HUMPHREY of Washington. I can not yield any further, as I have not the time. There are in this portion of the country that I was speaking about some agricultural land. If I had more time I could read from the hearings and show where they admit that a homesteader has no title on this forest reserve. He has to go to the forester to get it. The only purpose of this reserve has been to hold back the development of that country, and now, as we are going to have a railroad constructed there, what excuse is there for its continuance? We have a bill reported here now to open up those coal lands. What excuse is there for keeping a number of men and paying them $22,000 a year to simply annoy settlers?

Mr. FORDNEY. Mr. Chairman, will the gentleman yield for a statement?

Mr. HUMPHREY of Washington. Yes.

Mr. FORDNEY. I wish to say to the gentleman from Wisconsin [Mr. STAFFORD] that if he knows the land laws he knows that under the homestead laws no one can take up land that is designated as mineral land, not even take up land in that vicinity.

Mr. HUMPHREY of Washington. I can not yield any further. Just one other statement. I want to call the attention of the committee to the fact that the only timbered land there is in this entire reserve is around the city of Seward, and that is especially taken out of the reserve, as is indicated on the map. The only timbered land there is on the Kenai Peninsula is outside of the reserve. There is no timber in that entire area, and it appears that where some was by mistake placed in the reserve that when it was discovered it was eliminated.

Mr. GOULDEN. Are there any farming lands at all within this reservation?

Mr. HUMPHREY of Washington. Yes.

Mr. GOULDEN. And they could be homesteaded and cultivated and made productive?

Mr. HUMPHREY of Washington. As I said a moment ago, Mr. Whorf told me there were five or six homesteaders who came in there last year, and who tried all summer to get a forester to go with them so that they could locate that land, but they never found him. He was down here at Ketchikan, the headquarters of this reserve, a thousand miles away from Cook Inlet.

Mr. STEPHENS of Texas. Mr. Chairman, will the gentleman inform us who is getting all of this $22,000, and what it is for?

Mr. HUMPHREY of Washington. It goes entirely to pay these five or six foresters, who spend their vacations up there. They do not perform any service under heaven. The only thing they do is to annoy people who try to settle in that country. The fact is that one of the great purposes in creating it was in order to add 11,000,000 acres to the forest reserve, so that in making up the estimates for the appropriations they could count in the 11,000,000 acres and get that much more money to spend in the forest reserves in the United States.

Mr. GOULDEN. When was it created?

Mr. HUMPHREY of Washington. I do not remember exactly.

Mr. LEVER. July 4, 1907.

The CHAIRMAN. The time of the gentleman from Washington has again expired.

[By unanimous consent Mr. HUMPHREY of Washington was granted leave to extend his remarks in the RECORD.]

Mr. LEVER. Mr. Chairman, I do not care to take the time of the committee for any extensive statement as to the impropriety of the amendment of the gentleman from Washington [Mr. HUMPHREY]. The amendment is to strike out the sums that are now being used for the protection of this national forest in Alaska. The facts submitted to me by the Forest Service on yesterday in writing do not agree with the statement of the gentleman from Washington. In a memorandum from the Forest Service, which I hold in my hand, this statement is made:

> Assistant Foresters James B. Adams and Earle H. Clapp were sent to Alaska last summer to make a special examination of the lands within the Chugach National Forest. Their estimates indicate that there is a stand of approximately 8,000,000,000 feet.

So that there are 8,000,000,000 feet of timber——

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. HUMPHREY of Washington. I would like to ask the gentleman this question: If the statement of the Forester is correct, how does it happen that in the hearings before the gentleman's committee Forester Graves himself estimates that it will be 25 years before he can sell enough timber off that to pay expenses?

Mr. LEVER. The gentleman was reading from the testimony of Mr. Graves?

Mr. HUMPHREY of Washington. Yes. Before the gentleman's committee he estimated that it would be 25 years before he could sell enough timber off that to pay expenses.

Mr. LEVER. Oh, I take it in that connection there would be many of these forest units that probably never will be self-sustaining.

Mr. HUMPHREY of Washington. Is not this one?

Mr. LEVER. That may be true. I do not recall the testimony. The fact, nevertheless, is that the testimony of these foresters who were sent to this reserve in Alaska, as shown by the memorandum which I hold in my hand, is to the effect that in these forests there are 8,000,000,000 feet of hemlock and spruce timber; and it seems to me that it is a sufficient asset for us to protect.

Mr. JOHNSON of Washington. Will the gentleman yield?

Mr. LEVER. I will.

Mr. JOHNSON of Washington. Does the gentleman have any figures as to how many acres of land the 8,000,000,000 feet are on?

Mr. LEVER. I do. There are included in this forest about 11,000,000 acres of land, and 5,000,000 of it is regarded as timberlands.

Mr. JOHNSON of Washington. And how many feet?

Mr. LEVER. With 8,000,000,000 feet of spruce and hemlock, board measure.

Mr. JOHNSON of Washington. That is a thousand and a half——

Mr. FORDNEY. Fifteen hundred feet to the acre would not be worth going after.

Mr. LEVER. Well, with the vanishing supply of our timber, I think it is very well to protect it against some individual who wants to go and gobble it up.

Mr. JOHNSON of Washington. Let us get it perfectly clear. It is spruce and hemlock?

Mr. LEVER. Spruce and hemlock is my recollection.

Mr. JOHNSON of Washington. And they can care for it at the same expense and in the same proportion as in some of the heavily timbered reserves of the States of Washington and Oregon, at the same rate per acre. I would like to get that in the RECORD.

Mr. LEVER. Yes; that can go in the RECORD, I have no objection to it.

Mr. FORDNEY. Will the gentleman yield, in order to set myself right?

Mr. LEVER. I will yield.

Mr. FORDNEY. I do not want to be understood as objecting to forest reserves; but I say if there are but 8,000,000,000 feet of lumber on that much land, it is but 1,500 feet per acre, whereas in the South—in the State of the gentleman—he would not be warranted in going on 40 acres of land for 60,000 feet of timber. It is not worth the cost of building the roads to get to the timber.

Mr. LEVER. The gentleman will undoubtedly see this distinction, however: That the demand for lumber on account of

the lack of the timber supply makes this timber much more valuable than it would be in South Carolina.

Mr. FORDNEY. It certainly would, and cost more money to get it.

Mr. LEVER. Yes.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. I ask for five minutes additional.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. LEVER. This forest was set aside, as I have learned, for the purpose of protecting that timber for the use of the settlers in Alaska. More than that, it develops that there are extensive copper and coal deposits around Prince William Sound and the rich copper prospects along the Copper River Railroad can be most easily supplied with native-grown timber from the forests. Now, I suspect that the effort to eliminate this forest from the control of the Government might be based on the desire of somebody to get their fingers into these copper and coal mines which are now protected under this reserve.

In addition to that, I desire to say to the committee that the Forestry Service has already recommended the elimination of practically one-half of this forest because of the fact it has no timberlands, but the Secretary of the Interior, anticipating that the Alaska railroad bill would become a law, recommended the Forest Service to take no action in that regard until Congress had determined upon its policy in reference to the Alaskan road.

Mr. BOOHER. Mr. Chairman, will the gentleman yield?

Mr. LEVER. In one minute. Now, then, since Congress has determined to build a railroad in Alaska the Forest Service believes, as does the Secretary of the Interior, that this large body of land, which will very likely become the right of way over which the railroad is to be built, should be maintained in the possession of the United States until the location of the railroad has been fixed, and for that reason, if for no other reason, this reserve should be retained and its protection provided for by sufficient appropriations. Now I yield to the gentleman from Missouri.

Mr. BOOHER. I would like to ask the gentleman, What is the character of this timber? What is it good for?

Mr. LEVER. It is spruce and hemlock.

Mr. BOOHER. But what is it good for?

Mr. LEVER. It has special value as wood pulp.

Mr. BOOHER. Now, is it not a fact it is not worth anything for building purposes, and do not the hearings show it?

Mr. LEVER. I do not remember the hearings, and I will say to my friend from Missouri I am not an encyclopedia and can not remember all I have heard; but the statement from this memorandum from which I have been reading is to the effect that that timber is spruce and hemlock and it is bound to become very valuable as the development of the country goes on, and particularly valuable for wood-pulp purposes. Mr. Chairman, I ask for a vote.

Mr. BOOHER. Before the vote is taken I would like to get about five minutes. I move to strike out the last word.

Mr. LEVER. Before the gentleman does that, I wish to say this, further: That the showing made by the Forestry Service as presented in these memoranda is sufficient to justify the continuance of this appropriation, certainly until we have located the line for the Alaskan railroad.

Mr. GOULDEN. Will the gentleman yield before he takes his seat?

The CHAIRMAN. Does the gentleman from South Carolina yield to the gentleman from New York?

Mr. LEVER. I do.

Mr. GOULDEN. Have you any evidence showing the present condition of this timber, whether it is fully grown and developed, is going to fall down and rot, or whether it is simply young, thriving, growing timber that in 25 years or longer will be more valuable than it is to-day?

Mr. LEVER. I have no testimony as to that fact, but I think it is true that it is young timber.

The CHAIRMAN. The gentleman from Missouri [Mr. BOOHER] moves to strike out the last word.

Mr. BOOHER. Mr. Chairman, I am in favor of the amendment striking out the paragraph for this forest reserve in Alaska. I am in favor of it for the reason that it is a useless expenditure of money to continue it. My recollection of the hearings on this subject is that some gentleman who was before the committee, by the name of Steele, a man who was thoroughly posted on the conditions up there, stated to the committee that the timber was absolutely worthless for building purposes; that there was none of it of that character; and if any gentleman has the hearings here I would be glad to turn to it.

Mr. LEVER. That testimony was not taken before the Agricultural Committee.

Mr. BOOHER. I think it was; that is my recollection.

Mr. LEVER. I have no recollection of any such testimony.

Mr. HUMPHREY of Washington. I have the testimony taken before the Senate committee in May, 1913.

Mr. LEVER. But not before the Committee on Agriculture of the House, I am sure.

Mr. BOOHER. Now, here is the testimony, taken before the Senate committee on May 12, 1913, of a gentleman by the name of Steele:

> Senator JONES. In other words, this timber is not suitable for building purposes?
>
> Mr. STEELE. I would not give you 5 cents a thousand for it for building purposes. Our experience, Senator, was this: We first put up a little powder house at Prince William Sound, constructed of boards, doubling the boards, leaving cracks about 4 inches in width between the first tier of boards, then battening these cracks with 12-inch boards, and whenever we would get a driving rainstorm the rain would go right through those boards.

Mr. LEVER. In order that the record may be straight, let met put in the RECORD in connection with that this statement furnished me on January 1, 1914, by the Forestry Bureau:

> The fisheries, the mining industry, the railroads so far built, and all ordinary building are largely dependent upon native material, for practically all the demands of which it is as well suited as imported timbers.

Mr. BOOHER. That is true of other forests in Alaska, but not true of the Chugach Forest.

Mr. LEVER. Who is Mr. Steele?

Mr. HUMPHREY of Washington. He is a very reputable gentleman who lives in Alaska, and is connected with the building of railroads.

Mr. LEVER. With railroads?

Mr. HUMPHREY of Washington. Now, the gentleman says "railroads," and he is sitting down, while evidently thinking a man who represents railroads is not to be believed. I want to say to the gentleman that I talked with two men who live in this reserve, one of whom has lived there for 20 years, Mr. Wharf, and Mr. Donald McKenzie. And Mr. Wharf told me that in the 150 fish traps up there very little of this timber was used for the piling; that they sent to Puget Sound for it. Mr. McKenzie told me they tried to use this timber for railroad ties, but they had to abandon it, inasmuch as it was absolutely unfit for that purpose.

Mr. LEVER. What is the interest of these gentlemen in this proposition?

Mr. HUMPHREY of Washington. The interest of Mr. Wharf, who lives up there, is that he would like to have some of these men who went up there last year trying to get homesteads, get them without consulting the Forester.

Mr. LEVER. Is it not more likely that he would like to have some of those copper and coal lands?

Mr. HUMPHREY of Washington. It is not true, because he is one of the men out of a great many thousand who has got a coal claim.

Mr. LEVER. I never saw a man who had so much property that he did not want to acquire more.

Mr. HUMPHREY of Washington. Did the gentleman ever see a man so honest he would tell the truth?

Mr. LEVER. Lots of them, and I think the gentleman from Washington [Mr. HUMPHREY] is one of those men.

Mr. HUMPHREY of Washington. I am telling what one of these gentlemen said this morning about the character of this timber.

Mr. BOOHER. Mr. Chairman, I am much interested in the dialogue between the gentleman from South Carolina and the gentleman from Washington, but they have taken most of my time. [Laughter.]

It does not make much difference who the gentleman is, whether his name is Wharf, or McKenzie, or what business he is interested in, this forest reservation ought to be abandoned. There are thousands of sections of good land in this reserve that can be homesteaded. We are building a railroad in Alaska for the purpose of inducing people to go up there, and you have got the best lands—that they would strike first in going to Alaska—in a forest reserve, where they can not get an acre of it. It has been stated that the timber is absolutely worthless as building timber, and it ought to be cleared off of the ground. It is said it will make wood pulp. There was not anybody in the Senate hearings who testified it would make wood pulp. But suppose it would, is it not better to open it to settlement? You can not get people to settle in Alaska when you have the best part of it fenced up in a forest reserve. According to the statement of the gentleman from South Carolina, there is on an average about one tree to the acre. There are thousands of acres that have not a tree of any kind on them. I hope the motion to strike this item from the bill will prevail.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BRYAN. Mr. Chairman and gentlemen, I want to warn the members of this committee not to take too seriously the grievances expressed here on the floor by these distinguished

colleagues of mine, who take an entirely different view on some of the very fundamentals of this conservation proposition from what the people of the State of Washington take.

Now, to begin with, it may be true that the limits of these reserves are subject to some kind of revision; there may be some merit to that contention. But when you come to take up here on the floor of this House a proposition of this kind, to throw out the appropriation which provides means of keeping up a forest reservation, and thus by a collateral attack throw out the whole machinery and put out of commission the whole reserve and wreck the whole plan, then the proposition becomes absolutely ridiculous, it seems to me.

This particular reservation was made by order of Theodore Roosevelt, and whether or not that order met with the approval of some of the gentlemen from Washington, nevertheless the fact remains that by that order the coal deposits of Alaska were saved to the people of this country, and I am glad that that reservation was made. I am glad that the order was given. I am glad that that coal was preserved.

We had a great deal of debate here over the Alaska railroad bill, and we accomplished what I believe to be the greatest piece of progressive legislation that has been enacted by this Congress when we enacted the Alaskan railroad bill. But if it had not been for that order reserving those coal fields, I am quite sure that all will admit that President Wilson would not have deemed it necessary to have included in his message a request that a railroad be built up there.

But I must hasten along. The gentlemen from Washington in the past have endeavored to have timberlands and other lands eliminated from the forest reserves, and it has always been the story that the settlers needed it; that the settlers needed the opportunity to build up the country. But in actual practice where lands have been eliminated, within a very short while they have gone into the possession of men in large blocks for speculation and to be used as a means of extorting toll from generations yet to come.

There was a great hullabaloo raised over the reservation of land in Clallam County, in my State. It was stated that it was absolutely necessary for the development of that territory to eliminate a lot of those lands. But after getting those reports, and after fighting for a long period of time, the senior Senator from my State [Mr. JONES] aiding and writing letters, and other Representatives joining with him and writing letters about the necessity of getting this land out quickly, in the interest of agriculture in Clallam County, on the claim that agriculture was jeopardized because of that reserve, finally they got the land out—something like 700,000 acres—and behold, inside of a few months—in fact, the next day after the necessary act was passed here—the big timber interests and organizations controlling large bodies of land were on the ground; and I have here a list of settlers. Among them is the Milwaukee Land Co., leading with 80,630 acres; James D. Lacey & Co., with 48,370 acres, together with a lot of others; and in 10 years' time only 600 acres have been cultivated out of a total of 700,000 acres; 523,720 acres had passed into the hands of large companies owning great bodies of land.

Now, I am glad that this Chugach Reserve has been made. And I want to say that the people out in the great Northwest indorse Theodore Roosevelt; and they indorse Gifford Pinchot in the work that he did. They indorse that conservation movement, and they are glad that work was done.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BRYAN. I do not think I can. My time is about out.

Mr. HUMPHREY of Washington. The gentleman spoke about Gifford Pinchot.

Mr. BRYAN. Yes.

Mr. HUMPHREY of Washington. I wish the gentleman would explain in connection with his statement the action of Mr. Gifford Pinchot in that transaction, where the Northern Pacific Railroad got 240,000 acres of valuable land and the Santa Fe got 1,200,000 acres of valuable land in exchange for worthless land. I would like to know about that.

Mr. BRYAN. I will say to the gentleman that lieu-land legislation was put on the statute books by the gentlemen who cooperated with my colleague, and this land was taken out through these lieu-land propositions; but Gifford Pinchot stopped that sort of thing.

Mr. HUMPHREY of Washington. I asked the gentleman to explain that proposition.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. GOULDEN. Mr. Chairman, I ask that the gentleman from Washington [Mr. BRYAN] be given five minutes more. This is a very important matter.

The CHAIRMAN. Is there objection to the request of the gentleman from New York [Mr. GOULDEN]?

There was no objection.

Mr. BRYAN. Gifford Pinchot, in his efforts against the operations of timber looters and speculators under the lieu-land provisions that had been put into laws by the men who took the same position on this floor as my colleague now takes, interfered with those things and stopped them. I have shown here, in the remarks I made during the special session, facts and figures by which that fact can be easily demonstrated, and I say Gifford Pinchot is not responsible for the taking of that property away from the people out there.

It is true that forest reserves were first created by order of Grover Cleveland, and then by order of President Roosevelt and others; and then by cute legislation, offered on the floor here by Members, by striking out a line here and inserting a line there, they fixed it so that these lieu-land selections could be made, and so that the Government could be divested of this property, and it took active, energetic work to stop it. They said that the Government had taken in land belonging to the railroads, and that it was necessary to get the forest-reserve land in a compact body, and that it was necessary to have the railroads which had land in forest reserves give up that land and take land on the outside; and they fixed it so that they got land on the outside without consideration of the value or location and without other safeguards which ought to have been put in, and which would have been put in if the legislation had received full consideration. By that kind of legislation they robbed the public domain.

When Gifford Pinchot and the Forestry Bureau came on the scene they attacked that line of work and interfered with it and stopped it, and they are the ones who are entitled to the credit for stopping it. Those Members of Congress from the Northwest who heretofore represented that country and failed to take up the matter in the way that they ought to have taken it up found it easy enough to come here and, by amendments like this, wipe out reserves and wipe out the improvements that had been made.

We do not want to turn Alaska over to the speculators and give them carte blanche as to these public lands, and so I urge that the amendment offered by the gentleman from Washington [Mr. HUMPHREY] be defeated, and that we continue in the course that we have been pursuing, unless we take up the matter regularly and, upon full consideration by the department and after full discussion here, make such corrections here as may be necessary in the administration of our Forest Service.

The CHAIRMAN. The time of the gentleman from Washington has again expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I ask for minutes in which to reply to the gentleman.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. Mr. Chairman, I want to reply just briefly to some of the statements made by my colleague [Mr. BRYAN], and I want the committee to hear this statement.

The elimination of the lands from forest reserves, to which my colleague refers, I have heard about a great many times. It was probably a mistake, and ought never to have been done. But I call the attention of the House to these facts, and if my colleague now or hereafter can explain them I would be glad to have him do it.

Mr. Gifford Pinchot made a protest against this elimination which he has mentioned, and Mr. Pinchot was right when he protested against that elimination, as the results have shown since. But at that time Mr. Gifford Pinchot was connected with the Government. He was connected with it after that until he went out under President Taft's administration. Now, after this elimination of which the gentleman speaks, and while Mr. Gifford Pinchot was still connected with the Government service——

Mr. BRYAN. With the Government service, not the Forest Service.

Mr. HUMPHREY of Washington. While he was connected with the Government service, when he was the man upon whom the President was depending for advice and information in regard to the creation of these forest reserves, the Santa Fe Railroad received 1,200,000 acres of the best land upon all the public domain in exchange for a like number of acres of land that contained no timber and was utterly worthless, and was estimated by the railroad company at from 15 to 18 cents an acre. Why did not Mr. Gifford Pinchot protest against that exchange? He was in the service. I challenge my colleague or

any other man to show where Mr. Pinchot ever protested against that steal. That is what my colleague called it. It was not what he put in the RECORD, but that is what he said. It was the greatest and most outrageous looting of the public domain in our history.

Mr. BRYAN rose.

The CHAIRMAN. Does the gentleman yield?

Mr. HUMPHREY of Washington. Not just at this moment.

The CHAIRMAN. The gentleman declines to yield.

Mr. HUMPHREY of Washington. Mr. Gifford Pinchot could see a settler in my portion of the country if he cut a tree. Mr. Gifford Pinchot could see a man in Alaska if he cut a fishing pole; but he could not see the Santa Fe Railroad getting 1,200,000 acres at one time.

Afterwards a bill was brought in here to repeal the lieu-land law. During the time when that law was pending over in the Senate one of the forest reserves in Montana was extended to include 240,000 acres, or a new reserve was created containing that amount of practically treeless land belonging to the Northern Pacific Railroad. Mr. Gifford Pinchot was then forester. The Northern Pacific Railroad went out into my country, and for that 240,000 acres of practically worthless land they got 240,000 acres of heavily timbered land, trading it acre for acre. Where was Gifford Pinchot? Why did he not protest against that trade? He favored that exchange. Talk about looting the public domain. These gentlemen who howl about conservation come in here and protest about "looting the public domain," but Mr. Gifford Pinchot and the men associated with him let the railroads of this country take 2,000,000 acres of land for practically nothing without a word of protest. Why did they keep silent? Why did not Mr. Pinchot protest like he did when that elimination was made out in my State? His protest then was right; but if Mr. Gifford Pinchot has ever protested against the seizure of these public lands by the railroads, let him say so. Let him point where he has protested against the specific cases to which I have referred. I do not want to do him any injustice, but every time that any man speaks on the floor of this House in behalf of the interests of the West or about the looting of the public domain by these railroads some one arises and talks about these great "conservationists." I am getting a little weary of this "holier than thou" attitude. Let them clean their own skirts first. Mr. Pinchot is now a candidate for United States Senator over in Pennsylvania. Let him explain these transactions with the Santa Fe Railroad. Let him explain the transactions with the Santa Barbara Water Co., that got 63,000 acres of the public domain for land that they themselves estimated at 25 cents an acre. Mr. Gifford Pinchot wrote a letter indorsing that transaction.

The CHAIRMAN. The question is on the amendment of the gentleman from Washington [Mr. HUMPHREY] to strike out the paragraph in line 24, page 29.

The question was taken, and the Chairman announced that the noes appeared to have it.

Mr. LEVER. I ask for a division, Mr. Chairman.

The committee divided.

The CHAIRMAN. On this question the ayes are 3 and the noes are 41, and the amendment is rejected. The Clerk will read.

Mr. BRYAN. Mr. Chairman, a parliamentary inquiry. Did the Chairman report the ayes as 3?

The CHAIRMAN. Ayes, 3.

Mr. BRYAN. I understood that the gentleman from Michigan, Mr. FORDNEY; the gentleman from Pennsylvania, Mr. MOORE——

Mr. MANN. Well, but, Mr. Chairman——

Mr. BRYAN. I saw five men standing.

Mr. MANN. Mr. Chairman, I ask for the regular order. The gentleman knows he is out of order.

The CHAIRMAN. The gentleman is out of order, but the Chair——

Mr. MANN. What is the purpose of the gentleman in naming Members in this way?

Mr. COOPER. Is it out of order in this House or in the Committee of the Whole when a Member thinks there has been a mistake in the count for him to call attention to it? When four Members are standing, if the Chairman announces the vote as 3, is it out of order to call attention to it?

Mr. BRYAN. These four gentlemen ought to be proud to have their names given.

The CHAIRMAN. The present occupant of the chair will not hold it out of order to make this inquiry. Technically it may be out of order, but the Chair will not hold it out of order. The present occupant of the chair may have been mistaken as to how many were standing in the affirmative. The Chair thought that one, at least, of those standing was an employee of the House.

Mr. COOPER. There were four besides him.

The CHAIRMAN. The Chair may have been mistaken as to the exact number, but it can not affect the result. The Chair intended to be entirely fair about the matter. He took one of those, at least, standing to be an employee of the House, and thinks he was correct about it.

Mr. BRYAN. I want to say this——

Mr. MOORE. Mr. Chairman——

The CHAIRMAN. The gentleman from Pennsylvania.

Mr. MOORE. Under what rule are we now proceeding?

Mr. LEVER. Mr. Chairman, I ask for the regular order.

Mr. MOORE. A parliamentary inquiry.

The CHAIRMAN. We are reading the bill under the five-minute rule, and the regular order is the reading of the bill. The Clerk will proceed.

Mr. MOORE. A parliamentary inquiry.

Mr. BRYAN. I want to say to the gentleman that I am not going to call anybody's name.

Mr. MOORE. Is the gentleman in order in proceeding now, in view of the ruling of the Chair?

The CHAIRMAN. The Chair has made no ruling. This has been going on by unanimous consent of the House.

Mr. BRYAN. I ask unanimous consent to make a brief statement.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to make a statement.

Mr. MOORE. Reserving the right to object, the gentleman from Washington is evidently fighting from the Washington viewpoint the senatorial battle in Pennsylvania. He is inclined to bring a candidate over from his State——

Mr. LEVER. Mr. Chairman, I again demand the regular order.

The CHAIRMAN. The regular order is demanded. Is there objection to the request of the gentleman from Washington?

Mr. MOORE. Reserving the right to object——

Mr. BRYAN. Mr. Chairman, I withdraw the request.

Mr. MOORE. I thought he would in due course of time.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word, for the purpose of saying that I was one of the Members who stood up just now and voted in the hope that the appropriation for the Chugach Range would be stricken out. I do this for the purpose of putting it into the RECORD, so that no man who may be a senatorial candidate from my State of Washington shall later on go rushing around and declaring that I missed a chance to go on record as to where I stand on the expenditure of money for this particular Chugach Range.

Mr. MOORE. Will the gentleman yield?

Mr. JOHNSON of Washington. For a question.

Mr. MOORE. Is the gentleman's colleague a candidate for Senator in his State or the State of Pennsylvania?

Mr. JOHNSON of Washington. I am not going to look around among the Members of the House to pick out pinfeather candidates for Senators. I do not know to whom my friend from Pennsylvania refers.

Mr. MOORE. There are candidates coming from out west, or New York, or somewhere, who are running in Pennsylvania, and there are candidates running for Senator in Washington. To whom does the gentleman refer?

Mr. JOHNSON of Washington. By inference I might refer to both, but I do not want to use up my time in that way. I have too much to do to look after the interests of my great district, which is three times as large as the State of Massachusetts, with its three large forest reserves, every one of which we are willing should be maintained, but we do contend that if money is to be spent for upkeep and for the employment of rangers, enough should be spent so that more constructive work shall be done. In the Chugach Range in Alaska I have no more interest than any man in the Northwest. I do not want it to appear by inference that I am in favor of striking down any part of the timber in that reserve. I hope every bit of it will be kept for the people of the United States, but I do not think it is necessary to have forest-reserve men and clerks go there to preserve the timber that nobody can want now; rangers to arrest occasionally a settler or a prospector who picks up a sled load of wood to build a fire.

I withdraw the pro forma amendment.

Mr. BRYAN. Mr. Chairman, I want to speak in opposition to the pro forma amendment. Awhile ago when my colleague, Mr. HUMPHREY, was speaking, I endeavored to ask him a question, but his time was so brief that he did not have an opportunity to yield to me, but said that he would yield to me later, but his time expired.

Here is what I wanted to call to his attention in connection with the remarks he was making. This lieu-land law was

repealed in 1905 in part on the recommendation of Gifford Pinchot, who was not made forester until 1905. Now, this elimination that the gentleman complains of was made prior to that date, and Mr. Pinchot could not be held responsible for the elimination made prior to the time he had any responsibility or jurisdiction in the department.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. BRYAN. Certainly.

Mr. HUMPHREY of Washington. What I tried to say, and I think I did say, was that Mr. Pinchot was connected with the Government during all the time of these transactions, and he saw that elimination out in our State and protested against it. Why did not he protest against the others?

Mr. BRYAN. The gentleman admits that it was none of Mr. Pinchot's duty or responsibility to protest?

Mr. HUMPHREY of Washington. Oh, no.

Mr. BRYAN. He says a short time before, or a number of years before, he did all he could to prevent the looting of the particular district that my colleague, Mr. JOHNSON, represents by these Standard Oil syndicates that were there; he did all he could and tried to save it. He was turned down absolutely by the authority of the congressional delegation from Washington urging Executive action. Then later on they did some more of this kind of work, and Mr. Pinchot did not protest. Now he says why did not Mr. Pinchot keep up the good work? He says Mr. Pinchot was doing mighty good work when he tried to stop the then Washington delegation.

The senior Senator from Washington [Mr. JONES], then a Member of Congress, was earnestly urging that elimination; and the gentleman from Washington now says that Mr. Pinchot did right when he protested against it. It is a fact that Mr. Pinchot was turned down at the earnest recommendation of Senator JONES. They were in direct opposition. He says Mr. Pinchot was right, and commends him, and now he complains because he did not keep up the good work, although he was not responsible, although it was not his official duty, although it was not assigned to him by any law to interfere with these eliminations.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. BRYAN. No. I will yield in a few minutes. I have yielded to the gentleman once, and I do not want to appear discourteous. Mr. Pinchot, as soon as he became forester, as soon as he got hold of the matter, stopped this lieu-land exchange, interfered and stopped the whole procedure, over the protest of men from the Northwest who ought to have been there protecting the public lands. Now he wants to condemn him because for a period of time he was not volunteering his services and protesting. I do not doubt he did protest all he could against those lieu-land reserves, even though it is not recorded, but it was not within his authority or power. He got fired by President Taft in the Ballinger controversy later on because of his activity, because he tried to do something. The Republican President put him out of office because of his earnestness to save these resources for the people; and I want to say that the last man in the State of Washington on whom you can score and make good a criticism, so far as conservation of the public domain is concerned, is Gifford Pinchot. You can not make good out there on criticizing him or Theodore Roosevelt either. Theodore Roosevelt carried the State by 50,000 above Taft——

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I ask unanimous consent to proceed for one minute.

Mr. LEVER. Mr. Chairman, this is a very interesting washing of linen on that side of the House, but I trust the gentlemen will soon conclude it.

Mr. HUMPHREY of Washington. I only want one minute more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. Mr. Chairman, I want to make clear the situation so far as my colleague is concerned. He made one statement, I think unintentionally, and I think he will correct it when it is called to his attention, wherein he said the lieu-land law repeal was opposed by the Members from the Northwest. He is mistaken about that, at least so far as the delegation from the State of Washington is concerned, because we not only worked for it, but voted for it.

Mr. BRYAN. Did the gentleman ever introduce a bill directed toward a repeal of the lieu-land law?

Mr. HUMPHREY of Washington. Not that I know of.

Mr. BRYAN. Or any other man from the State of Washington?

Mr. HUMPHREY of Washington. Yes; we passed such a law.

Mr. BRYAN. But never introduced it.

Mr. HUMPHREY of Washington. I do not know how it could become a law without somebody introducing it.

Mr. BRYAN. It was put through by Theodore Roosevelt with the big stick.

Mr. MANN. Oh, that is not correct.

Mr. HUMPHREY of Washington. That is not correct. Mr. Chairman, I thought I would give the gentleman an opportunity to correct a misstatement, but if he prefers to leave it in that way in the RECORD I have no objection. What I want to say is this: The gentleman still apparently does not understand my statement, and here is what I want him to explain. When Mr. Gifford Pinchot was Forester—remember he was the Forester—there was an extension of a forest reserve or reserves, or new reserves created, in Montana, and 240,000 acres of practically treeless land included that belonged to the Northern Pacific Railroad.

For this land of little value the Northern Pacific obtained 240,000 acres of heavily timbered land in exchange, and that Gifford Pinchot favored that transaction.

Mr. BRYAN. When was that?

Mr. HUMPHREY of Washington. I do not know the exact date.

Mr. BRYAN. Was the gentleman in Congress at that time?

Mr. HUMPHREY of Washington. Yes.

Mr. BRYAN. Did the gentleman from Washington, seeing that loot, protest?

Mr. HUMPHREY of Washington. The gentleman from Washington did not know that the looting was going on, but a Member of this House went to Gifford Pinchot and protested, and Gifford Pinchot said he proposed to favor it any way, and the fact that the railroad was getting some of it would not turn him from what he considered the proper policy.

Mr. BRYAN. Did my colleague, Mr. HUMPHREY, protest?

Mr. HUMPHREY of Washington. I did not.

Mr. ANTHONY. Why, the gentleman just said he did not know anything about it.

Mr. HUMPHREY of Washington. I am not in the habit of protesting against something about which I know nothing.

Mr. MOORE. Mr. Chairman, I move to strike out the last word. I do this for the purpose of making an explanation. I misunderstood the situation a little while ago as it was presented by the gentleman from Washington [Mr. BRYAN]. He introduced the subject of a United States Senatorship as it seemed to affect the forest reservations in Alaska. I was inadvertently in a position to be counted——

Mr. MADDEN. Is there a United States Senatorship to be given away in Alaska?

Mr. MOORE. That is a part of the explanation I want to make.

Mr. MANN. Does the gentleman mean that he was counted as a United States Senator?

Mr. MOORE. Not yet. [Laughter.] My present understanding of this mixed situation is this, that the gentleman from Washington [Mr. BRYAN] was advocating the distinguished ex-forester of the United States, Mr. Gifford Pinchot, for United States Senator in the State of Washington, and that the gentleman from Washington [Mr. HUMPHREY] was advocating the gentleman from Washington [Mr. BRYAN] as a possible candidate for United States Senator in the State of Pennsylvania. That is how I came to get mixed up in this matter, and, having gone to the gentleman from Washington [Mr. HUMPHREY] to speak to him about it, I was counted as one of the three—and I hope they will now be immortal—who stood up against an unwarranted expenditure of the public money for the purpose of maintaining gentlemen on vacation trips somewhere up in Alaska to look after a treeless forest that evidently was put on the map some time ago. But I now understand where the trouble lies. I am in error in believing that the gentleman from Washington [Mr. BRYAN] is a candidate for United States Senator in the State of Pennsylvania, and I am in error in understanding that the gentleman who is so popular, at least in the State of Washington—Mr. Gifford Pinchot—is a candidate for Senator in that State or in Alaska.

Mr. BRYAN. But the gentleman would be right if he were to say that he could be elected out there.

Mr. MOORE. If I ever was right, I certainly would not be in the class of the gentleman from Washington, because the gentleman from Washington is so universally the other way that his interruption at this time gives point to his position. [Laughter.] But I find my error was in this, that instead of believing, as I thought, that Gifford Pinchot was a candidate for United States Senator in the State of Washington, the fact is that the gentleman from Washington [Mr. BRYAN] is the candidate for Senator in that State, and that Mr. Gifford Pinchot, who is so popular there, and whose record was brought

into question a moment or two ago by the gentleman from Washington [Mr. HUMPHREY], is actually a candidate for Senator in the State of Pennsylvania. I think it is important that the House of Representatives, that hears so much about Mr. Pinchot, should know that he has finally come into the State of Pennsylvania to become a candidate for Senator there.

Mr. BUTLER. Mr. Chairman, will the gentleman yield?

Mr. MOORE. Certainly.

Mr. BUTLER. Mr. Chairman, I have listened patiently to my colleague for five minutes, and will he please tell me now who will be the candidate for Senator of the United States, Mr. BRYAN or Mr. Pinchot?

Mr. MOORE. I do not know. I have just been advised that Mr. Pinchot has become a candidate for the Senate in the State of Pennsylvania. That is useful and important information, if true.

Mr. GOULDEN. Mr. Chairman, I think I can answer the distinguished gentleman from Pennsylvania [Mr. BUTLER] by telling him whom the Republicans ought to elect as Senator from the State of Pennsylvania, and that is, Mr. J. HAMPTON MOORE, of the House of Representatives. [Applause.]

Mr. MOORE. Well, I hesitate to admit that, of course. Mr. Chairman, I believe I still have some part of my time left to further elucidate this question; but I will use it to say to my distinguished friend from the great Democratic organization of New York that never on any occasion or in any adversity has he failed me. I thank him for the nomination, but will not accept at this time. [Applause.]

Mr. MONDELL. Mr. Chairman, I move to strike out the last two words. Mr. Chairman, I am glad that some of the gentlemen from the Northwest coast have at last discovered the uselessness for forest purposes of a large part of the Chugach Forest Reserve. I have a very lively recollection of a few remarks I made with regard to that famous reserve, that does not contain many trees, at the time it was largely extended. The Agriculture bill, I recall, was brought into the House. There was a large increase for the forest reserves. At that time the expenditures on the reserves were not segregated, as they are now, but were lumped together, and a large increase was accounted for, apologized for, and excused on the ground that some 20,000,000 of acres had been added to the reserves, necessitating the expenditure of a few thousand more dollars. The interesting fact I discovered on investigation was that while the increase in the area in reserves was mostly in Alaska, yet the money that was being asked for on account of the increased acreage was to be used within the continental boundaries of the United States and outside of Alaska.

Mr. LEVER. Will the gentleman be kind enough to indicate what year that was?

Mr. MONDELL. Well, I do not recall. I think the gentleman remembers it. We had a stirring time over it I recollect.

Mr. LEVER. I recall the time.

Mr. MONDELL. My good friend from Illinois [Mr. MANN], I remember, thought I was overemphatic in some of the statements I made in regard to the matter.

Mr. MANN. The gentleman was right, as usual.

Mr. MONDELL. That is the fact; I accept the statement; I was right, as usual. [Laughter.]

Mr. BRYAN. As right as usual.

Mr. MONDELL. The fact remains that this reserve was increased by millions of acres, and that increased area was and is and will be almost entirely unforested and valueless for any purpose within the purview or contemplation of the forest reserve law.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. MONDELL. In just a moment. That when this great extension was made, it was made as an excuse for largely increased expenditures thousands of miles away in other reserves.

Mr. MADDEN. Is the gentleman able to tell the committee what the purpose of establishing a treeless forest reserve is?

Mr. MONDELL. Well, I assume generally——

Mr. MOORE. Is it not to take care of a number of employees in the service?

Mr. MONDELL. I have opinions about it. What I want to emphasize is that the great additions to this reserve was of land without trees, and it was made the excuse of expenditures elsewhere.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOORE. Would it not be valuable for experimental purposes?

Mr. MONDELL. Possibly for the purpose of experimenting as to how far that sort of thing could be done without protest.

The Clerk read as follows:

Sopris National Forest, Colo., $6,230.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word. I would like to ask the gentleman from South Carolina if he is able to inform the committee how many acres there are in forest reserves altogether, and how many of those acres are treeless?

Mr. LEVER. There are 168,000,000 acres. Just what percentage are treeless I am unable to state to the gentleman.

Mr. MADDEN. Is the gentleman able to state approximately if there is any considerable area which is treeless?

Mr. LEVER. There is a considerable treeless area that is included in the national forests.

Mr. MADDEN. Does it approximate anything like 30 per cent of the total acreage?

Mr. LEVER. It would be a mere guess upon my part to make any statement.

Mr. MADDEN. Will the gentleman state for the information of the committee what good purpose is served by having a treeless forest reserve? The gentleman from Wyoming [Mr. MONDELL] was not able to state that.

Mr. LEVER. My own opinion of it would be that the land would be very valuable for grazing purposes.

Mr. MADDEN. Is it advisable specifically to establish grazing areas and call it a forest reserve?

Mr. LEVER. Oh, I do not think that is the case. Is the gentleman aware of any?

Mr. MADDEN. I am asking the gentleman from South Carolina for information on this subject, and I can say, with all the discussion I have heard on the floor of this House on this subject, I have never been able to get an intelligent conception of a forest reserve upon which there are no trees.

Mr. LEVER. The gentleman from Illinois understands that the House of Representatives is not responsible for these reserves. They have been set aside by Executive order from time to time, and it is the duty of Congress, of course, to appropriate for their protection. Now, just what per cent of these forest reserves is not timbered I do not have that information right at hand, but it would be very easy for me to get it, and if the gentleman desires it I will get it and put it in the RECORD.

The information is as follows:

The treeless lands within the national forests are comprised of the mountain tops above timber line, which include about 8 per cent of the entire area, the lands within the timber belt which are covered with brush or undergrowth of value for watershed protection about 11 per cent, and the burned-over areas and open parks and slopes about 9 per cent. This makes a total of 28 per cent of the area of the national forests which is at present treeless and is being held either for the purpose of reforestation or watershed protection.

Mr. MADDEN. I should be very glad to have it as a matter of information. I think the public ought to have such information, and I am quite sure that most of the people out my way who live adjacent to the forests would like to know why any part of the public domain is set aside as a forest reserve where there are no trees.

Mr. HAWLEY. Will the gentleman yield to me?

Mr. MADDEN. Surely.

Mr. HAWLEY. As members of the committee we have asked the Forestry Service on several occasions the number of acres that were nonforested within the forest area, within the exterior limits, and we have been told that no survey has yet been made of sufficient detail to determine the number of acres. They know it as to a few forests, but not as to all of them.

Mr. LEVER. That is true.

Mr. HAWLEY. We have been insisting that information be furnished at the earliest possible date.

Mr. MADDEN. Does not the Committee on Agriculture think that it would be one of the important functions of the committee to ascertain this and bring in some definite recommendation, so that we may reach an intelligent conclusion upon which we may be able to base proper legislation?

Mr. LEVER. I will say to the gentleman from Illinois that this bill now under consideration provides an appropriation of $185,000 to do that very thing—to classify the agricultural lands within the national forests and eliminate them as rapidly as possible?

Mr. JOHNSON of Washington. I would like to ask the gentleman from Illinois [Mr. MADDEN] if, after looking it all over carefully, he does not think it is unfortunate that in asking these trite questions regarding what comprises somewhere near one-half of all the territory of the 11 great Western States he has to ask the members of this very important Agricultural Committee, which, if it attends to the great agricultural problems of the United States, has all and more than it can do? Does he realize that more than one-fourth—nearly one-third—of the agricultural appropriation is for the Forest Service—$5,700,000 out of about $19,000,000? I want to ask him if he had ever stopped for a moment to consider that in Arizona, I think it is, 92 per cent of that territory is conserved or held by

the Government in some form or other, leaving only 8 per cent of it for two Senators and a Congressman, a governor, and a whole line of State officials to look after?

Mr. MANN. The gentleman will have to revise that statement in the RECORD.

Mr. JOHNSON of Washington. Well, then, how much of that State is conserved and why?

Mr. MADDEN. I am not really on the floor for the purpose of criticizing anybody. I am simply asking for information.

The CHAIRMAN. The time of the gentleman from Illinois [Mr. MADDEN] has expired.

Mr. MADDEN. Mr. Chairman, I ask unanimous consent for one minute more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MADDEN. I would like to suggest to the Committee on Agriculture that it would be wise for that committee to make some systematic effort to get such information upon this subject as will give an intelligent conception of what the situation is to the Members of the House.

Mr. LEVER. I will say to my friend from Illinois [Mr. MADDEN] that I do not believe there is a committee in this House which has made a more diligent effort to get information about all subjects connected with the bill which is reported to the House now than the Committee on Agriculture. It is almost impossible to anticipate in a bill that contains a thousand different items, as this bill does, every question that may be asked on the floor of the House.

Mr. MADDEN. I simply want to say, in reply to the gentleman from South Carolina, that I agree with him that there is no committee in the House more diligent, more patriotic, more painstaking, more up-to-date, than this Committee on Agriculture, and the only thing I know of which they have overlooked is this very important question of not being able to ascertain the number of millions of acres there are in the forest reserves that ought to be in agriculture.

Mr. HAWLEY. Mr. Chairman, I would like to be heard in opposition to the amendment of the gentleman from Illinois [Mr. MADDEN].

The CHAIRMAN. The gentleman from Oregon will be heard in opposition to the amendment.

Mr. HAWLEY. The total area in the national forests is 187,487,976 acres. When the national forests were established they were established by exterior boundaries, describing them usually by the township surveys. Great areas were included in them, because many of them were created within a very brief period. Many large areas were included in that that ought not to have been included, because, as stated, many of the forests were created quickly. There are, for instance, two kinds of land that have no trees on them that are included in the forest reserves. The first is the agricultural land. This land may have a small growth of timber or timber in spots on it. Those we have been endeavoring to have segregated, because there is a great demand for homes on the public domain, and the committee has appropriated from time to time moneys for that purpose, and this bill carries $185,000 for the purpose of selecting and segregating the agricultural lands.

The other class of lands are lands that are treeless, having been burned over, or are rocky, or with thin soil, and for which there is now no demand for homestead purposes. We have not made any special attempt to have any examination made of these latter, because, with the pressing problems upon us, no great good would come from such an examination at this time, and if they are valueless areas they may just as well be in the forest reserve as anywhere else, but we are urging the early elimination of lands capable of and valuable for agriculture.

Mr. GARNER. Will the gentleman yield?

Mr. HAWLEY. Yes.

Mr. GARNER. They have been carrying in this bill for a number of years appropriations for forestry purposes, for which $185,000 is carried this year. How long are they going to carry this appropriation without finishing this work?

Mr. LEVER. We have been carrying this appropriation for this purpose but one year. Last year was the first year that appropriation was carried in the bill.

Mr. GARNER. Have you any estimate from the department as to about how long you will carry it?

Mr. HAWLEY. It will take some time to eradicate the cattle tick. [Laughter.]

Mr. LEVER. They made a statement before the committee that they are hopeful to classify all these agricultural lands in the course of three years with the continuation of this amount of money.

Mr. GARNER. That is a very indefinite statement as to being able to complete this work within a few years.

Mr. LEVER. I would say to my friend from Texas that the Forest Service can not be entirely accurate as to how much of this land is agricultural until it has made the classifications which we are providing for in this bill.

Mr. GARNER. I should imagine there is a good deal of difference between——

Mr. HAWLEY. Is this being taken out of my time?

Mr. GARNER. There must be a difference between being able to survey a forest reserve in order to ascertain the agricultural land in it and eradicating the tick. You could appropriate enough money now in this bill at this time to do that entire survey work.

Mr. MANN. You would not have the force to do it.

Mr. GARNER. It seems to me it would be advisable to do so instead of running along for an indefinite number of years. If it is desirable to segregate this agricultural land, why not do it in one year?

Mr. MANN. Why not survey all the lands in the United States in one month and thus dispose of the subject?

Mr. GARNER. It would not be so difficult to do it.

Mr. MANN. Oh, well, we have been at it for a hundred years and have not done it yet.

Mr. HAWLEY. Mr. Chairman, I am glad to hear from the chairman of the Committee on Agriculture as to the length of time this item has been carried in the bill. I was misled as to that by the fact that for some years the Forest Service has been eliminating lands. But it does not matter whether it was carried in a specific item or in a lump fund; that practice has prevailed for a number of years.

The CHAIRMAN. The time of the gentleman from Oregon has expired.

Mr. HAWLEY. I would like to have one minute more.

The CHAIRMAN. Without objection, the gentleman from Oregon will proceed for one minute more. Is there objection?

There was no objection.

Mr. HAWLEY. In answer to the suggestion of the gentleman from Texas [Mr. GARNER], about appropriating enough money to make these surveys at once, whether the Forest Service is able at this time to find men who are sufficiently expert in agricultural land to go all through these forest areas and determine upon their character, I am not able to say, but I agree with him that the appropriation ought to be large enough to enable the Forest Service to proceed as rapidly as possible.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. HAWLEY. In a moment. I think if it is found that in the next succeeding appropriation they are able to do that they ought to push the work as rapidly as possible, so that those reserves will contain only lands that are properly the subject of forest purposes.

Mr. MADDEN. Now will the gentleman yield?

Mr. HAWLEY. Yes.

Mr. MADDEN. I was going to ask the gentleman from Oregon if he did not think it would be a good idea to have a committee of this House appointed, consisting of Members not interested in forest-reserve territory, to investigate just exactly what the situation is with respect to forest reserves and make a report based not on interest in the situation but on the facts? In that way, it seems to me, we would get at the facts and be able to give to the public such information as it is entitled to have.

The CHAIRMAN. The time of the gentleman from Oregon has again expired.

Mr. HAWLEY. I would like to have another minute, if I can have it.

The CHAIRMAN. Without objection, the gentleman from Oregon will proceed for one minute more.

There was no objection.

Mr. HAWLEY. In answer to the suggestion of the gentleman from Illinois [Mr. MADDEN] about a committee of the House, that is a matter to which I have never given any consideration. So far as I know the Members from the Western States and in their attitude toward the Forest Service, they have been insisting upon one thing especially regarding the areas of the forests, and that is that the agricultural areas within the forests should be listed and opened at the earliest possible date, because there is a vast influx of settlers in the western country seeking homes, and when they can not find homesteads within our borders they leave and go up into Canada. We can ill afford to lose them, because every man who goes out with his family takes out about a thousand dollars, and we lose a family of from three to five people. I think that no commission that could be created by this House, distinguished as it might be, would have more interest and more patriotic concern than the Members from the States in which the forests are located, so far as I know them.

Mr. MADDEN. I know they are unbiased.

The CHAIRMAN. The time of the gentleman from Oregon has expired.

Mr. MONDELL. Mr. Chairman, I do not want to detain the committee, but this question of nontimbered lands in the forest reserves is a very interesting one and of great importance to the people in the regions where the reserves are located.

It is true that there is a large amount of nontimbered land in the forest reserves, and where it is the sort of nontimbered land that is in the Chugach Reserve in Alaska it ought to be eliminated, because no good is served by retaining it in reserve and harm is done. On the other hand, there is a very considerable amount of nontimbered lands within the exterior boundaries of many of the reserves that is there properly.

Let me illustrate by taking the case of the Bighorn Forest Reserve in my State. The Bighorn Mountains are a great mountain mass, approximately 50 to 60 miles in length and about 30 miles in width, rising from the plains on either side and forming a great elevated rolling plateau, pierced in the center by the uplift of the main peaks of the range. The slopes of the valleys, particularly on the north side, are timbered. The south sides of the slopes ordinarily are not. Some of the open areas are timbered; more of them untimbered. A considerable portion of the land is above the timber line. Practically none of the land is fit for ordinary agricultural purposes; its elevation is too great. A considerable amount of it is good for grazing, but the untimbered areas in that reserve are practically all mountain areas. The untimbered areas are so scattered and dispersed among the timbered areas that it would be practically impossible to eliminate them. To do so would mean the creation of a dozen reserves where we have one, and no good purpose would be served; for while we should not put grazing lands in forest reserves for the purpose of having them in reserves, no harm is done if a certain amount of mountain grazing land is in a reserve, and the effect of the reserve and its protection, we hope, will ultimately be to extend somewhat the forested areas on these mountain slopes and sides and tops.

The complaint with regard to agricultural lands in forest reserves in times past came, as the gentleman from Oregon [Mr. HAWLEY] has just suggested, arose from the hurry and carelessness with which the exterior boundaries of the reserves were established years ago. Much of that has been remedied. There are still some areas that ought to be excluded from the reserves. I think there are not many such in my State. We have not much to complain of in that regard. But on the Pacific slope they have another condition—land within the reserves that is actually timbered, and heavily timbered, but that would be valuable for agricultural purposes if the timber were cut and the land cleared. And there the question is, Should the settler be allowed to have the valuable timber and the land, or should the timber be cut and sold and then the settler be allowed to obtain the land? Or, taking everything into consideration, should the land be retained as timber-bearing land? It is not an easy problem, and it is a problem that has a great many sides.

Mr. HUMPHREY of Washington. Is the gentleman laboring under the impression that the Forest Service has sold any timber in our State? I hope not.

Mr. MONDELL. Well, the gentleman has criticized the Forest Service for not selling timber in his State. I do not know how extensive those sales are. But I imagine that one reason why they have not sold more is because there is so much timber in the gentleman's State that you could not sell it all at once, and it would not be a good thing to do it if you could. In my State the Forest Service is selling about all the timber there is a demand for. I think they are rather stiff in their prices—too high in some cases—but if they sold much more we would not have any long.

The CHAIRMAN. The time of the gentleman has expired.

The Clerk read as follows:

Stanislaus National Forest, Cal., $16,601.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. On the last day when this bill was under consideration the gentleman from Wyoming [Mr. MONDELL] was talking about the creation of certain forest reserves after the law prohibiting their further creation by Executive order was passed, and a moment ago the gentleman from Oregon [Mr. HAWLEY] was speaking of the rapidity with which these forest reserves have been created. I have here a list of the creation of some of these forest reserves, and I find that on February 6, 1907, there were four reserves created, that on the 1st day of March, 1907, there were 12 created, and that on March 2, 1907, there were 20 forest reserves created. I call attention to the fact that these creations were just before the law went into effect upon the subject. The law prohibiting the creation of new forest reserves in certain States, contained in the agricultural bill approved March 4, 1907, at 9.43 o'clock a. m., is in the following language:

*Provided*, That hereafter no forest reserve shall be created, nor shall any additions be made to ones heretofore created within the limits of the States of Oregon, Washington, Montana, Colorado, or Wyoming, except by act of Congress.

It was just before the act became effective that all the reserves which I have mentioned were created. They totaled about 12,000,000 acres, as I remember.

Mr. Chairman, I ask to extend my remarks in the RECORD by inserting a memorandum showing the number of the reserves and the dates of their creation.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. The memorandum referred to is as follows:

1. January 15, 1907.—Caribou Forest in Idaho and Wyoming; new.
2. January 25, 1907.—Cascade, Oreg.; addition.
3. February 2, 1907.—Ouray, Colo.; new.
4. February 6, 1907.—Monticello, Utah; new.
5. February 6, 1907.—Stony Creek, Cal.; new.
6. February 6, 1907.—Big Burros, N. Mex.; new.
7. February 6, 1907.—Glenwood, Utah; new.
8. February 14, 1907.—San Jacinto, Cal.; addition.
9. February 15, 1907.—Little Belt, Mont.; readjustment of boundaries.
10. March 1, 1907.—Toiyabe, Nev.; new.
11. March 1, 1907.—Wenaha, Oreg. and Wash.; addition.
12. March 1, 1907.—Siskiyou, Oreg.; addition.
13. March 1, 1907.—Big Hole, Mont. and Idaho; addition.
14. March 1, 1907.—Uncompahgre, Colo.; addition.
15. March 1, 1907.—Big Belt, Mont.; addition.
16. March 1, 1907.—Imnaha, Oreg.; addition.
17. March 1, 1907.—Park Range, Colo.; addition.
18. March 1, 1907.—Holy Cross, Colo.; addition.
19. March 1, 1907.—Bear Lodge, Wyo.; new.
20. March 1, 1907.—Colville, Wash.; new.
21. March 1, 1907.—Las Animas, Colo. and N. Mex.; new.
22. March 2, 1907.—Little Rockies, Mont.; new.
23. March 2, 1907.—Yellowstone, Wyo. and Idaho; addition.
24. March 2, 1907.—Port Neuf, Idaho; new.
25. March 2, 1907.—Palouse, Idaho; new.
26. March 2, 1907.—Weiser, Idaho; addition.
27. March 2, 1907.—Cabinet, Mont. and Idaho; new.
28. March 2, 1907.—Mount Rainier, Wash.; addition.
29. March 2, 1907.—Washington, Wash.; addition.
30. March 2, 1907.—Ashland, Oreg.; addition.
31. March 2, 1907.—Coquille, Oreg.; new.
32. March 2, 1907.—Cascade, Oreg.; addition.
33. March 2, 1907.—Umpqua, Oreg.; new.
34. March 2, 1907.—Blue Mountains, Oreg.; enlarged.
35. March 2, 1907.—Medicine Bow, Wyo.; enlarged.
36. March 2, 1907.—Lewis and Clark, Mont.; addition.
37. March 2, 1907.—Otter, Mont.; new.
38. March 2, 1907.—Olympic, Wash.; addition.
39. March 2, 1907.—Montezuma, Colo.; addition.
40. March 2, 1907.—San Juan, Colo.; addition.
41. March 2, 1907.—Priest River, Idaho; addition.
42. March 2, 1907.—Tillamook, Oreg.; new.

The names of many of these forests have since been changed. I have given the names as they occur in the original proclamations.

Mr. STAFFORD. Did I understand the gentleman to state that there had been no sales of timber on any of the reserves in the State of Washington?

Mr. HUMPHREY of Washington. There have been some sales. Off those 12,000,000 acres they sell enough to keep one mill running a few months in the year.

Mr. STAFFORD. I misunderstood the gentleman. I thought he made the bald statement that there had been no sales.

Mr. HUMPHREY of Washington. At the rate they have been cutting their timber it would take 35,000 years to cut over the reserve once in the State of Washington.

Mr. STAFFORD. While the hearings show that they have only got on all the forest reserves about half a billion feet, they still expect to cut an average of 6,000,000 feet, which will be, of course, a material increase, and will undoubtedly enter into competitive conditions in the lumber trade.

Mr. HUMPHREY of Washington. They are always expecting. They told us 10 years ago they were going to sell enough timber to pay expenses. If you will look into the hearings you

will see that they always consult the great timber owners as to the price they shall fix——

Mr. STAFFORD. Mr. Chairman——

Mr. HUMPHREY of Washington. I do not want to be interrupted in the middle of a sentence. If the gentleman will look at the hearings, he will discover that one reason why the expectations of the Forest Service are not realized in the amount of timber sales is because they always consult other great timber owners as to the price at which the timber shall be sold, and they always fix it at a price a little higher than the private timber owners get.

Mr. STAFFORD. Will the gentleman give us the basis of that statement?

Mr. HUMPHREY of Washington. It is in the hearings. If they were private individuals, the Attorney General would prosecute them for making a combination to keep up the price of lumber. In your own hearings on this bill the representative of the Forest Service testified that they always asked about as much or a little more than timber sells for on private holdings.

Mr. STAFFORD. The gentleman says "your own hearings." I hope the gentleman will not ascribe the hearings to me, because I am not a member of that committee. I think the statement should be made by some gentleman who is a member of the committee.

Mr. MANN. In view of the Underwood tariff law and the great increase in the production of lumber products in British Columbia and the closing of mills in Washington, why does the gentleman now desire to have the Forest Service sell the timber when there is no demand for it from the mills out there?

Mr. HUMPHREY of Washington. Is the gentleman asking me a question?

Mr. MANN. Yes. The gentleman is the only man I know of who can answer it.

Mr. HUMPHREY of Washington. The reason why I would like to have the Forest Service sell some timber is that a little over one-fourth of my State is in forest reserves, and they have been paying us the magnificent return of $14,400 a year; whereas, according to the statement made by our Commissioner of Public Lands, if the timber on the forest reserves was taxed at the same rate as private timber, in my State it would pay between $5,000,000 and $7,000,000 a year. We would like to get some returns, in view of the fact that we were promised by Mr. Gifford Pinchot that we were going to get in my State an amount equal to what the State lost in taxes, if it had the right to tax this timber.

Mr. MANN. The gentleman has given a very lucid answer to my question. [Laughter.]

Mr. LEVER. In view of the statement of the gentleman from Washington [Mr. HUMPHREY] that the Forest Service is not selling more timber because it consults with Mr. Weyerhaeuser and other timber barons, I think it is time that the statement should go into the RECORD that there is a statute which requires that when timber is sold by the Forestry Service to an amount exceeding $100 it must be sold on competitive bids, after 30 days' notice in the newspapers of the country. That is the law, and the gentleman ought to know that, and he ought not to put statements into the RECORD unless he is satisfied as to his facts.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. LEVER. I will.

Mr. HUMPHREY of Washington. I will ask the gentleman if it is not true that in the hearings before his committee the other day a representative of the Forest Service said they always sold their timber for as much or a little bit more than the private timber owners? Is not that statement in the hearings?

Mr. LEVER. That may be; but why not? Why should they give the timber away? The Forestry Service is handling a piece of property that belongs to the people of the United States. Why should the Forest Service give it away? Why should the Forest Service sell the timber that belongs to the people of the United States to the people in the Western States cheaper than they can get it anywhere else?

Mr. HUMPHREY of Washington. Why should the Forest Service combine with those who hold timber outside to fix the price?

Mr. LEVER. I have just read to the gentleman and called his attention to the fact that timber is sold on competitive bids under the statute of this Congress.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Yes.

Mr. SLOAN. Is it not a fact that the forester said it sold for about as much as private timber, but there was nothing whatever said anywhere in the hearings that they had consulted with anybody as to what the price would be; but it was sold in accordance with the statute, after due publication, and no consultation with Mr. Weyerhaeuser or anybody else?

Mr. LEVER. If there is any testimony in the hearings before the committee to that effect, I have not found it.

Mr. Chairman, I want to say in this connection, in the balance

Mr. LEVER. I want to say in this connection, in the balance of the time that I have, that we have spent one hour and three-quarters this morning discussing matters that took place in 1907—discussing Gifford Pinchot pro and con. In that time there has been one amendment offered, an amendment to strike out a national forest in the Territory of Alaska.

Mr. JOHNSON of Washington. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Just one moment. I think it is rather strange that these critics of the Forest Service should select the one forest in Alaska upon which to offer an amendment to strike out, leaving their own forests untouched, with no amendments to strike them out. If the forest policy of the United States is not a good thing, I ask you gentlemen—you critics—to offer your substantive propositions—your amendments to this bill. If the Forest Service is not a good thing for the United States, offer your amendments to strike out these appropriations one by one, and I will put you on record here; and if your people agree with you, they will send you back; and if not, they will send some one else who will agree with this policy. I ask you not to consume the time of the House or of the country in delaying the passage of this great Agriculture appropriation bill with talk alone, but give me your propositions and let us do business and you will find the Committee on Agriculture standing for every item in this bill ready to defend it, and, if possible, ready to see that their position is sustained by the Committee of the Whole. There has been but one proposition offered to the House this morning, and that is to strike out the Alaska item, and yet you have spent an hour and three-quarters talking about things that happened before some of us were born.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. LEVER. I am not losing my patience, but I do hope gentlemen will let us read along a little while.

The Clerk read as follows:

Toiyabe National Forest, Nev., $9,770.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word. I am very anxious to make it appear here now in opposition to the statement of the chairman of the Agricultural Committee that some of us who desire to have the Forest Service looked into carefully by the people of the United States do not want to strike out the Forest Service or to strike it down. As I understood the one amendment offered—and I am anxious to make my position clear—it was not an amendment to do away with the Chugach Reserve, but was an amendment to avoid spending unnecessary money there. The chairman has asked us what we can do in a constructive way. My contention is that this child—the Forest Service—has become so large that it is about to eat up the department to which it belongs. We take a day every week or so here to consider matters pertaining to the District of Columbia, 69 square miles and yet when the opportunity arises to discuss these enormous reserves and tracts, we are asked to hurry along. I can not stand here representing the people of the State of Washington and try to get more money for the real development of these great reserves, for a point of order would be made.

Mr. LEVER. It would be subject to a point of order.

Mr. JOHNSON of Washington. I know it. I would not get anywhere in this great but very expensive year of Democratic economy. It is hopeless for me to try to secure three times the expenditure in each reserve, so that we might have some roads cut through, so that we could go through that country; and so far as I am concerned, in the second district of Washington, I want to say that we are not trying to get back a single stick of timber. We have trouble enough of our own with the timber that is privately owned.

The Clerk read as follows:

Washington National Forest, Wash., $13,130.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word for the purpose of calling attention to the fact that here is one more reserve in the State of Washington just exactly like the three reserves in my district, and to ask how many Members of Congress are there who suspect for a moment that under a provision in this bill which authorizes the building of telephone lines in forest reserves, the Forest Service agents can go into the Olympic Forest Reservation and spend several thousand dollars to put up a line 23 miles long directly in competition with a farmers' line, erected by each farmer himself contributing thereto? Is not that a waste of the Government money? Is there any need of putting

two telephone lines along the same trail where only a few people live?

Mr. COX. Could the Forest Service have made any connection with the farmers' telephone line or got communication in any way with them?

Mr. JOHNSON of Washington. Yes, certainly. Here is a little line 23 miles long, running from two little bits of towns, not connected with any trunk line, and the farmers who put up their money and agreed to contribute $6 a year for service and upkeep ask only that the Government shall pay the price of two telephone instruments, or $12 a year.

Mr. COX. Could the Forest Service have rented any of these boxes?

Mr. JOHNSON of Washington. Of course. But the Forest Service said, You give us free use of telephones or we will put up our own lines, and they not only did put up their own lines, but they went into court and sued these poor farmers, living 20 miles from a settlement of any consequence, for the cost of an eighth of a mile of telephone poles that are not worth as much out there as a few toothpicks are in this Chamber. That is what I call extravagance in the Forest Service. Yes, and worse.

Mr. COX. Can the gentleman put in the RECORD how much that Government telephone line will cost?

Mr. JOHNSON of Washington. I will.

Mr. COX. Approximately how much is it?

Mr. JOHNSON of Washington. I should imagine $6,000 or $8,000. It costs money in that country to build roads or telephones and to open the country. These people who went in there were originally 80 miles from a settlement, and they hauled their supplies in over rough trails and have waited almost a generation for relief to come.

Mr. GOULDEN. Will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. GOULDEN. I ask for information. If the Forestry Service had wanted a connection with the farmers' line, would the farmers have allowed them to connect on reasonable terms?

Mr. JOHNSON of Washington. Yes; the farmers, after many weeks of effort and organization, met and put up their own money and their labor and built 23 miles of telephone line in this forest reserve. One-eighth of a mile of that line ran on the actual reserve itself. This other part was an elimination.

Mr. GOULDEN. And the forest reserve people could have used the line on reasonable terms?

Mr. JOHNSON of Washington. Yes; one-eighth of a mile of the telephone line was actually on the public reserve, as I say, which was a road originally on public lands before there was any forest conservation—a county road, if you please. The first step after the Government got into the quarrel was for the Government to order down the private telephone line which crossed the one-eighth mile of forest reserve originally a public road. The line itself does not get anywhere. The forest rangers got into a quarrel with the people and did not propose to pay $12 for two instruments, or $24 for four instruments, I forget which it was, but they were willing to put up a rival line, reaching from nowhere to nowhere, for the benefit of nobody.

Now, in dispensing the forest money received for sales and for grazing, 25 per cent goes back to the county in proportion to what its area is in the reserve. I have told you that 25 per cent of that amount in one great, big county in my district was about $25 last year. On top of the 25 per cent there is 10 per cent that is floating money. The 10 per cent of that floating money is to be used in the further extension of roads, trails, and other things. It became necessary, after the farmers were so angry and upset over the telephone extension, to placate them. The farmers had already petitioned for that celebrated, so-called "big bottom country" to be opened, and thereupon some rangers or agents of the multitude of people who travel around at the Government expense proposed that some of the 10 per cent money, about $2,000, should be used to build a good road along there.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. JOHNSON of Washington. I ask for five minutes more.

The CHAIRMAN. The gentleman from Washington asks that his time be extended five minutes. Is there objection?

There was no objection.

Mr. JOHNSON of Washington. That brought about a situation so that for a time the farmers were divided as to whether they would like to have a little bit of the "big bottom" land thrown open for more people to come in or sit down and get this $2,000 for building the roads.

Mr. LEVER. Will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. LEVER. I take it, from the gentleman's argument, that he thinks this expenditure in these items is too large—that it is extravagant.

Mr. JOHNSON of Washington. Not a bit of it.

Mr. LEVER. I want the gentleman from Washington to give me warning, so that I can get my cohorts in here, if he is going to offer an amendment to strike out these appropriations or cut them down.

Mr. JOHNSON of Washington. On the contrary, I would move to add three times the amount to the appropriation for every forest reserve in the United States. How can we get along with these trifling appropriations in a district where the forest reserve itself is bigger than a whole State? How can we build roads to travel over to get anywhere? We get no taxes; we do not want the timber. My heavens, we do not want it! The gentleman does not know what it means to have 35 or 40 per cent of a State set aside and be at the mercy of this service. I have dozens and dozens and dozens of letters from men writing me, giving the names of rangers, inspectors, and others who come, one after another, over and over again, looked the lands over, quarreling and reporting as to whether it is timberland or agricultural land; and then come more agents making a geological inspection, with counter reports back and forth, back and forth, until the agents and investigators alone use up, I do believe, actually more of the Government's money than the land will be worth in the next 200 years. I think I know what I am talking about, because I live right on the edge of one of these big forest reserves.

The Clerk read as follows:

Prescott National Forest, Ariz., $4,780.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. I want to say that I will gladly offer an amendment to strike out the appropriation for any reserve in our State, with the single exception of the sum sufficient to protect the forests from fire if the chairman will tell me what that amounts to. We would be far better off if all the other items were taken out.

Mr. LEVER. I would like to say that the gentleman is rather fortunate in waiting until we get through with nearly all the Washington items.

Mr. HUMPHREY of Washington. Well, there is one here now, if the gentleman will tell me what the fire protection amounts to.

Mr. LEVER. I will let the gentleman make his motion, and I will take my own course.

Mr. HUMPHREY of Washington. The gentleman has criticized us because we have not made objection to items as they came along, instead of the Alaskan one. I will tell you why. We did not know much about the rest, but I did know about the one in Alaska. The gentleman can not give us any information about them, neither can any man on the committee.

Mr. LEVER. What does the gentleman want to know?

Mr. HUMPHREY of Washington. Give us the amount of nontimbered land there is in these forest reserves.

Mr. LEVER. I have told the gentleman repeatedly that the Forest Service itself did not know the amount. I told him also that we appropriated $185,000 in this bill to find out, and we began the work only last year. Where was the gentleman and his party when it was in power on this proposition?

Mr. HUMPHREY of Washington. I want to say to the gentleman that it does not lie in his mouth to criticize anybody because they do not object. The Forestry Service does not know anything about it. The reason I did not object to these items is because I was willing to let it go, because I did not know anything about it myself. I objected to the one in Alaska, because the creation of it served no useful purpose.

Mr. LEVER. It was not very convincing.

Mr. HUMPHREY of Washington. No; and it would be a waste of time as to these other items. But I challenge the gentleman from South Carolina to stand up before the House and the country and give one good reason why this Chugach Reserve should be retained.

The Forest Service ought to protect the forest reserves from fire. I hardly think gentlemen ought to criticize me. I did not object to many other items. If I had known that he would consider it a favor I would have objected to one after another. If the gentleman will tell me how much appropriation is needed to protect the particular forest now under consideration from fire, I will move to reduce it to that amount.

Mr. LEVER. I accept the gentleman's challenge and will give him the information he desires, except I tried to make him understand, and I think everybody else in the House understands except the gentleman, that I did not know and the Forest Service does not itself know the exact percentage of nontimbered land within the national forests. Now, the gentleman wants to

know something about this particular forest. Here is the information.

WENATCHEE NATIONAL FOREST.

Area and location. The Wenatchee National Forest is situated in Chelan and Kittitas Counties in central Washington. The gross area is 1,157,000 acres, of which 652,354 acres are publicly owned.

Topography: The topography is extremely rough and rugged, and the mountains (Cascades) are cut by countless streams, forming an important tributary system to the Columbia River to the east. Some bench land occurs along the streams.

Stand: The total stand of timber amounts to 3,715,000,000 board feet. Only a small amount is accessible. Douglas fir and western hemlock are the principal trees. Other trees of importance are yellow pine, western red cedars, and firs.

Purposes: The Wenatchee Forest protects the heads of streams the waters of which are used for irrigation in the Kittitas and Yakima Valleys, famous for their fruit. The danger from fire is great, and it is absolutely necessary that these watersheds be protected, not only on account of the value of the water for irrigation, but also because of the value of the timber embraced within the area.

Does the gentleman want any more information?

Mr. HUMPHREY of Washington. I have no doubt that is the amount necessary for fire protection and——

Mr. LEVER. The gentleman does not move to strike it out.

Mr. HUMPHREY of Washington. Because the gentleman says it is necessary for fire protection.

Mr. LEVER. The gentleman is mistaken when he says the gentleman from South Carolina did not know anything about it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. STAFFORD. Mr. Chairman, I rise in opposition to the amendment offered. My friend from South Carolina could not furnish the desired information; perhaps I can. I would like to inform gentlemen that they expended $141.86 last year fighting fires——

Mr. LEVER. How much?

Mr. STAFFORD. One hundred and forty-one dollars and eighty-six cents.

Mr. JOHNSON of Washington. Will the gentleman yield?

Mr. STAFFORD. I will.

Mr. JOHNSON of Washington. Can the gentleman give me the number of million feet of board timber in the Wenatchee Reserve in the State of Washington compared with the number of feet in the Chugach Range, and then we will compare the expenditures of $9,300 with $16,330?

Mr. STAFFORD. The chairman of the committee did not furnish the information to the committee requested by your colleague, and I desired to supplement that and furnish it.

My purpose in rising was to direct the attention of the chairman to the fact that last year there was carried in this item the sum of $11,330, and there was expended, according to the report of the Secretary of Agriculture, $21,347. In glancing over the other items in this bill I find the department has not been limited to the appropriations carried in last year's appropriations act, but in many instances they are double the amount. I am acquainted with the fact that under the 15-cent limit arrangement the department has that authority, but if it has that authority I would like to inquire what is the basis for the estimates of the department when they are free to increase it at will.

Mr. HAWLEY. Will the gentleman yield?

Mr. STAFFORD. I will if the gentleman is going to furnish information.

Mr. HAWLEY. The reason why some of the items of expenditure appear larger than the authorization of the preceding year was that some of the forests were changed in their boundaries, lands were transferred from one forest to another, and so some were increased in size, and there appears charged to that forest under its name the amount really expended under its present boundaries, which should be taken into consideration.

Mr. STAFFORD. That may be the explanation of the department, Mr. Chairman, but when we consider all these items, we find expenditures in excess and, in some instances, twice the amount, so that is no explanation to this House as to the others; and accordingly I would like to have from the chairman, if he can furnish any explanation as to the basis of the department in furnishing these estimates when they expend usually twice the amount appropriated in the upkeep of the different forest reserves.

Mr. LEVER. I would think that the department bases the estimates upon its general knowledge of the situation and what is necessary for the protection each of these forest units needs and put in what should be used or is likely to be used during the fiscal year for which the estimates are being made. That is the explanation I gave to the gentleman from Illinois day before yesterday. It may be that the Forest Service knows that in a certain forest unit a contract for timber is going to be made, and it will necessitate, of course, the sending in of forest cruisers to mark the timber and make selection, and the like of that.

And knowing that fact in advance, of course they can estimate in advance in the neighborhood of what the expenditure will be.

Mr. STAFFORD. The committee must have given consideration to the need of continuing that interchangeable appropriation of 15 per cent of the total expense for use in any one item.

Mr. LEVER. Yes.

Mr. STAFFORD. Will the gentleman inform this committee as to his committee's opinion whether there is any urgent need for the department having such an omnibus discretion as does away with any limitation on the expenditures for these respective forest reserves?

Mr. LEVER. I would think that is an important provision for the Forestry Service. For instance, 15 per cent of $2000 here in one of these items would be a very small amount of money.

Mr. STAFFORD. If the gentleman will permit, the 15 per cent is not limited to the specific appropriation, but it is 15 per cent of the total of two or three millions of dollars that may be expended on any one project.

Mr. LEVER. The gentleman has an entirely different impression from that which the committee has, then.

Mr. STAFFORD. I read the provision, and I think it bears that construction.

Mr. LEVER. That is not the construction the department places on it, nor the Committee on Agriculture.

Mr. STAFFORD. I am glad to hear that. Then it is 15 per cent of the specific appropriation made?

Mr. LEVER. Yes.

Mr. GOULDEN. Mr. Chairman, I move to strike out the last two words in order to make an observation.

If all the appropriations for the various forest reserves are as properly and honestly made as this one, the committee and the Forestry Bureau are to be complimented. I happen to be familiar with this well-watered and finely timbered reservation. It lies along the Columbia, the Wenatchee, and the Chewawa Rivers in the State of Washington, is the watershed of that great fruit country which lies along the Wenatchee and Columbia Rivers, from which thousands of tons of splendid fruit are shipped each year, and where irrigation is necessary. Therefore I am heartily in favor of this particular item, and wish to say to you that it is an honest, well-thought-out, and deserved appropriation. The home of the big apple, the luscious cherry, the juicy pear is in the Wenatchee Valley, beginning at the flourishing city of Leavenworth and extending eastward for 50 miles. The waters from this famous reservation are required to irrigate these rich producing fruit lands.

Mr. STAFFORD. Will the gentleman from New York [Mr. GOULDEN] yield the balance of his time to me?

Mr. GOULDEN. Certainly.

Mr. STAFFORD. I want to say to the chairman, in view of the query I propounded to him when he stated it was the practice of the department that this 15 per cent allowance is limited to the specific appropriation, that in every instance, I might say, in the expenditures for these respective forest reserves the amount expended by the department was in excess of the 15 per cent, and the bill itself says 15 per cent of the total appropriation may be utilized.

Mr. LEVER. I think the gentleman is reading from the expenditures for 1913.

Mr. STAFFORD. I will take any one item the gentleman sees fit to take, and I will show to him the expenditure is away in excess of the specific appropriation. The authorization of 15 per cent on this great total means millions and millions of dollars, which means no limitation whatsoever on the discretion of the Forestry Service in the expenditure of that 15 per cent.

Mr. LEVER. The gentleman is calculating upon the amount carried in this appropriation bill as one basis, and making his calculation upon the basis of expenditures for 1913.

Mr. STAFFORD. Take, for instance, the one I just referred to; last year's appropriation for the Wenatchee Forest Reserve was $11,330. There was expended $21,347 on that forest reserve, or more than 80 per cent in excess of the specific appropriation.

Mr. LEVER. That was expended the year before. You are not reading the expenditures for the fiscal year 1914, but you are reading the expenditures for the fiscal year 1913.

Mr. STAFFORD. I will get the appropriation act of the year previous, and I think my statement will be confirmed also by that.

Mr. LEVER. The gentleman may be correct, but I do not think he is.

Mr. STAFFORD. If it were not for the fact that in all of these items the expenditures are nearly double the amount of the appropriation, I would not be so positive in my assertion.

Mr. LEVER. I would be glad to have the gentleman look that up.

Mr. STAFFORD. I will be very glad to do so.

Mr. GOULDEN. Mr. Chairman, I withdraw the pro forma amendment.

Mr. BRYAN. Before the pro forma amendment is withdrawn I wish to say that I object to the pro forma amendment.

Mr. GOULDEN. In order to accommodate my friend from Washington, who has given us so much valuable information this morning, I will not withdraw the pro forma amendment now, but yield the balance of my time to him.

Mr. BRYAN. I thank my friend from New York [Mr. GOULDEN].

Here we have an appropriation of $9,330 for the Wenatchee National Forest, and my colleague from Washington [Mr. HUMPHREY] says that if the chairman of this committee would tell him how much of that appropriation is to be used for fire protection he will then move to strike out all the rest of the appropriation, so that there can be nothing done in the forest reserve except such as is coincident with the protection from fire, and that all of the other work is to be laid down.

Now, I want to suggest, Mr. Chairman and gentlemen, that if my colleague were to succeed in putting through an amendment of that kind, and thus wreck the work of the Government in the next fiscal year in that magnificent forest reserve, I doubt very much if my colleague, notwithstanding his geniality, good nature, and all that sort of thing, would be permitted to stay over night in Wenatchee if he were to drop off there after having put through here that particular amendment.

I want to read here a letter with reference to the administration of that forest, a letter that was written on October 21, 1912, to the National Conservation Association. It is as follows:

FERN DELL ORCHARD,
*Lakeside, Wash., October 21, 1912.*

NATIONAL CONSERVATION ASSOCIATION,
*Washington, D. C.*

GENTLEMEN: Your letter of the 5th instant, asking me for honest opinions to certain charges against the national forests and the actual effects upon myself and neighbors of these reserves as now handled. I have no hesitation in telling all I know of any subject that pertains to the public welfare. I will answer the questions as they come by number.

First. The national forest is a blessing to the people within its borders because it affords, provides, and guarantees a supply of fuel, timber, and pasture or range for every resident. It affords us the best fire protection known.

Right now I want to call to the attention of the Members here, as a diversion, that the vast areas of timber in my State, tens of thousands and hundreds of thousands of acres of land, that have passed into private hands out there and are held in private control, do not worry or cause any particular annoyance to these gentlemen. We do not have any rights, public rights, out there in Washington over the areas that have been passed over to the Weyerhaeusers and the railroads. The only rights the public has out there are in these forest reserves. Now I read further:

It prevents the forest cover from being destroyed, thus conserving our springs and water supply, and also keeps our steep hill and mountain sides from erosion. The Forest Service has given us roads, trails, and telephones. It is a detriment only to lawless exploitation.

Second. There is not a natural resource within this (Chelan) forest that is not offered for use and is being used as fast as people can make use of them. Logs for lumber, timbers, electric-light and telephone poles, wood, pasture for great bands of sheep, everything that can be used, is used. Only it is now looked after and the resources are sold, not stolen.

Third. This forest has been dug over two or three times and is being gone over all the time.

Fourth. I have never heard of a mining claim being held up in this reserve, although there are some that should be.

Fifth. Timber, fuel, pasture, is given to the poor man free. The big man, big sheep man, steamboat man, sawmill man, etc., pay for their privileges. Giving the lie direct to that charge.

Sixth. At the risk of being tiresome, I must tell you of our situation here. Lake Chelan is nearly 60 miles long. It is one of the most beautiful pieces of water in the world. The climate is such that you can take a blanket and go camping and sleep on the ground for months. No rain nor dew. Thousands avail themselves of this opportunity every summer. Any man, be he ever so poor, can take his wife and kids in a rowboat and spend as long as he has the time along the shores; but the only camping places, owing to the precipitous shores, are at the mouths of the various creeks that empty into the lake. A few people have raised a big howl because they were not allowed to homestead these places. See? A dozen of these homesteads would sew up the whole thing. These places, all together, would not make a garden, but they would sell to some millionaire, and the few men would practically own the lake. We hope these places will be held for the thousands who need them. Aside from this, homesteads are being taken all the time where there is any agricultural land, and the benefit of the doubt is generally given to the applicant.

Seventh. All the forest officers and men that I have come in contact with have been courteous, polite gentlemen. I have eaten and drank with them, and I have fought fire with them, when for 6 days we put in about 16 hours a day, without very much food or water either. Their work is hard and many times dangerous and their pay is insufficient.

Eighth. I have not met the eastern theorists. The men on the Chelan Forest, from supervisor down, are men raised in this country and have worked up from the bottom in the service here. They know their business, and there are no more sober, honest, and reliable business men in this country. Ask the banks or any business house in this country.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. BRYAN. I ask only two minutes, Mr. Chairman, and I also ask that I may insert the rest of the letter that I do not read.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. BRYAN. I read further:

Ninth. The sheep range is the land way back and up that no settler could use. We have all the range we can use at our doors. All our logs for lumber have been sold to a local mill here. There are no other buyers. Wood is sold to the steamboats, given to the settlers, up to a certain amount.

You may get the idea from this letter that my warm espousal of the Forest Service is because I have profited in some way from the handling of same. I will say my home here was homesteaded long before this was a reserve. I have never even received a cord of wood. I have plenty on my own land, but my neighbors have had favors. We all know and appreciate the advantages of being in the reserve, and we don't want any State handling of it. Much better it would go back as open Government land than to let the State have any hand in it.

I am sure this is the opinion of the great majority of the people in this country, especially of those who live in the reserve. Hoping you will be able to head off any adverse legislation and that the good work will go steadily on, and if I can be of any use you will call on me, I am,

Yours, very truly,

EDWARD F. GAINES.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. MANN. Mr. Chairman, there seems to be a slight difference of opinion among the Members of the House representing the State of Washington. The gentleman from Washington, Mr. HUMPHREY, thinks that the appropriation for the Forest Service ought to be reduced because the administration is too expensive. The gentleman from Washington, Mr. JOHNSON, thinks the appropriations ought to be increased threefold; but it is some pleasure to know that the gentleman from Washington, Mr. BRYAN, is thoroughly satisfied with all that has been done and all that is being done, and with the appropriation.

It is a pleasure to know that some one in Washington or these other States where they have large forest reserves does not have a kick. The fact is, there has been a good deal of criticism of the Forest Service on the floor of the House. The forest reserves are of comparatively recent origin. Complaint has been made that no one knows just how many acres have trees on and how many acres do not have trees on. Yet I dare say that until the end of time that will not be known, because what was true yesterday will not be true to-morrow of those reserves. There is constant addition to the timbered area through the growth of new forests, and loss of untimbered area through its being taken out of the forested area and turned over as homesteads, and other disposition as public lands.

We have not learned all there is to know about the management of forests, but the people of the West, in the locality of these forests, have not yet fully appreciated the fact that the people of the United States believe that those lands belong to the people of the United States, and that if settlers go onto those lands and obtain them, in the main free, because they think they are of value, they must take them upon the conditions which the Government prescribes, and one of those conditions now is that they shall not be permitted to seize the valuable timber on the lands and the valuable forests belonging to the whole people for the exploitation of individuals or corporations.

That policy is thoroughly settled as the policy of our people to-day, in my opinion. While we may make mistakes as we go along, and while we may learn more and more about what forests should be retained, about how timber should be disposed of, we propose to maintain as the right of the people these reserves of our country, and we do not propose to turn them over for private exploitation. [Applause.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. STAFFORD. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. The Chair is of opinion that debate on this paragraph is exhausted.

Mr. STAFFORD. I desire to proceed for five minutes, in order to furnish the chairman of the committee with the information he requested a few moments ago.

The CHAIRMAN. The gentleman from Wisconsin [Mr. STAFFORD] asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. STAFFORD. Mr. Chairman, since the gentleman requested the information as to the difference in appropriations and the amount expended in the fiscal year 1913 I have obtained the appropriation act of 1913, and I will call his attention to the appropriations under that act for the Wenatchee Reservation, in the State of Washington, and the two following ones, and compare the amounts with the amounts expended.

For the year 1913 there was appropriated $8,183 for the Wenatchee; there was expended $21,306. For the White River National Forest, Colo., there was appropriated $12,112, and there was expended $20,429. For the Whitman National Forest, in Oregon, there was appropriated $16,489, and there was expended $32,845.

It goes without saying that these amounts are far in excess of the 15 per cent of the individual items. The authorization as carried in this bill permits the department to spend not to exceed 15 per cent of the general expenses of the Forest Service in any branch of the administration of the Forest Service. The total amount carried in this appropriation act for the Forest Service is $3,500,000, in round numbers. That authorizes the Chief of the Bureau of Forestry to spend $475,000 on any one item without any restriction whatsoever. The reason why I am directing this query to the gentleman is because of the abuse which was made of a similar interchangeable appropriation, not in the Agricultural Department, but in the Post Office Department, by the noted Machen and Beavers. It was the abuses which were committed by those post-office officials some 12 years ago that caused the Post Office Committee that met following those disclosures to eliminate from the appropriation bill a similar interchangeable provision—which up to that date had been allowed to the Division of Salaries and Allowances—to appropriate 5 per cent of the total appropriation for various items to be used indiscriminately in other items.

We found that there could be no limitation whatsoever on the disposition of the public funds. I think we have had a pointed illustration of the abuse in the instance cited by the gentleman from Washington [Mr. JOHNSON], where a ranger was authorized to expend thousands of dollars upon his own ipse dixit for the establishment of a public telephone line when there was a private telephone line in existence that would have given the necessary service, just because of some feigned objection that this forester may have had to the use of the farmer's private line. I think it is a subject that should be brought to the attention of the chairman of the committee. It can not be corrected at the present time. He stated that he and the members of the committee were under the impression that the 15 per cent was limited to one specific item: I call attention to the fact, so that when the committee meets next year they will take it into consideration and will consider whether it is not advisable to take this item that may be subject to abuse, and in the history of other departments has been the subject of the gravest kind of abuses, and correct it.

Mr. LEVER. I will say to my friend that the impression of the committee is that this can not be transferred in the manner which the gentleman suggests, and that that opinion is confirmed by the testimony of the Assistant Secretary, Dr. Galloway, before the committee, that transfers are limited to 15 per cent of the item.

Mr. STAFFORD. Here we have a law which authorizes the Secretary of Agriculture to spend 15 per cent of the amount appropriated under general expenses, which is $5,500,000, and which amounts in this bill to $750,000; and here are these special instances that I have called to the attention of the committee, where the increase amounts to 80 and in some instances to 100 per cent of the amount appropriated for a particular purpose.

Mr. LEVER. That language may be involved, and it may be well to correct it.

Mr. HAWLEY. I ask unanimous consent to address the committee for five minutes.

The CHAIRMAN. The gentleman from Oregon asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. HAWLEY. Mr. Chairman, in reply to the argument of the gentleman from Wisconsin [Mr. STAFFORD] regarding the apparent increases in the items above the amount appropriated, I should like to call the attention of the committee to this situation of the accounting: There is appropriated in the bill a certain amount of money for the payment of supervisors, rangers, and guards and other employees, for other expenses immediately connected with the forests. That is the item to which the gentleman has referred, in the appropriation law of 1912; but in the bookkeeping, in order to render a fair account of all the costs with which any particular forest is to be charged, there is added to that specific appropriation for the forest the proportionate amount of the overhead charge, of the division of the national domain into which it falls. There are six divisions or districts into which the forests are divided, and a proportionate part of the overhead charge in each division is added to the particular amount.

Mr. STAFFORD. Mr. Chairman——

Mr. HAWLEY. Just a moment. Then the proportionate part of the overhead charge of the Washington end of the administration is added. In addition to that, while the language of the act may be broad, yet I asked Assistant Secretary Galloway specifically on that point, and he said he never transferred to any item more than 15 per cent of that particular item. That 15 per cent additional goes into this amount. Then there are certain items that are included in the appropriation for the Forest Service, regarding the special services, the study of trees, dendrological study, silviculture, the growing of trees, making surveys, roads and improvements, and other items. Those are accounted for. All the work done on the forests under those items is counted up and accounted for in the report to which the gentleman refers, to show what that particular forest costs the Government, so that every item of cost that that forest must be charged with is accounted for in this appropriation from all sources. The report from which the gentleman has read does not profess to be a report of the expenditures simply for the men who care for the forest, but it is a statement of all the items with which that particular forest ought to be legitimately charged.

Mr. MURDOCK. Does the gentleman uphold the chairman of the committee in the statement that the 15 per cent is applied to the individual item, and not to the total?

Mr. HAWLEY. I asked Assistant Secretary Galloway if certain items could not be increased over 15 per cent from any large item in the bill, and he said no, that it could only be added to by 15 per cent of the particular item.

Mr. STAFFORD. Will the gentleman yield?

Mr. HAWLEY. With pleasure.

Mr. STAFFORD. I wish to correct the gentleman when he says this appropriation is limited merely to salaries.

Mr. HAWLEY. I never said salaries.

Mr. STAFFORD. I understood the gentleman to say salaries. I wish to call attention to the phraseology—

For salaries and field and station expenses, including the maintenance of nurseries, collecting seed, and planting necessary for the use, maintenance, improvement, and protection of the national forests named below.

Mr. HAWLEY. That language and the preceding paragraph precedes these appropriations, and is the general enacting clause not only for these individual items but for all the items of silviculture, dendrological studies, extermination of insect pests, making roads, surveys, and every other business that the Forest Service carries on.

Mr. STAFFORD. And I have before me the segregated, itemized expenditure for this Wenatchee Forest Reserve. For the fiscal year ending June 30, 1913, we appropriated a total amount of $8,183. The statutory expenditure for salaries on that forest reserve alone was $11,417, or far in excess of the 15 per cent; and as you run across the page, following the various segregated items, you will find that the total of expenditures is away in excess of the 15 per cent.

The CHAIRMAN. The time of the gentleman from Oregon has expired.

Mr. HAWLEY. I should like to have five minutes more.

The CHAIRMAN. The gentleman from Oregon asks unanimous consent that his time be extended five minutes. Is there objection?

There was no objection.

Mr. STAFFORD. While I do not wish to criticize, and it would be far from me to criticize the good faith of the Assistant Secretary, I still believe that the figures and returns of the Secretary of Agriculture showing the itemized expenditures contradict that statement and contradict the exposition made by the gentleman from Oregon [Mr. HAWLEY]. I think it would require further investigation before the gentleman can wipe away the figures which show that double the amount has been expended in many instances.

Mr. MADDEN. Will the gentleman yield?

Mr. STAFFORD. I am talking in the time of the gentleman from Oregon.

Mr. HAWLEY. I will yield.

Mr. MADDEN. The appropriation for the item was $8,000; and how much was the expenditure?

Mr. STAFFORD. Eighteen thousand dollars.

Mr. MADDEN. Well, that is more than 15 per cent.

Mr. HAWLEY. It does not show that that particular explanation is incorrect. Let me go over the matter again. There was authorized for expenditure in each of the forest reserves a certain amount of money. When they came to report on each reserve, in order to make a fair report, of what a given forest has cost the Government, they must charge it with not only the work of the rangers, but a proportional part of the administration in Washington, the administration in the district in which it is, for roads, surveys, improvements, and other expenses, and then, possibly, the 15 per cent must go into that.

Mr. MADDEN. Then the appropriation of $8,000 was simply to pay the rangers?

Mr. HAWLEY. To pay for the rangers and the administration of the forest.

Mr. MADDEN. On the ground?

Mr. HAWLEY. On the ground.

Mr. MADDEN. And all the other general expenses?

Mr. HAWLEY. There is added to this all the items and all the amounts that ought to be charged to it, not only in the field and the items I have mentioned, but for experts that go to the forest to study the extermination of pests, and the other expenses already enumerated.

Mr. MANN. Oh, no.

Mr. MADDEN. If there was $8,000 appropriated for a particular forest, assuming that the $8,000 was to cover the management, what does the management consist of?

Mr. HAWLEY. The $8,000 was to cover the cost of caring for the forests on the ground. Then, there are other appropriations to take care of, like fire protection, and so forth.

Mr. MADDEN. Where does it say so in the appropriation bill?

Mr. HAWLEY. I am talking about the practice of the department.

Mr. MADDEN. The appropriation bill, then, does not tell the truth.

Mr. HAWLEY. The appropriation bill tells the truth, for that is what they get. They can not pay out any money unless the appropriation bill authorizes it, because it has to pass through the hands of the Auditor of the Treasury Department.

Mr. MADDEN. Can I make another suggestion which the committee may take advantage of in making up appropriations for a given forest? That is, that they ought to segregate the items, so much for the management on the ground, so much for overhead charges, everything incidental to the management that might figure during the year.

Mr. HAWLEY. If the gentleman will turn to page 26, at the bottom of the page he will find that from there down to line 20, on page 28, all the purposes that he has mentioned are set forth in general terms, and then follows the items for specific work.

Mr. JOHNSON of Washington. Are there any items there for spreading wire netting over an acre of ground to keep the birds and squirrels from eating up the seeds?

Mr. HAWLEY. There is a provision in the bill for forest nurseries.

Mr. MANN. Mr. Chairman, the item in the bill for the appropriation for the different forest reserves is very explicit and it covers all expenses on each of the reservations except overhead expenses, but you may send into a forest an expert whose salary is carried by some other appropriation. The item reads:

For salaries and field and station expenses, including the maintenance of nurseries, collecting seed, and planting necessary for the use, maintenance, improvement, and protection of the national forests named below.

I do not recall just how the item of expenditure is made up to which the gentleman from Wisconsin has referred, but certainly, if it is made up correctly, it should show the items of expenditure out of this specific appropriation. If they want to guess what the overhead charges are, and it is purely a matter of guess, they can put it in a separate item. If they claim that somebody has gone into the forest under some other item of appropriation, that ought to be specified in the report. We have, for instance, an item of $400,000 for the construction of trails and roads in the forests. Of course, a portion of that may have been expended in this forest; but, if so, the item of expenditure should show whether it comes out of another appropriation and is a special item, or whether it is for the administration of the forest itself.

Mr. LEVER. Will the gentleman yield?

Mr. MANN. Yes.

Mr. LEVER. The statement in the book of expenditures of the department under this item of expenditure shows the ordinary current expenses of timber sale, trespass, grass, fire trespass, water power, and the like of that; fire and other emergency expenditures, permanent improvements, such as roads, telephones, and silviculture, a technical name for the study of forest trees.

Mr. MANN. If they have bunched all those items together in one, they might as well have thrown the thing into the wastebasket, as far as furnishing information is concerned.

Mr. LEVER. Each item that I have read is a separate item, covering a separate amount.

Mr. MANN. How much of that appropriation and expenditure is for the items covered for maintenance of the forest itself on the ground?

Mr. LEVER. Let me read:

Ordinary current expenses, $18,000.

Mr. MANN. What was the appropriation for that purpose?

Mr. LEVER. The appropriation was not set out.

Mr. STAFFORD. Eight thousand one hundred and eighty-three dollars.

Mr. LEVER. The appropriation was $8,180.

Mr. MANN. There can be no question among us arithmeticians that $18,000 is more than 15 per cent above $8,000.

Mr. LEVER. That is very true; but, as the gentleman from Oregon [Mr. HAWLEY] explained——

Mr. MANN. But he did not explain, and that is the trouble.

Mr. LEVER. That could be accounted for, I think, in the overhead charges in the city of Washington.

Mr. MANN. But that is not a part of the overhead charges. In the first place, there can not be more than 100 per cent of the expenditures in the field for overhead charges. That would be to plead guilty to gross negligence and extravagance. You can not make the overhead charges for those forests more than 100 per cent of the appropriation expended in the field.

Mr. HAWLEY. The gentleman is not contending that I made any such statement?

Mr. MANN. I am not contending anything about what the gentleman's statement was.

Mr. HAWLEY. That included all improvements and other matters.

Mr. MANN. But the gentleman from South Carolina [Mr. LEVER] states that the administrative expenses, including the expenses of the forest, were $18,000. That does not include the other special items, which are certainly more than $8,000.

Mr. ANDERSON. But that includes a proportionate part of the statutory roll.

Mr. LEVER. That is what I was trying to bring out.

Mr. MANN. It includes no part of the statutory roll except overhead charges.

Mr. ANDERSON. Oh, yes; it does.

Mr. MANN. I beg the gentleman's pardon. The item of appropriation is for salaries and field and station expenses, including the whole thing for the forest itself. There is no other statutory roll that is charged to that forest.

The CHAIRMAN (Mr. SHERLEY). The time of the gentleman from Illinois has expired.

The Clerk read as follows:

Whitman National Forest, Oreg., $16,790.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word. I want to conclude my remarks in

Mr. JOHNSON of Washington. I conclude my remarks in regard to the general management of the Forest Service by saying I thoroughly indorse all that was said a few moments ago by that careful, cautious, far-sighted Republican leader, the gentleman from Illinois [Mr. MANN]. We people away out West know that conservation is here and here to stay, and that being the case we do want it looked into and taken care of, with full regard to both sides of the question. That is all there is to the problem. I am not talking of the past, but of the present. It does no good to talk of what happened seven or more years ago.

But I submit here is a proposition in bureaucracy. Here is a bureau which is, I feel sure, too big to be handled under a department. That must be apparent. Here is one branch of the Government service which we all expect will pay the people back for every dollar expended, and pay back in millions of dollars, and I ask once more, if this is the case, is it not apparent to the Members that it is a big and terrific task to impose all of the work in connection with this bureau on the Agriculture Committee? One thing more in respect to the charges made here on the floor this very day—and perhaps I was a little confused as to who was running for Senator in the State of Washington and who in the State of Pennsylvania—but what I do want to say in reply to the queries as to why more has not been said in previous Congresses about conservation and the care of the forests. I will tell you why. Except my colleague, Mr. HUMPHREY, where is the Congressman who

has dared to get up and talk about the Forest Service when he knows he will be promptly jumped upon and accused of representing the timber owners?

In this Olympic Forest Reserve there are 15,000 people living, and I believe I am the first man who has come from down in the heart of that country who has dared to talk in an effort to tell the representatives of the people of the United States something about what is happening. It makes very little difference to me whether I am attacked for it or not. I will tell you that the list of names of poor people who have been mistreated out in these forest reserves in my district is as long as the list of dead at Gettysburg, and it is time that somebody with nerve enough got up to say something about it.

Mr. GREEN of Iowa. Mr. Chairman, the gentleman spoke of what we expected to get back from this forest-reserve operation. Can the gentleman give us information as to what we are getting now?

Mr. JOHNSON of Washington. You are not getting anything now; but let us be fair about that. All of this timber belongs to all of the people. Some of the agricultural land should go back to the settlers; but here on the next page there is an item proposing an appropriation for segregation and classification of lands, $100,000. If you want to know how far that will go out in that heavy western country, where the undergrowth is 2 feet thick, step over into the Indian Service and ask what it costs to classify the lands in the Quiniault Indian Reservation for allotment, and you will find that $100,000 will rattle around like 10 cents in a big tin washboiler. It is a mere drop in the bucket and nothing more.

Mr. GREEN of Iowa. I think the gentleman misunderstood the purport of my question. I was not taking exception to his remarks but was trying to get information as to whether we were getting anything back out of this large expenditure?

Mr. JOHNSON of Washington. No; you are not; but you will in the course of fifty or a hundred years.

Mr. COX. Mr. Chairman, $100,000 is a lot of money. Who gets it?

Mr. JOHNSON of Washington. Perhaps the map makers. Who knows? Perhaps it will be divided around among a lot of people who are so classified that I can not recall the divisions; but never mind, they will be working along all the time.

Mr. COX. And doing nothing?

Mr. JOHNSON of Washington. Classifying some lands in a slow way, and after classification is made, we will say, of 25,000 acres, then the geological board will eliminate some of them, and some other board will eliminate some more, and they will make some more maps, and the 25,000 acres will be reduced to 5,000 acres, and then it will be proposed to have a race, a lottery, or something else for hundreds of land-hungry people to rush in and grab the little piece that is left, at expense to themselves and to the Government out of all proportion to what the agricultural lands are really worth.

Mr. COX. Then that $100,000 will probably provide for about 5,000 acres of land?

Mr. JOHNSON of Washington. I did not make that statement. But I will say this: Conservation is a big baby to be taken care of, and not only along this line, but along many others, the country is marching on toward Federal control—actually Federal usurpation, in great measure.

The CHAIRMAN. The time of the gentleman has expired.

Mr. JOHNSON of Washington asked and obtained leave to extend his remarks in the RECORD.

Mr. LEVER. I want to make a further statement, and I would like to have the attention of the gentleman from Wisconsin and the gentleman from Illinois, in reference to this forest in Washington, as to the way in which expenditures are made and to give some reason for the expenditures being larger than the appropriation. I hold in my hand a statement of expenditures of the Department of Agriculture, and if the gentlemen will turn to page 29, fourth line from the bottom, they will see that for this Wenatchee Forest there is an expenditure of $11,417.49 in the way of statutory salaries and $3,598 from the lump fund.

Mr. STAFFORD. What is the lump sum, may I inquire?

Mr. LEVER. Under the general expense item of the Forest Service.

Mr. MANN. Oh, no.

Mr. LEVER. Oh, yes.

Mr. MANN. That is a specific item.

Mr. LEVER. A specific item, known as the lump fund.

Mr. MANN. It is an item of appropriation for the forest.

Mr. LEVER. Yes. This contains $327.23 for transportation; $554 for meals and lodging; $1,347 for wages; $84 for subsistence supplies and $1,494 for materials and equipment; $310 for freight, express, and drayage; $33.59 for advertising; $91.91 for telephone and telegraph; $42.75 for miscellaneous supplies and services and $300 for rent; $2.30 for furnishing heat, light, and so forth; fuel, no charge at all; $250 for forage, stock feed——

Mr. STAFFORD. The gentleman is reading one line above the right line.

Mr. LEVER. Well, that brings out the thought.

Mr. STAFFORD. Does the gentleman mean to say that all other than the statutory amount for salaries is paid out of the segregated items carried in the appropriation act?

Mr. LEVER. I beg the gentleman's pardon.

Mr. STAFFORD. Does the gentleman mean to say that all the items other than the first, for salaries, which is paid out of the statutory amount, were paid out of the appropriations for the segregated items of the Forest Reserve Service?

Mr. LEVER. Yes; I think so.

Mr. STAFFORD. I will just call the attention of the gentleman to this fact. I also examined this before the gentleman replied. I am acquainted with the figures of the total amount which the gentleman says is $21,347. The amount of the statutory salaries is $11,417, the amount as given by the gentleman, leaving a balance of $9,930. The amount appropriated for the fiscal year 1913 for this reserve is $8,183. Fifteen per cent is $1,200, which makes the amount $9,380, $600 in excess of the 15 per cent allowance, so the gentleman will have to make some further allowance, though I will say frankly to the gentleman that his explanation to the committee has informed me of something of which I was not advised when I first took the floor, that as to this total expenditure for this forest reserve there is included an aliquot portion of the departmental expenses. In that connection I wish to say out of the total appropriation of $21,347 charged up to one item—one reserve—there is an expenditure of more than one-half for departmental expenses here at Washington, or $11,417, and that is the case as to other reserves, going right down the line.

Mr. LEVER. No; not necessarily in Washington.

Mr. HAWLEY. Rangers' salaries are charged in.

Mr. STAFFORD. It seems to me a very large amount that should be specifically accounted for.

Mr. MANN. Will the gentleman yield?

Mr. LEVER. I will; but before the gentleman from Illinois starts let me say further I have had the clerk of the committee call up the Forest Service and make inquiry about this 15 per cent clause, and they say that it relates to the item and not to the total appropriation, and this difference about which we have been speaking is accounted by this explanation I have tried to give.

Mr. MANN. Now the only service which can be rendered on the statutory rolls are supervisors and rangers, clerks, draftsmen, carpenters, machinists, messengers, and charwomen. I suppose they do not have any charwomen at these forest reserves. I should hope not. I do not believe they have messengers out there.

Mr. LEVER. But I understand, however, that they do not have——

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. I ask that the gentleman may have two minutes more.

Mr. LEVER. I do not object, Mr. Chairman.

Mr. MANN. Now, I do not believe they have supervisors or deputy supervisors, or rangers or deputy rangers——

Mr. LEVER. Yes.

Mr. MANN. But it seems like a very large sum of money to pay the supervisors and rangers, more than the entire cost of the appropriation for the forest reserve itself.

Mr. LEVER. I confess to the gentleman it does look large to me.

Mr. ANDERSON. I want to call the gentleman's attention to the fact that of this statutory roll, $1,570,000 was spent outside of Washington, as the Book of Estimates shows.

Mr. LEVER. Yes. I called attention to that the other day.

Mr. MANN. I understand.

Mr. LEVER. I say very frankly to the gentleman that it does look like a disproportionate amount of overhead charges.

Mr. MANN. I would not call them overhead charges.

Mr. LEVER. Statutory charges, then.

Mr. MANN. I would not call them overhead charges, and say that it is the salary of the rangers and supervisors. They are in the field.

Mr. LEVER. Of course, the gentleman must understand that this is rather a large forest and very likely to take a good-sized force to administer it.

The Clerk read as follows:

Wyoming National Forest, Wyo., $7,170.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word, so that I may call the attention of

the gentleman from Indiana [Mr. Cox], whom I know to be a very good Treasury watchdog and a good observer also, to the fact that I hope he will never find it necessary to go out into the far western States and endeavor to take up a homestead on a piece of eliminated land that has been taken out of the forest reserve at considerable expense, with agents here and there, and then find himself trying to hold that piece of land, and, as a poor western farmer, witness a battle between the forest ranger of the Agricultural Department and a special examiner of the Land Office, one supported by the Department of the Interior and the other by the Department of Agriculture, and then let him decipher, if he can, after one year, what the mess of correspondence means, and he will see that the price has been spent more than a couple of times over and what chance he has.

Mr. COX. I think the gentleman is undoubtedly right; but he need not worry, as he is not going to catch me in that kind of a trap.

Mr. JOHNSON of Washington. We need the gentleman out there for a citizen. We need gentlemen with backbone.

Mr. BRYAN. I will say to the gentleman that we do not need them in Seattle, as we have plenty of men with backbone and nerve out there.

Mr. JOHNSON of Washington. Yes; as was evidenced by the recent election out there in Seattle.

Mr. BRYAN. And I guess that you celebrated the victory.

Mr. JOHNSON of Washington. I will, my friend, together with Seattle's greatest majority.

Mr. MADDEN. I would like to ask the gentleman from Washington how much it costs to supervise and segregate land put to agricultural uses?

Mr. JOHNSON of Washington. Often much more than it is worth. In an upland, where the land is rough and hard, I would not advise anyone to go on it for a living.

Mr. MADDEN. Can the gentleman give an idea of what it costs? I hear him criticizing the department.

Mr. JOHNSON of Washington. I can not say, but I think about $20.

Mr. MADDEN. An acre?

Mr. JOHNSON of Washington. Yes.

Mr. MADDEN. What is the regular charge for the Government?

Mr. JOHNSON of Washington. Do you mean in the Department of the Interior or in the Department of Agriculture?

Mr. MADDEN. I mean the lands for settlement that are owned by the Government.

Mr. JOHNSON of Washington. I think $10 an acre.

Mr. MADDEN. If the Government gets only $10, and it costs the Government $20, how much does the Government pay?

Mr. JOHNSON of Washington. It is not different from a good many other expensive Government operations. We are coming rapidly, I am afraid, to a form of Federal usurpation, where the Government will have to do it all for this citizen, that citizen, big and little.

Mr. MOORE. What will it do for us in Pennsylvania, where we pay for our own forest reserves?

Mr. JOHNSON of Washington. The Government now has the mountain tops, I take it, in Pennsylvania. Our people out in the State of Washington, where we get as low as $25 per county in lieu of taxes, for as much as half the area of a county, while you have got your mountain tops laid by and paid for in cash by a generous Government. What is more, the 5 per cent you get in lieu of taxes this bill is going to give you 10 per cent.

Mr. MOORE. The gentleman does not seem to be satisfied with the Forestry Service out in his own State?

Mr. JOHNSON of Washington. Of course we are not satisfied.

Mr. MOORE. And that is due to certain conditions of which the gentleman does not approve?

Mr. JOHNSON of Washington. Yes.

Mr. MOORE. Would the gentleman like to see that applied to Pennsylvania, a State in which we have a million acres paid for by ourselves? Would the gentleman from Washington load on the State of Pennsylvania what he does not want?

Mr. JOHNSON of Washington. If you will take care of my good conservationist friend Pinchot and keep him so busy attending to public duties that he can not fill up the libraries and the magazines with dream-book conservation, you will do the rest of the country a favor. Some day you may cry out that your State has been pot shotted by Pinchot.

Mr. MOORE. The gentleman leaves me in doubt whether I am listening to an eloquent speech in the House of Congress or to the reading of a lurid magazine article on conservation.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOORE. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] moves to strike out the last word.

Mr. MOORE. I wanted to ask the gentleman who has just taken his seat whether the candidate for Senator in Pennsylvania is the gentleman from Washington or the gentleman from New York?

Mr. JOHNSON of Washington. I can not go into the politics of the Eastern States, but I will say this: Let me tell you this in regard to conservation——

Mr. MANN. Mr. Chairman, I do not desire to interfere, but I am going to make a point of order.

Mr. MOORE. I wish the gentleman would reserve it. The gentleman is always generous in matters of this kind.

Mr. MANN. We are not making progress on this bill by the discussion of politics in Pennsylvania.

The CHAIRMAN. The point of order is sustained. The pro forma amendment will be considered withdrawn. The Clerk will read.

The Clerk read as follows:

Additional national forests created or to be created under section 11 of the act of March 1, 1911 (36 Stats., 963), and lands under contract for purchase or for the acquisition of which condemnation proceedings have been instituted for the purposes of said act, $77,590.

Mr. MANN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] moves to strike out the last word.

Mr. MANN. I understand this is for the Appalachian forests—the care of them?

Mr. LEVER. Yes.

Mr. MANN. It does not cover any land that has already been acquired. Has not some land been acquired?

Mr. LEVER. I will ask the gentleman from Georgia [Mr. LEE], who is a member of the commission, to answer the gentleman's question.

Mr. LEE of Georgia. I will be very glad to answer that question. In the year 1912 the commission acquired 287,698 acres. In the year 1913 the commission acquired 713,415 acres, and I think by the end of the present fiscal year something like 250,000 acres will be added to that amount.

Mr. ANDERSON. The Government has not title to that amount yet?

Mr. LEE of Georgia. No.

Mr. COX. What States will that be in?

Mr. LEE of Georgia. In Georgia, South Carolina, North Carolina, Tennessee, Virginia, Vermont, New Hampshire, and Maine.

Mr. COX. Does it represent the virgin forests?

Mr. LEE of Georgia. Yes; largely.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] moves to strike out the last two words.

Mr. HUMPHREY of Washington. I want to call attention to the fact that when what is called the Weeks bill was being debated here in the House we were solemnly informed from time to time that the land purchased under that act would not cost more than 50 cents an acre——

Mr. MADDEN. And that much of it would be given.

Mr. HUMPHREY of Washington. Yes; and that much of it would be given to us. I find from the report of the National Forest Preservation Commission, on page 2, that it costs us $5.07 an acre.

Mr. HAWLEY. Does the gentleman mean that it costs that much to maintain?

Mr. HUMPHREY of Washington. No. The purchase price of it was that. Now, I want to call the attention of the committee to an item that is even more interesting than that. I find, in looking at the detailed statement of the expenses of purchasing this land, that it cost 22 cents out of every dollar to purchase lands that everybody wants to sell us, lands that everybody is anxious and willing that we should take. This merely illustrates the extravagant and incompetent methods of the Forest Service again. It takes 22 cents out of every dollar to pay the expenses of investigating the lands we are about to purchase.

Mr. LEVER. The gentleman ought to be fair enough to make it plain in the RECORD that the Forest Service does not buy a foot of this land.

Mr. HUMPHREY of Washington. I know it does not, but I am holding right here in my hand a statement of the salaries paid for examining this land. The Forest Service employees received the most of it, and it amounted to $100,710. They are the ones that contract these expenses. They send men out to examine this land, and it costs as much as the land is worth for them to make the examination.

I call attention to a further fact showing the incompetence and extravagance of this Forestry Bureau.

Mr. LEE of Georgia. Mr. Chairman, I want to call the gentleman's attention to the fact that we have appropriated about $4,000,000 for additions to the forest areas and have expended $100,710 in doing it.

Mr. HUMPHREY of Washington. I hold in my hand the report of the Secretary of War, and if he is correct in the statement made here, in the year 1913 $884,309.95 was expended, and of that sum $723,999.75 was for land; the rest of it was for expenses. If my figures are correct, that is 22 per cent. I may have made a miscalculation, but I do not think I have.

Let me give you some other illustrations of how incompetent this Forest Service is. I find that we have public lands to the amount of 700,000,000 acres under the control of the General Land Office. They can administer those 700,000,000 acres, take care of it, make their surveys, look after the settlers, and everything connected with it, and it costs $2,356,000 a year to do it. The Forest Service, on the other hand, looks after 163,000,000 acres, and it costs $5,500,000 to do it. That is the difference between the two bureaus.

Mr. LEE of Georgia. The gentleman understands that in purchasing these lands in the beginning there are extraordinary expenses. For instance, the geological people have to go on it and make a full report. Then the forestry people, the experts, go on and count the timber, and then the title has to be looked into.

Mr. MANN. And then the survey must be made.

Mr. LEE of Georgia. The survey is made, and a great deal of legal talent must be employed in procuring title. Of course the expenses are greater at first than they are later.

Mr. HUMPHREY of Washington. But, unfortunately for that comparison, I am using the last figures. I am quoting the figures of 1913.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HAWLEY. Mr. Chairman, I move to strike out the last three words.

The CHAIRMAN. The gentleman from Oregon [Mr. HAWLEY] moves to strike out the last three words.

Mr. HAWLEY. I want to say a word, as a member of the commission, in regard to the purchase of these lands. Great bodies of land are offered to us from time to time, but in making up the areas that are easy and economical of administration we must add to those that are offered, so that the bodies will lie together as compactly as possible.

Of course, the men who offer the lands—all the lands in the East here that we are buying are in private ownership—desire to get as large a price for their land as they can, and they make representations that they think, I suppose, are fair as to the value of their land. If we took the lands on the basis of the valuation at which they are offered to us, the total amount expended for the lands purchased or authorized to be purchased would be very largely in excess of the amounts we actually pay.

Under the provisions of the Weeks law, as soon as any area is offered or the commission has decided upon areas in which it will make purchases, and upon the character of the land that we desire to purchase, the Forest Service officials are authorized and instructed to go down there and examine the land and ascertain just the kind and character of timber there is on it, the value of the soil, and the different values of timber on cove and slope and ridge.

So that when they come back to us with their report we have a detailed report of everything on those areas above 8 inches in diameter, breast high, estimated at its commercial value, and a general summary of the value of timber on the land below 8 inches in diameter, the minerals and all the other values that may be in the land, including the value of the soil. As a member of the commission I would not buy land for the Government unless I had information, as adequate and competent as possible, as to what the land was worth; and while, as the gentleman from Washington says, it does cost something to make these surveys of the character of the land, counting the trees and making the geological survey, to determine whether under the law it is suitable for purchase, and then to make surveys of the exterior boundaries of the land and to ascertain prices paid in the several localities, yet I believe it is a proper and necessary expenditure. We do not buy the land on surface surveys, but on horizontal surveys, such as it is the practice to make on western lands. The amount per acre that it has cost the Government to make these surveys has, in my judgment, been saved many times over, in comparison with what we would have had to pay for the land if we had taken it at the valuation of the parties offering it or at the valuation of somebody we might have appointed as a purchasing agent.

Mr. MANN. Or on the acreage they have given.

Mr. HAWLEY. In some cases the acreage has been reduced thousands of acres—10 per cent, as I recall it, in one instance—so that this is a necessary and valuable expenditure, and I think the cost per acre, taking into consideration the amount of work done and the information collected, is not excessive; and if anything, I would insist upon its being more thorough than less thorough.

Mr. HUMPHREY of Washington. Will the gentleman yield for a question?

Mr. HAWLEY. Yes; with pleasure.

Mr. HUMPHREY of Washington. The gentleman is familiar with timber lands in our country, where it is much more difficult to examine the land than it is in the part of the country where the land under consideration is located. I will ask the gentleman if he thinks it would be a reasonable expenditure for a private party who contemplated purchasing land to expend as much as 22 per cent in the examination of the property? Under the circumstances I suppose it is probably all right in this case, and no more than it ought to be, but does not the system make it extravagant? My first impression is that it is absurd to talk about expending 22 cents out of every dollar for the purpose of examining to know whether we want to purchase or not.

Mr. HAWLEY. I take it for granted that the gentleman has stated the computation correctly; but if the gentleman has examined some of these southern areas, as I have, he will find a great difference in looking over land here and in the West. In the West the timber stands comparatively even over a large area. Here we have cut-over areas, areas which have been partly cut, areas in which certain trees, like the poplar or tulip, have been cut out.

Mr. HUMPHREY of Washington. Certain varieties?

Mr. HAWLEY. Where certain varieties are cut out, and where certain varieties of very large trees, apparently good timber, have no commercial value in the territory where they are located. There are many questions involved in the examination of land here that would not be involved in the examination of land out in the western country.

The CHAIRMAN. If there be no objection, the pro forma amendment will be considered as withdrawn, and the Clerk will read.

The Clerk read as follows:

For the selection, classification, and segregation of lands within the boundaries of national forests that may be opened to homestead settlement and entry under the homestead laws applicable to the national forests, $100,000.

Mr. MANN. Mr. Chairman, I move to strike out the last word. I did not know but some gentleman would move to strike out this item, in view of the fact that one gentleman stated awhile ago that it cost about $25,000 to survey 2,000 acres of land. If it really costs $25,000, in the matted undergrowth of Washington, to open 2,000 acres of land to homestead settlement, it seems to me that that is rather an extravagant expenditure, and I think any gentleman who believes that ought to move to strike out this item.

Mr. JOHNSON of Washington. I move to strike out the item.

Mr. LEVER. I was anticipating that the motion would be made.

The CHAIRMAN. The gentleman from Washington [Mr. JOHNSON] moves to strike out the paragraph.

Mr. HUMPHREY of Washington. I want to say just one word in reply to my distinguished friend from Illinois [Mr. MANN] about the expense of examination of land in our State. I have never had any personal experience, but I was talking the other day with a man connected with the Indian Service, and he was talking about making an examination of the land out on an Indian reservation in the district of my colleague [Mr. JOHNSON of Washington]. It is not a very large Indian reservation, but he told me it would take two years to examine the timber.

I wish once more to refer to the transaction where the Northern Pacific Railroad, for 240,000 acres of practically worthless land, land without valuable timber on it, was permitted to select an equal number of acres of the finest timberland then owned by the Government. This is the exchange that was made when Mr. Gifford Pinchot was chief forester. I refer to it again to call the attention of the committee to a very interesting letter I received upon the subject.

This letter reads as follows:

POLSON, MONT., June 5, 1913.

Hon. WILLIAM E. HUMPHREY,
*House of Representatives, Washington, D. C.*

DEAR SIR: I was very much interested in reading your resolution calling for investigation of the Forest Service, printed in the CONGRESSIONAL RECORD of the 29th ultimo.

I am familiar with the lands in the Lewis and Clark and Flathead National Forest Reserve. I have been over considerable of the most

tains within the 50-mile limit of Northern Pacific lands, and personally know that the land in the Swan Range and Main Range of the Rocky Mountains in Flathead and Missoula Counties is absolutely worthless, with the exception of the Swan River Valley, which contains very good merchantable timber, but is only a very small territory compared with the vast area of mountainous lands which are not worth 10 cents per acre; and in lieu of this worthless land the Northern Pacific Railroad was permitted by the Forestry Department to select the very best yellow-pine lands in western Flathead County, which at that time embraced all of now Lincoln County as far west as the Idaho line, and north to the Canadian boundary line, a territory almost as large as some of the Eastern States.

I have been over considerable of this area, and have estimated the timber, while in the employ of the Julius Neils Co., one of the large lumber companies of the Northwest. I find a large portion of this vast territory that contains on an average of 10,000,000 feet to the section, and extending for miles and miles, where you can drive over with a buggy, there being no underbrush—only fine, large pine trees—and the land is gently rolling and is agricultural in character when the timber is removed. I find, further, that pretty soon after this land was selected by the said company and approved by the department, a very large tract was sold to the Big Blackfoot Lumber Co., whose headquarters is at Bonner, Mont., in Missoula County; and when the said transfer was made the deed was recorded in Kalispell, Mont., and the clerk's and recorder's fees amounted to over $2,000. A very large portion of this land is yet owned by said railroad company, and I can furnish proof satisfactory to satisfy any impartial committee that this land did not cost the railroad company to exceed 25 cents per acre, as the land they held in the national forest was not worth that amount; and now the lands selected in lieu thereof are worth on an average of $30 per acre. I am willing to appear before the congressional committee and furnish all the information necessary to establish the facts as I have outlined them here in this letter; at Kalispell I can get a copy of the records or list of Northern Pacific lieu lands and can furnish also an approximate estimate of the timber on these lands.

I know positively that the valuable timber now held in the Lewis and Clark and the Flathead Forest Reserves is held in the interest of the big lumber companies. In the year 1907 I made a trip up the Swan River Valley in the National Forest Reserve with the manager of the Julius Neils Co., who were at that time investigating the timber in this particular territory with the object of purchasing same. We examined the river, with reference to driving logs, and estimated the cost of logging the country; and since that date I have observed that, under the rulings of the Forestry Department, no one person or corporation of small capital can purchase timber from the National Forest Reserve, and that it has been absolutely reserved and intended to be sold to the large lumber companies.

Very respectfully,

FRANK C. BAILEY,
*United States Commissioner, Polson, Mont.*

Mr. BRYAN. As I understand it, the paragraph to be stricken out is the one providing $100,000 for the selection, classification, and segregation of lands within the boundaries of national forests that may be opened to homestead settlement and entry under the homestead laws applicable to the national forests.

Mr. LEVER. Yes.

Mr. BRYAN. I am opposed to striking out that paragraph. For my part, I am perfectly willing to eliminate from forest reserves land that ought to be eliminated. I am perfectly willing to vote money to be used for the purpose of segregating real agricultural lands, but what I oppose is this wholesale elimination without a survey, without careful study, and without proper computation, that results in the timber barons and in land speculators getting large tracts of land to hold and use for speculation, and for purposes of that kind. I am surprised at any gentleman who comes, as my colleague does, from a State that has a number of forest reserves should object to money being appropriated to be used in this careful, scientific way for ascertaining what land is necessary to be eliminated.

Mr. JOHNSON of Washington. If the gentleman will yield to me for an interruption, I desire to say that if this is stricken out, it is my purpose to offer an amendment making the sum at least $300,000, so that some business can be done along the very lines my colleague has suggested, and which I heartily indorse.

Mr. BRYAN. Mr. Chairman, if the gentleman is really acting on a well-laid plan, then I must insist that there is something wrong with his planner. If he really made the motion without understanding it, or without intending to do what the motion would do, then, of course, I would be glad to eliminate my remarks and let him withdraw his amendment; but for him to move to strike out a paragraph providing $100,000, because by some kind of circumlocution and jiu jitsu he proposes later on to move to insert another paragraph in its place, containing an appropriation three times as large, is a method of parliamentary procedure and legislative legerdemain that I can not comprehend. I am opposed to the amendment, and hope it will be defeated.

Mr. LEVER. Mr. Chairman, I ask for a vote.

Mr. JOHNSON of Washington. Mr. Chairman, if it is not too late, I ask unanimous consent to withdraw my amendment and modify it.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to be permitted to withdraw his amendment and modify it.

Mr. JOHNSON of Washington. By striking out "$100,000" and making the sum "$300,000."

The CHAIRMAN. By striking out the figures "$100,000" and inserting "$300,000."

Mr. BRYAN. I hope there will be no objection to that.

Mr. LEVER. I object.

Mr. ANDERSON. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ANDERSON. I desire to ask if the gentleman is required to have unanimous consent in order to withdraw his amendment?

The CHAIRMAN. The Chair thinks he is. The question is on the amendment offered by the gentleman from Washington.

The question was taken, and Mr. LEVER demanded a division.

Mr. HUMPHREY of Washington. Mr. Chairman, if we are going to waste time in this way I will make the point of no quorum. If time is going to be wasted in this way, you will keep a quorum here for the rest of the time this bill is under consideration.

Mr. LEVER. The gentleman from Washington can not frighten the chairman of the committee.

The CHAIRMAN. The gentleman can not interpose in that way when the House is dividing. Those in favor of the amendment will rise and be counted.

The committee divided; and there were 2 ayes and 52 noes.

So the amendment was lost.

The CHAIRMAN. The gentleman from Washington makes the point of no quorum, and the Chair will count. [After counting.] One hundred and nine Members present, a quorum, and the Clerk will read.

The Clerk read as follows:

For fighting and preventing forest fires and for other unforeseen emergencies, $150,000.

Mr. STAFFORD. Mr. Chairman, I move to strike out the last word. I want to obtain some information concerning a proposition that may have been submitted to the committee as to the appropriation of $100,000 to be expended in various States in cooperation with the States in the suppression of forest fires. On February 5 last I received a letter from the Wisconsin State forester, Mr. Griffith, requesting me to favor an appropriation of $100,000 for that cooperative purpose. The item under consideration does not extend to those projects, I understand.

Mr. LEVER. We carry a separate item for that. The gentleman will find on page 66 that the committee allowed the Secretary's estimate of $100,000.

Mr. STAFFORD. I replied to the State forester that I was not in favor of imposing on the National Government burdens that should be borne by the State, but I see the committee took a different view, and believes in appropriating money purely for State purposes. When the item is reached in the bill I shall have something to say on that project. I withdraw the pro forma amendment.

The Clerk read as follows:

For the purchase of tree seed, cones, and nursery stock, for seeding and tree planting within national forests, and for experiments and investigations necessary for such seeding and tree planting, $165,640: *Provided*, That hereafter the Secretary of Agriculture may procure such seed, cones, and nursery stock by open purchase, without advertisements for proposals, whenever in his discretion such method is most economical and in the public interest and when the cost thereof will not exceed $500.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. I want to call attention to the fact that, according to the statement of the Forester, it cost $11 for every acre they have planted, but only one acre out of two survive, so it costs $22 for every acre planted. They invest $22, and 50 years hence they get an acre of land that is worth, the way they have been administering the national forests, 16½ cents. After waiting for 50 years they get an acre of land they cut a cent's worth of timber from a year. If the $22 had been invested at 6 per cent, it would amount to about $98. If there was ever a farce and an extravagance for which there is no justification, then this so-called seeding and planting of forests is one. I would like to ask the chairman of the committee what is the amount—how many acres have been planted within the 15 or 20 years that the service has been trying it?

Mr. LEVER. I will read to the gentleman from page 28 of the Forester's report:

The reforestation work covered 29,446.02 acres, of which 23,777.73 acres were sown and 5,668.29 acres planted, at average costs per acre of $4.04 and $11.14, respectively. The total expenditures during the year for seed, nursery stock, equipment, and labor were $159,300.13. Douglas fir was used on over 10,000 acres, western yellow and western white pine on over 7,000 acres each, and lodgepole pine on over 2,000 acres, making over 92 per cent of the entire area; on the remainder a large number of other species were planted in small quantities. The work was distributed among the different States, as follows:

And then follows a list of the States which I presume the gentleman does not want.

Mr. HUMPHREY of Washington. The purpose I had in mind was to find out whether the cost had been reduced since 1912, when the Forester gave it as $11.05 an acre. He further states that one-half of it only survives—only 1 acre out of 2 lives. So it costs $22.10 to plant these trees, and then you have to wait on an average, I suppose, 50 years before you can make any return, and if they cut it at the same rate they do now it will return the magnificent sum of 6 per cent on a valuation of 16½ cents per acre.

Mr. MANN. I would like to ask either one of the gentlemen to which expenditure he refers, the planting of trees or the reseeding?

Mr. HUMPHREY of Washington. It costs $11.05 for planting, and the seeding is considerably less.

Mr. MANN. Does either gentleman know whether they take the raw ground to plant the trees, or do they prepare the ground?

Mr. LEVER. They sow the seed frequently.

Mr. MANN. Sowing the seed would not cost 25 cents an acre. The planting of an acre of young fir trees would not cost over $1.25 or $2 possibly an acre. The planting of a small tree is a simple operation. You push down your foot and pull it out and the tree is planted. I have planted thousands of them.

The Clerk read as follows:

For other miscellaneous forest investigations, and for collating, digesting, recording, illustrating, and distributing the results of the experiments and investigations herein provided for, $40,160.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. I do so for the purpose only of calling attention to the difference in the administration by the State of Washington and the Government of their forests in our State. Mr. Gifford Pinchot, in an article in Pearson's Magazine of May 19, 1913, states that the State of Washington up to the time of which he writes had received from forest service $115,205. Of course, like they always do, he tells us that some time we are going to get an amount equal to our loss of taxes. I called the attention of the House to the fact some time ago that if we were to tax timber in the forest reserves in our State at the same rate we tax private timber we would get between five and seven million dollars. The State of Washington has about 2,000,000 acres of timberland and the Government has 12,000,000 acres of timberland in our State. I am not especially complimenting the conduct of the State forest service, but out of the 2,000,000 acres there are about 666,000 in the national reserves that the State is permitted to use. Yet the State has already accumulated a fund of $12,000,000 from that part of the 2,000,000 acres it has been permitted to handle. The Forest Bureau, which has 12,000,000 acres, makes $14,500 a year. That is the difference between the two.

If the forests in my State were properly administered they would pay the entire expenses of the Forest Service, great as it is to-day, amounting to something over $5,500,000, and at the same time pay into the National Treasury from $2,000,000 to $3,000,000 a year. I cited the illustration of British Columbia, where their forests make net the sum of $3,000,000 a year. The people of the State of Washington are asked to be very thankful because the Forest Service can take one-third of our State and keep it out of taxation and sell timber off it at the rate of 1 cent an acre, because they so run it that they would cut over it once in 35,000 years, if they continue at their present rate, and because we receive the munificent sum from it of $14,500 a year. That is what we get for all this vast amount of land that is taken out of taxation.

Mr. PAYNE. What does the gentleman mean by taking it out of taxation?

Mr. HUMPHREY of Washington. I mean it is not taxed.

Mr. PAYNE. Does not the gentleman know it belongs to the United States Government, and why should it be taxed?

Mr. HUMPHREY of Washington. I suppose the gentleman knows I am saying what the tax would be if taxed the same as private holdings. Why is not that timber worth as much to the Government, if properly controlled, as to anyone else?

Mr. PAYNE. When the gentleman talks about mismanagement that is one thing, but he always winds up with the statement that it is not taxed for the benefit of his State.

Mr. HUMPHREY of Washington. Because the Forest Service, as well as Mr. Pinchot in his article referred to, has repeatedly promised that if we will just be patient the 25 per cent we get from the sale of the timber on the forest reserves will take the place of what the tax would be if we were given control of the reserves.

Mr. PAYNE. I do not know what Mr. Pinchot has to say about that. He has nothing to do with it.

Mr. HUMPHREY of Washington. In other words, I am making this point, that if the State of Washington could control that timberland, or if private parties controlled it, it would be worth, without in any way decreasing the original amount, cutting only the natural increase, between $5,000,000 and $7,000,000 a year.

Mr. PAYNE. And in spite of that the gentleman voted to build a railroad in Alaska to be run at Government expense.

Mr. HUMPHREY of Washington. That is to be within a forest reserve.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. BRYAN. Mr. Chairman, my colleague has made this statement repeatedly. He made practically the same statement in a magazine article, published in American Industries:

Their records in the State of Washington demonstrate that during the last 10 years they took $75,000,000 and gave in exchange $115,000.

The gentleman has asserted that if the timberland in the forest reserves were taxed in our State, our State would get the munificent sum of $75,000,000, whereas we have gotten only $115,000 from the Forest Service. Seven million five hundred thousand dollars a year that we would get in the State of Washington for taxes, if the timber were only in private hands, if only the big timber barons owned that land instead of Uncle Sam. I have here the record of the meeting of the Tax Commission of the State of Washington in 1912. The State taxes for general purposes under the whole tax levy amounted to $5,819,449. That was apportioned among the several counties of the State. The taxes on the railroads, on the timberlands, on the farm lands, on the banks, on the buildings, on the street railways, on the live stock, on the merchandise in the stores, on the mills, on the factories, on the mines, on the newspapers, on the steamboats, on all the franchises, and on all the property of the State of Washington combined amounted to only $5,819,447, and yet my colleague repeats, and has repeated it twice on the floor to-day, and has published it in this magazine article some months ago, that if this timber had been in private hands—in other words, if the Weyerhaeusers owned it, or the Polsons owned it, or if the big timber mills down there at Aberdeen, in the district of my colleague [Mr. JOHNSON], only owned it—we would get $7,500,000 a year extra. But the figures show that the combined taxes levied by the State tax commission for all purposes for 1912 was less than $6,000,000.

Mr. MANN. Will the gentleman yield for a question?

Mr. BRYAN. I will.

Mr. MANN. All the taxes raised in the State of Washington for public purposes are less than six millions, as stated by the gentleman?

Mr. BRYAN. I am speaking of State taxes.

Mr. MANN. The gentleman does not include county taxes?

Mr. BRYAN. I am not talking about county taxes, but I am willing to comment on county taxes.

Mr. MANN. That takes away all the gentleman's argument.

Mr. BRYAN. It does not take away the gentleman's argument at all, if the gentleman will permit me.

Mr. MANN. It just occurred to me that it did; that is all.

Mr. BRYAN. I can clear the occurrence from the mind of the gentleman from Illinois, if he will allow me a moment. The sum of $6,000,000 exceeds the entire State tax, and is considerably less than this $7,500,000 referred to by the gentleman from Washington [Mr. HUMPHREY]; but in this $6,000,000 are included innumerable other things besides this timber.

Timberland is only a small fraction of the assets of the State, the taxable assets, so that the statement that $7,500,000 would have been derived from that timber is absolutely absurd and can not be figured out by any system of mathematics or the reasoning of any intelligent man. My time has about expired, and I ask unanimous consent to set forth this data more definitely in the RECORD.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to extend his remarks in the manner indicated. Is there objection? [After a pause.] The Chair hears none.

Mr. BRYAN. In the closing paragraph of the article by Mr. HUMPHREY of Washington is the following:

Yes; they are helping the schools. Their record in the State of Washington demonstrates it, for there, during the last 10 years, they took $75,900,000 and gave in exchange $115,000. Great is conservation, as it has been practiced by the Forest Service!

We will just lop off the $900,000, almost a million you will note, in order to be magnanimous with the gentleman.

According to the fourth biennial report of the State board of tax commissioners for the period ending September 30, 1912, the entire assessed value of all property in the State of Washington subject to taxation was $1,005,086,251. The total assessed value

of all the privately owned timber in the State was at the same time $89,375,888, or about 9 per cent of the entire assessment.

It will be seen from the following excerpt from the official proceedings of the State tax commission of Washington that the total State taxes assessed for all purposes in the State in 1912 was $5,819,449:

On motion, the State tax for general purposes, amounting to $1,230,256; for State school purposes, amounting to $1,909,664; for military fund, amounting to $110,559; for permanent highway fund, amounting to $1,005,086; for public highway fund, amounting to $502,543; for University of Washington, amounting to $477,416; for Washington State College, amounting to $326,653; for Cheney State Normal School, amounting to $90,458; for the Bellingham State Normal School, amounting to $90,458; for the Ellensburg Normal School, amounting to $70,356, making a total of $5,819,449, was levied and apportioned among the several counties of the State as indicated by schedule E of this report.

If the timberland assessment is 9 per cent of the total of the entire assessed values of the State, then the timberland would pay 9 per cent of this $5,819,449, or $525,750.49. In other words, the State of Washington collects from all its timberlands under private ownership an annual tax of a half million dollars. The gentleman from Washington [Mr. HUMPHREY] says the State of Washington would collect $7,500,000 from the forest-reserve areas annually if these reserves could only get into private hands.

The statement is absurd beyond all consideration even if only one year be considered. He says the people of Washington would collect fifteen times as much from the timber that is not in private ownership as from that in private ownership, but the gentleman to compound the absurdity and wild inaccuracy of his figures says the State has suffered this loss of $7,500,000 each year for 10 years, making a grand total loss of $75,000,000. In 1905, just seven years earlier, the total assessed value of all taxable property in the State of Washington was $328,542,525, which is $676,543,726 less than in 1912. Those who know are aware that in those good old days, when the Puget Mill Co. had such supreme power over the officers who collect the taxes, that timber was very much underassessed. Anyone with ordinary intelligence can see how absurd the statement of my colleague, Mr. HUMPHREY of Washington is. Ten years ago I feel safe in saying that the State did not collect $2,000,000 per year from taxes from all sources. Yet the gentleman says we lost $7,500,000 per year just because this timber was held by Uncle Sam.

In the article referred to my colleague says:

If this land thus included in the national forests was taxed by the State of Washington the same as private timber holdings, it would give to that State annually $7,593,500. What does the Forest Service give us in return for this amount, $14,400 per year?

My colleagues would do well to ponder a little on the words of their leader, the gentleman from Illinois [Mr. MANN]. The good old days are gone, and gone forever. Uncle Sam has been generous to the few lucky men who were cunning enough, lucky enough, or shrewd enough to get the timber in such tremendously large quantities into their own private hands in the West. The two gentlemen from Washington [Mr. JOHNSON and Mr. HUMPHREY] have practically stood alone here to-day in their assaults upon the "dreaming" Pinchot. Not another man on the floor of this House, except the gentleman from Michigan [Mr. FORDNEY] and the gentleman from Pennsylvania [Mr. MOORE], has lent any encouragement to their assaults on the Pinchot brand of conservation. As the gentleman from Illinois [Mr. MANN] said, these timber resources belong to the people and the time of their exploitation has passed.

These Government forests are a part of the Federal system of public ownership. We are going to own the coal in Alaska and the railroad in Alaska, and we are going to do some more things in this Republic that will startle this fast vanishing race of politicians. "You can not fool all the people all the time," and you had as well give up the game. How long will a man last in this day and time who stands up before the people and proposes that the public give away valuable timber reserves so the property will become subject to taxation? That kind of nonsense will not go any longer.

The Clerk read as follows:

Not to exceed 15 per cent of the total of all sums appropriated under "General expenses, Forest Service," may be used in the discretion of the Secretary of Agriculture as provided above under general expenses for Forest Service for all expenses necessary for the general administration of the Forest Service

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. Mr. Chairman, I did not think it was necessary to reply to my colleague, but he evidently misunderstood my statement. His statement and mine are not inconsistent. I took the figures given me by the commissioner of public lands for our State, or, rather, took them from his report. Using these as a basis of calculation, the tax on 12,000,000 acres of timberland at the same rate would amount to the sum mentioned, $7,500,000. That is not inconsistent with the statement made by my distinguished colleague. He gives the taxes for State purposes only. He takes his figures, I fear, from the Forest Magazine. I read them, and they are not correct, as used in the article.

The Clerk read as follows:

That hereafter all moneys received as contributions toward cooperative work in forest investigations, or the protection and improvement of the national forests, shall be covered into the Treasury and shall constitute a special fund, which is hereby appropriated and made available until expended, as the Secretary of Agriculture may direct, for the payment of the expenses of said investigations, protection, or improvements by the Forest Service, and for refunds to the contributors of amounts heretofore or hereafter paid in by them in excess of their share of the cost of said investigations, protection, or improvements.

Mr. MADDEN. Mr. Chairman, I make the point of order against the paragraph.

Mr. LEVER. Mr. Chairman, I concede that it is subject to the point of order.

The CHAIRMAN. The point of order is sustained, and the Clerk will read.

The Clerk read as follows:

That hereafter the Secretary of Agriculture may, when necessary for the purpose of increasing the public benefits or public use of the national forests, rent or lease to responsible persons or corporations, for periods of not to exceed 20 years, suitable spaces or portions of ground for the construction of summer residences, hotels, stores, or any structures needed for recreation or convenience.

Mr. MADDEN. Mr. Chairman, I make the point of order against the paragraph.

Mr. HAWLEY. Will the gentleman reserve the point of order?

Mr. MADDEN. I will reserve the point of order.

Mr. HAWLEY. Mr. Chairman, I hope the gentleman will conclude not to make the point of order for this reason: On the forest reserves there are very many places of scenic beauty that hundreds of people desire to visit and spend their summer outings upon. For instance we have one in my own State which I will use as an illustration out of many that might be named. Out in Josephine County, Oreg., there are what are called the Oregon Caves. They are in the midst of a great forest and many people desire to visit them. They are probably 30 miles from the nearest accessible point. There is a company that desires to build a summer hotel up there, and many people desire to erect summer residences that they may go up in the forest for the purpose of enjoying the scenery and the healthful atmosphere of the forest. They can not do that unless they have accommodations. This company will, under the regulations of the Forest Service, for instance, build a road in there which will be of use to the Forest Service in the administration of the forest, and they will construct such buildings as are necessary to accommodate the people. Persons will build inexpensive summer cottages. There will be put up, for instance, for the benefit of the community a little summer store at which they can buy flour and various things of that kind which they need. At all times it will be under the control of the Forest Service; no damage can come to the forest; in fact this amendment went into the bill on the special recommendation of the Forest Service; the roads will aid in their general improvement and management, it being the national policy, I take it, to make the forest not only contribute to the general welfare from the standpoint of national development, but to the good and pleasure of the people.

Mr. MANN. Will the gentleman yield for a question?

Mr. HAWLEY. I will.

Mr. MANN. Does the gentleman recall whether we enacted legislation similar to this for the national parks or some specific national park?

Mr. ANDERSON. The Yellowstone.

Mr. MANN. I know we had such a proposition up here.

Mr. HAWLEY. It has been done for several national parks.

Mr. ANDERSON. There was an item in the appropriation bill last year which applies only to the land under the control of the Secretary of the Interior.

Mr. MANN. I understand it would not apply to this, but I am asking whether this is the same thing that was done in reference to a national park.

Mr. HAWLEY. The same thing in practically the same language, but whether in exactly the same language or not I can not say.

Mr. LINDBERGH. Will the gentleman permit? The same practice is carried with reference to the forest reserve in the State of Minnesota.

Mr. MADDEN. Mr. Chairman, I think it would be a very bad practice to pass this legislation in an appropriation bill, and I therefore make the point of order on the ground that it is new legislation and not in order on the bill.

Mr. LEVER. I concede the point of order.

The CHAIRMAN. The point of order is conceded, and the Chair thinks it is correct. Therefore, the point of order is sustained.

Mr. HUMPHREY of Washington. Mr. Chairman, I ask unanimous consent to extend my remarks by inserting in the RECORD a clipping or two that I have here.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to extend his remarks in the RECORD by inserting certain matter which he has indicated. Is there objection? [After a pause.] The Chair hears none. The Clerk will read.

The Clerk read as follows:

For investigating the preparation for market, the handling, grading, packing, freezing, drying, storing, and transportation of poultry and eggs, and for experimental shipments of poultry and eggs within the United States, $50,000.

Mr. MANN. Mr. Chairman, I move to strike out the last word. May I ask the gentleman in charge of the bill whether this work, in reference to eggs, is now being carried on under some other appropriation?

Mr. LEVER. I will say to the gentleman from Illinois [Mr. MANN] that the testimony before the committee is to the effect that this work heretofore has been carried on under the pure food and drugs act. It is not new work by any means, but we wanted to take it from that general expense language and put it here in the bill, where it could be seen.

Mr. MANN. Fifty thousand dollars looks like a very large appropriation to commence work that is not very well developed yet. I do not know what they intend to do. I noticed the other day there came into one of the Pacific coast ports 3,500,000 eggs from China, under the Underwood tariff law—eggs that ought to have been produced in the United States. Is it to investigate so as to aid them in bringing eggs in from abroad?

Mr. LEVER. No; I think not. I think the investigation is in aid of the poultry raiser and consumer in this country.

Mr. PAYNE. If the gentleman will allow me, they need no aid in China, because the statement is made in the public press that they have had the eggs over there for 80 years. All we need to learn is that secret.

Mr. LEVER. This is really not an increase, but only an apparent increase, being a transfer of the $50,000 from the lump-sum appropriation of the food and drugs act. There is no increase in the amount of work to be done.

Mr. MANN. Do I understand the gentleman to say that the Department of Agriculture has expended $50,000 out of the appropriation for the enforcement of the pure-food law for "investigating the preparation for market and the handling, and so forth, of eggs"? If so, it seems to me like a gross abuse of an appropriation.

Mr. LEVER. The testimony before the committee is to that effect.

Mr. MANN. I do not know whether there is any way that we can frame language by which we can control the department, but certainly no ordinary minded individual would have supposed that in an appropriation to enforce the pure-food law we would have $50,000 of it expended for the purpose of ascertaining how to handle eggs.

Mr. LEVER. I confess very frankly to the gentleman from Illinois and to the committee that I did not know until the statement was made before the committee that that money was being expended in that way.

Mr. SHERWOOD. Mr. Chairman, I would like to inquire what is meant by experimental shipments of poultry and eggs in the United States; what are those experimental shipments?

Mr. LEVER. I will say to the gentleman from Ohio [Mr. SHERWOOD] that the department is undertaking to make a study of the marketing condition of eggs. For instance, to find some way of preventing breakage, to find some way of getting the eggs to the market in the best condition from the farm; also they are making investigations into the proposition of dried eggs, and things of that kind. There is a number of lines of investigation that the department is making.

Mr. SHERWOOD. Then you consider the producing of eggs by a farmer is a Federal question?

Mr. LEVER. Yes. They seem to think so, at least. And this not only covers eggs, but poultry.

Mr. MANN. Under this item, of course, they go into the whole storage proposition. Is it the intention of the department to go into the question of cold storage as to eggs, and incidentally everything else, under this item?

Mr. LEVER. I think not.

Mr. MANN. Well, that would not be straining nearly as far from the interpretation of the language as it would be to go into this enforcement of the pure-food law.

Mr. PAYNE. Mr. Chairman, I think I can reconcile the gentleman from Illinois to this expenditure of money. I want to assure him it has a great effect, especially on the solution of the high cost of living in the United States. The gentleman from Maryland [Mr. LEWIS], who has the matter of the parcel post entirely in charge for the whole House, and who I regret is not here, says that if we get so that we can pack eggs and other things of that kind, the farmers can trade directly with the ultimate consumer, and that the parcel post is going to solve the question of the high cost of living to the ultimate consumer. Now, under the instruction of the Department of Agriculture, or in some other way, but I think it was very likely from the original brightness and alertness of some of my constituents, I saw in a local paper that some farmers living out some 15 miles from my home city have learned how to pack eggs so that they can be sent by parcel post without arriving at destination in a scrambled condition, and that they send them fresh to their customers in the city every day. Of course, gathering them in at that time, they are really able and honestly to certify that the eggs are freshly laid.

They are a strictly fresh article, and they contribute that much toward reducing the high cost of living, because, being a strictly fresh article, these farmers not only insist but they have the right to insist, and succeed in insisting, upon receiving the highest market price for these eggs, and they get 3 cents a dozen extra for having produced fresh eggs on the market. That helps Mr. LEWIS out in his problem of solving the high cost of living by making possible direct dealing between the farmers and the consumers; and the farmers have the right to this. Why not? Why should they not get the highest market price for their eggs—the highest price they can get?

It is in the interest of agriculture and it is in the interest of the farmers of the country that this appropriation should be continued. I hope it will be.

Then we can go a little farther and see by what process in China, 80 years ago, they were able to pack away eggs in cold storage and produce them now, probably having in view the provisions of the Underwood tariff bill, whereby they can bring them in free and ship them to St. Louis at 10 cents a dozen and sell them to the unsuspecting public there at 20 cents a dozen, thus reducing the high cost of living, if they can furnish any eggs that are fit to eat. [Laughter.]

It is all in the interest, first, to help the ultimate consumer, and to help the farmer in selling his eggs to the ultimate consumer. I hope my friend from Illinois [Mr. MANN] will make no further objection to this item. [Laughter.] I yield to the gentleman from Illinois the balance of my time.

Mr. MANN. Mr. Chairman, I do not want to come in before anybody else, but——

Mr. SIMS. I want to bear testimony, Mr. Chairman, that I am now getting all the eggs I can use from Virginia by parcel post. They come absolutely fresh, and not one is broken. The producer is selling direct to the consumer right in this town.

Mr. MOORE. Where are they shipped from?

Mr. SIMS. I do not remember the place, but it is only a short distance from Washington.

Mr. MADDEN. Does the gentleman remember the price?

Mr. SIMS. I pay 35 cents a dozen. I pay the bill at the end of the month.

Mr. MOORE. That is the usual market price, or a little better, is it not?

Mr. SIMS. I really do not know.

Mr. MOORE. Then it has no effect on the cost of living at all, except to increase it?

Mr. SIMS. It has this effect: These eggs are absolutely fresh, and they all come in perfect condition. I do not think that place is more than 75 miles away.

Mr. MOORE. The farmer gets a good price, and the gentleman pays a high price.

Mr. MANN. Mr. Chairman——

Mr. PAYNE. I yield the floor, Mr. Chairman, to the gentleman from Illinois.

Mr. MANN. Mr. Chairman, the gentleman from Tennessee [Mr. SIMS] testifies now that he gets fresh eggs shipped in by parcel post. The gentleman on my left a moment ago stated that some time ago he had eggs, as he understood it, shipped clear from the Northwest to Washington, in good order on arriving here.

Thereupon we proceed to make an appropriation of $50,000 to learn how to ship eggs. I had supposed it was done by parcel post. The gentleman from South Carolina [Mr. LEVER]

tells us we are spending $50,000 during the current year for this purpose and that we expended, I suppose, $50,000 last year for that purpose. So far as I have been able to learn, the substance of the knowledge acquired by the department could be stated in this clipping, giving the precautions that should be used by egg handlers. This is from a newspaper clipping—a newspaper of high standing.

Among the precautions suggested by Dr. Pennington were the discarding of used cases, more care in handling the eggs, more care in sieving, more careful bracing and buffing in the cars. The careless freight handler, who tosses egg cases about, is responsible for a good deal of the loss, according to Dr. Pennington.

That is a very valuable bulletin. Next I suppose we will be told that the man who throws eggs on a stone floor will damage the eggs unless they are frozen. [Laughter.] Perhaps they will advise that all eggs be frozen when we send them to market, so that they can not be broken.

Mr. MADDEN. I suppose the next thing they will do will be to raise the question as to whether the hen, when she is cackling, is laying or lying. [Laughter.]

Mr. MANN. I quit after that. [Renewed laughter.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For investigating the handling, grading, packing, canning, freezing, storing, and transportation of fish, and for experimental shipments of fish, for the utilization of waste products, and the development of new sources of food, $15,000.

Mr. MOORE. Mr. Chairman, I would like to learn from the gentleman from South Carolina just how this $15,000 is expended and where.

Mr. LEVER. This is entirely new language and the beginning of an entirely new line of work in the Bureau of Chemistry. There have been no expenditures under this head heretofore.

Mr. MOORE. The department has not undertaken this line of investigation before?

Mr. LEVER. That is the testimony had before the committee.

Mr. MOORE. I would like to make an inquiry I was unable to by reason of the colloquy on the previous item—a question as to the storing of eggs, and so forth. Will the gentleman from South Carolina tell me where that expenditure is made? Have we experimental stations elsewhere than in Washington?

Mr. LEVER. No. That expenditure, as I gathered from the witnesses who appeared before the committee, is largely in the way of salaries for the scientific investigators and traveling expenses.

Mr. MOORE. Are there many of them?

Mr. LEVER. No; very few.

Mr. MOORE. Who is in charge?

Mr. LEVER. Dr. Pennington, a lady chemist, who is regarded as one of the great chemists of the world.

Mr. MOORE. Her work carries her to the different points throughout the country to conduct these investigations?

Mr. LEVER. Yes.

Mr. WILLIS. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from Ohio [Mr. WILLIS] moves to strike out the last two words.

Mr. WILLIS. Can the gentleman state whether the investigation that the department has already made has gone to the matter of the utilization of the waste in the canning of fish? I ask that question because in another committee that matter has come up.

Mr. LEVER. I will say to the gentleman that, so far as I know, and so far as the witnesses have testified before the committee, this is the first time the Department of Agriculture has undertaken this line of work. No work has been done in that line heretofore, but they are now asking funds with which to do it.

Mr. WILLIS. Certainly the department has been doing work along this line for a number of years, has it not?

Mr. LEVER. No; their statement before the committee is to the effect that this is new language and new work in the Bureau of Chemistry.

Mr. WILLIS. The gentleman from Illinois [Mr. MANN] very appropriately suggests to me that it is probable that this work is a duplicate of work that has already been undertaken and done in the Bureau of Fisheries. Is that a fact?

Mr. LEVER. We inquired into that situation, and our information is that this will not duplicate any of the work that is being done by the Bureau of Fisheries.

Mr. WILLIS. Has not this bureau been cooperating with the Bureau of Fisheries? I think I read somewhere in the hearings that the Bureau of Fisheries had loaned the Bureau of Chemistry one of its vessels.

Mr. LEVER. That was not in the fish work, but in the oyster work. If you will notice the next item, for the investigation of oyster handling and the like of that, it is with reference to that, not with reference to fish. As I understand it, there has been no cooperation between the Bureau of Chemistry and the Bureau of Fisheries except in the oyster work.

Mr. WILLIS. So far as the gentleman knows, then, there has been no investigation along the lines that I have suggested?

Mr. LEVER. No.

Mr. WILLIS. We found out in another committee that there was undoubtedly a tremendous waste in the canning business, that fish that were good for food were being used for other purposes.

Mr. LEVER. Undoubtedly that is true, and we ought to encourage our people to eat more fish, and they will do it when they learn not to be afraid of them.

The Clerk read as follows:

For investigating the packing, handling, storing, and shipping of oysters and other shell fish in the United States and the waters bordering on the United States, $5,000.

Mr. MOORE. Is this a new item?

Mr. LEVER. Yes.

Mr. MOORE. Then you are entering the oyster field, also, for the first time?

Mr. LEVER. Yes. We want to do with oysters the same character of work as with fish. I will say to the gentleman that the testimony before the committee is to the effect that the Bureau of Chemistry during the past year have been cooperating with the Public Health Service in this oyster work. They estimated for a very much larger sum than the committee allowed. We looked into the situation very carefully, and the committee became afraid that there might be a duplication of work, and hence we revised the language of the item itself and cut the appropriation down to $5,000, confining it to the packing, handling, storing, and shipping.

Mr. MOORE. Evidently the word "planting" has been left out for some reason.

Mr. LEVER. Yes.

Mr. MOORE. Then you are not going into the culture of oysters at all?

Mr. LEVER. No.

Mr. MOORE. But you confine the work wholly to the packing, handling, storing, and shipping of oysters?

Mr. LEVER. Yes.

Mr. MOORE. The other question might involve the rights of some of the States where controversies have already arisen, and which are still pending, as for instance, in Maryland.

Mr. LEVER. That is the reason we cut out that part of it. We looked into the matter very thoroughly.

The Clerk read as follows:

For the biological investigation of food and drug products and substances used in the manufacture thereof, $10,000.

Mr. LINTHICUM. Mr. Chairman, I move to strike out the last word, for the purpose of reverting to the paragraph in reference to oysters. At whose suggestion was that investigation proposed? Was it the Department of Health?

Mr. LEVER. Does the gentleman mean this item in the bill?

Mr. LINTHICUM. For investigating the packing, handling, storing, and shipping of oysters.

Mr. LEVER. This language was estimated for by the Department of Agriculture.

Mr. LINTHICUM. It has nothing to do with the planting or cultivation of oysters?

Mr. LEVER. Nothing whatever. The committee were very careful to keep that out of it.

The CHAIRMAN. If there be no objection, the pro forma amendment will be considered as withdrawn, and the Clerk will read.

The Clerk read as follows:

Enforcement of the food and drugs act: For enabling the Secretary of Agriculture to carry into effect the provisions of the act of June 30, 1906, entitled "An act for preventing the manufacture, sale, or transportation of adulterated, or misbranded, or poisonous, or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes," in the city of Washington and elsewhere, including chemical apparatus, chemicals and supplies, repairs to apparatus, gas, electric current, official traveling expenses, telegraph and telephone service, express and freight charges, and all other expenses, employing such assistants, clerks, and other persons as may be considered necessary for the purposes named, and rent outside of the District of Columbia, $644,301; and hereafter the Secretary of Agriculture may employ and designate scientific experts to make investigations and act as boards or committees to report to him upon questions arising in the enforcement of said act of June 30, 1906.

Mr. MADDEN. Mr. Chairman, I make a point of order against that part of the paragraph including the word "and" in line 14, down to and including all of line 19, on page 43.

The CHAIRMAN. The gentleman from Illinois [Mr. MADDEN] makes a point of order against the language indicated.

Mr. LEVER. Mr. Chairman, I doubt very seriously if that language is obnoxious to the rule as being new legislation. I will say to my friend from Illinois that the purpose of setting out this language is to make it show absolutely on its face that the Secretary of Agriculture has the authority to appoint these scientific boards, for instance, such as the Remsen Board. You will remember that several years ago quite a controversy arose here in the House as to whether or not the Secretary of Agriculture had the power under the pure-food act to appoint the Remsen Board.

Mr. ANDERSON. Does the gentleman think he ought to have that power?

Mr. LEVER. I contended at that time that he ought not to have that power, but the House overruled me. That was before the gentleman from Minnesota became a Member. The Attorney General has held that the Secretary of Agriculture has the power to appoint such a board as would be provided for in this language. I made a point of order against it on the floor of the House on the occasion to which I refer, and the Chair held that the Secretary of Agriculture had the right to make this appointment. So that, speaking now to the Chair, I am satisfied in my own mind that this is not new legislation at all, but is a setting out of what is now existing law, just as these other items in this bill have been set out.

Mr. MADDEN. I desire to say that the provision to which I make the point of order is the enactment of permanent law in an appropriation bill. If the Secretary has the power now, there is no necessity for reenacting the authority which he is thought to have.

Mr. LEVER. That may be, but that would not affect the judgment of the Chair. The chairman is not called upon to pass on the necessity, but whether it is existing law.

Mr. MADDEN. I maintain that this is a change of existing law and attempting to enact a permanent law on an appropriation bill, which is in violation of the rules of the House.

Mr. MANN. Mr. Chairman, the question which was raised in the House with reference to the Remsen Board did not arise in this matter at all. It was claimed by gentlemen at the time that under the pure-food law no such board could be appointed. But an appropriation was made for the enforcement of the pure-food law. It was not for Congress to determine how that money should be expended. It was for the administrative officers, and the administrative officers, under the opinion of the Attorney General, held that under the pure-food law as written they could make the appointment of certain gentlemen to assist them in the administration of the law and advise them. That is not the proposition here. Here is a proposition to add to the pure-food law, to provide permanent law that hereafter the Secretary of Agriculture may employ and designate scientific experts to make investigations and act as boards or committees to report to him upon questions arising in the enforcement of said act of June 30, 1906. That is distinctive new legislation. As to what they may do under the appropriation when made is for their determination under existing law. But under the rule it is not in order to provide new legislation authorizing directly the appointment of boards, however desirable it may be to do that.

Mr. LINTHICUM. Mr. Chairman, I think the section is clearly subject to a point of order. According to the section, there is no limit to what the Secretary of Agriculture might do. He might appoint scientific experts, make investigations, have boards unlimited. It seems to me that it is clearly new legislation and ought to be stricken out.

The CHAIRMAN. The Chair thinks it is new legislation, and will sustain the point of order.

Mr. MANN. Mr. Chairman, I move to strike out the last word, to make an inquiry concerning the language on page 42, lines 23 and 24, which I did not hear the Clerk read, or I would have made the inquiry then. The item reads:

> For the biological investigation of food and drug products and substances used in the manufacture thereof, $10,000.

That has never been carried before. I would like to inquire what is the intention of the department as to the use of this money. How is it to be used?

Mr. LEVER. The statement before the committee was about like this; I put it pretty fully in the report:

> Biological investigations (p. 42, line 23): This is a new item and involves an increase of $10,000. The department asked for $20,000, but the committee reduced it to the amount named, believing that as this was new work $10,000 would be sufficient to begin the investigations. Under this item laboratory experiments and research will be conducted to determine the biological effects of foods and drugs and substances used in their manufacture. Studies will be made of the relative food value of various substances for the purpose of determining what constitutes a pure food. These involve metabolism experiments for the purpose of studying the deleterious action of substances which are or may be used in food products and the biological study of the value and composition of foods and related research problems.

Mr. MANN. I understand—I catch on quite quickly—that this is a revival of the poison squad.

Mr. LEVER. Not at all.

Mr. MANN. That is what the language says so far.

Mr. LEVER. I do not think so.

Mr. MANN. What is the biological investigation of food and drug products if it is not the investigation of their effect on the health of people?

Mr. LEVER. Dr. Alsberg, before the committee, says this:

> Dr. ALSBERG. That, again, is an item which provides chiefly for investigations which have been set aside from the appropriation for the enforcement of the food and drugs act; that is to say, it is a new item, but represents the continuation of work which has been done to some extent under the food and drugs act.
>
> Mr. HAWLEY. That, in a measure, is a segregation of the larger appropriation?
>
> Dr. ALSBERG. Yes. It contemplates, in addition, some new work. The object of making all these segregations here is to give to Congress fuller information than it has had heretofore. Some years ago all these last four appropriations would have been paid for out of the fund for the enforcement of the food and drugs act. Dr. Pennington's appropriation was paid last year out of that fund, for instance. Now, this work of biological investigation of food and drug products is partly a continuation of the old work and in part new work. The Bureau of Chemistry, in the enforcement of the food and drugs act, is constantly confronted with new problems. I might use lard and lard substitutes as an illustration. That happens to be a large and important product. It so happens that the people of the United States want the fat they use for cooking purposes in solid or nearly solid form. They do not like to use oils for that purpose, and many tropical oils are unfit for food purposes. An invention has been made which enables one by chemical means to convert an oil into a hard fat, so that the product is, chemically and in every other respect, so far as we can find, the same as a natural fat. It is not a substitute.

Now, they want to find out why this is so.

Mr. MANN. Those of us who have been here for a number of years remember the fight over the poison squad. While my friend from South Carolina was denouncing the poison squad, Dr. Wiley and I were defending it.

Mr. LEVER. Oh, the gentleman is mistaken. Dr. Wiley never had a better friend on the floor of the House than I was, and I defended him.

Mr. MANN. Oh, I think the gentleman was against the poison squad. A whole lot of other gentlemen in the House were, though I will take it back as to the gentleman from South Carolina, because I do not remember definitely; however, I think that whole side of the House, without exception, was against Dr. Wiley and the poison squad. Now it comes in again, identically the same thing, under a little different language. The gentleman from South Carolina [Mr. LEVER] read a part of his report and then read some other language from the testimony. I am going to read a little more of his report:

> Studies will be made of the relative food value of various substances for the purpose of determining what constitutes a pure food. These involve metabolism experiments for the purpose of studying the deleterious action of substances which are or may be used in food products and the biological study of the value and composition of foods and related research problems.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MANN. Mr. Chairman, I ask unanimous consent to proceed for five minutes longer.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MANN. Mr. Chairman, Dr. Wiley was carrying on experiments for the purpose of determining the effect upon the human system of putting various preservatives in packed, canned, and preserved foods of different kinds. People charged him with favoring one kind of preservative over another, although as a matter of fact he did not believe in the use of artificial preservatives in these foods, and the people employed in producing the food using the preservatives made a very lovely contest and secured favorable action from Congress upon the subject. I am glad to know now that the new Secretary of Agriculture proposes to endeavor to ascertain what effect it has on the human system to eat, say, tomato catsup day after day, perhaps, with a certain preservative in it, or to eat various other food products, either canned or packed or dried or otherwise preserved, containing a preservative. It was the theory of Dr. Wiley, in which I never wholly partook, that any artificial preservative in food which was not assimilated by the body—and these preservatives are not assimilated by the body—required an extra exertion on the part of the body to get rid of them, either on the part of the kidneys or the liver, that that was an extra tax on the system over and above the ordinary tax which the system should bear, and that in the course of time it would have a tremendous effect upon many people. We struck it out years ago, with the aid of that side of the House, and now, under the leadership of my distinguished friend from South Carolina [Mr. LEVER], to whom I am always proud to take off my hat, we have reinserted the poison squad once more.

Mr. MOORE. Mr. Chairman, I move to strike out the last two words. Will the gentleman from South Carolina [Mr. LEVER] say whether there is anything in the present food and drug act, of which our distinguished friend from Illinois [Mr. MANN] is the author, which will prevent the indiscriminate sale of what are known as bichloride of mercury tablets?

Mr. LEVER. Mr. Chairman, I will say frankly that I know of nothing in this food and drug act to prevent that if the tablets are properly branded.

Mr. MOORE. Having the attention of the gentleman from South Carolina, I invoke that of the gentleman from Illinois, who is the author of many wholesome laws that are now in operation, to the subject of many communications—I know many of them have come to me—with regard to what appears to be an absence of national law restraining the use of these tablets, which are shipped from State to State and sold in certain drug stores, and which in many cases result in the death of those who take them by mistake or design.

Mr. MANN. The gentleman knows that the governor of his State vetoed a bill to restrict the use of bichloride of mercury tablets, because he said they were a household necessity.

Mr. MOORE. That may be, but that does not remedy a situation that is becoming national and that results in the loss of human lives by mistake. The gentleman from Illinois [Mr. MANN], who may regard this as a humorous matter—though I am quite sure that he does not—will recall the widely reported case of the young man in Georgia who recently fought for his life, with every newspaper in the country commenting upon his resignation and fortitude and upon the great distress of the young wife who prayed for his recovery. There have been many other similarly pathetic cases. Within the last year, I am told, the records show that upward of 100 deaths have resulted from the use of these tablets taken by accident or for suicidal purposes. Evidently, there is no sufficient special label or warning attached to the packages or bottles containing them, and through a mistaken idea that they are for headaches or for the purpose of relieving pain they are sometimes innocently swallowed, with generally fatal results.

Now, if we are to spend $644,000 for the purpose of enforcing the pure food and drug act, and if a large proportion of that money is to go into salaries of experts and scientists, and in particular if some of it is to be spent for scientific commissions to make investigations with regard to food supplies and the purity of drugs, it seems to me that no better purpose could be served than by telling the Secretary of Agriculture through his competent agents to study this question and see if we can not find a remedy for what is apparently a very great evil.

Mr. LEVER. The matter to which the gentleman refers I have no doubt, and I believe, is a very important matter, and I think he will agree with me that there is no authority in the pure-food law under which we could make appropriations to carry on that line of investigation. The Public Health Service is doing a great work, and I see the gentleman from Kentucky [Mr. SHERLEY], whose committee handles that service.

Mr. MOORE. I take it that the gentleman from Illinois, who drafted this law and for whom it is named, may have had this thought in mind at one time, or may have it in his mind now, to try to guard against this evil.

Mr. LEVER. It certainly has not been construed by the officials of the department to give them this authority.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOORE. I see no harm in calling the attention of the Department of Agriculture to the fact that we are expending a large amount of money and that some of it might be applied for this purpose.

Mr. MANN. Mr. Chairman, I had not intended to say anything about this subject. Probably I would not; but the gentleman from Pennsylvania, in a moment of temporary aberration of mind, referred to me as considering this subject from a humorous standpoint.

Mr. MOORE. I rather think the gentleman did. He smiled—which is unusual for him—at the very height of my argument.

Mr. MANN. I smiled at the ignorance of the gentleman from Pennsylvania; that is all. I could not help it.

Mr. MOORE. The gentleman is usually serious, but he smiles occasionally.

Mr. MANN. I took up this subject last fall, when we were in session and I was not able to persuade a quorum to come here—took it up myself, took it up with the national wholesale and retail drug trade, took it up with the Bureau of Chemistry in the Department of Agriculture, and with the Public Health Service, and with the manufacturers of those drugs. I have done a good deal of work upon the subject, and not being as ready as some other gentlemen, have not yet been able to find a solution of an unsolvable problem.

The CHAIRMAN. The Clerk will read.

Mr. MOORE. Will the gentleman yield?

Mr. MANN. Certainly.

Mr. MOORE. The result of the inquiry I have just made has been to draw from the gentleman the very illuminating information that he has been alive to the necessities of this situation, and that the attention of the Department of Agriculture has been called to it. Is it not worth something to the world at large to know that?

Mr. MANN. I do not think so.

Mr. MOORE. I think it will be if the gentleman's mind works right.

Mr. MANN. Well, my mind is not like the gentleman's from Pennsylvania—there is no need to put an "if" about it. It works right.

Mr. MOORE. It is always conceded that the gentleman's mind works right.

Mr. MANN. I concede it.

Mr. MOORE. And he is always right and we are always wrong, as the gentleman always is.

Mr. MANN. I am sorry to have the gentleman say I am always wrong.

Mr. MOORE. Well, I will take that back.

The Clerk read as follows:

And hereafter every food and drug inspector of the United States Department of Agriculture is, in connection with his duties as such food and drug inspector, hereby authorized to administer or to take from any person an oath, affirmation, or affidavit, and such oath, affirmation, or affidavit administered, sworn, affirmed, taken, had, or done, by or before such inspector, shall be valid and of like force and effect to all intents and purposes as if administered, sworn, affirmed, taken, had, or done by or before any other person within the United States duly authorized and competent thereto.

Mr. MADDEN. Mr. Chairman, I make the point of order against that paragraph of the bill.

Mr. LEVER. Mr. Chairman, the paragraph is subject to the point of order. I concede it.

The CHAIRMAN. The point of order is sustained, and the Clerk will read.

The Clerk read as follows:

BUREAU OF SOILS.

Salaries, Bureau of Soils: One soil physicist, who shall be chief of bureau, $4,000; 1 chief clerk, $2,000; 1 executive assistant, $2,000; 4 clerks, class 4; 2 clerks, class 3; 4 clerks, class 2; 1 clerk, $1,260; 8 clerks, class 1; 5 clerks, at $1,000 each; 3 clerks, at $900 each; 1 soil cartographer, $1,800; 1 soil bibliographer or draftsman, $1,400; 1 photographer, $1,200; 5 draftsmen, at $1,200 each; 1 clerk-draftsman, $1,200; 1 draftsman, $1,000; 1 messenger, $840; 3 messengers, messenger boys, or laborers, at $480 each; 2 laborers, at $600 each; 1 laborer, $300; 1 charwoman or laborer, $480; in all, $59,420.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word. I would like to ask the gentleman from South Carolina what exact work the Bureau of Soils is doing that requires an additional appropriation for help?

Mr. LEVER. On the statutory roll, you mean? There is no increase in this item at all. There is an apparent increase, but that is an increase from transfers from the lump sum.

Mr. MADDEN. The appropriation last year was $53,620 and this year $59,420.

Mr. LEVER. There is an apparent increase of about $5,000, but that is represented here in transfer from the lump sum.

Mr. MADDEN. Will the gentleman from South Carolina tell the committee what the Bureau of Soils does?

Mr. LEVER. If the gentleman had done me the distinguished honor to have read my report upon the subject, it would not have been necessary for him to have asked me that question.

Mr. MADDEN. I know very well the gentleman writes very lucidly——

Mr. LEVER. Much more so than he speaks.

Mr. MADDEN. And writes with a great deal of force on everything upon which he writes, and he always speaks much more forcibly than he writes, but what I would like to have him tell us is just exactly what this bureau does.

The CHAIRMAN. The Clerk will read.

Mr. MADDEN. Just a moment. The gentleman from South Carolina [Mr. LEVER] has not yet replied to my question.

Mr. LEVER. I will say to the gentleman from Illinois that the Bureau of Soils is engaged in the very important fundamental work of classifying the different soils of the United States, studying soil fertility, going into a number of different lines of investigational work which it has been doing heretofore, and which the committee thinks is important, among them, studying the sources of different fertilizers.

Let me call attention to one result of the work. They have discovered, on the Pacific coast, kelp beds, from which we can

manufacture sufficient potash to last this country for a hundred years, I presume. That is a line of work that was put into the agricultural appropriation bill some few years ago, and it has resulted, we think, in bringing to the attention of the country in a commercial way, and to commercial interests and industry, propositions that are going to mean a great deal to this country, and particularly to the farmers. And there are other lines of work that I will be glad to take up item by item when we come to them.

Mr. MADDEN. Will the gentleman be kind enough to tell the committee what the total appropriation of the Bureau of Soils is? I have not gone over the figures.

Mr. LEVER. Three hundred and fifty-nine thousand dollars.

Mr. MADDEN. And $59,000 of that is for office expenses?

Mr. LEVER. Salaries, and the like of that; yes.

Mr. MADDEN. So that about 20 per cent of the whole expense is for office expenses?

Mr. LEVER. I presume there is a great deal more than that which goes in the way of salaries, but the gentleman understands the Department of Agriculture is not like many other departments in that respect, and that practically all the expenses of the department are in the way of salaries in the employment of experts, scientists, and the like of that.

Mr. MADDEN. This is all for salaries in the department here?

Mr. LEVER. The bulk of it. The laboratory, the scientific, and the research work of this bureau is done in the laboratories in the city of Washington.

Mr. MADDEN. I thought they were used to find out what the soils were useful for.

Mr. LEVER. A certain amount of this appropriation is for that purpose.

Mr. MADDEN. Only about 20 per cent of it.

Mr. LEVER. For instance, we are spending $169,000 for investigation of soils in cooperation with other branches in the Department of Agriculture. That is field work, pure and simple.

Mr. MADDEN. That is 50 per cent, then, of the total expenditure. Now, it looks to me as if 50 per cent of the total appropriation is a very large part of the appropriation to be expended for that branch of the work that does not produce any results.

Mr. LEVER. That $169,000 to which I refer is for field work; that is, the investigation and mapping of the soil.

Mr. MADDEN. Yes.

Mr. LEVER. And, of course, there are other lines of field work also, which are segregated in the bill. I presume I can get it in the Book of Expenditures and show just what is expended in Washington. But even conceding it is a large fund, I do not think the bureau is subject to criticism on that account, for, as I said a moment ago, necessarily a large amount of the appropriations made for the Agricultural Department in scientific research work must be expended in Washington, where its laboratories are located and its experiments being made. I think the gentleman will concede that that follows necessarily.

Mr. MADDEN. I am not going to object to the appropriation, but I thought it well enough to call attention to what I believe to be an extravagance at the office end of the work.

Mr. LEVER. I do not think it is, however. I disagree with the gentleman.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For exploration and investigation within the United States to determine possible sources of supply of potash, nitrates, and other natural fertilizers, $36,500: *Provided*, That of the amount hereby appropriated, the sum of not exceeding $5,000 may be used for the erection of a small laboratory building on the experimental farm of the Department of Agriculture at Arlington, Va., for the purpose of studying fixation of atmospheric nitrogen by electrical methods, plans and specifications for the building to be approved by the Secretary of Agriculture and all work done under his supervision.

Mr. MADDEN. Mr. Chairman, I reserve a point of order on the proviso to this paragraph of the bill, and wish to ask the gentleman from South Carolina if he believes that the erection of this building is a necessity for the proper conduct of the work?

Mr. LEVER. Mr. Chairman, I will say to the gentleman from Illinois that several Members of Congress who have given very careful study to this proposition of extracting nitrogen from the air appeared before the committee and urged very strongly upon the committee a large appropriation to enable the Department of Agriculture to make that study. Members of the committee got into communication with the Bureau of Soils of the Department of Agriculture, and especially the gentleman who will be in charge of that line of work, and he told us very frankly that he thought it was a line of investigation that should be pursued, and he could do the work, he felt satisfied, if he had a small laboratory at Arlington that would not cost to exceed $5,000. The gentleman understands, of course, that nitrogen is one of the three essential ingredients of what we call a complete commercial fertilizer and is the most expensive one of the three. We are doing a great deal of work down in my country in getting nitrogen into the soil by the use of leguminous plants, and we are succeeding very well in that direction, but any process by which the nitrogen supply may be increased or its cost reduced must be of great importance to the agricultural interests of the country.

Mr. MADDEN. You can get that by putting in clover and alfalfa and that sort of thing?

Mr. LEVER. Yes. Of course the air is filled with nitrogen, and if we could find some process by which we could extract it in a commercial way it would mean a great deal to this country.

I will say very frankly that the committee thought that while this might be in an ordinary sense a waste of money, at the same time the subject was so big and the results, if we succeeded in getting favorable results, would be so good that it would be a good investment to make an effort in that direction. The language, in my judgment, is subject to a point of order.

Mr. MADDEN. Does the gentleman in reality think it would be possible, after the experiments were made, to convey the nitrogen to the ground without some process of cultivation, such as the raising of clover or alfalfa or some such product as that, which would carry the nitrogen into the soil by opening up the pores of the soil?

Mr. LEVER. Every commercial fertilizer—and we use a great deal of it in the South—bears its proportion of nitrogen, and it goes into the soil as a plant food.

Mr. MADDEN. Of course, any conclusions that would be obtained as the result of this study would not enable any person to convey the nitrogen into the ground without the use of some fertilizer or without the use of some leguminous plants?

Mr. LEVER. That may be. Of course, I do not know how they would convey it to the soil. I presume they would do it in the ordinary way, as it is done now, by the mixture of potash and phosphoric acid.

Mr. MADDEN. What good would it do after you got it?

Mr. LEVER. I take it that if the department can devise a plan by which you can extract nitrogen from the air so successfully that it can be put on a commercial basis, private individuals will go into the manufacture of it and make the cost of fertilizers very much cheaper by cheapening the process.

Mr. ANDERSON. Mr. Chairman, may I ask the gentleman if there is any water power or anything of that kind over at Arlington?

Mr. LEVER. I am not positive of that.

Mr. ANDERSON. I always understood that the extraction of nitrogen from the air was a proposition involving a large amount of power—power more than anything else. I can not see what possible opportunity there would be for investigations of this character out at Arlington.

Mr. LEVER. I will say to the gentleman very frankly that I have not given very special study to the proposition of extracting nitrogen from the air, but the department itself asked for only $5,000 for this work, and I presume that they have asked for a sufficient amount.

Mr. ANDERSON. This is a proposition that has advanced largely in Norway, where they have great water power and where it can be used at small expense. It is a proposition thus far involving the use of power, and therefore I can not understand how any experiments of any value can be carried on out at Arlington.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MADDEN. I think I shall make a point of order on this item, Mr. Chairman.

Mr. LEVER. I hope the gentleman will not do that.

Mr. ANDERSON. I hope the gentleman will not make the point of order. I think the experiments are valuable, but they are not going to be conducted at the right place.

Mr. MADDEN. I will not make it, then.

Mr. STAFFORD. Mr. Chairman, I will renew the point of order for the sake of getting some information. I would like to inquire whether it is essential to have this experimentation conducted at Arlington, and whether it could not be more favorably carried on in the department here at Washington?

Mr. LEVER. No. Their statement was that they would rather have the work carried on at Arlington.

Mr. STAFFORD. They might wish to have it carried on in the pleasant surroundings of the landscape over in Arlington; but is it practicable to have these experiments made in the department here, where they have laboratories, instead of having a separate building erected on the Arlington estate?

Mr. LEVER. The department informed me that they had absolutely no room in the department to carry on this work. They

want to erect for it a fireproof building in Arlington. They have no room here.

Mr. STAFFORD. The gentleman has not answered my question yet as to whether this work could be done as practicably here in the laboratory in Washington as over in the landscape gardens at Arlington.

Mr. LEVER. I said that the testimony of these gentlemen who will do the work is to the effect that it can not be done here. That is all I know about it. I will say that I think another reason why they want to go to Arlington is that they have an electrical plant there that they can use in connection with it.

Mr. STAFFORD. I can appreciate the reason if they have a plant there that they can utilize in this experimentation. The important fact advanced by the gentleman from Minnesota [Mr. ANDERSON] that this service could be carried on in Norway and in Sweden, where the electric power can be produced cheaply because of the superabundance of water power, does not to my mind make it impracticable to make the experimentation here, where there is some electrical power, and if the gentleman says there is such power over on the Arlington estate I have no objection to the item.

Mr. LEVER. I recall that that is one of the reasons; and my clerk, whose memory is good, also recalls it.

Mr. STAFFORD. I withdraw the point of order.

Mr. MANN. I renew the point of order. I do not know whether the gentleman will bowl me over as easily as he has the other gentlemen or not. As I understand, there is no question about the ability to obtain nitrogen from the air in fixed form for use commercially.

Mr. LEVER. That is true.

Mr. MANN. And that is being done in a number of places.

Mr. LEVER. Yes.

Mr. MANN. And that is done where they can obtain practically unlimited water power for the purpose of generating electrical power.

Mr. LEVER. Yes; cheap power.

Mr. MANN. Now, it being known that you can do this, and the question being the obtaining of the power, what is the use of locating a plant out here at Arlington, where you can not find out anything about the cost, the cost being practically the only question in controversy?

Mr. LEVER. That is a very important question, and I will answer the gentleman as nearly as my recollection will permit me to answer him. Dr. Cameron made the statement before the committee, as I recall it, that just a few days before appearing before the committee he had examined a number of patents filed in the Patent Office for extracting nitrogen from the air by different processes, and I think he said there were more than a hundred of them; but he said that most of these processes are patented already, and that is true of the situation in Norway. He said they were secret processes that they could not get hold of. Now, Dr. Cameron—who, I think, is one of the ablest chemists in the Department of Agriculture—has no doubt that if he is given this appropriation and this little laboratory he can find a process by which nitrogen can be extracted from the air and put upon the market in a commercial way.

Mr. MANN. If he has persuaded the Committee on Agriculture of that fact, he has done remarkably well. If he could persuade me that he could do this with $5,000, I would beg, borrow, or steal the money in some way and put it into his hands and have a patent worth millions and millions of dollars. I think he is a little bit overoptimistic on the subject.

Mr. LEVER. Let me say to the gentleman from Illinois, in justice to Dr. Cameron, who is one of the most modest men I have ever seen, that Dr. Cameron did not come before the committee on his own initiative, nor did the Department of Agriculture estimate for this item. It is inserted in the bill on the initiative of the committee itself.

Mr. MANN. I have no doubt it might be advisable to have this work carried on somewhere. We have a number of dams in various places, in connection with irrigation plants of the Government and otherwise, where we have water power; but to start in and make experiments on something concerning which the requisite is cheap water power at a place where there is no water power at all reminds me of experimenting with an irrigation plant on top of Pikes Peak.

Mr. STAFFORD. Will the gentleman yield?

Mr. MANN. Yes.

Mr. STAFFORD. Even at a small laboratory, such as is proposed in this item, would it not be possible for the experimenter to determine the amount of electric power necessary to produce the nitrogen that is so very valuable as a fertilizer, and thus determine the cost?

Mr. MANN. That would not help them out any at all. For instance, the manufacture of ground wood pulp and print paper requires cheap water power, and in almost every place where it is manufactured cheap water power is used for that purpose. We are carrying on experiments in reference to the use of different woods for the manufacture of pulp, but we do not think for a moment that we can determine the value of our experiments in the laboratory in Wisconsin without testing them further in the practical mill, where we must ascertain the facts from actual operation, which could not be done here.

Mr. STAFFORD. If the gentleman will yield, we can ascertain from the experimentations in the laboratory at Madison whether certain kinds of wood are utilizable for pulp. That is the purpose of the laboratory.

Mr. MANN. Oh, we know that certain kinds of wood can be used. The question is how to utilize them. No one has been able to determine that question practically yet, so that they can be utilized commercially. I am not complaining of that work. I make the point of order.

The CHAIRMAN. The point of order is sustained, and the Clerk will read.

The Clerk read as follows:

For the investigation of soils, in cooperation with other branches of the Department of Agriculture, other departments of the Government, State agricultural experiment stations, and other State institutions, and for indicating upon maps and plats, by coloring or otherwise, the results of such investigations, $169,800.

Mr. STAFFORD. Mr. Chairman, I reserve a point of order against the paragraph. I think there is some new phraseology in this paragraph that needs some explanation. I would like to know whether it means a new departure or whether they are conducting the same activities and want an authorization.

Mr. LEVER. The department submitted estimates, and in submitting estimates submitted this language, with the statement that it did so for the purpose of more clearly setting out in the bill the character of the work being done under the item. There is no departure in policy whatever, nor is there any new authority added in the item. It is in legal effect completely the same.

Mr. STAFFORD. Can the gentleman inform the committee whether as to this $169,000 how much is spent in cooperation with State institutions?

Mr. LEVER. The Department of Agriculture under the present management is trying hard and sincerely to establish cooperative relationship with the agricultural colleges in the States. This is shown in the department's attitude toward the Lever agricultural extension bill, and it is shown in a number of recent arrangements. Practically every agricultural college now is cooperating with the Department of Agriculture in carrying on the Federal work in that State. In my own State the Federal official in charge of the department's work, the farm demonstration work, is located at the agricultural college, occupying one of the professors' houses. He is in fact a part of the faculty, living on the ground. Of course, he does his work separately. It is the hope of the department, as it is of each member of the committee, that closer and closer cooperative arrangements can be made in conducting the work of the Department of Agriculture with the States and the agricultural colleges.

Mr. STAFFORD. In the case the gentleman instances, is he performing the work for the Agricultural Department, work that should be performed by the State agricultural institutions, and are there other instances where the National Government is paying for services that should be performed by the State? I know that the tendency is to relieve the State.

Mr. LEVER. The character of the work being done by the man to whom I refer is farm demonstration work, with which the gentleman from Wisconsin is familiar, as he is with the farm management work in the North. It is a system of getting the information from the Agricultural Department out to the farmer by the farm demonstration method. I do not think it is the work of the State or that the State ought to be called upon to do it entirely, but I do think the States under the Lever extension bill ought to be called upon to do their share. I do not hesitate to say that I believe the time is coming when the States will cooperate in all work of a large public character, such as is this demonstration work. I believe it will make for efficiency and economy.

Mr. STAFFORD. Am I to understand that there is no instance where the National Government is performing work which the State ought to perform, and thereby relieving the State from the burden?

Mr. LEVER. Not as far as I know.

Mr. PLATT. Will the gentleman yield?

Mr. LEVER. Certainly.

Mr. PLATT. I want to say to my knowledge the students of the State agricultural college of my State are making these

soil surveys under Government supervision. I know that is the case with the Cornell students.

Mr. LEVER. That is under some cooperative arrangement with the Department of Agriculture.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. LEVER. Mr. Chairman, I desire to be recognized for two minutes.

The CHAIRMAN. The Chair will recognize the gentleman.

Mr. PLATT. I want to ask the gentleman whether there is any provision in the bill for reprinting of soil surveys that are out of print?

Mr. LEVER. No.

Mr. PLATT. How can that be done?

Mr. LEVER. The appropriation for the printing of those surveys is carried in the sundry civil appropriation bill—an item, I think, of $300,000.

Mr. PLATT. Is there no way to get a reprint under this bill?

Mr. LEVER. No; not under this language, nor in this bill.

Mr. WILLIS. Will the gentleman from South Carolina yield?

Mr. LEVER. With pleasure.

Mr. WILLIS. The gentleman knows that I am in sympathy with making liberal appropriations for the Bureau of Soils, but it seems to me that there are two or three matters that ought to be explained. Is not there a duplication in these items as compared with items on the preceding page; for instance, "For soil-fertility investigations." "Properties and composition of soil humus," and "The transformation and formation of soil humus by soil organisms," and so forth? It seems to me that you have the same thing provided for in three or four different places.

Mr. LEVER. No; although I am not surprised that the gentleman should get that idea from the language; but, as a matter of fact, there is no duplication whatever in this Bureau of Soil's work. The item under consideration is for field work and the other is mainly for laboratory and research work.

Mr. WILLIS. It is not work done by the same body of men?

Mr. LEVER. No.

Mr. STAFFORD. Mr. Chairman, I would like to inquire, before I withdraw the point of order, as to how long the gentleman plans to run to-night?

Mr. LEVER. If the gentleman will let us read through the statutory roll of the Bureau of Entomology, I will be very glad to rise.

Mr. STAFFORD. Very well. Mr. Chairman, I withdraw the point of order.

The Clerk read as follows:

General expenses, Bureau of Entomology: For the promotion of economic entomology; for investigating the history and the habits of insects injurious and beneficial to agriculture, horticulture, arboriculture, and the study of insects affecting the health of man and domestic animals, and ascertaining the best means of destroying those found to be injurious; for collating, digesting, reporting, and illustrating the results of such investigations; for salaries and the employment of labor in the city of Washington and elsewhere, rent outside of the District of Columbia, freight, express charges, official traveling expenses, office fixtures, supplies, apparatus, telegraph and telephone service, gas, and electric current, in connection with the following investigations.

Mr. HAWLEY. Mr. Chairman, I move to strike out the last word.

Mr. STAFFORD. Mr. Chairman, will not the gentleman be willing to have his motion pending, so that the committee can now rise?

Mr. HAWLEY. I do this for the purpose of asking the gentleman from South Carolina if he intends to proceed with the bill to-morrow?

Mr. LEVER. Mr. Chairman, I have been trying to make an arrangement with the gentleman in charge of pensions by which we might go on with this bill, but I have not been able to do so as yet. I understand, however, that even if the pension bill is taken up, it will not take over a couple of hours.

Mr. LANGLEY. It will not take that long, unless there is some opposition.

Mr. LEVER. Mr. Chairman, I would like to inquire of the gentleman from Ohio [Mr. SHERWOOD], whom I see in the Chamber.

Mr. SHERWOOD. Mr. Chairman, I understand that there will be a special rule on the fisheries treaties brought in to-morrow, and that the Committee on Rules will ask to have the floor. If so, the Pension Committee will have to give way.

Mr. LEVER. If the special rule, however, is not brought in, how long does the gentleman think it would take to complete the pension bill?

Mr. SHERWOOD. There are 208 names, and if there is no filibuster we ought to get through in an hour.

Mr. LANGLEY. The Committee on Pensions will also have a bill, I understand.

Mr. SHERWOOD. So far as I am concerned individually, I am willing to give way to the Agricultural appropriation bill.

Mr. LEVER. That being the case, the committee will go on with the bill to-morrow. The gentleman from Ohio says that he is willing to give way to-morrow to the Agricultural bill.

Mr. SHREVE. Mr. Chairman, I have an amendment that I would like to offer to the next line.

Mr. STAFFORD. That can be considered to-morrow.

Mr. JACOWAY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by placing therein a tabulated report showing the work of the department on farm-demonstration work in Arkansas.

The CHAIRMAN. The gentleman from Arkansas asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection?

Mr. STAFFORD. Mr. Chairman, reserving the right to object, is it in the nature of a speech that the gentleman desires to insert?

Mr. JACOWAY. No; they are tables showing the progress of this work. There will be an introductory statement on my part, which the gentleman might construe to be a speech.

Mr. STAFFORD. How voluminous is the data which the gentleman wishes to insert?

Mr. JACOWAY. It is not very voluminous.

Mr. STAFFORD. Would not the same purpose be accomplished if the gentleman asked to have it published as a public document? I do not believe there would be any objection to that. The gentleman would have those documents under his control.

Mr. JACOWAY. I would rather have it published in the RECORD in the usual form.

The CHAIRMAN. Is there objection?

Mr. STAFFORD. Mr. Chairman, I will have to object to its going into the RECORD. I have no objection to its being published as a public document.

The CHAIRMAN. The Chair is informed that the gentleman from Pennsylvania [Mr. SHREVE] desires to offer an amendment and have it pending.

Mr. SHREVE. Mr. Chairman, I will offer that to-morrow.

Mr. BRYAN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

Mr. JACOWAY. Mr. Chairman, reserving the right to object, I would like to know how voluminous the gentleman's remarks are, and if they could not be published as a public document? [Laughter.]

Mr. BRYAN. Oh, this is part of the debate that I have been participating in during the day.

Mr. JACOWAY. Oh, very well.

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 13679, the Agricultural appropriation bill, and had come to no resolution thereon.

## SENATE BILLS REFERRED.

Under clause 2 of Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees, as indicated below:

S. 4247. An act to increase the efficiency of the United States Navy by the appointment of six vice admirals; to the Committee on Naval Affairs.

S. 4096. An act to amend the act authorizing the National Academy of Sciences to receive and hold trust funds for the promotion of science and for other purposes; to the Committee on the Judiciary.

## REPRINT OF SPEECH MADE BY HON. SIMEON D. FESS ON ABRAHAM LINCOLN (H. DOC. NO. 823).

Mr. MADDEN. Mr. Speaker, I wish to ask unanimous consent to publish as a House document the very excellent speech delivered on the subject of Abraham Lincoln by Representative FESS, of Ohio, on the 12th of February last.

The SPEAKER. The gentleman from Illinois asks to publish as a House document a speech made by Representative FESS, of Ohio, on the 12th of February on Abraham Lincoln. Is there objection?

Mr. LEVER. Reserving the right to object, the gentleman from Arkansas [Mr. JACOWAY] a moment ago in the Committee of the Whole asked unanimous consent to extend his remarks in reference to certain matters, and objection was made. I

hope the gentleman who objected to the request will withdraw it, and I will make no objection.

Mr. STAFFORD. Mr. Speaker, I am not inclined to make this a case of barter, but the gentleman from Illinois asked to have this matter printed as a document, and I stated to the gentleman from Arkansas——

Mr. LEVER. Does the gentleman ask to have it printed as a House document?

Mr. STAFFORD. Yes.

Mr. LEVER. Then I have no objection.

Mr. STAFFORD. I said to the gentleman from Arkansas I had no objection to having his matter printed as a document.

Mr. FERRIS. Mr. Speaker, reserving the right to object, of course everybody was delighted with the speech of Mr. FESS which was delivered in the House here, but that is already printed in the RECORD. What is the advantage now of printing it as a public document? It is frankable, and what is to be gained by that action?

Mr. MADDEN. Mr. Speaker, it is a patriotic address with Mr. GOULDEN'S remarks at the time, who was present when the speech was delivered by President Lincoln on the battle field of Gettysburg, and I think it is one of the most comprehensive statements of the case that has ever been made; and I think it ought to be published as a public document.

Mr. FERRIS. I can not for the life of me see what is to be gained by printing the matter as a public document when it is already frankable. The Senate does that because they do not insert in the RECORD.

Mr. MADDEN. I hope the gentleman will not object.

Mr. FERRIS. If the gentleman feels it keenly, I will not object.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

BOYS' CORN CLUBS.

Mr. JACOWAY. Mr. Speaker, I ask unanimous consent to address the House for two minutes.

The SPEAKER. The gentleman from Arkansas asks unanimous consent to address the House for two minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. JACOWAY. Mr. Speaker, there are 75 counties in the State of Arkansas. In the year 1913 boys' corn club work was carried on in all but 5 of these counties. Two thousand three hundred and fifty-nine boys and at least one girl cultivated an acre of corn under departmental instruction and guidance and in accordance with departmental methods. They averaged 45 bushels of corn per acre. The average cost was 36½ cents per bushel. True, these were select acres, but it is important to consider that this average yield is more than double the average yield under existing methods of cultivation as generally practiced. Wesley Pledger, in my home county, and who lives at Belleville, Ark., raised 94 bushels of corn on 1 acre of ground and took first prize of $100.

EIGHTEEN WHO LED.

I give here the names and addresses of the Arkansas boys, and there is one girl in the list, who made over 100 bushels of corn on an acre of Arkansas land in the year 1913.

These 18 members grew 1,930 bushels of corn on 18 acres, with an average yield per acre of 107 bushels at an average cost per bushel of 16 cents:

| Name. | Address. | Number bushels. | Cost. |
|---|---|---|---|
| | | | Cents. |
| Louis Epstein | Luna Landing | 100 | 10 |
| Floyd Peters | Okolona | 100 | 48 |
| Edwin Moore | Hot Springs | 155.25 | 16½ |
| Jean Garner | Paragould | 102.5 | 20 |
| Harold Logers | do | 102.33 | 27½ |
| Clyde Halbrook | Franklin | 106 | 18 |
| Orde Phillips | Wyman | 102.75 | 16 |
| Allen M. Rush | Melbourne | 112 | 13 |
| Charley Benson | Shannon | 100 | 33 |
| Russell Benson | do | 108 | 15 |
| Willie Deaver | Brockett | 106 | 10 |
| Fred Going | Pocahontas | 100 | 9 |
| Miss Delphine Moore | Wyman | 104.4 | 11 |
| Elbie Moore | do | 101 | 11 |
| Donald Jones | Greenland | 102 | 14½ |
| Jno S. Reed | Johnson | 104.75 | 24 |
| Grover Choate | El Paso | 116.36 | 23 |
| W. D. Sego | Griffithville | 110 | 16 |

This kind of work carried out in all the corn fields of Arkansas would have added over $40,000,000 to the corn crop of Arkansas in the year 1913.

Mr. MURDOCK. Mr. Speaker, will the gentleman yield?

Mr. JACOWAY. Yes, sir; gladly.

Mr. MURDOCK. Was this production of corn during the year when there was considerable drought?

Mr. JACOWAY. In answer to the question of the gentleman from Kansas, I will say I think the year was a normal one and the conditions about the same as those of the average year.

Mr. MURDOCK. This was the year 1913?

Mr. JACOWAY. Yes.

COTTON CLUBS.

Cotton is one of the great crops of Arkansas. We raise nearly 1,000,000 bales of this kingly crop. We not only produce standard middling but grow large quantities of long staple, which brings from 24 to 30 cents per pound in the spinning markets of the world. This crop is grown on about two and one-quarter million acres. [Applause.]

But look at what cotton-club work shows. In 1913, 800 boys each grew according to modern agricultural methods an acre of cotton each in 50 counties of the State. Their average yield was 1,081 pounds of seed cotton. This is double the average for the State. These acres averaged a net profit of $25.10 per acre.

Had all the cotton lands of Arkansas done as well the increase in the crop would have netted the State $40,000,000 in a single year. [Applause.]

CANNING CLUBS.

Arkansas girls have not only shown that they can grow corn equal to the boys, but an Arkansas girl holds the record for canning club work for the 12 Southern States. This young lady is Miss Fay Parker, of Beebe, Ark., who made a net profit of $152.83 on one-tenth of an acre garden. This is at the rate of $1,528.30 per acre for good gardening in Arkansas as conducted by Arkansas horticulturists if they keep up with the intelligent pace set by one of Arkansas's fair daughters. [Applause.]

ARKANSAS'S GROWTH.

Statistics show that during the last 30 years Arkansas has made a greater growth than any other State in the Union. In 1880 the value of the factory products in this State was $6,850,000. In 1913 the value of factory products was $80,000,000, an increase of 1,400 per cent. The value of farm products in 1880 was $43,796,000, and in 1913 it was $168,375,000, an increase of 300 per cent. Our forests yielded in 1880 only $2,990,000, and in 1913 they brought us $54,008,000, an increase of nearly 1,700 per cent. Our mines yielded the pitiful sum of $65,000 in 1880, and in the year 1913 they brought $5,600,000. This was an increase of 8,400 per cent.

GENERAL SUMMARY OF CLUB WORK IN ARKANSAS FOR 1913.

CORN CLUBS.

The corn-club work has been conducted in 70 counties this year, with a total enrollment of 2,359 boys. The average yield per acre of the boys reporting this year is 45 bushels. The average cost per bushel is 36½ cents. This average yield of 45 bushels per acre is more than double the average yield of the State made under the old methods of cultivation. Below are the names and addresses of members who made 100 bushels and over per acre with the cost per bushel:

COTTON CLUBS.

The cotton clubs have been conducted in about 50 counties in the State with a total enrollment of 800. The average yield per acre of seed cotton of the boys reporting is 1,081 pounds. This is double the average of the State made under the ordinary method of cultivation. The average net profit per acre of the boys reporting, $25.10.

CANNING CLUBS.

The canning-club work for girls has been conducted in 13 counties, with a total enrollment in round numbers of about 800. The girls reporting have grown over one-quarter million pounds of tomatoes on their gardens. They have not only grown tomatoes on their gardens, but have grown a number of other vegetables. The total value of all products sold from the one-tenth-acre gardens amount to over $14,000. The average cost of production per one-tenth acre is $10.24, with an average net profit per one-tenth acre of $35.07. Arkansas has the honor of having a girl who holds the record of having made the greatest net profit of any girl in the 12 Southern States in which the club work has been conducted, according to information received from the Department of Agriculture at Washington. The girl is Miss Fay Parker, of Beebe, who made a net profit of $152.83 on one-tenth of an acre. The canning-club work is becoming more popular every day, as well as the corn and cotton clubs. In two years the local aid for conducting the canning-club work, which is put up by quorum courts and by private subscription, has grown from nothing to over $5,000, and there are counties now wanting the work, but will have to be denied this year, because of insufficient funds from the Government.

IS THE WORK WORTH WHILE?

The question has been asked me if the work is really worth while, and what there is to it? A few figures will, I think, show the merits of the work. Approximately there are 2,475,000 acres of corn in Arkansas in 1913. The average yield per acre of the State is about 20 bushels. The corn-club boys have made an average of 45 bushels per acre, a gain, therefore, of 25 bushels per acre. Two million four hundred and seventy-five thousand acres, at a gain of 25 bushels per acre, give a total gain of 61,875,000 bushels of corn, which, at 70 cents per bushel—and this is reasonably low—would give an increase in dollars and cents in the corn production in Arkansas for 1913 of $43,312,500, had every acre of corn in Arkansas been worked under demonstration methods.

There have been approximately 2,400,000 acres of cotton grown in Arkansas in 1913. The average yield per acre in the State is about 370 pounds of seed cotton. The boys have averaged 1,081 pounds of seed cotton per acre. There has therefore been a gain, in round num-

bers, of 500 pounds per acre; 2,400,000 acres with a gain of 500 pounds per acre would give a total gain of lint cotton of 400,000,000 pounds, which, at 10 cents per pound, and this is reasonably low, would give a gain in dollars and cents of $40,000,000 had every acre in cotton in Arkansas been grown under demonstration-club methods. Arkansas therefore would have been over $80,000,000 to the good had every acre of corn and cotton been grown under demonstration-club methods. I leave it for the reader to say whether the demonstration-club work is worth while.

There will be two new features of the club work the coming year—poultry clubs for the girls and the pig clubs for the boys. Poultry clubs were conducted to some extent in two counties last year. They will be made a regular feature of the girls' work the coming year and prospects are that they will be very popular.

The pig clubs for the boys are to be conducted in conjunction with the corn clubs. We hope to teach the boys that there is no better way of marketing their corn than through good hogs. We also hope to teach them that, aside from being a good means for marketing their corn, that one of the best ways for building up the soil is through the growing of more and better live stock.

UNITED STATES DEPARTMENT OF AGRICULTURE, BUREAU OF PLANT INDUSTRY, FARMERS' COOPERATIVE DEMONSTRATION WORK.

[Extracts from annual report, 1913.]

The Arkansas State office of the farmers' cooperative demonstration work of the Bureau of Plant Industry, United States Department of Agriculture, has just finished compiling its annual report to the department of the results accomplished in Arkansas for the year 1913. The facts set out in this report show that a wonderful progress has been made in the development of agricultural conditions all over the State, and the possibilities for the future indicated by this demonstration work are astounding.

The organization for the demonstration work in this State consists of Mr. C. W. Watson, State agent; Mr. W. J. Jernigan, assistant State agent, in charge of the boys' and girls' club work; Mr. R. C. Davidson, Mr. J. C. Barnett, and Mr. Harry F. Kapp, district agents, each having charge of 25 counties in the northeastern, northwestern, and southern sections of the State, respectively. Under this supervising force there were 72 local agents in the various counties who were in direct contact with the farmers and conducted operations on the farms along the lines of scientific agriculture prescribed by the department. Of the local agents, 9 were negroes, doing work among the members of their race in the counties heavily populated by negroes. The following figures given do not include any of the boys' and girls' club work or the work done by the negro agents; they pertain entirely to results accomplished by 50 local agents among the white adult farmers of the State.

These 50 agents had 1,454 demonstrators in corn, 1,520 demonstrators in cotton, a total of 2,974 farmers whom they visited regularly and supervised the growing of the crops. These 2,974 demonstrators had 16,258 acres in corn and 25,910 acres in cotton, or a total of 42,168 acres, making the average size of the demonstration plats 14½ acres per demonstrator. In addition to the 2,974 demonstrators the local agents had on their lists 10,407 cooperators, whom they are not required to visit regularly, but who receive the department literature and advice from the agents. Hence the demonstration force was in touch with 13,381 farmers in our State during the year 1913.

On the 16,258 acres in corn under demonstration methods last year 580,901 bushels were produced, an average of 34½ bushels per acre. On the 25,910 acres in cotton were produced 27,516,420 pounds of seed cotton, an average of 1,062 pounds per acre. These average yields of both corn and cotton are larger than the averages obtained under demonstration methods last year, and this was accomplished in spite of an unusually severe and extended drought and a heavy boll-weevil infestation, indicating that demonstration methods are effective in getting good results in the face of unfavorable weather conditions and insect depredations. Also, the average yields were obtained from every character of soil, upland and bottom, varying in fertility from very poor to rich and embracing every section of the State.

The average corn yield per acre for Arkansas, as shown by the Yearbook of the Department of Agriculture for 1912 was 20½ bushels. It is fair to presume that the average yield for the State last year was not greater than this. But the average yield on the demonstration farms was 34½ bushels per acre, a net gain of 14 bushels, or a total of 227,612 bushels for the 16,258 acres under demonstration methods. Figuring this increased yield at 70 cents per bushel, we have a net gain of $9.80 per acre, or a total gain of $159,328.40 for the total demonstration acreage over the ordinary yields.

The average yield of cotton per acre for Arkansas, obtained as above, was 570 pounds for 1912. The average yield on the demonstration farms was 1,062 pounds per acre, a net gain of 492 pounds per acre, or a total of 12,747,720 pounds. Thirding this for lint, and figuring the increased yield at 10 cents per pound, we have a net gain of $16.40 per acre, or a total of $429,924 for the 25,910 acres under demonstration methods over the ordinary yields.

The total amount contributed by the people of Arkansas, quorum courts, and otherwise for last year was $53,013.37. The increased earnings of the demonstration acreage over the ordinary yields was $159,328.40 on corn and $429,924 on cotton, or a total of $584,252.40. Hence it is shown that for every $1 expended by the people in fostering demonstration work more than $11 has been returned—more than 1,100 per cent on the amount invested.

Viewing these figures from another standpoint, it becomes evident that if the 2,475,000 acres planted to corn in 1912 had been under demonstration methods in 1913 and the same increased yields obtained, the farmers of Arkansas would have had 34,650,000 bushels more of corn, worth $24,255,000, at 70 cents per bushel. And if the 2,363,000 acres planted to cotton in 1911 had been under demonstration methods in 1913, the farmers would have had 1,162,596,000 pounds more of seed cotton, which at a price of 10 cents per pound for the lint would have been worth $38,753,200. In other words, if demonstration methods were universally practiced and such yields obtained as the demonstration work shows to be possible and practical, the increased income from the farms of the State on these two crops alone would have reached the astounding sum of $63,008,200.

In the above discussion no account is taken of such other wealth-producing factors of the demonstration work as the boys' corn, cotton, and pig clubs, and the girls' canning and poultry clubs. Neither does it include the vast amount of work done by the local agents in other lines. These men are conducting hundreds of demonstrations in the growing of the various clovers and other legumes and grasses for hay crops; superintending the sowing of thousands of acres of grain and cover crops; establishing permanent pastures; encouraging the better breeding and growing of all kinds of live stock; restoring impoverished farms and showing how to maintain and increase the fertility of the soil; teaching the growing of crops for silage and the building of silos; urging the efficiency of the dipping vat in tick eradication even in the very southern limits of the State; terracing and draining land; administering hog-cholera serum; helping to organize truck growing and cooperative marketing associations; getting in touch with the greatly increasing number of home seekers coming to our State and informing them as to climate, soils, crops, and cultivation in order that they may become contented, prosperous, and permanent citizens; preaching the gospel of good roads, schools, and churches for the material and moral uplift; assisting in everything that makes for the betterment of the farm and farmer and the upbuilding of the home. The local agent is a missionary of progress wherever he goes, and the demonstration force as a whole is a most potent agency for the material advancement of our great Commonwealth along every line.

Mr. Speaker, from the above compilations of Mr. C. W. Watson, State agent for Arkansas, and Mr. W. J. Jernigan, assistant State agent in charge of demonstration club work for Arkansas, it can be seen at a glance that Arkansas is living up to her privileges and opportunities in the great work of farm demonstration. All are entitled to a portion of this credit.

The man in the city has done his part in this work. He has joined hands with the farmer and left nothing undone to gain from this work, and for the benefit of the farmers, all that could be accomplished with the means afforded.

THE QUORUM COURTS OF ARKANSAS.

Especially should the quorum courts of Arkansas be given their just proportion of credit, for had not the funds in part come from these sources farm demonstration work in Arkansas would have been most seriously hindered. I take pride, Mr. Speaker, in making a recital for Arkansas of the growth, development, and progress along lines so essential to the upbuilding of every Commonwealth. [Applause.]

Now, I want to say, Mr. Speaker, that until a few years ago the State of Arkansas in many respects was somewhat handicapped in raising the money to supplement or complement the appropriations made by Congress. In all of this work the State has to make an appropriation before Federal funds are available. However, the State of Arkansas remedied the condition by passing a law authorizing the quorum courts of each county to appropriate money for this work. Previous to the passage of this act the quorum courts had no legal power to authorize an appropriation for this work, and private individuals had contributed the necessary amount of money called for by the Government. In this way the work was carried on and Federal aid secured. I am glad now to say that in all the 75 counties of the State of which I have the honor in part to represent, except five, if my memory serves me correctly, appropriations have been made for the demonstration work, and it is thought that it is money wisely expended when we come to compare the good that has been accomplished as a result.

For the purpose of diffusing this knowledge among the people at large, and in order to encourage those who are lukewarm and are not giving it the support it should be given, I asked to extend my remarks. And my further object in rising to-day, and so asking unanimous consent to extend my remarks in the RECORD, was for the purpose of avoiding any trespass on an already tired House that has done an honest day's work. It seems there have been some objections coming from Members in this regard, and what prompted them I am unable to say; but in my limited experience in this House, in the time that I have been endeavoring to represent my district, I believe the personnel of this House will bear me out on this occasion when I say that I have not outraged the proprieties on many occasions and indulged myself on the floor. I try, however, when I have something for the benefit of my district and my State and the Nation at large, to submit what remarks I think may be pertinent and that may be of advantage and benefit to the House.

Mr. STAFFORD. Will the gentleman yield?

Mr. JACOWAY. I will yield.

Mr. STAFFORD. Mr. Speaker, when the gentleman first propounded his request I was under the impression that it was a compilation of statistics framed by some outside source and thought that the matter could be as serviceably placed in a document. I now learn from the gentleman's explanation that it is a speech prepared by him, and, of course, I have no objection to any matter prepared by any gentleman of this House being inserted in the RECORD——

Mr. JACOWAY. I want to say to the gentleman from Wisconsin——

Mr. STAFFORD. And if the gentleman wishes to extend his remarks in the RECORD I will not raise any objection.

Mr. JACOWAY. I will say, in answer to that, if the gentleman from Wisconsin will take the time in the morning to read the CONGRESSIONAL RECORD and note the work that has been done by the people of Arkansas, and send it over his State, it will be a source of inspiration to him and to the people of his

State, and in the years to come they, too, may catch the strains of the martial music of progress and do likewise. [Applause.]

Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. The gentleman from Arkansas [Mr. JACOWAY] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

WITHDRAWAL OF REPORT—ALASKAN COAL-LEASING BILL.

Mr. FERRIS. Mr. Speaker, I ask unanimous consent to withdraw Report No. 352, on the bill H. R. 14233, known as the Alaskan coal-leasing bill, for correction.

The SPEAKER. The gentleman from Oklahoma [Mr. FERRIS] asks unanimous consent to withdraw the report which he has named for correction. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 43 minutes p. m.) the House adjourned until Friday, March 13, 1914, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, submitting an item of appropriation in connection with the sundry civil bill, authorizing the Secretary of War to lease buildings of the Shiloh National Military Park to former owners or other persons and apply proceeds to the maintenance of the park (H. Doc. No. 844); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Secretary of the Treasury, submitting an estimate of appropriation for the necessary expenses and salaries, Customs Service, Panama-Pacific International Exposition, San Francisco (H. Doc. No. 825); to the Committee on Appropriations and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. NORTON, from the Committee on Indian Affairs, to which was referred the bill (H. R. 4988) to provide for the disposal of certain lands in the Fort Berthold Indian Reservation, N. Dak., reported the same with amendment, accompanied by a report (No. 371), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. FLOOD of Virginia, from the Committee on Foreign Affairs, to which was referred the bill (H. R. 13667) authorizing the appointment of an ambassador to Argentine Republic, reported the same with amendment, accompanied by a report (No. 372), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. GUDGER, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 11254) to increase the limit of cost for the erection and completion of the United States post-office building at Mandan, N. Dak., reported the same with amendment, accompanied by a report (No. 373), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

He also, from the same committee, to which was referred the bill (H. R. 12169) providing for an additional appropriation for a public building in the city of Monroe, N. C., reported the same without amendment, accompanied by a report (No. 374), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. CANTRILL, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 13819) to increase the limit of cost of the Federal building at Pendleton, Oreg., reported the same without amendment, accompanied by a report (No. 376), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. MURRAY of Oklahoma, from the Committee on Pensions, to which was referred the bill (H. R. 14546) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors, reported the same without amendment, accompanied by a report (No. 370), which said bill and report were referred to the Private Calendar.

Mr. McKELLAR, from the Committee on Military Affairs, to which was referred the bill (H. R. 1090) for the relief of Alonzo D. Cadwallader, reported the same without amendment, accompanied by a report (No. 375), which said bill and report were referred to the Private Calendar.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. MOORE: A bill (H. R. 14544) to incorporate the Mothers' Day International Association; to the Committee on the Judiciary.

By Mr. BLACKMON: A bill (H. R. 14545) authorizing the Secretary of War to donate to the Andrew Jackson Chapter of the Daughters of the American Revolution, at Talladega, Ala., two cannon or fieldpieces; to the Committee on Military Affairs.

By Mr. O'HAIR: A bill (H. R. 14547) to prevent the use of the United States mail and all common carriers engaged in interstate traffic, in carrying, transporting, or conveying any written or printed matter or other device for advertising, selling, delivering, or in any way disposing of any false or fraudulent cures for injuries, diseases, or other physical ailments; to the Committee on Interstate and Foreign Commerce.

By Mr. CLAYTON: A bill (H. R. 14548) to amend section 195 of an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911; to the Committee on the Judiciary.

By Mr. BRYAN: A bill (H. R. 14549) to authorize the President of the United States to provide for coal-mine development in the Territory of Alaska, and for other purposes; to the Committee on Mines and Mining.

By Mr. FESS: Memorial of the Legislature of the State of Ohio relative to proper Federal and State action to abate the loss sustained from hog cholera; to the Committee on Agriculture.

By Mr. MURRAY of Oklahoma: Resolution (H. Res. 438) requesting the Secretary of State to furnish the House certain information regarding alleged statements of Walter H. Page, ambassador to the Court of St. James, and other information; to the Committee on Foreign Affairs.

By Mr. O'HAIR: Resolution (H. Res. 439) to investigate the condition and affairs of the National Homes for Disabled Volunteer Soldiers and Sailors, and to determine the nature and treatment of the members thereof, and to determine whether said homes should be placed under the management of the War Department; to the Committee on Rules.

## PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. MURRAY of Oklahoma: A bill (H. R. 14546) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors; to the Committee of the Whole House.

By Mr. DECKER: A bill (H. R. 14550) granting a pension to D. W. Snyder; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14551) granting a pension to William J. Walker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14552) granting a pension to R. H. Landrum; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14553) granting a pension to Frances M. Sims; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14554) granting an increase of pension to Nathan T. Moore; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14555) granting an increase of pension to Bonaparte Hunnell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14556) granting an increase of pension to William H. Koffman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14557) granting an increase of pension to Calvin C. Leaming; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14558) granting an increase of pension to John P. Walker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14559) granting an increase of pension to Gustus A. Keller; to the Committee on Invalid Pensions.

By Mr. DERSHEM: A bill (H. R. 14560) granting an increase of pension to Henry C. Wolfe; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14561) for the relief of William Mattson, alias William Madison; to the Committee on Invalid Pensions.

By Mr. EVANS: A bill (H. R. 14562) granting an increase of pension to Jennie M. Bissonette; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14563) granting an increase of pension to Mary Cook; to the Committee on Invalid Pensions.

By Mr. FORDNEY: A bill (H. R. 14564) to remove the charge of desertion from the record of Royal G. White; to the Committee on Military Affairs.

By Mr. FESS: A bill (H. R. 14565) granting a pension to Iva Blair Booher; to the Committee on Invalid Pensions.

By Mr. HAMLIN: A bill (H. R. 14566) to correct the military record of Andrew Ballon; to the Committee on Military Affairs.

By Mr. HUGHES of Georgia: A bill (H. R. 14567) granting a pension to Henry C. Newman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14568) granting an increase of pension to L. R. Clayton; to the Committee on Invalid Pensions.

By Mr. KEATING: A bill (H. R. 14569) granting an increase of pension to Elizabeth Venning; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14570) removing the charge of desertion from the name of George A. McKenzie, alias William A. Williams; to the Committee on Military Affairs.

By Mr. KEY of Ohio: A bill (H. R. 14571) granting a pension to Josephine G. Hawkins; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14572) granting an increase of pension to Joseph Diedier; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14573) granting an increase of pension to Joshua H. Reynolds; to the Committee on Invalid Pensions.

By Mr. KREIDER: A bill (H. R. 14574) granting an increase of pension to Jacob Witmer; to the Committee on Invalid Pensions.

By Mr. LANGHAM: A bill (H. R. 14575) for the relief of Samuel M. Crosby; to the Committee on Military Affairs.

By Mr. MAHAN: A bill (H. R. 14576) granting an increase of pension to Charles C. Camp; to the Committee on Invalid Pensions.

By Mr. PLATT: A bill (H. R. 14577) granting a pension to Sarah J. Bogert; to the Committee on Invalid Pensions.

By Mr. SMALL: A bill (H. R. 14578) granting an increase of pension to Thomas B. King; to the Committee on Pensions.

By Mr. SMITH of Maryland: A bill (H. R. 14579) granting an increase of pension to Thomas C. Helmling; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14580) to appropriate a sum of money to pay to the heirs of Myra Clarke Gaines for certain lands in Louisiana; to the Committee on Claims.

By Mr. WHITE: A bill (H. R. 14581) granting an increase of pension to Charles C. Davis; to the Committee on Invalid Pensions.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petition signed by 67 employees of the Martin B. Brown Printing & Binding Co., of New York City, urging the passage of the Bacon-Bartlett bill, known as S. 927, H. R. 1873, which exempts labor unions and agricultural societies from the provisions of the Sherman anti-trust act; to the Committee on the Judiciary.

Also, protests from sundry citizens of Villa Ridge, Washington, Herman, and Labaddie, State of Missouri, against the national prohibition amendment to the Constitution; to the Committee on the Judiciary.

By Mr. ALLEN: Petitions of 482 citizens of Cincinnati and Hamilton County, Ohio, protesting against national prohibition; to the Committee on the Judiciary.

By Mr. BAILEY (by request): Petition of sundry citizens of Altoona, Pa., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of sundry Spanish War veterans of Pennsylvania, favoring House bill 13044, providing pensions for widows of Spanish War soldiers; to the Committee on Pensions.

Also, memorial of the Minnesota Federation of Women's Clubs, favoring passage of the Lindquist pure-fabric bill; to the Committee on Interstate and Foreign Commerce.

Also, petition signed by members of District Lodge, No. 32, of International Association of Machinists, of St. Paul, Minn., urging the enactment of legislation exempting labor organizations from the operation of the antitrust law; to the Committee on the Judiciary.

By Mr. TEMPLE: Petition of sundry citizens of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

Also, papers to accompany a bill (H. R. 14488) granting a pension to Mrs. Margaret Mars; to the Committee on Invalid Pensions.

By Mr. THOMAS: Petitions of A. H. Nordlorn, G. D. Mantto, and George W. Dickerson, of Adairville, Ky., protesting against national prohibition; to the Committee on the Judiciary.

By Mr. TRIBBLE: Petition of Miss Mildred Lewis Rutherford and others, of Georgia, relative to preparing for signing of the treaty of Ghent; to the Committee on Foreign Affairs.

By Mr. WHITACRE: Petition of sundry citizens of Alliance, Ohio, against section 6 of House bill 12928, relative to Sunday work in post offices; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens and churches of Ohio, favoring national prohibition; to the Committee on the Judiciary.

By Mr. WILLIS: Petition of Advance Grange, No. 1882, of Mechanicsburg, Ohio, in favor of House bill 11897, providing for the establishment of a system of farm credits; to the Committee on Banking and Currency.

Also, petition of Rev. J. M. Prickett and 26 other citizens, of Findlay, Ohio, in favor of House joint resolution 168, relating to national prohibition; to the Committee on the Judiciary.

By Mr. WILSON of New York: Petition of the Federated Central Body, of New York, against national prohibition; to the Committee on the Judiciary.

Also, petition of the Associated Chambers of Commerce of the Pacific Coast, against repeal of the exemption clause of the

Mr. DU PONT. I am directed by the Committee on Military Affairs, to which was referred the bill (S. 1575) authorizing the President to issue a commission as major of Cavalry in the name of John T. Haines, with rank to date from March 3, 1911, to report it adversely. I move that the bill be postponed indefinitely, as a Senate bill on the same subject has just been reported favorably by me from the Committee on Military Affairs.

The VICE PRESIDENT. The bill will be postponed indefinitely.

Mr. BRYAN, from the Committee on Claims, to which was referred the bill (S. 1805) for the relief of Benjamin E. Jones, reported it with amendment and submitted a report (No. 343) thereon.

He also, from the same committee, to which was referred the bill (S. 2334) for the relief of S. W. Langhorne and the legal representatives of H. S. Howell, reported it without amendment and submitted a report (No. 344) thereon.

Mr. KENYON, from the Committee on Military Affairs, to which was referred the bill (S. 1063) for the relief of Philip Cook, reported it without amendment and submitted a report (No. 345) thereon.

He also, from the same committee, to which were referred the following bills, reported adversely thereon, and the bills were postponed indefinitely:

S. 4031. A bill to correct the military record of William Miles; and

S. 4385. A bill to correct the military record of Henry Woodard.

Mr. LEA of Tennessee, from the Committee on the Library, to which was referred the bill (H. R. 9671) to appropriate $5,000 to erect a suitable monument on the battle grounds at the Horse Shoe, on the Tallapoosa River, in the State of Alabama, reported it without amendment.

### AGRICULTURAL CREDIT.

Mr. FLETCHER. Mr. President, as chairman of the commission appointed to investigate and study in European countries cooperative land-mortgage banks, cooperative rural credit unions, and similar organizations, I submit Part III of the report of the commission and ask to have the letter of transmittal read. It is very brief.

The VICE PRESIDENT. Without objection, the Secretary will read the letter of transmittal.

The Secretary read as follows:

WASHINGTON, D. C., *March 13, 1914.*

*To the Senate and the House of Representatives:*

We have the honor to submit herewith Part III of the report of the United States commission appointed by the President and authorized by an act approved March 4, 1913, "to investigate and study in European countries cooperative land-mortgage banks, cooperative rural credit unions, and similar organizations and institutions devoting their attention to the promotion of agriculture and the betterment of rural conditions" and "to submit a report to Congress as early as practicable embodying the results of its investigations and such recommendations as it may see fit to make."

Parts I and II, relating to land-mortgage or long-term credit, were submitted to Congress on January 29, 1914, and printed as Senate Document No. 380, Parts I and II, Sixty-third Congress.

Part III relates to personal or short-term credit.

Respectfully,

DUNCAN U. FLETCHER, *Chairman.*
RALPH W. MOSS, *Vice Chairman.*
THOMAS P. GORE.
HARVIE JORDAN,
JOHN LEE COULTER, *Secretary.*
KENYON L. BUTTERFIELD.
CLARENCE J. OWENS.

Mr. FLETCHER. I ask that the letter of transmittal and the report be referred to the Committee on Banking and Currency and that they be printed.

The VICE PRESIDENT. That action will be taken.

### THANKS OF CONGRESS.

Mr. PERKINS. I am directed by the Committee on Commerce to report back favorably, without amendment, the joint resolution (H. J. Res. 217) to convey the thanks of Congress to the captain of the American steamer *Kroonland*, of the Red Star Line, and through him to the officers and crew of said steamer, for the prompt and heroic service rendered by them in rescuing 89 lives from the burning steamer *Volturno*, in the north Atlantic Ocean, and I submit a report (No. 336) thereon. I ask for the present consideration of the joint resolution.

The VICE PRESIDENT. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which was read, as follows:

*Resolved, etc.*, That the thanks of Congress be, and the same are hereby, extended to the captain of the American steamer *Kroonland*, of the Red Star Line, and through him to the officers and crew of said steamer, for promptly going to the relief of the burning steamer *Volturno*, in the north Atlantic Ocean, on the 9th and 10th days of October, 1913, and heroically rescuing 89 people then on board said burning steamer.

SEC. 2. That the Secretary of Commerce be, and he is hereby, authorized, empowered, and directed to cause to be purchased and presented to Capt. Paul H. Kreibohm, of the said steamer *Kroonland*, a suitable American-made solid gold dial watch and chain; and said Secretary is further authorized, empowered, and directed to cause to be made at the United States Mint 5 suitable gold, 5 silver, and 29 bronze medals, which watch and medals shall be appropriately inscribed to express the high admiration in which Congress holds the services of the captain, officers, and crew of the steamer *Kroonland*, and be presented to the officers and crew, to whose promptness, vigilance, bravery, and skill was due the rescue of 89 lives.

SEC. 3. That the sum of $1,000, or so much thereof as may be necessary for the purchase of such watch and chain and for the purpose of purchasing the necessary materials for said medals, is hereby appropriated out of any money in the Treasury not otherwise appropriated.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. PERKINS. I ask that the report of the committee may be published in the RECORD.

There being no objection, the report this day submitted by Mr. PERKINS was ordered to be printed in the RECORD, as follows:

[Senate Report No. 336, Sixty-third Congress, second session.]

EXTENDING THANKS OF CONGRESS TO CAPTAIN AND CREW OF STEAMER "KROONLAND."

Mr. PERKINS, from the Committee on Commerce, submitted the following report (to accompany H. J. Res. 217):

The Committee on Commerce, to whom was referred the joint resolution (H. J. Res 217) to convey the thanks of Congress to the captain of the American steamer *Kroonland*, of the Red Star Line, and through him to the officers and crew of said steamer, for the prompt and heroic service rendered by them in rescuing 89 lives from the burning steamer *Volturno*, in the North Atlantic Ocean, having considered the same, report it without amendment with the recommendation that it pass.

The bill has the approval of the Department of Commerce, as will appear by the annexed report, with accompanying papers, together with a report of the Committee on the Merchant Marine and Fisheries of the House of Representatives, which is annexed hereto and made a part of this report.

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
*Washington, December 27, 1913.*

MY DEAR SENATOR: I beg respectfully to hand you herewith copy of letter from Arnon L. Squiers, a gentleman well known to me, dated December 24, 1913, together with copies of the inclosures referred to therein.

This department would be very glad if some official recognition can be given to the heroic action of the officers and crew of the American steamship *Kroonland*, and regards this as of especial importance in view of the statement made in the inclosed that the respective foreign Governments which were represented by the other ships engaged in the rescue of the passengers and crew of the *Volturno* have all taken some official action in honor of the services of their own seamen.

Recommending the suggestion herein, therefore, to your thoughtful attention, I am,

Yours, very truly,
WILLIAM C. REDFIELD,
*Secretary.*

Hon. JAMES P. CLARKE,
*Chairman Committee on Commerce,*
*United States Senate, Washington, D. C.*

Kindly send to Hon. RUFUS HARDY, acting chairman of the House Committee on the Merchant Marine and Fisheries, the inclosed clipping from the Brooklyn Eagle after you have examined it.

—

DECEMBER 24, 1913.

Hon. WILLIAM C. REDFIELD,
*Secretary of Commerce, Washington, D. C.*

MY DEAR MR. REDFIELD: I wish to write you on a matter which is of great personal interest to me. As perhaps you know, I was a passenger on the steamship *Kroonland*, of the Red Star Line, at the time of the rescue of the passengers on board the *Volturno* on the 9th and 10th days of October last. Of 12 ships that were on the scene of this tragedy, the *Kroonland* was the only ship commanded by a citizen of the United States and flying the American flag. It is to the credit of the *Kroonland* that she rescued 89 souls from the *Volturno*, including Capt. Inch, of the *Volturno*, and a number of his officers and crew. I am advised on good authority that the respective governments represented by the various ships engaged in the rescue have all taken official notice and honored the captains, officers, and volunteer crew of the rescuing ship, with the single exception of the *Kroonland*.

After the event a testimonial was drawn to Capt. Kreibohm, of the *Kroonland*, signed by all the first-cabin passengers, testifying to his skillful seamanship and heroism, and to that of his officers and crew who volunteered to man the lifeboats.

I am inclosing herewith a copy of that testimonial, which also has attached the names of the volunteer officers and crew who manned the lifeboats.

I do not know what recognition the Government can take of these noble men, but if there is any appropriate recognition that the Government can give I am sure it would be greatly appreciated by all who witnessed this thrilling event, and I know would be greatly appreciated by the captain and officers and crew of the *Kroonland* who took part in this heroic rescue.

The passenger marine service of England, Russia, Germany, France, and Belgium were represented among the rescuing ships, and I am authoritatively informed that each one of these nations has taken official notice of the captains and volunteer officers and crew of the ships respectively. No ship played a more important part in this rescue than the *Kroonland*, and as I was a passenger on board and on behalf of the first-cabin passengers presented the testimonial (a copy of which I inclose) to Capt. Kreibohm, I am anxious that some recognition of these noble officers and men be taken by our Government if it be possible.

I inclose my personal account which I gave to the Brooklyn Eagle on the evening of our arrival in port.

With the season's best wishes, I am,

Respectfully, yours,

ARNON L. SQUIERS.

ON BOARD STEAMSHIP "KROONLAND."

We the undersigned first-cabin passengers on board Red Star liner *Kroonland*, bound from Antwerp to New York, do hereby certify:

That on the 9th day of October, 1913, about 10 a. m., Capt. Kreibohm, in command of the *Kroonland*, received a wireless message from steamship *Volturno* to the effect that the latter was on fire and required immediate assistance.

Capt. Kreibohm immediately responded to the call, and at full speed proceeded in search of the *Volturno*, which was reported more than 100 miles away.

The weather at this time was very bad and a heavy sea was running. The *Kroonland* reached the *Volurno* at about 5.30 p. m. of the same day and found three other steamers standing by, which had been unable to take off any passengers on account of the heavy sea.

At that time the *Volturno* was in flames from the smokestack to the bow. The steerage passengers on the *Volturno* were crowded in the afterpart of the vessel.

Immediately on reaching the scene Capt. Kreibohm ran his steamer close by and within hailing distance, to observe for himself the conditions. He caused lifeboat No. 1 to be lowered at the greatest possible risk. This boat returned in more than an hour, but was unable to get alongside the burning ship because of the dangerous sea, but did come within speaking distance of the captain of the *Volturno*.

After the return of the first lifeboat and about 9.30 p. m., the magazine on the *Volturno* was seen to explode and a rocket was sent up, showing that the *Volturno* was in the direst distress.

Capt. Kreibohm at once caused lifeboats Nos. 4 and 8 to be lowered in a desperate effort to effect rescue from the *Volturno*. These boats did not return for a period of three or four hours, but succeeded in saving 13, who jumped overboard from the *Volturno*, the boats being unable to get alongside. It being at that time in the early hours of the morning, and, by reason of the weather and sea, it was determined to suspend further efforts until daylight, it evidently being the judgment of Capt. Kreibohm that this could be done.

However, in the meantime the *Kroonland* stood close by until daylight, closely observing.

At daylight on the morning of the 10th Capt. Kreibohm caused lifeboats Nos. 4, 6, and 8 to be dispatched to the burning ship, and these boats between that hour and 9 a. m saved 76 persons from the *Volturno*, including the captain and a portion of the crew, the captain of the *Volturno* being the last person to leave the burning ship.

The meritorious action of the officers and crews of the lifeboats, who all volunteered, resulted in saving 89 lives from the burning vessel, and we trust due recognition and consideration will be given the matter and that these heroes will receive some reward from the hands of your society.

The skillful seamanship and noble act of Capt. Kreibohm, who was in command, will no doubt receive careful attention.

The following are the members of the crews of the boats above mentioned:

No. 1 boat: Fifth officer, Bernhard Anton Heinrich; first boatswain, Franz Reinhard Emil von Hymmen; first carpenter, John Ernest Tobmann; second carpenter, Joan Michailovitch Konstantinoff; quartermasters, Karl Freidrich August Meinjohannes and Emil Moritz Bohme; able-bodied seamen, Jack Roelands, Herman Karl Brand, Jakob Arens Fischer, Roman van Drom, Gerhard F. Borrenberg, Leon Coppens, Gustave Wilhelm Maron, and Ernest Richard Bennecke. Left at 8 p. m. and returned at 9.10 p. m.

No. 8 boat: Fifth officer, Bernhard Anton Heinrich Kummel; second boatswain, Anton Christian Pederson; first carpenter, John Ernest Tobmann; lookout man, Fred Becker; A. B., Louis Bateste Schreiwers; A. B., Ingolf Fritz Loode; fireman, Georg Hertzog; fireman, Gustav Ebeling; oiler, Franz Ouedmann; trimmer, Theodor Hubertus Timmermann. Left at 10 p. m. and returned at 1 a. m.

No. 4 boat: Senior second officer, Frederik Mansfield; first boatswain, Franz Reinhard Emil von Hymmen; quartermaster, Karl Friedrich August Meinjohannes; lookout man, Desire August Coopmann; lookout man, Heike Martin Peter Janssen; A. B., Erich Johann Weststrom, A. B., Peters Augustinus Stobbelner; Gustave Wilhelm, Gustave Wilhelm Maron; fireman, Alfons Josef Roll; trimmer, Heinrich Schaub. Left at 10.20 p. m. and returned at 12.20 a. m.

No. 4 boat: Senior second officer, Frederik Mansfield; fourth officer, Erik Hans Hirschfeld; quartermaster, Karl Friedrich August Meinjohannes; quartermaster, Emil Moritz Bohme; quartermaster, Jacob Rumberg; quartermaster, Charles Samuel Svenson; A. B., Gustave Wilhelm Maron; A. B., Ingolf Fritz Loode; A. B., Jack Roelands; A. B., Leon Coppens. Left at 5.55 a. m. and returned at 7.15 a. m. Left at 7.15 a. m. and returned at 9 a. m.

No. 8 boat: Fifth officer, Bernard Anton Heinrich Kummel; first carpenter, John Ernest Tobmann; second boatswain, Anton Christian Pedersen; A. B., Erich Johann Weststrom, Roman von Drom, Jakob Arens Fischer; barkeeper, Arthur George Ingram; storekeeper, Jack Hubert Fletcher; steward, Harry Ericus Josef Guelinchs. Left 5.50 a. m. and returned at 7.05 a. m.; left 7.25 a. m. and returned at 8.15 a. m.

No. 6 boat: Third officer, Guillaume Jean Frederic Wynen; first boatswain, Franz Reinhard Emil von Hymmen; lookouts, Heike Martin Peter Janssen, Fred Becker; A. B., Gerhard Franoisous Borrenberg, Peters Augustinus Stobbelaer, Louis Bateste Schreiwers, Ernest Richard Bennecke; engineer, Alexander Sandiland; steward, August Friedrich Reokangel. Left at 6.25 a. m. and returned at 7.15 a. m.; left at 7.45 a. m. and returned at 9 a. m.

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
*Washington, January 2, 1914.*

SIR: On the 27th ultimo I sent you a copy of a letter from Mr. Arnon L. Squiers, dated the 24th ultimo, in regard to the heroic action of the officers and crew of the American steamship *Kroonland*, with the suggestion that official action be taken in honor of the services of our own seamen. I now wish to submit also the statement of the master of the *Kroonland*, dated November 19, giving further details of the occurrence. I hope this statement will be placed with the papers which I sent you on Saturday.

Respectfully,

WILLIAM C. REDFIELD,
*Secretary.*

Hon. JAMES P. CLARKE,
*Chairman Committee on Commerce, United States Senate.*

VOYAGE BOUND ANTWERP ON NOVEMBER 6, 1913.

STEAMSHIP "KROONLAND,"
*November 19, 1913.*

The MANAGER RED STAR LINE.

DEAR SIR: On October 9, at 9.30 a. m., in latitude 47.44 north, longitude 36 west, we received a wireless call from the steamship *Carmania* to the effect that the steamship *Volturno* was in distress, ship being on fire and in extreme danger. The *Volturno's* position at that time was given as latitude 49.12, longitude 34.51 west. We immediately altered our course and steered for the position indicated, and on reaching there found the *Volturno* burning from bow to funnel. At the time of our arrival there were three other vessels standing by, viz, *Carmania*, *Grosser Kurfurst*, and *Sendlitz*. It was blowing a fierce gale from the north, with tremendous high and dangerous sea running. We steered as near to the *Volturno* as safety would permit, and noticed that two-thirds of the ship was burning like a furnace. The after part of the vessel was crowded with people, apparently emigrants, and it was evident that something had to be done without any delay to save those on board the burning vessel, as the situation was very critical. We endeavored to get a rope connection to the *Volturno* by means of the Lyle gun, but this proved to be impossible.

Under these circumstances I called for volunteers, and in spite of the fierce gale blowing and the dangerous, high sea running, my appeal met with a most hearty response, and every member of the crew, officers, engineers, sailors, and firemen, as well as waiters, stepped forward. At 8 p. m. No. 1 lifeboat, manned by the fifth officer, Mr. B. Kummel, and a volunteer crew of 10 men, was swung out and succeeded in getting close to the *Volturno*, but returned at about 10 p. m., after two hours' strenuous work, without having been able to save anybody, it being impossible to get alongside owing to the prevailing high sea, and none of those on the *Volturno* could be induced to jump and be saved. I might here mention that our boat was the first one of all the vessels standing by which managed to get near the *Volturno*. Shortly afterwards the same boat set out once more for the burning ship, and at the same time lifeboat No. 4, under the command of the senior second officer, Mr. F. Mansfield, and a volunteer crew, was launched. Both boats returned between 12.30 and 1 a. m., one with 3 survivors and the other with 10, all of whom had jumped from the *Voturno* into the sea and were picked up by the boats' crews and taken safely on board the *Kroonland*. Seeing that no others could be persuaded to jump, under these circumstances, I decided to wait a little while, but before the boats could be hoisted up under the davits a heavy sea struck lifeboat No. 1, completely smashing it to pieces, but fortunately none of the crew were hurt. At about 5 a. m we again maneuvered the *Kroonland* as near as possible to the *Volturno* and lowered three lifeboats, Nos. 4, 6, and 8, under command of Mr. Kummel, Mr. Mansfield, and Mr. Wignen, third officer. By this time the gale and heavy sea had moderated a little, and after several attempts we managed to get 88 people, all in all, on board. The boat in charge of Mr. Mansfield was the last one to leave the doomed vessel with the captain and part of the crew on board, and, knowing that every living soul had been taken off and having hoisted the lifeboats on board, we proceeded on our voyage.

All the survivors were disembarked safe and sound on our arrival at New York on the 16th of October.

In conclusion, I beg to say that the excellent work performed by the *Kroonland's* lifeboat in rescuing the passengers and crew of the *Volturno* is undoubtedly due to the fact that every member of the crew in all three—deck, engine, and steward's—departments are exercised in boat drill at every opportunity offered, in Antwerp as well as the harbor of New York, when the boats are lowered in the water, and the crew assigned to each boat have to pull about. The splendid work done on this occasion also proves that the firemen and waiters are not only as equally able as the best seamen to handle boats during stormy weather, with a high, dangerous sea running, as was the case on the night of October 9–10, but they likewise display great courage.

I am, dear sir,

Yours, very respectfully,

PAUL H. KREIBOHM, *Master.*

Lifeboat No. 1, commanded by Mr. Kummel, Bernhard, fifth officer, left the *Kroonland* at 8 p. m.,; returned at 9.10 p. m. on the 9th of October; rescued nobody.

The crew was composed of: Fifth officer, Kummel, Bernhard; boatswain, von Hymnen, Frank; first carpenter, Jobman, Ernst; second carpenter, Konstantinoff, John; quartermaster, Keinjohanns, Karl; quartermaster, Bohme, Emil; sailor, Roelants, Jacques; sailor, Brandt, Hermann; sailor, Fischer, Jakob; sailor, Van Drom, Armand; sailor, Borrenberg, Berard Franz; sailor, Coppens, Leon; sailor, Maron, Gustav; sailor, Esnecke, Ernst.

Lifeboat No. 8, commanded by Mr. Kummel, Bernhard, fifth officer, left the *Kroonland* at 10 p. m.; returned at 1 a. m. on the 10th of October; rescued 10 persons.

The crew was composed of: Fifth officer, Kummel, Bernhard; second boatswain, Pedersen, Anthon; first carpenter, Jobman, Ernst; lookout man, Becker, Frederick; sailor, Schryvers, Louis Fredegandus; sailor, Loode, Ingoff; oiler, Quednan, Franz; fireman, Herzog, Georg; fireman, Ebling, Gustav; trimmer, Timmermans, Theodor Hubert.

Lifeboat No. 4, commanded by Mr. Frederick Mansfield, second officer, senior, left the *Kroonland* at 10.20 p. m.; returned at 12.20 a. m.; rescued 3 persons.

The crew was composed of: Second officer, senior, Frederick Mansfield; first boatswain, Frank von Hymmen; quartermaster, Karl Meinjohanns; lookoutmen, Desire August Coopman and Keike Janssen; sailors, Johann Erik Wesstrom, Petrus Strobbelaar, and Gustav Maron; fireman, Alphone Roll; trimmer, Heinrich Schaub.

Lifeboat No. 4, commanded by Frederick Mansfield, second officer, senior, left the *Kroonland* at 5.55 a. m.; returned at 7 a. m. on the 10th of October; rescued 28 persons.

The crew was composed of: Second officer, senior, Frederick Mansfield; fourth officer, Erich Hirschfield; quartermasters, Karl Meinjohanns, Emil Bohme, Jakob Rumberg, and Charles Svenson; sailors, Gustav Maron, Ingolf Loode, Jaques Roelants, and Leon Coppens.

Lifeboat No. 4, commanded by Frederick Mansfield, second officer, senior, left again at 7.15 a. m. with the same crew; returned at 9 a. m.

Lifeboat No. 8, commanded by Mr Bernhard Kummel, fifth officer, left the *Kroonland* at 5.50 a. m., returned at 7.05 a. m., on the 10th of October; left again at 7.25 a. m. and returned at 8.15 a. m.; rescued 24 persons. The crew was composed of: Fifth officer, Bernhard Kummel; first carpenter, Ernst Jobman; second boatswain, Anthon Pedersen; sailors, Johann Erik Wesstrom, Armand Van Drom, and Jakob Fischer; barkeeper, Arthur Ingram; storekeeper, Hubert Jack Fletcher, and waiter, Henry Guelinck.

Lifeboat No. 6, commanded by Mr. Guilleaume Jean Wynen, third officer, left the *Kroonland* at 6.25 a. m., returned at 7.15 a. m.; left again at 7.45 a. m. and returned at 9 a. m.; rescued, altogether, 23 persons. The crew was composed of: Third officer, Guilleaume Jean Wynen; first boatswain, Frank von Hymmen; lookout men, Heike P. M. Janssen and Fred Beker; sailors, Gerard Frans Borrenberg, Petrus Stobbelsar, Louis Fredegandus Schryvers, Ernst Benecke, and Wilhelm Otto Muller; junior fourth engineer, Alexander Sandilands, and waiter, August Fried Reckzugel.

---

[House Report No. 283, Sixty-third Congress, second session.]

The Committee on the Merchant Marine and Fisheries, to whom was referred House joint resolution 217, intending to convey the thanks of Congress to the captain and crew of the American steamer *Kroonland*, of the Red Star Line, for prompt and heroic services rendered by them in rescuing 89 persons from the burning steamer *Volturno* in the North Atlantic Ocean on the 9th and 10th days of October, 1913, having had the same under consideration, report thereon with recommendation that it be passed with the following amendment:

On the printed page 2 strike out the whole of section 3 and insert in lieu thereof the following:

"SEC. 3. That the sum of $1,000, or so much thereof as may be necessary for the purchase of such watch and chain and for the purpose of purchasing the necessary materials for said medals, is hereby appropriated out of any money in the Treasury not otherwise appropriated."

The purpose of this resolution is to recognize, on behalf of the American Nation, the skillful and heroic services rendered by the captain, officers, and crew of the American steamship *Kroonland* on the 9th and 10th of October last, in rescuing 89 people from the burning steamer *Volturno*. That tragic occurrence is fresh in the minds of the American people, and we do not consider it necessary in this report to recite the details in full. A similar resolution of thanks was passed by Congress shortly after the *Titanic* disaster in 1912. There is, however, this difference between the two resolutions: The resolution relating to the *Titanic* disaster conveyed the thanks of Congress to Capt. Arthur Henry Rostron of the steamship *Carpathia* by name, and thereby conferred upon him the privilege of the floor of the Houses of Congress. Your committee considers it unwise to grant this great privilege too frequently, thereby lessening the high appreciation in which such a privilege should be held. This resolution extends the thanks of Congress to the captain of the *Kroonland* by title and not by name, and does not confer upon him the high privilege of the floor of the Houses of Congress.

The resolution provides that the Secretary of Commerce shall purchase and present to Capt. Paul H. Kreibohm, of the steamship *Kroonland*, a suitable American-made, solid gold-dial watch and chain, the estimated cost of which is placed at $250. There were actually engaged in the work of rescuing 5 officers, 5 petty officers, and 29 of the crew, the names of whom have been certified to the Secretary of Commerce. It is proposed to have made at the United States Mint 5 suitable gold medals, properly inscribed, for presentation to the officers, and 5 additional silver medals for the petty officers, and 29 bronze medals for the members of the crew, all suitably inscribed. The cost of the gold medals is estimated by Mr. Chamberlain, Commissioner of Navigation, at $80 each, and the silver medals at $5 each. The cost of the bronze medals is estimated at $2 each. All medals are to be suitably inscribed, and as some of the officers and crews made more than one trip in the work of rescuing, the medal of each officer and member of the crew will show by the number of bars across the face of it the number of such trips made by such officer or member of the crew. The total cost of the gold medals will be about $400, of the silver medals $25, and the bronze medals $58, making the total for material $483; and it is further intended that leather and plush cases shall be provided for the medals at a total cost of about $50.

By having the medals made at the United States Mint, Congress saves the expense of manufacturing the same and pays only for the material. This provision was inserted at the suggestion of Mr. Roberts, Director of the Mint.

LOAN OF TENTS.

Mr. FLETCHER. From the Committee on Military Affairs I report back favorably, without amendment, the joint resolution (S. J. Res. 122) authorizing the Secretary of War to loan certain tents for the use of the Confederate Veterans' reunion to be held at Jacksonville, Fla., in May, 1914, and I ask unanimous consent for its present consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution. It authorizes the Secretary of War to loan, at his discretion, to the equipment committee of the Confederate Veterans' reunion to be held at Jacksonville, Fla., in the month of May, 1914, such tents, with necessary poles, ridges, pins, and cots, as may be required at said reunion; and that no expense shall be caused the United States Government by the delivery and return of said property, the same to be delivered to the committee designated at such time prior to the holding of the reunion as may be agreed upon by the Secretary of War and H. L. Covington, jr., general chairman of said equipment committee; and that the Secretary of War shall, before delivering such property, take from said H. L. Covington, jr., a good and sufficient bond for the safe return of the property in good order and condition, and the whole without expense to the United States.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

LOUIS EDER.

Mr. CLARK of Wyoming. From the Committee on Public Lands I report back favorably, without amendment, the bill (S. 4714) to authorize Louis Eder to enter lands under the homestead laws, and I submit a report (No. 337) thereon.

Mr. WARREN. This is a very short bill, regarding a local matter, and I ask for its present consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It authorizes Louis Eder, of Laramie County, Wyo., to enter and secure title under the homestead laws of the United States to 160 acres of unappropriated public lands in lieu of the north half of north half of section 28, township 14 north, range 70 west, of sixth principal meridian, relinquished by him to the Government for inclusion in the withdrawal of lands for the protection of the water supply of a military post, and no charge shall be made for making the entry of record to cover the tract selected; and that the requirements of the laws respecting settlement, residence, improvements, etc., are complied with on the new claim, credit being allowed for the time spent on the relinquished claim.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

LUCY B. KASSON.

Mr. WILLIAMS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably, without amendment, Senate resolution 297. I call the attention of the Senator from Ohio [Mr. BURTON] to the resolution.

Mr. BURTON. I ask for its immediate consideration.

The resolution was read, considered by unanimous consent, and agreed to, as follows:

*Resolved*, That the Secretary of the Senate be, and he hereby is, authorized and directed to pay, out of the contingent fund of the Senate, to Lucy B. Kasson, widow of H. A. Kasson, late a member of the Capitol police force, a sum equal to six months' salary at the rate he was receiving by law at the time of his death, the said sum to be considered as including funeral expenses and all other allowances.

HEARINGS BEFORE THE COMMITTEE ON PRINTING.

Mr. WILLIAMS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back Senate resolution 299.

Mr. FLETCHER. I ask for the immediate consideration of the resolution.

The resolution was read, considered by unanimous consent, and agreed to, as follows:

*Resolved*, That the Committee on Printing or any subcommittee thereof be, and the same is hereby, authorized to employ a stenographer from time to time, as may be necessary, to report such hearings as may be had on bills or other matters pending before said committee, and that said stenographer be paid as compensation not to exceed $1 per printed page out of the contingent fund of the Senate.

THE COMMITTEE ON FOREIGN RELATIONS.

Mr. WILLIAMS. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably Senate resolution 292.

Mr. SHIVELY. I ask unanimous consent for the immediate consideration of the resolution.

The resolution was read, considered by unanimous consent, and agreed to, as follows:

*Resolved*, That the Committee on Foreign Relations or any subcommittee thereof be, and the same is hereby, authorized to employ a stenographer, from time to time as may be necessary, to report such hearings as may be had on bills or other matters pending before said committee, and that said stenographer be paid as compensation not to exceed $1 per printed page out of the contingent fund of the Senate.

Mr. SHIVELY. In the same connection, I submit a resolution, for which I ask immediate consideration.

The VICE PRESIDENT. The resolution will be read.

The Secretary read the resolution (S. Res. 302), as follows:

*Resolved*, That the Committee on Foreign Relations, or any subcommittee thereof, be authorized, during the Sixty-third Congress, to send for persons and papers, to administer oaths, and to hold hearings upon any bill or matter pending before said committee; and that the said committee and all subcommittees thereof may sit during the sessions of the Senate; and that the expenses of such hearings be paid out of the contingent fund of the Senate.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

Mr. SMOOT. Does it not involve an expenditure from the contingent fund of the Senate? It ought to go first to the committee.

Mr. SHIVELY. Yes; it would probably involve some expense in sending for witnesses.

Mr. SMOOT. Under the law it should go to the committee.

Mr. SHIVELY. I have no objection.

Mr. SUTHERLAND. As I caught the reading of the resolution, it simply provides that the committee may sit while the Senate is in session.

Mr. SMOOT. And they are to send for persons and papers, and that, of course, would involve expense.

Mr. SHIVELY. I will say to the Senator from Utah that it does go further than merely to authorize the committee to sit during the sessions of the Senate. It authorizes the committee to send for persons and papers for the purpose of taking

testimony. I am satisfied that under the statute it must first go to the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. SUTHERLAND. I caught rather imperfectly the reading of the resolution which was just passed, which provides for the employment of a stenographer for the committee. Does that resolution provide that the stenographer shall be paid out of the contingent fund of the Senate?

The VICE PRESIDENT. It does. The Chair is of the opinion that the resolution of the Senator from Indiana could have been made an amendment to Senate resolution 292, and if there is no objection it will be treated as an amendment to that resolution.

Mr. WILLIAMS. Mr. President, I do not think that can be done. In the first place, the original resolution has been passed by the Senate. That resolution provides for a stenographer, to be paid as compensation not to exceed $1 per printed page. In the second place, nothing can be paid out of the contingent fund of the Senate, by amendment or otherwise, unless the matter has first been considered by the Committee to Audit and Control the Contingent Expenses of the Senate.

The VICE PRESIDENT. The resolution will be referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

### NAVIGATION IN BUZZARDS BAY.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (S. 4235) to mark the approaches to the Cape Cod Canal and Buzzards Bay and Barnstable Bay, and I submit a report (No. 338) thereon. I ask unanimous consent for the present consideration of the bill.

The VICE PRESIDENT. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It authorizes the Secretary of Commerce to make such changes in and additions to the existing lights and marks for the aid of navigation in Buzzards Bay, between Wings Neck Light and the mouth of the Monument River, as shall be necessary for the safety of vessels navigating that part of Buzzards Bay under the changed conditions caused by the construction of the Cape Cod Canal and the dredging of new channels incident thereto, and that the Secretary of Commerce is hereby authorized and required to change the lights in Barnstable Bay to conform to the requirements of navigation in approaching and leaving the eastern end of the Cape Cod Canal.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

### BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WILLIAMS:

A bill (S. 4882) to erect a monument to Ferdinand de Lesseps; to the Committee on the Library.

By Mr. STERLING:

A bill (S. 4883) for the relief of Milton C. Conners and George G. Conners, doing business under the firm name of Conners Bros.; to the Committee on Claims.

By Mr. BURLEIGH:

A bill (S. 4884) granting an increase of pension to William Wallace, 2d; to the Committee on Pensions.

By Mr. SMITH of Arizona:

A bill (S. 4885) granting a pension to Philip H. Chambers (with accompanying paper); to the Committee on Pensions.

By Mr. BORAH:

A bill (S. 4886) to place the name of Capt. Henry S. Howe upon the unlimited retired list of the Army; and

A bill (S. 4887) to place the name of Capt. Addison L. Ewing upon the unlimited retired list of the Army; to the Committee on Military Affairs.

By Mr. BRADLEY:

A bill (S. 4888) granting a pension to James T. Fitzgerald (with accompanying papers); to the Committee on Pensions.

By Mr. ROBINSON:

A bill (S. 4889) for the relief of the heirs or estate of Samuel N. Pryor, deceased (with accompanying papers); and

A bill (S. 4890) for the relief of the heirs or estate of Wesley W. Wallace, deceased (with accompanying papers); to the Committee on Claims.

A bill (S. 4891) to provide for the purchase and equipment of a mine-rescue car, and for other purposes; to the Committee on Mines and Mining.

A bill (S. 4892) granting an increase of pension to Julia Taylor (with accompanying papers); to the Committee on Pensions.

By Mr. OWEN:

A bill (S. 4893) to amend section 5 of an act entitled "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone," approved August 24, 1912; to the Committee on Interoceanic Canals.

By Mr. GORE:

A bill (S. 4894) for securing the uniform grading of grain, preventing deception in transactions in grain, and regulating traffic therein, and for other purposes; and

A bill (S. 4895) to authorize the Secretary of Agriculture to establish uniform standards of classification for cotton; to provide for the application, enforcement, and use of such standards in transactions in interstate and foreign commerce; to prevent deception therein, and for other purposes; to the Committee on Agriculture and Forestry.

### AMENDMENTS TO INDIAN APPROPRIATION BILL.

Mr. HITCHCOCK submitted an amendment providing that all wagon transportation from the point where delivery is made by the last common carrier to the Indian agency, school, or elsewhere, shall hereafter be made from the funds appropriated or otherwise available for the support of the school, agency, or other project for which the supplies to be transported are to be purchased, etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

He also submitted an amendment proposing to appropriate $68,800 for the support and education of 400 Indian pupils at the Indian school at Genoa, Nebr., etc., intended to be proposed by him to the Indian appropriation bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

### INTERSTATE TRADE COMMISSION.

Mr. LODGE submitted an amendment intended to be proposed by him to the bill (S. 4160) to create an interstate trade commission, which was referred to the Committee on Interstate Commerce and ordered to be printed.

### BUREAU OF LABOR SAFETY.

Mr. RANSDELL submitted an amendment intended to be proposed by him to the bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor, which was referred to the Committee on Education and Labor and ordered to be printed.

### COMMITTEE SERVICE.

On motion of Mr. LODGE, it was

*Ordered*, That Mr. LIPPITT be appointed a member of the Committee on Mines and Mining and of the Committee on Expenditures in the State Department;

That Mr. GALLINGER be appointed a member of the Committee on Manufactures;

That Mr. DU PONT be appointed a member of the Committee on Railroads; and

That Mr. BRANDEGEE be appointed a member of the Committee to Examine the Several Branches of the Civil Service.

### FEDERAL ANTITRUST DECISIONS.

Mr. McLEAN submitted the following concurrent resolution (S. Con. Res. 18), which was read and referred to the Committee on Printing:

*Resolved by the Senate* (the *House of Representatives concurring*), That there be printed and bound 3,000 copies of the Federal antitrust decisions, 1911 to 1914, to be compiled by the direction of the Department of Justice, 1,000 copies for the use of the Senate and 2,000 copies for the use of the House of Representatives.

### SWISS SCHOOL SYSTEM.

Mr. TILLMAN submitted the following resolution (S. Res. 306), which was read and referred to the Committee on Printing:

*Resolved*, That Bulletin No. 56 of the United States Bureau of Education, entitled "Some Suggestive Features of the Swiss School System," be printed as a Senate document, and that 5,700 additional copies be printed for the use of the Senate document room.

### PAYMENT UNDER RECLAMATION PROJECTS.

Mr. SMITH of Arizona. Mr. President, I desire to give notice that on Wednesday, March 18, upon the conclusion of the routine morning business, I shall move to take up Senate bill 4628, Calendar No. 261, being a bill extending the period for payment under reclamation projects, and for other purposes.

### POSTAL SAVINGS DEPOSITORIES.

Mr. MARTINE of New Jersey. I ask unanimous consent for the present consideration of House bill 9318.

The VICE PRESIDENT. Is there objection?

Mr. LODGE. Let the bill be read, Mr. President.

The Secretary read the bill (H. R. 9318) to amend the act approved June 25, 1910, entitled "An act to establish postal savings depositories for depositing savings at interest with the security of the Government for repayment thereof, and for other purposes."

Mr. BRISTOW. Am I to understand the Senator from New Jersey has asked for the immediate consideration of this bill?

Mr. MARTINE of New Jersey. I have.

Mr. BRISTOW. I object.

The VICE PRESIDENT. Objection is made to the present consideration of the bill.

Mr. MARTINE of New Jersey. I ask unanimous consent for the present consideration of the bill (H. R. 7967) to amend the act approved June 25, 1910, authorizing a postal savings system.

The VICE PRESIDENT. Is there objection?

Mr. SMOOT. I object.

The VICE PRESIDENT. Objection is made.

### W. H. PRAY.

Mr. McCUMBER. Mr. President, before the morning business is closed I desire to call attention to Senate resolution 182, directing the Postmaster General to transmit to the Senate all papers, and so forth, relating to the removal of W. H. Pray as postmaster at Valley City, N. Dak., which is still on the calendar. I note that the Senator from Maryland [Mr. SMITH] is anxious to go on with and to complete the District appropriation bill in his charge. The resolution which I desire to have passed seeks to secure certain data from the Post Office Department for hearing before the Post Office Committee. A certain nomination has been reported twice to the Senate, and I have had it recommitted to the committee because I myself desire a hearing before that committee in connection with those papers. I do not wish to take up any time now, for I know the Senator from Maryland is anxious to go on, but I wish those who have charge of post-office matters in the Committee on Post Offices and Post Roads, the chairman of that committee not being present, shall note that I desire to have that hearing upon those papers before that name is again reported to the Senate, so that I may have an opportunity to be heard. If I delay pressing the matter now in order that the appropriation bill may be considered, I do not wish it charged up to me that I am delaying the consideration of action upon the matter to which I refer. With that understanding I shall not call up the resolution at the present time.

The VICE PRESIDENT. Morning business is closed.

### DISTRICT OF COLUMBIA APPROPRIATION BILL.

Mr. SMITH of Maryland. I ask unanimous consent that the Senate proceed to the consideration of House bill 10523, being the District appropriation bill.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 10523) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1915, and for other purposes, the pending question being on the amendment reported by the Committee on Appropriations, on page 85, after line 16, to insert:

> For the preparation of plans and specifications, necessary grading of site, and for the erection of hospital buildings, including power house and domestic-service building, for municipal purposes, to be located and erected on the site now owned by the District of Columbia at Fourteenth and Upshur Streets, and hereafter to be known as Gallinger Hospital, with authority to contract for the completion of said buildings at a total cost not to exceed $300,000, which amount is hereby appropriated and made immediately available.

Mr. THOMAS. Mr. President, the amendment reported by the committee, on page 85, proposes to appropriate the sum of $300,000 for the erection of a hospital building for municipal purposes, to be erected upon a site now owned by the District of Columbia. The reasons which have been assigned for the action of the committee are to the effect that this is a necessary structure, made essential because of the unsatisfactory and insanitary conditions of the hospital, or hospital building so called, which is now used to serve the purpose for which this new building is designed, and that the conditions of the diseased and the helpless are such as to require this appropriation.

Mr. President, I have heretofore adverted to the fact that these conditions may be, and doubtless are, as unsatisfactory as has been here stated two or three times. They are, nevertheless, conditions which are not new to the District, but seem to have prevailed for a considerable length of time. My experience—and I think I can say the experience in common of all of us—is that such conditions depend not so much upon the character of the structure in which they exist as upon the nature of the management which has characterized the conduct of the institution. A good housekeeper can make a hovel very comfortable, while a poor one can make a palace repulsive; and I have no doubt that the conditions which are so eloquently portrayed here are more largely than anything else the result of mismanagement or lack of management or careless management. But, Mr. President, I am convinced that, whether or not that be so, there is no immediate necessity for this very large appropriation.

I am not at all sanguine that anything I shall say will change the course of this body with reference to this appropriation. Certainly, I have had but very little influence so far and have produced but very little effect in making objection to some of the appropriations contained in this bill, but I want, Mr. President, to record my objections, which I think are intelligent ones even though not convincing, to this very large appropriation which will be added to this bill.

In the first place, I find by referring to page 68 of the estimates of the commissioners that only $60,000 was requested for this hospital. The amount of the appropriation therefore is five times the amount of that estimate. A reference is made to the subject on page 219 of the statements before the Senate committee by Mr. Wilson, who said:

> Mr. Chairman, the next item omitted was on page 68, between lines 10 and 11, which was an estimate of $60,000 for the preparation of plans and specifications, necessary grading of site, etc., for beginning the work for hospital buildings on the hospital site at Fourteenth and Upshur Streets. That is an item concerning which you have already heard Dr. Kober at length, and I presume you do not want me to discuss it. I would only like to say this, that, regardless of what the future general hospital policy might be, I hope in some way in the very near future that improved accommodations will be available for our people down at the Washington Asylum Hospital. The estimate here submitted, $60,000, with authority to contract for an expenditure of not to exceed $300,000, could not possibly anticipate any numbers beyond those now needing care and not cared for in other institutions, and of course the future policy as to buildings and maintenance is in the hands of the Congress entirely.

We start out, therefore, Mr. President, with the initial appropriation——

Mr. WARREN. Mr. President——

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Wyoming?

Mr. THOMAS. In just a moment. We start out, therefore, with the initial appropriation for this purpose of $300,000, or five times the amount which is estimated as required at the present time by the commissioners. I now yield to the Senator from Wyoming.

Mr. WARREN. Mr. President, it is not strange the Senator should be perhaps misled by what he has read. The facts are that they have been demanding a municipal hospital to cost $3,000,000 instead of $300,000, and the appropriation of money for plans referred to, and so forth, in the paragraph of the report just read was intended to lead to a total appropriation of that amount in time. In the present case it is intended to build this hospital complete for $300,000, so that it is possible to effect a saving between hundreds of thousands of dollars and millions of dollars. All that has preceded this in past years regarding a municipal hospital is well understood by those who have worked on the committee, and the Senator is wrong in concluding that this appropriation is in the nature of a larger final expenditure, when, as a matter of fact, it is for a smaller ultimate expenditure.

Mr. THOMAS. I now yield to the Senator in charge of the bill.

Mr. SMITH of Maryland. Mr. President, I will say to the Senator that he will see, if he will notice the provision, that the hospital is authorized at a cost not to exceed $300,000, which was the amount asked for, but only $60,000 of that amount is appropriated.

Mr. THOMAS. I do not draw the conclusion the Senator does from the language of the amendment.

Mr. SMITH of Maryland. If the Senator will pardon me, I will read the amendment. It is as follows:

> For the preparation of plans and specifications, necessary grading of site, and for the erection of hospital buildings, including power house and domestic-service building, for municipal purposes, to be located and erected on the site now owned by the District of Columbia at Fourteenth and Upshur Streets, and hereafter to be known as Gallinger Hospital, with authority to contract for the completion of said buildings at a total cost not to exceed $300,000.

Mr. THOMAS. But the amendment provides that $300,000 is "hereby appropriated and made immediately available."

Mr. SMITH of Maryland. That is right.

Mr. THOMAS. It is $300,000.

Mr. SMITH of Maryland. That is so; but that does not represent the amount that was requested for the building of this hospital.

Mr. THOMAS. If I thought that this building or this improvement—because I presume it comprises more than one structure—would be confined to an ultimate cost of $300,000, I should feel a good deal better about it; but I am reminded that in a hearing before the committee on the 12th day of February, 1914, attention was called to the fact that there exists upon the premises where the Washington Asylum Hospital is now located an uncompleted workhouse structure

which, when completed, it is estimated will cost close to $700,000. The construction of this building at that price was in violation of an express provision of the act of Congress limiting its cost to $150,000. I will read the statement of Mr. Curriden concerning this subject before the committee on the date previously mentioned. Upon inquiry by the chairman of the committee Mr. Curriden went into the particulars, which are found in the statement to the committee. Among other things there is quoted a proviso having reference to this structure, which is an amendment offered by former Senator Cockrell, of Missouri, at the time the appropriation was made, which I will read:

*Provided*, That the total cost of the building shall not exceed $150,000, including the $100,000 heretofore appropriated; and said commissioners are hereby authorized, in their discretion, to expend for temporary frame structures to meet present institutional needs not exceeding $20,000 of the sum heretofore appropriated for this purpose.

That is the language of the proviso, but Mr. Curriden continues:

Our association, as well as myself, rested in the belief that this clause subsequently enacted into law would settle the business. In the meantime plans for this ambitious structure, to cost between $600,000 and $700,000, were being discussed in the papers, and pictures of it were printed in architectural and other professional papers.

But in spite of the above prohibition, the powers in charge of the construction used nearly all of the $150,000 in expensive plans and in the erection of but one wing, a small portion only of the building costing in the end sums vastly in excess of half a million dollars, and this for a permanent construction and a permanent occupation of Reservation No. 13 in complete violation of Senator Allison's understanding of the desire of the Senate.

Some of us have been criticized for making objections to appropriations for the District of Columbia; but if any justification were needed for it, that justification is found in incidents like this. It appears from the testimony that plans have been heretofore prepared for a hospital which may be used for this purpose. Reference has been made by the Senator from Wyoming to the fact that a $2,000,000 structure has been contemplated heretofore for this hospital. Those plans doubtless referred to that contemplated institution.

Mr. WARREN. It was a matter of $3,000,000.

Mr. THOMAS. Three million dollars?

Mr. SMITH of Maryland. If the Senator will pardon me, that appropriation was made for a combination of hospitals, and not for a municipal hospital.

Mr. THOMAS. Yes; but I wish to record here and now the prediction that if this appropriation is made the purpose for which it is appropriated, the final cost of which by this bill is expressly limited to $300,000, will be five times that sum.

Mr. GALLINGER. If the Senator will permit me——

Mr. THOMAS. Certainly.

Mr. GALLINGER. On this very site, occupying a small part of it, is a tuberculosis hospital, for which we appropriated $100,000, and it was built absolutely for that amount. It did not cost a dollar over the amount.

I think the Senator is right in calling attention to an abuse that occurred a good many years ago; but my observation has been that as a rule where there is a provision that these appropriations shall not exceed a certain amount, they do not exceed it in the District of Columbia. That is the case as a rule.

Mr. THOMAS. The Senator's experience concerning this subject is, of course, superior to mine; but when I find an instance of this kind it is so familiar and so much like similar appropriations for buildings in some of the States that I am inclined to think human nature is the same all the world over. I am very glad the Senator has interrupted to record the fact that in the matter of the tuberculosis hospital the appropriation has not been exceeded.

I stated, however, some time ago that my opposition was largely based upon the fact that I thought this appropriation was unnecessary. My information is that the city of Washington has many hospitals, ample to take care of all indigent cases, and that only a small outlay in the way of an addition to the present almshouse hospital would amply provide for future needs, if at all.

I have been furnished with a list of the following hospitals, showing the number of free beds which each contains, together with the number of free beds now unoccupied. The date of this statistical statement is the 12th day of March, 1914:

Garfield Hospital has a free-bed capacity of 270 beds. Free beds empty, 124.

Providence Hospital, free-bed capacity, 100; free beds empty, 7.

Georgetown University Hospital, free-bed capacity, 98; free beds empty, 43.

George Washington University Hospital, free-bed capacity, 45; free beds empty, 10.

Columbia Hospital for Women, free-bed capacity, 104; free beds empty, 23.

The Tuberculosis Hospital, free-bed capacity, 120; free beds empty, 10.

Hospital, Home for the Aged, the Almshouse, free-bed capacity, 25; free beds empty, 15.

The Freedman's Federal Hospital for Colored People, free-bed capacity, 240; free beds empty, 29.

This hospital has one entire ward vacant in addition to the above vacant beds, which, if provided with 10 more nurses and 1 maid, would add 26 more vacant beds, bringing the total empty-bed capacity of this hospital up to 55.

The total free-bed capacity of the hospitals of the District of Columbia, excluding the Sibley Hospital, the Children's Hospital, the Episcopal Eye and Ear Hospital, the Naval Hospital, the Walter Reed Army Hospital, the Soldiers' Home, and other private hospitals, is 1,002 beds; vacant beds, 261.

From the above it is clearly shown that by the use of existing institutions which have contractual relationship with the District government all present needs could be met, and with a slight appropriation for a building at Blue Plains, where the Municipal Almshouse is located, to cost not more than $25,000, all the objectionable chronic cases of the future years could be accommodated.

The deplorable condition of the Washington Asylum Hospital necessarily reflects bad management that must have prevailed there for some years past to justify the open public criticism that has been made against it.

Mr. President, assuming this statement to be true—and I have no reason to doubt it—it appears that the free-bed capacity at present for indigent cases in these institutions which have contractual relations with the Government is more than 25 per cent in excess of the demand.

Mr. KENYON. Mr. President, I should like to inquire how these hospitals are now maintained. Are they maintained under the half-and-half plan?

Mr. THOMAS. As to that I must refer the Senator to the committee. My impression is that they are maintained in part, at least, by appropriations made by Congress.

Mr. KENYON. I should like to ask the chairman of the committee.

Mr. SMITH of Maryland. And very largely by contributions from different people in the District of Columbia.

Mr. NORRIS. I think there are appropriations in this bill to most of the hospitals.

Mr. THOMAS. There are appropriations for some of them in this bill, but whether for all or not I can not state offhand.

Mr. SMITH of Maryland. The efforts of the people here to maintain hospitals are supplemented by the Government to a certain extent.

Mr. KENYON. Are certain hospitals maintained by different church organizations?

Mr. SMITH of Maryland. No; I do not think so. They are maintained by different charitable organizations and by contributions from various people throughout the city, and possibly people residing elsewhere.

Mr. GALLINGER. The question can be easily answered. We make appropriations, not of very large amounts, to the Garfield Hospital, Providence Hospital, George Washington Hospital, Georgetown University Hospital, National Homeopathic Hospital, and possibly others, and they earn it in this way: The appropriation is in the hands of the Board of Charities. They pay those hospitals an average of about $1 per day for taking care of each destitute patient.

Mr. SMOOT. For all expenses?

Mr. GALLINGER. For all expenses; and in some cases they do not exhaust the entire appropriation and it goes back into the Treasury. It depends upon the number of patients that are sent. If we should take the 300 patients that we hope to provide for in this hospital—there will not be that number at first, of course—and pay $1 a day to these hospitals for caring for them, and they charge a little more than that in some cases, it would amount to $109,500 a year.

Mr. KENYON. For all the hospitals?

Mr. GALLINGER. For all the hospitals. We have one Government hospital, the Columbia Hospital for Women. That is on Government land and is owned by the Government.

Mr. WARREN. Of course the Army and Navy hospitals are for persons belonging to the Army and Navy. As I understand, we did not build these other hospitals enumerated.

Mr. GALLINGER. Oh, no.

Mr. WARREN. We simply provide in them for the care of our people.

Mr. GALLINGER. Of course we could not invade the Army and Navy hospitals, anyway. The Walter Reed Hospital, which is a military hospital, we could not invade. The Senator will observe in his list there some hospitals, such as the Soldiers' Home Hospital, that in the very nature of things we could not invade.

Mr. KENYON. Does the Government contribute anything toward the sectarian hospitals?

Mr. GALLINGER. No; not as a rule, unless the Providence Hospital should be called a sectarian hospital. It is under the auspices of the Catholic Church, and is a very ably managed hospital. We do make an appropriation, I think, of $19,000 a year, and that is dispensed through the War Department, as I recall; and they take patients at $1 or $1.10 or $1.20 a day, I am not sure which.

Mr. KENYON. The hospital earns it, as I understand the Senator, under this arrangement?

Mr. GALLINGER. Every hospital earns every dollar that is appropriated by Congress in that way. Through the Board of Charities the patients are sent to the hospitals, and the hospitals are paid $1 or $1.10 a day, and I think in the case of the Children's Hospital 60 cents a day, for caring for the indigent patients, until the amount is exhausted. That is the modus.

Mr. SMOOT. Mr. President——

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Utah?

Mr. THOMAS. I yield.

Mr. SMOOT. I do not know who furnished the figures the Senator has read in relation to the empty beds, but the Senator must know that it is absolutely impossible for any hospital anywhere to have full beds at all times. No one builds a hospital without at least having room for 10 to 15 per cent more patients than the number they estimate that they will treat. That is the case in Washington. I believe if the Senator really knew the number of public patients that are treated in these private hospitals and paid for as stated by the Senator from New Hampshire the question of empty beds never would be taken into consideration.

Mr. GALLINGER. And I ought to have added, if the Senator will permit me——

Mr. THOMAS. I yield.

Mr. GALLINGER. That when this appropriation for any given hospital is exhausted by the payment of $1 a day the hospitals care for these indigent patients at their own expense, and a very considerable amount is contributed by them in that way.

Mr. THOMAS. Mr. President, it is quite obvious, of course, that such hospitals as the Army and Navy Hospital are not open to the general public, but it is equally obvious that the cases for which they care do not have to be provided for by a general hospital. In other words, the fact that they are confined to a certain class of the community minimizes to that extent the necessity for general hospital provisions.

It is quite true, of course, as suggested by the Senator from Utah, that the capacity of a hospital should be somewhat in excess of the demands made upon it, but where a general showing is made that the free-bed capacity—and that is what I am emphasizing—is 25 per cent and more in excess of the demands made upon it, to my mind it is a controlling reason why this particular appropriation of $300,000 should not be made at this time.

Mr. President, I now approach another phase of this amendment with much reluctance. It is not at all pleasant to refer to it, because one's purposes are sometimes open to possible misconstruction. I wish to say in advance that I am actuated by no sinister or personal motives whatever in what I shall say about the matter, and I should express the same sentiments if the name of any other Senator were connected with a great appropriation made by the Senate of the United States. I refer to the fact that it is the purpose of this amendment to christen this building by the name of one of the honored Members of this body.

I am not aware that in the past any such precedent has been set by either House of Congress. My judgment is that it is in bad taste, that it is ill-advised, that it is inappropriate, and that it will result in the establishment of a precedent that may be subject to frequent abuse.

There are plenty of excuses now for making appropriations without adding to them the desire for permanent distinction as applied to Members of the body making the appropriation. I think, therefore, this amendment is objectionable, among other things, for that reason, as any other appropriation of a similar character, attaching to it the name of any living Senator, would be equally objectionable.

If this were an amendment providing for the Ashurst asylum, or for the Smoot sanitarium, or for the Brandegee boulevard, or any other object coupled with the name of a Member of this body, I think that fact should condemn it, although not because of the motive which lies behind it, albeit of the loftiest character and designed to recognize long and continuous and arduous and honorable service. My contention is that we can not afford to begin this method of appropriation.

I trust, therefore, for the reasons I have assigned, that the Senate will refuse to adopt the amendment which I have criticized.

Mr. WARREN obtained the floor.

Mr. NORRIS. Mr. President, will the Senator from Wyoming yield to enable me to ask the Senator from Colorado a question?

Mr. WARREN. Certainly.

Mr. NORRIS. I wish to ask the Senator how many free beds, in the aggregate, there are? I did not get that. Has the Senator summed up the figures?

Mr. THOMAS. Yes. There is a total capacity of 1,002 free beds. There are 261 vacant beds.

Mr. WARREN. Mr. President, as I remarked when interrupting the Senator a few moments ago, this appropriation, in my judgment, would tend to economy rather than to extra expense, because there has been a plan which has been followed up here, in which it has been sought to induce the committee time and again, year after year, to build a great municipal hospital. This provision for a hospital is much like the provisions we have made in the case of the Army and Navy in the way of manufacturing part of our own arms and material and seeing whether we could manufacture it all, if necessary. The idea is to depend partially upon these privately owned hospitals, and also to depend partially upon one which is owned entirely by the municipality.

I believe that in civil life, as in military life, the place to begin is with the sick, the wounded, and the destitute, to progress toward a higher civilization and humanity; and I think the present appropriation, instead of being excessive, is exceedingly moderate.

As to the name, I am very sorry to have heard the Senator from Colorado make the slightest objection. The committee, of course, was not influenced by the Senator for whom it is named. The hospital naturally would have some name. Other hospitals and other institutions have been named for Senators.

Mr. THOMAS. If the Senator will permit me, I should like to inquire what hospitals or other institutions have been named for Senators in service at the time of making the appropriation.

Mr. WARREN. I think the Senator will remember that there was a hospital named after a Senator.

Mr. THOMAS. While he was a United States Senator?

Mr. WARREN. Yes.

Mr. THOMAS. I am very sorry that there ever was such a precedent established in this body.

Mr. WARREN. The Garfield Hospital, while it may not have been named for Senator Garfield, bears the name of an honored Member of Congress and Senator.

Mr. THOMAS. Was not that name conferred upon the hospital after the death of President Garfield?

Mr. WARREN. I assume it might have been.

Mr. THOMAS. Was it not?

Mr. WARREN. But there are those who believe that no man should receive honor until after he is dead, and I am sorry the Senator from Colorado is liable to be termed one of those.

Mr. THOMAS. Will the Senator permit me?

Mr. WARREN. Certainly.

Mr. THOMAS. I am not one of those, Mr. President. On the contrary, I believe in honoring the living; but I do not believe in coupling that honor with an appropriation made by the body of which he is a member.

If the Senator will yield for a moment longer, the truth is that our motives may be, and justly so, misconstrued, and it may be thought that we are not inspired so much by the necessity of the appropriation as by the desire of conferring distinction in matters of this kind.

Mr. WARREN. That suspicion, in my judgment, is too trivial to be given attention here or anywhere else.

Mr. THOMAS. In that particular the Senator and I differ.

Mr. WARREN. It does not enter into the case here, as everyone knows.

Mr. SMITH of Maryland. Mr. President, I should like to make a statement, if the Senator from Wyoming will yield to me for a moment. This matter was agreed to by the committee before there was any thought whatever of naming it for the distinguished Senator from New Hampshire. It was never spoken of, and the naming had nothing whatever to do with the appropriation. It was not understood that his name should be con-

nected with it, because it was not spoken of until after the appropriation had been agreed upon.

Mr. THOMAS. I have not so charged, and I do not intend to so charge, even indirectly. Neither do I wish it to be inferred from what I have said that the Senator whose name is connected with it was at all instrumental in the matter. I am endeavoring to criticize what seems to me to be the establishment of what may become a bad and undesirable precedent.

Mr. WARREN. Mr. President, I have too much confidence in the American public, in the judgment and good sense of the people, to believe that when an appropriation is made and a hospital built and a name is sought they will cavil at a name which represents one in this body who has served more days and weeks and months than any other Senator in the body; who came to this body before any other Senator now a Member came here, except one, and whose service has been continuous and longer than that of any other in this body, and, besides, served most honorably through two Congresses in the House of Representatives. No man could have been more conscientious, more attentive, more continuous in his service, which has been arduous, because he has been a member of hard-working committees of the Senate—the Committee on the District of Columbia for over 20 years, the Committee on Appropriations, the Committee on Finance, and other active committees—and he has always been found faithful, resourceful, and efficient.

We should have to search long, indeed, in my judgment, for a name that could be more happily bestowed than that of Gallinger upon this hospital. And it must have a name.

Mr. THOMAS. Mr. President——

Mr. WARREN. Will the Senator let me complete my sentence? Here is the great Army hospital that bears the name of an individual. Other individuals in many cases have had their names bestowed upon public institutions.

Mr. President, I am not going to occupy any further time to portray the absolute fitness of this proposition as it appears in my mind, and I believe it will be so considered by the general public and by considerate people. It has no relation whatever to the necessities for this hospital; it has no reference whatever to the intent on the part of the committee to recommend to Congress the establishment of the hospital; but it happens that in naming it we are able to do honor to a much-loved and greatly respected man who yet lives instead of honoring the dead.

Mr. THOMAS. Mr. President, I fully agree that in point of service and standing the Senator from New Hampshire is all that has been claimed for him, but if that be an argument in favor of this action, then it must follow that when the Senator from Wyoming is the senior Senator in point of service we should make another appropriation for some other institution and christen it with his name.

Mr. WARREN. I am glad to be apprized of the Senator's real motive.

Mr. THOMAS. And then we would have to do the same with each successive Senator in point of seniority. It leads up to what I felt it to be my duty to criticize the item for, to the establishment of a precedent that may ripen into a custom and disfigure the appropriations of the future.

Mr. SMOOT. Mr. President, just one word in reply to what the Senator from Colorado said.

I do not believe that this case would be a precedent that would be followed in the future. I hardly think that there will ever be a Senator in the future serve so many years on the District Committee as Senator GALLINGER has served. The particular line of work during his service has been such as to suggest that a hospital established in the District of Columbia by an appropriation from the Government should bear the Senator's name.

Senator GALLINGER has been a member of the District Committee during his entire service in this body. I believe, Senators, that there is no Senator in the history of this country who has served and given the detailed attention to affairs of the District of Columbia as has the Senator from New Hampshire.

The Senator from New Hampshire, before he was a Senator, was a physician, and particularly has his work benefited institutions in the District of that character. I can not for the life of me see what objection there could be to naming this hospital "The Gallinger Hospital." I do not believe that any serious effect would ever come from it, and I do not believe that the public generally would ever think for a minute that the appropriation was influenced because of the name that was given to the institution.

Mr. POMERENE. Mr. President, several days ago, in going over this bill, I for the first time discovered that it had been proposed to give the name of the municipal hospital to this honored Senator. I confess I was very much gratified to feel that the committee proposed to pay him this compliment. It has been my pleasure to serve for several years on the District Committee with the distinguished Senator from New Hampshire [Mr. GALLINGER], and I know that he has labored in season and out of season for what he believed to be for the good of this District. I have not always agreed with him, but I have never questioned his honesty, integrity, or good faith.

We are year after year spending money to erect statues to the memory of those who have rendered distinguished service both in military and civil life. This hospital, I understand, is a necessity to this, the Capital city. We are not making the expenditure for the purpose of doing honor to a Member. We are simply christening it for the purpose of doing honor to this Member from the great State of New Hampshire. I shall vote for this provision cheerfully and feeling that I am helping to bestow an honor where it is well deserved.

Mr. WORKS. Mr. President, I have had the honor to serve upon the Committee on the District of Columbia most of the time since I have been here, under the chairmanship of the Senator from New Hampshire. I have learned to respect him very highly, and I know that he has done conscientious and earnest work on behalf of the District of Columbia and the whole country.

I do hope that the Senators will be broad-minded enough to recognize his great services, particularly in that committee. I hope—I feel I may say I am sure—that all the members of that committee, both Democrats and Republicans, would be glad to see this honor bestowed upon him, if there is any honor in having a hospital named after one. I shall be greatly disappointed if the Senate, now that this matter has gone so far as it has, should deny the Senator from New Hampshire that honor.

Mr. GALLINGER. It is proper, Mr. President, that I should say just a word. I did not intend to be in the Chamber when this item was discussed, but I was invited in.

It is absolutely immaterial to me what the Senate does about this matter. I have had nothing to do with it whatever. It never occurred to me that my name might be attached to this institution of benevolence and good work, but others saw fit to do it.

Mr. President, whatever happens to the amendment providing for this new hospital, the kindness of the committee and the generous words spoken two days ago by the Senator from Maryland [Mr. SMITH] concerning me personally will be a sufficient recompense to me for any work that I have done for my State, for the District of Columbia, and for the country in general during the 23 years that I have been in this body.

For 22 years I served upon the Committee of the District of Columbia, and for about 12 years as its chairman; and the only criticism that has ever been made against me that had any potency was a criticism on the part of some people of my own State that I was giving too much of my time and efforts to building up the National Capital.

I have some monuments in Washington already that I can point to with some degree of satisfaction, because I have been instrumental in a degree in bringing about certain great improvements; and as I am not an exploiter or a man seeking personal honor or emoluments, I have already received from the Committee on Appropriations, concurred in largely, as I understand, by the Committee on the District of Columbia, a sufficient reward for any service that I have rendered this great Capital, the State I in part represent, or the country of which I am proud.

Mr. SMITH of Maryland. Mr. President, I feel that I have already expressed my opinion in regard to this matter in the previous remarks made by me, but I want to say a word in reference to the remark made by the Senator from Colorado [Mr. THOMAS] that in future it might be that we would want to make appropriations for the purpose of giving the name of some person to an institution. I will merely direct the attention of the Senator to the fact that this appropriation was agreed to by the committee without any idea of giving it the name of any man, and that the Senator from New Hampshire knew nothing about it whatever until it was agreed upon by the committee and we determined to give it the name. Afterwards, personally, I went to him and asked him if it would be acceptable to him if the institution should be called for him. He knew nothing of it whatever, he had never heard of it, and the committee had never thought of doing it until after the appropriation had been agreed upon.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

Mr. THOMAS. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CLARK of Wyoming (when his name was called). I have a general pair with the senior Senator from Missouri [Mr. STONE], who is detained from the Chamber by illness. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. GALLINGER (when his name was called). I have a pair with the junior Senator from New York [Mr. O'GORMAN], and for that reason and a personal reason I withhold my vote.

Mr. MYERS (when his name was called). I have a pair with the junior Senator from Connecticut [Mr. MCLEAN]. In his absence I withhold my vote.

Mr. GORE (when Mr. NEWLANDS's name was called). I was requested to announce a pair between the senior Senator from Nevada [Mr. NEWLANDS] and the Senator from Massachusetts [Mr. WEEKS].

Mr. OVERMAN (when Mr. SIMMONS's name was called). I wish to state that my colleague [Mr. SIMMONS] is unavoidably detained by sickness. He is paired with the Senator from Minnesota [Mr. CLAPP]. I will let this announcement stand for the day.

Mr. TOWNSEND (when the name of Mr. SMITH of Michigan was called). The senior Senator from Michigan [Mr. SMITH] is absent from the city on important business. He is paired with the junior Senator from Missouri [Mr. REED]. I wish this announcement to stand for the day.

Mr. REED (after having voted in the negative). I had not been notified of the absence of the Senator from Michigan [Mr. SMITH] when I voted. I therefore withdraw my vote.

I take this occasion to announce the necessary absence of my colleague [Mr. STONE], on account of sickness. I make this announcement for the day.

Mr. SUTHERLAND (when his name was called). I have a general pair with the Senator from Arkansas [Mr. CLARKE], who is absent. I transfer that pair to the Senator from Illinois [Mr. SHERMAN] and vote "yea."

Mr. THOMAS (when his name was called). I have a pair with the senior Senator from New York [Mr. ROOT], which I transfer to the junior Senator from Nevada [Mr. PITTMAN], and vote "nay."

Mr. WARREN (when his name was called). I have a pair with the Senator from Florida [Mr. FLETCHER], but I am informed that, if present, he would vote as I shall vote on this question. I therefore vote. I vote "yea."

Mr. WILLIAMS (when his name was called). I have a pair with the senior Senator from Pennsylvania [Mr. PENROSE], but I am informed that, if present, the Senator from Pennsylvania would vote as I am about to vote. I therefore vote. I vote "yea."

The roll call was concluded.

Mr. SAULSBURY. I transfer my general pair with the junior Senator from Rhode Island [Mr. COLT] to the junior Senator from Tennessee [Mr. SHIELDS] and vote. I vote "yea."

Mr. CHAMBERLAIN. I have a pair with the junior Senator from Pennsylvania [Mr. OLIVER], but I am advised that, if present, he would vote on this question as I shall. I therefore consider myself released from the pair, and I vote "yea."

Mr. DU PONT. I have a general pair with the senior Senator from Texas [Mr. CULBERSON], who is absent. I transfer that pair to the junior Senator from North Dakota [Mr. GRONNA] and vote. I vote "yea."

Mr. FALL. I have a pair with the senior Senator from West Virginia [Mr. CHILTON], but as I am informed, if he were present, he would vote as I shall vote on this question, I will vote. I vote "yea."

Mr. SAULSBURY (after having voted in the affirmative). The junior Senator from Tennessee [Mr. SHIELDS] having returned to the Chamber and voted, I now transfer my pair with the junior Senator from Rhode Island [Mr. COLT] to the junior Senator from Georgia [Mr. WEST], and will allow my vote to stand.

Mr. WALSH. I am generally paired with the senior Senator from Rhode Island [Mr. LIPPITT]. I am advised, however, that, if he were present, the Senator from Rhode Island would vote on this question as I shall vote. Accordingly I vote. I vote "yea."

Mr. BRADLEY (after having voted in the affirmative). I see that the Senator from Indiana [Mr. KERN], with whom I am paired, has not voted. I therefore withdraw my vote.

Mr. CLAPP. I have a pair with the senior Senator from North Carolina [Mr. SIMMONS]. Not knowing how he would vote, if present, I withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. BRADLEY. I transfer my pair with the Senator from Indiana [Mr. KERN] to the Senator from Rhode Island [Mr. LIPPITT] and vote. I vote "yea."

Mr. LEA of Tennessee. I find that I can transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the senior Senator from West Virginia [Mr. CHILTON] and vote, which I shall do. I vote "yea."

The result was announced—yeas 53, nays 8, as follows:

YEAS—53.

So the amendment reported by the committee was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, under the subhead "Child-caring institutions," on page 86, after the word "expenses," at the end of line 5, to strike out "$3,100" and insert "$3,500," so as to make the clause read:

Board of children's guardians: For administrative expenses, including expenses in placing and visiting children, city directory, purchase of books of reference and periodicals not exceeding $25, and all office and sundry expenses, $3,500.

The amendment was agreed to.

The next amendment was, on page 86, after line 6, to strike out:

For agent, $1,800; clerk, $1,200; placing officers—1 at $1,000, 2 at $900 each; investigating clerk, $900; record clerk, and 2 visiting inspectors, at $720 each; clerk, $660; messenger, $360; in all, $9,840.

The amendment was agreed to.

The next amendment was, on page 87, after line 10, to insert:

For agent, $1,800; clerk, $1,200; placing and investigating officers—1 at $1,200, 3 at $1,000 each, 4 at $900 each; record clerk, $900; clerk, $720; messenger, $360; in all, $12,780.

The amendment was agreed to.

The next amendment was, on page 86, line 23, after the word "board," to strike out "$50,000" and insert "$60,000," so as to make the clause read:

For board and care of all children committed to the guardianship of said board by the courts of the District, and for temporary care of children pending investigation or while being transferred from place to place, with authority to pay not more than $1,500 to institutions adjudged to be under sectarian control and not more than $300 for burial of children dying while under charge of the board, $60,000.

The amendment was agreed to.

The next amendment was, on page 86, line 25, after the word "guardians," to strike out "$82,980" and insert "$96,280," so as to read:

In all, for board of children's guardians, $96,280.

The amendment was agreed to.

The next amendment was, on page 87, line 17, before the word "each," to strike out "$480" and insert "$540"; in line 18, after the word "each," to insert "temporary labor not to exceed $300"; and in line 19, after the words "in all," to strike out "$7,440" and insert "$7,860," so as to make the clause read:

Industrial Home School for Colored Children: Superintendent, $1,200; matron of school, $480; 2 caretakers, 2 assistant caretakers, nurse and sewing teacher, at $360 each; 2 teachers, at $480 each; manual training teacher, $600; farmer, and blacksmith and wheelwright, at $540 each; stableman, and watchman, at $300 each; cook, and laundress, at $240 each; temporary labor, not to exceed $300; in all, $7,860.

The amendment was agreed to.

The next amendment was, on page 87, line 23, after the word "grounds," to strike out "$1,500" and insert "$2,500," so as to make the clause read:

For repairs and improvements to buildings and grounds, $2,500.

The amendment was agreed to.

The next amendment was, at the top of page 88, to insert:

For erection of residence for superintendent and for administrative purposes, $5,000.

The amendment was agreed to.

The next amendment was, on page 88, line 3, after the words "Colored Children," to strike out "$18,490" and insert "$24,910," so as to make the clause read:

In all, for Industrial Home School for Colored Children, $24,910: *Provided*, That all moneys received at said school as income from sale of products and from payment of board, of instruction, or otherwise, shall be paid over to the commissioners to be expended by them in the support of the school during the fiscal year 1915.

The amendment was agreed to.

The next amendment was, on page 88, line 10, after "$1,500," to insert "supervisor of boys, $900"; in line 11, after the word "matron," to strike out "$480" and insert "$600"; in line 13, before the word "each," where it occurs the first time, to strike out "$360" and insert "$420"; in line 13, after the word "nurse," to strike out "$300" and insert "$360"; in line 14, after the word "teacher," to strike out "$600" and insert "$660"; in line 16, before the word "each," where it occurs the first time, to strike out "$240" and insert "$300"; and in line 17, after the words "in all," to strike out "$8,620" and insert "$10,180," so as to make the clause read:

Industrial Home School: Superintendent, $1,500; supervisor of boys, $900; matron, $600; three matrons, housekeeper, and sewing teacher, at $420 each; two assistant matrons, at $300 each; nurse, $360; manual-training teacher, $660; florist, $840; engineer, $720; farmer, $540; cook, and laundress, at $300 each; two housemaids, at $180 each; temporary labor, not to exceed $400; in all, $10,180.

The amendment was agreed to.

The next amendment was, on page 88, line 22, after the words "Industrial Home School," to strike out "$26,320" and insert "$27,880," so as to read:

In all, for Industrial Home School, $27,880.

The amendment was agreed to.

The next amendment was, under the subhead "Temporary homes," on page 89, line 8, before the word "yard," to strike out "and stone"; in line 9, after the word "Superintendent," to strike out "who shall also act as foreman"; in the same line, after "$1,200," to insert "foreman, $480"; and in line 11, after the words "in all," to strike out "$3,530" and insert "$4,010," so as to make the clause read:

Municipal lodging house and wood yard: Superintendent, $1,200; foreman, $480; cook, $360; night watchman for 6 months, at $25 per month, $150; maintenance, $1,820; in all, $4,010.

The amendment was agreed to.

The next amendment was, on page 89, after line 18, to insert:

Southern Relief Society: For care and maintenance of indigent and infirm men, women, and children under a contract to be made with the Southern Relief Society for the support of those under its care by the Board of Charities, $5,000.

The amendment was agreed to.

The next amendment was, on page 90, after line 2, to insert:

AID TO THE BLIND.

Aid Association for the Blind: For aid, maintenance, improvement of grounds, and purchase of mechanical equipment for the workshop of the Aid Association for the Blind, located at 3050 R Street NW., $10,000, said sum to be expended under the direction and supervision of the Commissioners of the District of Columbia.

The amendment was agreed to.

The next amendment was, on page 90, after line 10, to insert:

Library for the Blind: For aid of the Library for the Blind, located at 1729 H Street NW., $5,000, said sum to be expended under the direction and supervision of the Commissioners of the District of Columbia.

The amendment was agreed to.

The next amendment was, on page 91, line 15, after the word "superintendent," to strike out "$720" and insert "$900," so as to make the clause read:

Workhouse.—Administration: Superintendent, $2,500; chief clerk, $1,200; assistant superintendent, $900; stenographer, $720; stenographer and officer, $600.

The amendment was agreed to.

The next amendment was, on page 91, line 19, after the word "electrician," to strike out "$900" and insert "$1,200," so as to make the clause read:

Operation: Foreman, construction, $900; foreman, stone-crushing plant, $360; foreman, sawmill, $900; chief engineer and electrician, $1,200; superintendent brick kiln, $1,500; clay worker, $480; superintendent tailor shop, $480.

The amendment was agreed to.

Mr. SMITH of Maryland. On behalf of the committee, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 91, line 25, it is proposed to strike out "1, $1,000; 1, $900," and insert "2, at $1,000 each," so as to read:

Receiving and discharging officers—2, at $1,000 each.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Appropriations was, on page 92, line 5, after the words "in all," to strike out "$56,510" and insert "$56,990," so as to make the clause read:

Maintenance: Physician, $1,350; superintendent of clothing and laundry, $720; storekeeper, $660; steward, $900; stewardess, $480; veterinary and officer, $780; captain of guards, $1,200; captain of night watch, $900; receiving and discharging officers—2, at $1,000 each; superintendent laundry, $480; day guards—2 at $720 each, 30 at $660 each; 15 night guards, at $600 each; 2 day officers, at $480 each; 4 night officers, at $480 each; hospital nurse, $480; captain of steamboat, $900; engineer of steamboat, $840; in all, $56,990.

The amendment was agreed to.

The next amendment was, on page 93, line 4, after the word "wagons," to insert "harness," and in line 5, after the word "harrows," to strike out "drills, etc.," and insert "and drills," so as to make the clause read:

For farm implements, including wagons, harness, plows, planters, harrows, and drills, $1,500.

The amendment was agreed to.

The next amendment was, on page 93, line 6, after the word "workhouse," to strike out "$177,010" and insert "$177,490," so as to make the clause read:

In all, for workhouse, $177,490, which sum shall be expended under the direction of the Commissioners of the District of Columbia.

The amendment was agreed to.

The next amendment was, on page 93, line 11, after the word "buildings," to insert "including personal services connected therewith," so as to make the clause read:

Reformatory: For grading, fencing, road making, water supply, sewerage, draining, and other necessary work of preparation for the erection of buildings, including personal services connected therewith, for a reformatory, and for the beginning of construction of such buildings to be erected on the site authorized to be acquired for that purpose, to be constructed in accordance with the provisions of the act approved March 3, 1909, authorizing the acquirement of land and the construction of buildings for a reformatory and workhouse and all acts amendatory thereof, $15,000, to be expended under the direction of the Commissioners of the District of Columbia.

The amendment was agreed to.

The next amendment was, under the head of "Militia of the District of Columbia," on page 94, after line 20, to insert:

For pay of troops, other than Government employees, to be disbursed under the authority and direction of the commanding general, $24,000.

The amendment was agreed to.

The next amendment was, on page 95, after line 9, to insert:

ANACOSTIA RIVER FLATS.

For continuing the reclamation and development of the Anacostia River and Flats, from the Anacostia Bridge northeast to the District line, to be expended under the supervision of the Chief of Engineers, United States Army, upon plans heretofore authorized to be prepared; said sum to be available for the preparation of plans, the prosecution of the work, the employment of personal service, and for such other purposes as may in the judgment of the Chief of Engineers be necessary to carry out the purposes of this appropriation, $100,000. In connection with said reclamation and development of the river and flats from the Anacostia Bridge to the District line, the Secretary of War is authorized to acquire by purchase or by condemnation, for highway and park purposes, the fee simple and absolute title to the land along the Anacostia River on both sides thereof between the high-water lines of said river, as determined by the United States Coast and Geodetic Survey, and lines following approximately the contour of 10 feet elevation on each side of said river above mean low water at the United States navy yard, from the Anacostia Bridge to the northeast boundary line between the District of Columbia and Maryland; and also all land below the high-water lines on each side of said Anacostia River between the limits named that is not now owned by the United States; and the appropriation herein made for the reclamation and development of the Anacostia River and Flats from the Anacostia Bridge northeast to the District line, and all appropriations heretofore made for said purpose are hereby made available for the purchase or condemnation of said land and for the payment of amounts awarded as damages for said land and the costs and expenses of the condemnation proceedings in the event that it is necessary to institute such condemnation proceedings: *Provided*, That if said land or any part thereof can not be acquired by purchase from the owners thereof at a price satisfactory to the Secretary of War, the Commissioners of the District of Columbia, upon the request of the Secretary of War, shall institute condemnation proceedings to acquire such land under the provisions of chapter 15 of the Code of Law for the District of Columbia.

The amendment was agreed to.

The next amendment was, under the head of "Water department," on page 98, line 2, before the words "meter computers," to strike out "three" and insert "five," so as to make the clause read:

For revenue and inspection branch: Water registrar, who shall also perform the duties of chief clerk, $2,400; clerks—one $1,500, one $1,200, two at $1,000 each; index clerk, $1,400; five meter computers, at $1,000 each; chief inspector, $1,000; meter clerk, $1,000; tap clerk, $1,000; inspectors—eight at $900 each, eleven at $800 each; messenger, $600.

The amendment was agreed to.

The next amendment was, on page 98, line 6, after "$3,300," to insert "engineer, $2,400; assistants engineers—one at $2,000, one at $1,600"; in line 8, before the word "foreman," to strike out "draftsman, $1,600"; in line 9, after the word "clerks," to strike out "two at $1,500" and insert "one at $1,800, one

at $1,500"; in line 11, after "$900," to strike out "three steam engineers, at $1,100 each; assistant engineers, one $2,400, one $1,600"; in line 15, after "$1,125," to insert "master mechanic, $2,000"; in line 16, after "$1,750," to insert "two steam engineers, at $1,100 each"; after the words "inspector of valves," in line 21, to strike out "$1,400" and insert "$1,600"; and in line 22, after the words "in all," to strike out "$84,635" and insert "$88,435," so as to make the clause read:

For distribution branch: Superintendent, $3,300; engineer, $2,400; assistant engineers—one at $2,000, one at $1,600; foreman, $1,800; clerks—one at $1,800, one at $1,500, four at $1,200 each, stores clerk $1,500, one at $1,000, one $900; timekeeper, $900; assistant foreman, $900; leveler, $1,200; two rodmen, at $900 each; two chainmen, at $675 each; draftsman, $1,050; assistant foremen—one $1,275, one $1,200, one $1,125; master mechanic, $2,000; chief steam engineer, $1,750; two steam engineers, at $1,100 each; three assistant steam engineers, at $875 each; four oilers, at $610 each; three firemen, at $875 each; inspector, $1,200; janitor, $900; watchmen—one $875, one $700, one $610; drivers—one $700, one $630; two messengers, at $540 each; chief inspector of valves, $1,600; in all, $88,435.

The amendment was agreed to.

The next amendment was, on page 99, line 8, after the word "motor," to strike out "trucks" and insert "vehicles," so as to make the clause read:

For fuel, repairs to boilers, machinery, and pumping stations, pipe distribution to high and low service, material for high and low service, including public hydrants and fire plugs, and labor in repairing, replacing, raising, and lowering mains, laying new mains and connections, and erecting and repairing fire plugs, purchase and maintenance of motor vehicles, horses, wagons, carts, and harness necessary for the proper execution of this work, and including a sum not exceeding $800 for purchase and use of bicycles by inspectors of the water department, $37,000.

The amendment was agreed to.

The next amendment was, on page 104, after line 15, to strike out:

SEC. 8. That to the extent the revenues of the District of Columbia for the fiscal year 1915 shall exceed the proportionate part of the appropriations made in this or any other act and chargeable against said revenues, the same shall be covered into the Treasury of the United States to the credit of "Miscellaneous receipts."

The amendment was agreed to.

The next amendment was, on page 104, after line 21, to insert:

SEC. 8. That all laws and parts of laws to the extent that they are inconsistent with this act are repealed.

The amendment was agreed to.

The reading of the bill was concluded.

The VICE PRESIDENT. The Chair understands there are two committee amendments which have been passed over. The Secretary will state them.

Mr. SMOOT. Mr. President, I asked that the first two amendments be passed over. I did that because I wanted to see just how the other amendments recommended by the committee were going to be acted upon. As they were agreed to as the committee had recommended them, I shall not now make any point on the first two amendments.

The VICE PRESIDENT. The amendments passed over will be stated.

The SECRETARY. On page 2, line 5, after the words "Two commissioners, at," the committee proposes to strike out "$5,000" and insert in lieu thereof "$6,000."

The amendment was agreed to.

The SECRETARY. In line 7, the committee proposes to strike out "$5,000" and insert "$6,000."

The amendment was agreed to.

Mr. WORKS. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 8, line 23, after the numerals "$1,050," it is proposed to insert the words "one computer, $1,200."

Mr. WORKS. Mr. President, this amendment does not create a new office or employee, but simply changes the compensation from a per diem to a salary. It is estimated for in the estimates, and the amendment is suggested. The position has been occupied by one man now for 14 years, and he has been paid $4 a day. He is denied sick leave and vacation, which are allowed to all of the other employees. It seems to me only an act of justice to him that he should be placed on the regular salary list.

I hope the chairman of the committee will accept the amendment.

Mr. SMITH of Maryland. I will say to the Senator from California that we agree to the amendment. As I understand, this is not a new office. It is only giving a man who has been getting $4 a day a certain salary.

Mr. WORKS. Yes; about the same compensation, but a regular salary.

Mr. SMITH of Maryland. We agree to it.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from California.

The amendment was agreed to.

Mr. NORRIS. Mr. President, I offer an amendment, to come in on page 10 at the end of line 13.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 10, after line 13, it is proposed to insert:

On and after the 1st day of July, 1914, the Washington Gas Light Co. shall not charge or collect for gas furnished a consumer in any part of the District of Columbia a rate in excess of 75 cents per 1,000 cubic feet of gas so furnished: *Provided*, That if a consumer of gas other than the Government or the District of Columbia shall not pay monthly any gas bill within 10 days after the same shall have been presented, said gas company may charge and collect from any such consumer so failing to pay said gas bill as aforesaid 10 cents additional for each 1,000 cubic feet of gas represented by said bill: *And provided further*, That nothing herein contained shall be construed as limiting or taking away any of the powers now vested by law in the Public Utilities Commission of the District of Columbia.

Mr. SMITH of Maryland. Mr. President, I take it for granted that every Member of the Senate is desirous that the gas companies of Washington shall furnish gas at as low a rate as possible. We all want that. I take it for granted further, however, that there is no Member of the Senate who has sufficient information to determine the price at which the gas companies of Washington should furnish gas to their patrons. My idea is that the Public Utilities Commission was created for that purpose, and that is the object of having the commission. If there is any grievance, that is the place to carry it, and not to the Senate, it seems to me. I shall be forced to raise the point that the amendment is out of order.

Mr. NORRIS. I will ask the Senator if he will withhold his point of order?

Mr. SMITH of Maryland. I will, and reserve the right to make it later.

Mr. NORRIS. Mr. President, I agree with the Senator that we are all anxious that the people of the District of Columbia shall be furnished gas just as cheaply as it can possibly be furnished, giving, of course, to the company that furnish the gas a fair and honest return for their money invested in the gas company. I expect to be able to convince the Senate, including the Senator from Maryland, with information here from the gas company themselves, from their various reports, that this amendment, if adopted, will still leave the gas company in a position where they will receive returns, from their own figures, away beyond any reasonable interest on the money they have invested in the business. I am offering this amendment in good faith, believing as I do that the Senator from Maryland expresses the sentiment of the Senate when he says we are all anxious to do what is right on this proposition.

I have no desire, and it is furthest from my intentions even if I had the ability, to take away one penny from the Washington Gas Light Co. that honestly and fairly belongs to it. I am induced to offer this amendment on this appropriation bill because the committee having charge of and bringing in this bill had offered at this very place in the bill an amendment providing for the consolidation of the two gas companies, based, as I take it, upon the fact that a consolidation of the companies would reduce the cost of the manufacture of gas to the people of this District, and therefore would be economically right. There was nothing, however, coupled with the committee amendment that actually made any reduction. Personally, I think the two gas companies ought to be combined, and I believe that by a merger of the two companies gas could be manufactured and furnished to the people of this city and this District at less than the cost which is necessarily involved when it is manufactured by two companies.

Mr. President, the amendment I have offered applies only to one of these gas companies. There are in the District of Columbia two corporations engaged in the manufacture and sale of gas. They are not competitors. The line of demarkation is marked out clearly by law. The Washington Gas Light Co., the one to which this amendment applies, manufactures and has the sole right to manufacture and sell gas on this side of Rock Creek. The other company, known as the Georgetown Gas Light Co., operates in Georgetown, on the other side of Rock Creek. The company on this side is a mammoth one as compared with the other one. I am going to offer some figures here most of which are calculations based upon the figures of the gas companies themselves; and I think from their own figures, from their own reports, I shall be able to show that the amount named in this amendment is still too high.

I wish to say to the Senate that if you will take the last report of this gas company and take their own figures, without the change of a single one, take the amount of gas they themselves say they have manufactured, and every item of expense

they have included in their reports, and just figure it at 75 cents per 1,000 cubic feet instead of the price they charged, they still would have made last year, 1913, over 14 per cent on their capital stock. I shall show that not all of that capital stock has been paid in by this company in cash, but a large proportion of it has been paid in by enormous prices charged the consumers of gas and in that way stock dividends made possible.
